### HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 19, 1959*

Mr. HUMPHREY. Mr. President, I invite the attention of Senators to a brilliant and penetrating summary of the political situation in post-Stalin Russia written by the distinguished Protestant theologian, Dr. Reinhold Niebuhr, which appeared in the March 2, 1959, number of Christianity and Crisis. Dr. Niebuhr rightly insists that:

> The competition between the democratic and Communist worlds for winning the loyalty of the nontechnical nations of Asia and Africa by helping them achieve technical competence * * * will dominate the history of the next decades.

I ask unanimous consent that Dr. Niebuhr's editorial, "Mr. Khrushchev and Post-Stalin Russia," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHRISTIANITY AND CRISIS—MR. KHUSHCHEV AND POST-STALIN RUSSIA

The 21st congress of the Communist Party presented the world with a good opportunity to appraise the trends of history in Russia in economic and political affairs, in domestic and foreign policy since the death of Stalin and—more significantly—since the rise of the ebullient first secretary of the party who is now also Premier (having banished his old travelling companion, Mr. Bulganin, as one of the antiparty group of conspirators).

Mr. Khrushchev used the congress to crow triumphantly over his enemies at home and abroad. The crow lasted 6 hours. The congress was undoubtedly his day of triumph. Only 2 years ago he engaged in the hazardous gamble of exposing Stalin's crimes both for the sake of disassociating himself from the horror of those crimes (though he was Stalin's hatchet man in the Ukraine) and for the purpose of assuring the various rising bureaucrats that no such arbitrary rule would be established again. It is one of the achievements of the post-Stalin era that Khrushchev has gained his triumph over his foes without terror. He has merely banished them to Outer Mongolia or to equally remote places. This represents a real gain.

The disquieting side of the picture is that a dictatorship still seems to require a dictator, and that Khrushchev's triumph was symbolized by the uncritical obeisance made by all the lesser henchmen, even to the point of including him among the great theoreticians of the party. It was as if in our own history after President Jackson's triumph, the cabinet members had attributed to him philosophical achievements equal to those of Thomas Jefferson.

Undoubtedly a new cult of personality is developing. This euphemism is used by the Communists for the fact that men of absolute power become immune to criticism and are the beneficiaries of uncritical adulation by the bandwagon occupants.

In analyzing the development of Communist politics it is well to remember that Khrushchev has packed the mighty Presidium with his obedient henchmen and that his victory represents the triumph of the political oligarchy over the managerial and military oligarchies. This is a fact that rules out, for the moment, the slow growth of freedom by a process with which Western history has made us familiar, namely, the conflict between competing oligarchies. But again it must be recorded positively that this triumph was achieved not by terror but by shrewd political maneuvers.

Khrushchev defeated the managerial oligarchy, which supported Malenkov, by fanning the fears of the military oligarchy that Malenkov's program for increasing consumer goods was dangerous to the development of heavy industry upon which military might depended. Having gained this triumph with the help of Marshal Zhukov, Khrushchev subsequently cashiered the helpful marshal who had unwisely tried to use his prestige for gaining independent status for the military oligarchy.

In short, the party—that is, the political leadership—is still supreme in Russia. It has distinguished itself from all previous dictatorships by avoiding the supremacy of military men. The new and yet old democratic centralism means that the system is still totalitarian but it is not under the control of a single despot and probably can never again come under such control despite Khrushchev's great power.

At this point, we should again make a positive note: Khrushchev could defeat his foes only by taking the unprecendented step of appealing to the central committee from the Presidium, where the group now dubbed anti-Party men had outvoted him by either a 6 to 4 or 7 to 3 majority. These are small details, but they are important if it should be true that in Russia, as in the West, liberty may slowly broaden down from precedent to precedent.

The field of economic development gave Khrushchev the real opportunity to crow, to mix promises of the tremendous possibilities of the 7-year plan with self-congratulations about past achievements. The promises were a mixture of the probable and plausible with the improbable and the implausible, thus showing a similiarity between the Russian Premier and the politicians of the Western World. The total economy is to be increased by 80 percent in 7 years, or roughly 10 percent a year, compared with Russia's present 5 percent and our 2 to 3 percent rate of increase. The generation of electricity is to be doubled, wages are to be increased by 40 percent, and work hours reduced to 40 or even 35 per week.

The phoniest promises were the pledge to eliminate income taxes (which means exactly nothing in a regime that politically controls every economic transaction) and the promise to increase the agricultural yield by 70 percent in some crops and 100 percent in others. This latter promise is regarded by experts as strictly propaganda, particularly in view of the long series of failures in agriculture in Russia, including Khrushchev's own virgin land scheme.

Nevertheless, despite the transparent dishonesties in reporting past achievements and recording future hopes, we must not lose sight of the tremendous achievements of the Russian economy, both in the past and those that seem likely to come in the future. They have enabled Khrushchev to make the plausible claim (plausible at least to the non-technical cultures of Asia and Africa) that communism is superior to capitalism in productive energy.

It is the impression technological advance of Russia, vividly revealed in the launching of Lunik, that not only sealed Khrushchev's triumph over his Russian foes but also altered the power balance of the world. Khrushchev boasted that Russia now had intercontinental ballistic missiles in mass production that would invalidate all our carefully established advance bases for bombing aircraft. This is probably an overstatement, but not more seriously wrong than Secretary McElroy's defensive denials.

The resulting gap in the balance of terror by which a precarious peace is maintained is serious; it will undoubtedly tempt the Russians to push us strategically very near to the edge of disaster, as they are now doing in the Berlin crisis. But this fact must not obscure the greater issue emerging from the undoubted Russian technical achievements. That issue is the competition between the democratic and Communist worlds for winning the loyalty of nontechnical nations of Asia and Africa by helping them achieve technical competence.

That competition will dominate the history of the next decades. In it, Russia has many advantages over us. Even if her achievements are not as great as she boasts, she always has the advantage of lower living standards that give her greater power to maneuver in foreign aid, space exploration and military expenditures. The Russian leader is not under the necessity of coming to terms with the passion for a balanced budget, nor the desire of a pampered electorate for the highest possible standards of comfort and luxury, including the annual new automobile model.

## Facing Unemployment

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an informative and constructive editorial which appeared in the Christian

Science Monitor, Boston, Mass., on March 18, 1959:

FACING UNEMPLOYMENT

Congress is at least moving to ease somewhat one of the emergency needs of jobless Americans. The House of Representatives has passed the bill to continue for 3 months the Federal program of emergency aid designed to help States with their unemployment relief payments. This is much more reasonable than the year's extension proposed earlier, and we trust the Senate will quickly concur.

It is reported that more than 400,000 persons will benefit by this extension. But there are other hundreds of thousands who have now been jobless so long that both the regular and extended periods of relief payments for them have already run out. They have to look elsewhere for help, and for many it is a grim time. In some areas near starvation is reported—yes, in these United States in 1959.

Many who are not so desperate are still deeply troubled at the stretchout of unemployment. For in large areas of industry employers are simply not taking back men and women laid off when the recession came. They have adopted new methods or machinery to cut labor costs. They have rehired only the most efficient. Indeed, figures just released show a further gain in national product—even while unemployment registers little change. In January 1959 there were actually more jobless than in January 1958.

Most of the measures being proposed are little more than palliatives. In fact, demands for a higher minimum wage could easily result in more unemployment. And the same thing applies to some unions' wage demands. They are giving impetus to the very steps toward automation that many workers fear. Probably the worst unemployment in the Nation is in the coal fields. There a combination of John L. Lewis and of operators bent on mechanization has left no jobs for multitudes of miners.

Certainly improved man-hour productivity is highly desirable. But the coal fields are a good example of the need for private and public efforts to help retrain and relocate men so displaced by progress. The proposals for a 35-hour week surely hold no great promise. For their first result would be to increase costs and prices—and quite possibly consumer resistance. Such resistance is widely held accountable for reduced car sales and Detroit's 12 percent of unemployment.

Increased productivity which is passed on to the consumer in better or cheaper products seems more promising as a cure for unemployment. Here is the most direct and efficient way to increase effective purchasing power—and inclination. Neither wage nor price increases can so widely distribute purchasing power and stimulate markets.

We need much better figures on unemployment. For instance, there may be an increase in figures for employment without showing any decrease in unemployment. Some unemployed were never more than partially employed. Some States report more accurately than others.

But unemployment is much more than statistics; it is people, and aid should be shaped to help people help themselves. Long-range planning is needed. But right now in several depressed areas especially bad conditions exist and may well require special measures. Spot treatment of these areas—with Federal loans, if necessary—would be wiser than general Federal spending programs to stimulate the economy. Washington may be the ultimate backstop for unemployment relief, but it should not be looked to as the primary provider of employment.

## Unfinished Business Outdoors

EXTENSION OF REMARKS

OF

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a very fine article by the distinguished junior Senator from Oregon [Mr. NEUBERGER] entitled "Unfinished Business Outdoors," from the New Republic of March 9, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNFINISHED BUSINESS OUTDOORS

(By RICHARD L. NEUBERGER)

Jefferson may have ruminated on the incredible outdoors as he rode his stallion Eagle through the Virginia woods, but there was then time for such contemplation. Franklin D. Roosevelt could identify each tree in his green arboretum at Hyde Park. When he was in the outdoors he said he felt exactly like Antaeus, the mythical giant of old, who gained strength just by touching the earth again. Yet would F.D.R. have felt this way had he not been bound to a wheelchair?

Today, a public personage must worry about headlines and press releases, about TV shows and shaking the right hands, about banquet speeches and political rallies, about using every moment at cocktail parties for a contact which will further his career. Who can think of robin redbreasts or pronghorned antelope? Teddy Roosevelt might have been a man who liked to ride his favorite mustang counting the few remaining bison of the plains; he even could make a lonely bivouac in the Yosemite with bearded John Muir—while his Secret Service guards had been banished to the inn, far away. But there were sophisticates who insisted that Teddy Roosevelt never really grew up.

True, President Eisenhower likes to cast a dry fly and flush a covey of quail, but not under the circumstances required of most of those who put him in the White House. The private hunting preserves and exclusive ranches of his wealthy friends have been the locale of most of Mr. Eisenhower's forays into the outdoors. The average fellow would be a poacher if he invaded these precincts. The President, for all his love of the open sky, likes to be back at a candle-lit manor house by nightfall. His is not the language of the man who must share a crowded public campground, stake to stake with the other fellow's pyramidal tent.

For some inscrutable reason, the question of conservation lacks glamor. It may be that protecting birds and bees is too unsophisticated for the editors, columnists and VIP's by whom most politicians set great store. The fate of a salmon pilgrimage, waterfowl flock or spruce forest looms as pallid fare to people who think they carry the fate of nuclear testing or a balanced budget on their shoulders. One rarely can cause a ripple at a Washington reception by expressing concern over the destiny of moose grubbing for algae in an upland lake. Indeed, I rather fear that a political leader who talked about such things might be written off as a backwoods yokel by those who have custody over who gets banner headlines or billings on the TV panel shows.

Yet the issues in the outdoors mean a great deal to many less exalted citizens. Last year 59 million people visited the national parks and 68 million migrated to the more numerous national forests. Some 20 million Americans hold fishing licenses; 15 million having hunting licenses. Despite the inevitable duplication in such compilations, the totals are impressive. And to these must be added the millions active in the Audubon Society, garden clubs, Boy and Girl Scouting and similar projects. Izaak Walton League chapters in my State often have more sustained attendance at meetings than either chambers of commerce or trade unions.

I remember the grizzled Idaho frontiersmen in the Lochsa River country who told me how they had killed off the mountain lions that were devouring their herds and flocks. With the lions gone, deer multiplied astronomically. When the forage ran out, the multitude of deer was driven to eating bushes and young saplings. Flash floods surged off the denuded hillsides, destroying infinitely more livestock than ever the mountain lions had taken. Nature's delicate balance had been upset.

The issues are of far greater complexity today than on the old frontier. Can we safeguard crops from insects without eliminating birdlife? If adequate financing is not assured for dams and reservoirs, will we make effective use of our cheapest and most perpetual source of energy—plumes of tumbling water? If we sacrifice the outdoors to subdivisions and supermarkets, where will 200 million Americans take their leisure in 1975? Are television sets and concrete stadiums to be our sole recreation?

And always there is the specter of the Soviet Union—with forests and mines that have never been tapped, with four dams under construction to surpass our own Grand Coulee, with its trunkline railroads being electrified in order to save precious petroleum, with fisheries and waterfowl marshes beyond measurement.

If I were one of the politicians who aspired to lead the United States during the next 8 years (which I am not), these are a few of the issues in the realm of conservation which I would be thinking about very intently:

Some 68 million Americans camp, fish, or hike each year in our national forests. Yet, when private lands surround these public preserves, people have been assessed entrance fees as high as $25 to enter their own domain. The Government has authority to prevent this, and it should be used. More than 1.5 million acres in Colorado alone are dominated by private interests, and similar situations exist in other Western States.

Such pesticides as dieldrin have been effective in destroying plant pests like fire ants, but often all birds and small game animals perish in the process. Doves, bobwhites, rabbits, and even deer are dying with the gypsy moths. Dieldrin is said to be five times as deadly as DDT, which already had caused concern over its lethal impact on geese, ducks, quail, and similar birdlife. A lot of research by Federal agricultural scientists is required, because some rural counties are literally being saturated with pesticides sprinkled from planes and helicopters. The Boston Herald has warned that these poisons may do more harm than good.

President Eisenhower's famous $77 billion budget is bad news for the American outdoors. Funds are cut for grants to clean up stream pollution, although pure water supplies are an ever-increasing national need. Forest Service funds for recreation and public use have been reduced 15 percent, despite more extensive pressure than ever on campgrounds, roads, and trails. Cooperative tree-planting funds, between Federal and State agencies, are trimmed in the President's budget by approximately 33 percent. Fisheries research is given only a lick and a promise, although migratory salmon runs are in constant peril.

The wilderness preservation bill, which would give statutory protection to the relatively few scenic acres still as primitive as when Lewis and Clark went west, deserves earnest consideration by the Senate and House. Senator MURRAY and I held hearings in the Western States on this legislation last November. Its support came mainly from recreationists, the opposition from those who would fell the trees or mine the land within wilderness solitudes. The bill needs modifying amendments but its purpose is right. Why not spare a few museum pieces of the original America? Central Park might bring a lot of money to city hall's coffers if sold for real-estate promotion, but what New Yorker sound of mind would trade Central Park for such a quid pro quo?

After a terrific battle with the outdoor-advertising lobby, Senator KUCHEL, of California, and I were successful last year in having adopted a bill to provide a bonus for any State which would accept Federal standards for safeguarding scenery along the 42,000-mile Interstate Highway System. This struggle has now shifted to State legislatures, where the signboard owners and their trade-union associates continue high-pressure tactics. Despite our victory in Congress, this will be meaningless unless legislatures take the carrot of the one-half of 1 percent bonus offered for keeping Federal-aid roads free of the clutter of billboards.

The great river-valley experiment along the Tennessee is in danger of stagnation because the administration has been loathe to recommend the appropriations necessary to build steam plants to keep pace with load needs. A self-financing bill sponsored principally by Senators HILL and GORE passed the Senate last year but was held up in the House Rules Committee. Renewal of this legislation is essential to survival of the Tennessee Valley Authority.

In the Pacific Northwest, where the mighty Columbia River contains 40 percent of the country's latent hydroelectricity, a somewhat similar program is urgent. This would be a Columbia River Regional Power Corporation bill, permitting the system of Federal dams like Grand Coulee and Bonneville to use their own revenues for the purpose of adding new and desperately needed powerplants. In spite of the fact that existing dams on the Columbia have collected gross revenues to date of more than $500 million, they still must go hat-in-hand to the Budget Bureau for funds. This has retarded development, and has caused the country's highest rate of unemployment in a region which should have unlimited quantities of low-cost power for new industrial payrolls.

Senator HUBERT HUMPHREY'S Youth Conservation Corps bill, creating a revival of the CCC, would furnish a contingent of young Americans to help restore the facilities which furnish recreation in the outdoors. Our National Parks and Forests received their greatest rehabilitation a quarter of a century ago when F. D. R. organized the Civilian Conservation Corps and sent them into the western fastnesses with trail-building equipment and mobile kitchens.

The agenda of unfinished business is long, but I believe these few items are illustrative. Even a bus driver in Brooklyn, who may never see the Yosemite or Mount Hood, does not want such places defiled or exploited. He feels better about his country when he knows that these places exist and are protected. Both in 1952 and 1956, some of my friends and I tried to get a major role for conservation speeches on the agenda of the Democratic National Convention. Obviously, we failed. Yet, I think it would have been good for the country, and it might even have been good politics.

## Importation of Crude Oil and Residual Oil

EXTENSION OF REMARKS
OF
## HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. BURKE of Massachusetts. Mr. Speaker, the effect of the President's action a week ago on imposing drastic curbs on the importation of crude oil and residual oils has resulted in widespread criticism throughout New England. The unsympathetic attitude of the present administration toward my own State of Massachusetts has been evident for many months. The administration is engaged in a policy of creating unemployment on one hand and now we find the President making a decision that will result in increased fuel costs to industry in my area.

The pleas made by Massachusetts Congressmen including myself have fell on deaf ears. Responsible businessmen have made their feelings known to the administration. The leading newspapers in the Greater Boston area have written sound editorials pointing out the fact that this act of the President will do more harm to the New England area than any other by the administration.

It is my firm belief that the President should reconsider his action on this matter. Certainly, decisions of this kind which have such a far-reaching effect on the economy of the entire New England area should be given full consideration.

My responsibility is to the people of my district. I strongly object to the action of the President. If he were a member of my political party I would be sitting on the steps of the White House waiting to inform him in no uncertain terms of my strong feelings on the matter.

The time has come for the present administration to take a look at New England and readjust its views toward its economy.

Under leave to extend my remarks in the RECORD, I include the following editorials, telegrams, and letters:

[From the Quincy (Mass.) Patriot-Ledger, Mar. 9, 1959]

POOR REPRESENTATION

New England Members of Congress have failed miserably to protect the welfare of their region.

From all indications, President Eisenhower is going to extend restrictions on oil imports—this time by making voluntary ones permanent.

To be sure, New England Members of Congress have protested. They have even begged. But still they have failed.

Few, if any other, measures undertaken by the Eisenhower administration have done as much harm to the northeastern United States as the imposition of oil import quotas.

And the tragedy is they cannot be justified on any grounds.

Disregard, for the moment, any arguments about the need to preserve domestic oil for national defense and to trade with other countries.

If oil import restrictions could create more jobs in Texas and Oklahoma than they jeopardize in New England, the Eisenhower administration would have a case.

But this is not the situation at all. Texas and Oklahoma oil producers simply want to market all the petroleum they can find.

They claim that it is necessary for the United States to have a large oil producing capacity in case of war.

This is merely propaganda to conceal their desire for bigger and bigger profits.

The United States has sufficient oil producing capacity right now for a big war. For if a big war were started, it would be over quickly.

In case of a limited war, the United States would not be cut off from all foreign oil sources. In fact, in the case of oil from Canada, it is piped in and therefore free from enemy action on the high seas.

As long as foreign oil is available, the United States should burn as much of it as possible in order to conserve the domestic supply.

Defense purposes aside, the existence of a large supply of domestic oil prevents foreign suppliers from raising their prices unnecessarily.

The relatively few jobs oil import quotas may provide in Texas and Oklahoma are being far outweighed by the penalty forced upon New England.

New England has few natural resources. Its only indigenous source of energy is waterpower and this is not sufficient when converted to electricity to run all its factories.

If New England is to avoid decay, it must have another inexpensive source of power. Fuel oil meets this requirement better than coal. And energy from atomic power at competitive prices is still a long way off.

Oil import restrictions force New Englanders to pay higher prices for fuel to heat homes and run factories.

We do not know if New England Members of Congress could have persuaded Mr. Eisenhower to change his mind on this matter.

But we believe that they could have tried harder.

Little attention appeared to be given by New England Congressmen until Mr. Eisenhower extended the temporary restrictions briefly until permanent ones were ready.

Various explanations have been given for Mr. Eisenhower's stand. Cynics say that he is still paying off his election debts to Texas oil interests.

It is true that Texas does wield a great deal of influence in Washington. Both Houses of Congress are controlled by Texans.

President Eisenhower must deal with Senator LYNDON JOHNSON and Speaker SAM RAYBURN in order to get his legislative program through Congress.

But we believe that if New England had an impressive spokesman, particularly in Republican ranks, the administration would have had a difficult time maintaining its position.

Granted there would be fewer jobs in the oil industry in Texas and Oklahoma if there were no restrictions on petroleum imports.

But this is more than counterbalanced by any one of the number of elements in the picture.

The United States must trade with other nations if it wants to check the spread of Russian influence and to raise its own standard of living. We know of no better commodity to import than oil.

In order to appease Texas oil interests and their representatives in Congress, the Eisenhower administration hurts relations with friendly foreign nations, permits the depletion of U.S. reserves, and harms the economies of densely populated seaboard States.

Ineffective as they have been to date in this field, New England Members of Congress must continue to fight oil import restrictions.

Their region's very economic health depends upon their removal.

---

[From the Quincy (Mass.) Patriot Ledger, Mar. 17, 1959]

FIGHT MUST CONTINUE

It is probably belaboring a point to continue to protest the oil import restrictions that the Eisenhower administration has seen fit to perpetuate.

Spring is around the corner and soon New Englanders who use fuel oil to heat their homes will forget about the price of petroleum.

Nevertheless, the long-range effect of these oil import restrictions upon New England is so serious that every member of this region's congressional delegation should be working to get rid of them.

Congressman SILVIO O. CONTE, Republican, of Massachusetts, is not exaggerating when he says that New England could become the Nation's No. 1 economic problem if the Federal Government's economic policy continues to work to the disadvantage of this region.

No realistic person can expect the speech Mr. CONTE prepared for House delivery this week will change the situation.

The Congressman from the westernmost district in Massachusetts, is only a freshman lawmaker.

Moreover, he has spoken after the Eisenhower administration has made up its mind to continue these oil import restrictions.

His speech will take its place in the CONGRESSIONAL RECORD next to hundreds of other offerings from Members of Congress that are presented on any given day when Congress is in session.

It is significant, however, that a Republican Congressman has attacked a decision of a Republican President. This shows that the issue transcends party lines.

As far as Massachusetts is concerned, the persons who should be in the forefront against this outrageous action of the Eisenhower administration are Senators SALTONSTALL and KENNEDY.

Of the two, SALTONSTALL should be in the stronger position since he is not only a Republican but also a Republican up for reelection next year.

At one time or another every section of the United States has asked Congress to pass legislation that is detrimental to the welfare of the Nation as a whole.

New England has been as guilty of this practice as Texas and Oklahoma have been in the case of oil import restrictions.

New England, for example, has sought Federal action to protect the textile industry from foreign competition when such protection could not be justified.

Members of Congress from New England have intervened on the behalf of New England shipyards that were being underbid by more enterprising shipyards in other parts of the country.

But in the case of oil imports, New Englanders have no apologies to make.

As we pointed out in an editorial March 9, a day before the Eisenhower announcement, oil import restrictions cannot even be defended on the grounds they protect more jobs in Texas and Oklahoma than they imperil in New England.

In the long run, New England will only prosper if there is freer trade among nations. New England does not have many natural resources. It does not produce a basic farm crop, with the possible exception of potatoes in northern Maine.

If it is to support large numbers of people, New England must import raw materials and engage in manufacturing that requires relatively high degrees of skills.

The New England textile industry, for example, cannot even compete with other sections of the country much less the Japanese because it is not a skilled manufacturing process.

New England does have a great asset in its seacoast. This enables it to import raw materials from all over the world cheaply.

New England should be allowed to import oil without restrictions as long as the domestic oil producers are not suffering.

And, rest assured, the domestic oil producers are not suffering. They merely want to increase their profits at the expense of the rest of the country and to the detriment of American foreign relations.

We congratulate Congressman CONTÉ for placing himself on record against the Eisenhower oil import restrictions.

We hope that other Members of Congress from New England will show signs of waking up.

They will get nowhere if they limit their efforts to roundrobin letters sent to the White House at the last, futile minute.

---

FEBRUARY 26, 1959.

ADMINISTRATOR,
*Office of Civil and Defense Mobilization, Washington, D.C.*

DEAR SIR: Enclosed is a copy of a telegram received from the vice president of the New England Council with reference to the proposed action of including residual oil in import quota restrictions.

I would like to go on record as being strongly opposed to this proposed action.

Would you keep me advised as to the developments on this matter.

With kindest regards, I am,

Sincerely yours,

JAMES A. BURKE, *Member of Congress.*

[Enclosure.]

---

BOSTON MASS.,
*February 19, 1959.*

Hon. JAMES A. BURKE,
*House of Representatives,*
*Washington, D.C.:*

Rumored that Office of Civil and Defense Mobilization and Gerald Morgan, White House staff, now planning inclusion of residual oil in import quota restrictions. New England Council opposes such inclusion and urges your help.

GARDNER A. CAVERLY,
*Executive Vice President,*
*New England Council.*

---

WELLESLEY, MASS.,
*March 4, 1959.*

Hon. JAMES A. BURKE,
*House of Representatives,*
*Washington, D.C.:*

Understand White House presently considering mandatory restrictions on imports of residual fuel oil. At the least this will be an economic blow to New England due to increased fuel costs. One percent shortage in winter of 1947–48 drove New England fuel costs up at rate of at least $100 million annually. In addition with domestic oil industry incapable of making up artificially created shortages and oil burning equipment unable to use substitute fuels parts of New England may be completely without suitable fuel. Urge your intervention to prevent this action which could seriously damage New England economy.

JOHN P. BIRMINGHAM,
*President, White Fuel Corp.,*
*Boston, Mass.*

THE NEW ENGLAND COUNCIL,
FOR ECONOMIC DEVELOPMENT,
*Boston, Mass., February 11, 1959.*

To: New England delegation.

From: Gardner A. Caverly, executive vice president.

Subject: Residual fuel oil importation.

I am enclosing for your interest and information a copy of a recent letter to Mr. Leo A. Hoegh, Director of the Office of Civil and Defense Mobilization, concerning residual fuel oil importation.

As you will note from the letter, the membership of the New England Council is deeply concerned about this matter and vigorously opposed any restrictions on the importation of residual oils.

If we at the council may be of any help to you in this matter, please do not hesitate to contact us.

[Enclosure.]

---

THE NEW ENGLAND COUNCIL,
FOR ECONOMIC DEVELOPMENT,
*Boston, Mass., February 10, 1959.*

Re: Residual fuel oil importation.

Mr. LEO A. HOEGH,
*Director, Office of Civil and Defense Mobilization, Washington, D.C.*

DEAR MR. HOEGH: We are advised that your office is once again conducting an investigation of imports of crude oil and products and their impact on national security. We would appreciate your including this statement in the RECORD.

The New England Council, a nonpolitical, privately sponsored economic development organization for the six-State area, and composed of approximately 3,000 members, has been historically opposed to any restrictions curbing the importation of residual fuel oils. Our area is one of the most heavily industrialized sections of this country and one of the largest users of residual oils.

The following statistics on the consumption of residual oil in New England are taken from U.S. Bureau of Mines:

| State | Barrels | Percent of New England |
|---|---|---|
| Connecticut | 12,712,000 | 21.0 |
| Maine | 5,063,000 | 8.0 |
| Massachusetts | 28,744,000 | 48.0 |
| New Hampshire | 2,096,000 | 3.5 |
| Rhode Island | 11,114,000 | 18.5 |
| Vermont | 380,000 | 1.0 |
| Total, New England | 60,109,000 | 100.0 |

District 1, the east coast, consumes approximately 289,324,000 barrels of residual oil annually. Of this amount, New England alone consumes almost 30 percent. Total U.S. sales of residual oils amount to 540,460,000 barrels and district 1 consumes roughly 54 percent of the U.S. total. It is obvious, therefore, that the economy of the six New England States is extremely sensitive to any price fluctuations or differentials of residual oil.

Because of the multiplicity of our small industrial concerns and our great distance from fuel sources, the cost of fuels are a real factor in our economy.

We would like to quote for the record, the following policy statement concerning residual fuel oils, adopted by the board of directors of the New England Council on September 12, 1957.

"The economy of New England is heavily dependent upon an ample supply of fairly priced fuels. These fuels are vital to the healthy condition of this area, which has long suffered a substantial rail and freight

disadvantage for its raw materials and manufactured goods.

"Therefore, the New England Council vigorously opposes artificial controls which tend to increase the price of fuels or curtail the amount of fuels entering New England. The council specifically opposes any restrictions curbing the importation of residual oils."

Sincerely yours,

GARDNER A. CAVERLY,
*Executive Vice President.*

---

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF CIVIL AND
DEFENSE MOBILIZATION,
*Washington, D.C., March 5, 1959.*

Hon. JAMES A. BURKE,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. BURKE: This will acknowledge your letter of February 26 with enclosure, expressing your interest in the oil imports matter. Your views have been made a part of the record.

Careful consideration has been given to the problems of the citizens and of industry in the New England area during the course of our investigation.

My findings and recommendations have been presented to the President. He has directed a continuation of the voluntary oil import program so that he may study the report. Any information must emanate from the White House.

Sincerely,

LEO A. HOEGH.

## Visit of Prime Minister Harold Macmillan—Letter of Ukranian Congress Committee of America

---

EXTENSION OF REMARKS
OF

### HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. LAUSCHE. Mr. President, on March 18, 1959, the Ukranian Congress Committee of America, through Dr. Leve Dobriansky, of Georgetown University, wrote a letter to the President of the United States in connection with the forthcoming conference of the President with Prime Minister Harold Macmillan.

Because of the pertinency of the letter to the general problems under consideration, I ask unanimous consent that the text of the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA,
*March 18, 1959.*

The Honorable DWIGHT D. EISENHOWER,
*The White House,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Your momentous meeting with Prime Minister Harold Macmillan will constitute the fourth important Anglo-American conference in the past 5 years. On each of the previous occasions this committee prayerfully hoped for the full success of the meeting. With reverent emotion in the present crisis it now does so again.

As in the past, we wish also to take this opportunity to briefly express certain views concerning the major subjects that will be discussed at this meeting. In our judgment, despite the technological space and missile novelties of the past 2 years, the paramount foreign policy problems we face today are essentially no different from those in 1957 when the third Anglo-American conference took place. In our communication at that time (CONGRESSIONAL RECORD, Apr. 2, 1958, pp. A3180–A3181) we strongly urged that systematic steps be taken to realize and implement the proposal made on April 22, 1957, by Secretary of State Dulles. His proposal was: "Let us also make apparent to the Soviet rulers our real purpose. We condemn and oppose their imperialism. We seek the liberation of the captive nations." Unfortunately, little was done in this respect. The truly ultimate weapon, freedom-seeking men, has scarcely been utilized.

However, circumstances today are such that a powerful reassertion of this proposal, in the name of world peace with justice, is desperately needed. Along with countless patriotic Americans, we earnestly hope that the results of this conference would underscore this proposal and that dedicated efforts would be made to further our real purpose through the rich variety of peaceful means at our disposal. This can be done with great measure of success, but it requires sustained effort and detailed planning. Nevertheless, at this moment a verbal reassertion of the proposal would in itself decisively rebuff the devious propaganda offensive of Moscow on the Berlin issue and would appropriately give the lie to Mikoyan's latest statements that we are prepared to accede to the status quo of Eastern Europe and Asia.

The manifold significance of a policy statement along these lines, and particularly at this time, may further be seen from an enumeration of the following views. These present views still receive their main logical support from the more extensive observations and explanations presented in our three previous memoranda:

1. Berlin. Your firm position on our interest in the permanent freedom of West Berlin cannot but draw the respectful admiration of every freedom-conscious person, here or abroad. The united support of this position by our Congress reflects the healthy mood of our people. To yield on principle in this case means to irreparably corrupt our general moral posture in world leadership.

In our view, so long as our position regarding the captive nations is clearly and unequivocally maintained, Moscow can ill afford a global conflict now or in the future. History more than adequately demonstrates that imperialist Russia has always hesitated to commit its captive forces in any major war. Three times in this century alone its multi-national forces disintegrated early in the war. The factors accounting for this repeated phenomenon apply today in the face of Moscow's characteristic campaign of bluster about ICBM's and the like. Prior to World War I the Muscovites scared Europe with their alleged military steamroller.

The evidence supporting this view leads one to seriously question, and even reject, the notion that the West could not successfully meet the enemy in any ground war. Actually, this notion is only another product of our false conception of the Soviet Union. As witnessed so often in the past, the qualitative spirit of men is far more determinative than the quantitative number and arms of men. With a sound and strong foreign policy in relation to the substrate empire known as the Soviet Union our fear of Moscow plunging us into war would even be less than what is suggested here. Insecure multinational forces are hardly a basis of calculation for Moscow to risk any major conflict.

2. Flexible tactics. Diverse experience has always proved that the discipline of sustained principle insures the broadest flexibility of tactics and technique. In reality it affords the widest latitude for initiative and courses of offensive action. Thus, in the present crisis we should immediately settle for only a foreign ministers' conference and be pliably prepared to cover all aspects of the German problem as a necessary and inseparable part of the more fundamental problem of a divided and partly captive Europe. Our goal in these negotiations must steadfastly be the expansion of freedom. Anything less would be a compromise of principle. Serving this goal, therefore, flexible tactics can well strive to place all of Berlin and accesses to it under U.N. jurisdiction with strictly neutral forces and airtight guarantees.

These tactics can accommodate, too, a bold airing of the disengagement proposals. To prove that we uphold the principle of national freedom for all aspiring peoples, there is no rational cause for us to hesitate equating Western Germany with a comparable unit like Ukraine which Moscow claims is independent. Poland, Czechoslovakia and other smaller units may then be equated accordingly. Here, too, full guarantees at risk of total war must be sought. Such refreshing tactics of offensive action, rooted in the principle of expanded freedom and also in the knowledge of Moscow's gravest weaknesses, would stultify Moscow's campaign on Berlin.

3. Summit conference. Beneath all of Moscow's created crises and propaganda campaigns is its chief motivation of realizing a summit conference on its own agenda terms. The views we subscribed to in the memorandum submitted to you on the prospect of another summit conference (CONGRESSIONAL RECORD, July 16, 1958, pp. A6375–76) are equally and cogently applicable to the present situation. Although Secretary Dulles approved of these views last April, the U.S.I.A. has taken the foolish course of reducing our broadcasts to several captive non-Russian nations in the U.S.S.R. This action has doubtlessly satisfied the strategists of Russian Communist imperialism who have consistently sought the exclusion of any discussion on the captive nations in a summit agenda.

Hoping that the war threat surrounding the Berlin crisis would catapult us into an immediate summit conference, Moscow could successfully insist on this exclusion and attempt to include representatives from its various puppet regimes for the ostensible purpose of dealing primarily with the German issue. If we were to walk into this diplomatic trap, the Russian Communists could then rejoice at their greatest victory since 1920. Regardless of any advance declarations we might make, the captive non-Russian nations, for whom the goal of national independence is supreme, would virtually have their patriotic will sapped as the Moscow propaganda machine would overstress the factual omission of Western concern about them at the summit. This outcome would be one of the most unforgettable tragedies. It would immensely facilitate the consolidation of the Russian Communist empire and unquestionably embolden Moscow's penetrations into the free world.

4. The Middle East. The planned Berlin crisis is not only a springboard for this sort of summit conference but also a smokescreen for Moscow's infiltrative operations in the Middle East. We might well prepare for the next crisis in this area. Historically, the Russian imperialist advance in the Middle East is only a repetition of cycles witnessed in the 19th and preceding centuries. In all these cycles, including the present one, this advance would not be possible if the non-Russian nations in the Caucasus, Ukraine, Turkestan and others were free and independent. Thus, once again, the strategic importance and value of these non-Russian nations in the U.S.S.R. can be observed. But

again, unfortunately, we not only choose by far more expensive and less effective ways of trying to thwart the imperialistic advances of Russian communism but also practically ignore and event counteract the value of this strategic factor.

5. Actionism against reactionism. We heartily applaud the moral stand you took in your address to the people last Monday evening on the Berlin crisis. As free men and a free nation we cannot but face the realities you described so well with firm principle and fearless resolve. However, we should begin to face up to the nature of our enemy realistically and knowledgeably. We should have no fear whatsoever to designate things by their proper names. To designate our adversary as "the Soviets" is not only inaccurate and misleading but also unfair and unjust to the 110 million non-Russian captives in the prison of nations called the Soviet Union. Our intellects cannot escape the determining facts that the controlling center of this basic imperium is Moscow; that it was the invading Russian hordes under Trotsky who destroyed the independent non-Russian Republics in 1920; that the policies of the U.S.S.R. are dictated by the Russian Communist Party. The same enemy that challenges us is the enemy that destroyed the independence of these non-Russian nations; namely, Rusian Communist imperialism. We faced up to the fact of German Nazi imperialism with no common guilt placed upon the German people. Why now are we so squeamish about the real identity of our present enemy?

Mr. President, your remarks about the future of tensions and challenge that faces us were sobering and sound. For us they implicitly affirmed the fact that cold war activity is inherent in Russian Communist totalitarianism. They clearly indicated an awareness that the deceitful pleas for peace and coexistence by the Kremlin colonialists are only integral parts of this activity. In fact, historically, the unprecedented Russian Empire was largely built upon the techniques and weapons of such neither war nor peace activity—indeed, from Ivan the Terrible down to Nikita the Sanguine.

Nevertheless, these unremitting probings and tests, taken in the cumulative aggregate, will always result in some net gain for Moscow, so long as we passively confine ourselves to our side of the 50-yard line. In the long run, by only continually reacting to situations created by them, we scarcely face a hopeful prospect. No team has ever won anything on the complete defensive. Our recent signing of bilateral pacts with Iran, Turkey, and Pakistan was necessary and commendable, but this was still defensive and reactionist. We possess all the plentiful resources of actionism for expansive freedom and yet, pitifully, allow them to fall into disuse. Last September the Vice President actually said as much when he stated that "It is ironic in the extreme that the United States should ever be cast in the role of opposing legitimate nationalist movements." In no area is this impression more felt than in that of the captive non-Russian nations in the U.S.S.R., the one area which affords the most significant psychological, diplomatic, cultural, and political possibilities for us. Prime Minister Macmillan on his visit to Kiev talked with Ukrainian officials. In this connection, it is hoped that his reactions may somehow become known.

Once again, we wish you and the Prime Minister the fullest measure of success in this fourth Anglo-American conference. We hope that some of these views will receive your due consideration. We are among many who do not think a nuclear war is unthinkable or a ground war cannot be successfully waged against colonial Moscow. But, in total agreement with the recent special committee report of the American Bar Association, we are convinced that neither is necessary if we support a strong independence movement bebind the Iron Curtain.

With God's many blessings upon your health, work, and leadership, I am

Sincerely yours,

LEV. E. DOBRIANSKY,
*Georgetown University, Washington, D.C.*

## As the First Step Toward National Unity on the Labor-Management Front the New Jersey Labor Herald Proposes a Statewide Conference in New Jersey

EXTENSION OF REMARKS
OF
## HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. THOMPSON of New Jersey. Mr. Speaker, in a recent speech at the University of California, Deputy Under Secretary of Labor Millard Cass pointed out that labor and management can and should do more for themselves and for our country by trying to get along together than by trying to harm each other.

Now the New Jersey Labor Herald, a splendid publication officially endorsed by the New Jersey State Federation of Labor, has called for a statewide conference in New Jersey as a first step toward national unity on the labor-management front.

It is expected that in the near future representatives of management and labor in New Jersey will meet on an informal basis for the purpose of laying the groundwork for a statewide conference. I want to say that I welcome such a conference and wish both management and labor every success in this great endeavor.

I include here an editorial from the February 1959 issue of the New Jersey Labor Herald on this subject:

NOTHING IS IMPOSSIBLE FOR MEN OF GOOD WILL

Since its inception more than 20 years ago, the Labor Herald has consistentlly advocated a commonsense approach to the complex problem of labor-management relations. We've not only preached a policy of live and let live, but the record will show that we sincerely practiced that constructive philosophy.

This writer, while a member of the New Jersey Legislature, not only conceived the idea of creating a State-sponsored instrument designed to bring together these two important elements in our society, but also had the privilege of piloting to enactment the necessary legislation for the project.

The result, achieved with the aid and encouragement of former Gov. Alfred E. Driscoll, stands today, after more than a decade of service, as a signpost pointing toward the ultimate goal—industrial peace.

We refer, of course, with pardonable pride, to the Institute of Management and Labor Relations at Rutgers University; the only educational enterprise of its kind in this country.

In the December edition of the Labor Herald we once again, in the spirit of Christmas, addressed ourselves editorially to the masters of industry, in a sincere effort to penetrate the synthetic barrier that for so long has delayed labor-management accord, without which there can be no lasting prosperity in America. The editorial in question is reprinted below.

Former efforts to reach into the hearts and minds of our industrial leaders proved fruitless. Antagonism, generated over the years on both sides of the industrial relations question seemed to have become chronic. However, our most recent effort found a responsive chord in the heart of the newly elected president of the National Association of Manufacturers, Mr. Stanley C. Hope, whose reply to our proposal is submitted herewith.

The mechanics of bringing together the leaders of labor and management, on the national level, we have submitted to AFL–CIO President George Meany, where it rightfully belongs. Mr. Meany has often evinced his readiness to meet with the leaders of NAM and U.S. Chamber of Commerce, more than half way, in the interest of more friendly relations.

We feel confident that Mr. Hope's desire for a frank and factual discussion of the ingredients for industrial peace, will be entirely satisfied.

In the meantime, after listening to the excellent address on this very subject by President Lansing Shield, of the New Jersey Chamber of Commerce, at the recent congressional dinner in Washington (published elsewhere in this issue), we respectfully submit that a real beginning can be made by implementing the "meat" of that speech on the State level.

The forum of the Institute of Management and Labor Relations at Rutgers would be an ideal locale for such a Garden State industrial conference.

The editorial of last December follows:

"THE WITHERED OLIVE BRANCH

"In the spirit of 'The Prince of Peace,' whose birth is celebrated at this season, we once again etxend a sincere invitation to the masters of American industry, to cease sharpening their spears, and agree to confer with leaders of organized labor, in the hope that our tremendous joint powers may, at long last, be devoted to the future welfare of our country.

"Surely, the millions of dollars wasted by the National Association of Manufacturers and U.S. Chamber of Commerce, in financing hate-labor campaigns, could more profitably be utilized in helping such fields as higher education, or, even the sincere enhancement of sound labor-management relations. To fair, hard-headed business executives this certainly must appeal as good business.

"The only losers when and if labor-management peace is finally achieved, would be the hired mercenaries of NAM who would lose their soft jobs. These parasites thrive solely during travail, generated mostly by themselves.

"In a recent speech at the University of California, Deputy Under Secretary of Labor, Millard Cass, pointed out that 'Labor and management, can and should do more for themselves and for our country by trying to get along together, than by trying to harm each other.' Such desirable cooperation should not be too difficult of achievement, he said, when one considers the fact that over the past decade the total working time lost by strikes, has been only one-third of 1 percent.

"This is a remarkable record when more than 80,000 collective-bargaining contracts are negotiated annually, 95 percent without a strike or lockout.

"Labor-management accord could usher in a new era of enlightened capitalism that would excite the admiration of the entire world. In fact, it is the sole hope for the survival of free enterprise in America, as organized labor is the greatest bulwark against the Communist menace.

"An excellent beginning has already been made in several important industries of

national magnitude, including the sprawling electrical field. It is interesting to note the success of periodic conferences, on the national and regional levels, by the National Electrical Contractors Association and International Brotherhood of Electrical Workers, which deal with every phase of the industry through a council on industrial relations. There are a number of other industries in which joint energies are being channeled into plans for the common good.

"They are succesful because they spell good business, higher production and better profits and wages, without benefit of Government meddling.

"We respectfully submit the suggestion for convening of a semiannual labor-management assembly, preferably in Washington, sponsored but not dominated by Government composed of 10 representatives each, from labor and management. We are confident that AFL–CIO President George Meany would welcome such an opportunity.

"Here is a major objective for the newly elected president of the NAM, Mr. Stanley C. Hope who, because of his long and distinguished business career, must realize the potentialities of such an accord. Benefits that could flow from it, for the workers, for management and, what is of utmost importance, for this last bastion of freedom, in a world torn asunder by power-maddened tyrants parading under the blood-soaked banner of communism, stagger the imagination."

THE NAM RESPONSE

"Dear Mr. Hermann: I appreciate the spirit which prompted your editorial 'The Withered Olive Branch,' and your letter to me of January 5. In common with virtually all employers of labor that I know, I believe that labor and management can do more for themselves and for their country by trying to get along together than by trying to harm each other, as Under Secretary of Labor Millard Cass so correctly pointed out.

"However, I am compelled to take issue with you on the basic premise of your editorial. You say that the National Association of Manufacturers wastes millions of dollars on hate labor campaigns, which benefit only the hired mercenaries on the NAM staff. This association does not and will not engage in hate labor campaigns. However, we do uphold the principles of a free, competitive economy and attempt to create public understanding of sound fiscal and economic policies.

"American management, and NAM, would be more than happy to see such differences as exist discussed on the basis of fact and not fiction. We believe that if both sides of the bargaining table will acknowledge truth when it is presented, and then be willing to go where the facts take them, the kind of cooperative effort for the good of everyone which you hope for will become a reality.

"It cannot become a reality, however, if both sides continue to insist that only their own views are right, regardless of the facts, and insist on complete acceptance of their own viewpoints as the price of cooperation.

STANLEY C. HOPE,
*President National Association of Manufacturers.*
NEW YORK, N.Y., *January 28, 1959.*

## National Rice Week

EXTENSION OF REMARKS
OF
## HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. GATHINGS. Mr. Speaker, the Wynne Progress, a weekly newspaper printed at Wynne, Cross County, Ark., has for its editor Mr. W. M. (Bill) Courtney, one of those newspapermen who feel that their newspaper should carry both the news and the editorial comment to render the greatest service to its readers.

Bill Courtney has written a splendid editorial on the wonder food, rice, which is a part of the observance in this country of National Rice Week. This editorial points up the importance of rice as a food and as one of the most valuable segments of our American agricultural economy.

Alluding to the fact that rice is a $235 million crop to American farmers, Bill Courtney points out that—

If the American public would serve rice only three times a week, surpluses will disappear, acreage allotments will increase, and prosperity will be increased for rice growers, millers, dryers and all in businesses related to rice.

Bill Courtney's splendid newspaper was one of the many in the Nation which reprinted the zestful and tasty recipes for rice dishes which were gathered by me several years ago to show the various ways rice might be used in the American diet. Bill Courtney's editorial carries on this campaign to increase the American consumption of rice and to encourage and support this important agricultural endeavor. It is a pleasure to call attention of the Members to Mr. Courtney's full editorial:

[From the Wynne (Ark.) Progress, Mar. 12, 1959]

NATIONAL RICE WEEK

This is National Rice Week and a good time to give due recognition to one of the most interesting and fascinating of agricultural pursuits in the United States—the growing of rice.

To many of us the word "rice" brings to mind paddies in a far-off land with men and women laborers standing knee-deep in water, planting or cultivating the world's most important food crop.

The picture of rice growing in this country is more modern—about as different as a cave man's drawing and a Walt Disney production. The U.S. rice industry has become the world leader in the technology of rice growing and marketing. Here rice is produced from airplane seeding through mechanized harvesting. Modern methods have increased yield, brought new quality to the grain, and introduced milling and packaging processes before undreamed of.

But of the most importance to this area of the country is the fact that rice is a leading crop and its economic importance is steadily rising. It is the No. 1 food crop in Texas, Louisiana, Arkansas, and Mississippi. The total rice crop in the United States is now about 4.7 billion pounds annually from 1,431,200 acres under cultivation. About half of this is exported. But it is high time that more attention be given to the value of rice as a food in this country.

An association called the Rice Industry was formed a little more than a year ago at a meeting in Houston to do just that. A group of 100 rice leaders, including most of the leading producers, millers, and dryers of this area, joined together to increase the present U.S. consumption of rice so that its domestic use will be doubled. They have a promotion program to introduce rice to more people everywhere in our Nation. The per capita consumption of rice as a food in the United States is now about 6 pounds, or 1.6 servings per week. If the American public will serve rice only three times a week, surpluses will disappear, acreage allotments will increase, and prosperity will be increased for rice growers, millers, dryers, and all others in businesses related to rice.

Rice is a $235 million crop in America and is of particular concern to this area. The efforts of food nutritionists to call the attention of the American people to the food values of this native crop and to the attractiveness of rice as a tasty table dish should have the support of everyone.

## Small Business Administration 11th Semiannual Report, December 31, 1958

EXTENSION OF REMARKS
OF
## HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. McCULLOCH. Mr. Speaker, following 5 years of existence as a temporary agency the Small Business Administration was granted a permanent status by the 85th Congress. President Eisenhower had urged this status for the Small Business Administration. The President has further evidenced his confidence in the work of this agency by designating its Administrator, the Honorable Wendell B. Barnes, a member of the President's Cabinet Committee on Small Business and on all important interagency groups which either directly or indirectly deal with matters affecting small business.

The SBA Administrator is chairman of the Loan Policy Board which has progressively and affirmatively broadened the scope of the agency's lending activities within the proscribed limits of the Small Business Act, as amended.

The 85th Congress added many important duties and responsibilities on the SBA in the amended Small Business Act of 1958. The last half of 1958 saw the Small Business Administration get started on a pioneering effort in the financing of small-business enterprises through creation of privately-owned and privately-operated small business investment companies. This activity is the outgrowth of enactment by Congress on August 21, 1958, of the Small Business Investment Act. The Congress also added authority to the Small Business Act in the fields of Government procurement, Government disposal of property, research, and development, and cooperation with State agencies and public and private educational institutions, with limited grants for research into problems of small business. Of course, amendments increasing the ceiling on loans to single business organizations to $350,000 and the lowering of the interest rate to 5½ percent on SBA's share of loans, either direct or in participation with local banks, are important to small business.

These duties which have been added to the Small Business Administration's responsibilities and the granting of a permanent status are achievements of lasting benefit to the small-business sector of our economy. Hence, the semiannual reports of the Small Business Administration take on an added interest and im-

portance not only to Members of Congress, but to businessmen throughout our Nation.

Mr. Speaker, as a member of the House Small Business Committee which has played an important role in the establishment of the Small Business Administration and as the senior Republican Member of that committee, I am pleased to call attention to SBA's 11th semiannual report. I also request that the Small Business Administration's release describing a few of the important areas covered in the report be included at this point. The release follows:

Activities of the Small Business Administration in the 6-month period ending December 31, 1958, rose to new heights, Administrator Wendell B. Barnes reported to President Eisenhower and Congress today.

BUSINESS LOANS

The agency received a record number of business loan applications—4,981 requesting $282.8 million. The agency also approved a record number of loans—2,626 for a total of $119.7 million. These totals compared with 3,200 applications for $190.7 million and loan approvals for $73.4 million in the same 6-month period of 1957.

GOVERNMENT PROCUREMENT—SBA SETASIDES

Government purchases set aside for small business in this 6-month period by the Small Business Administration, the Department of Defense, and cooperating Federal civilian agencies totaled $428.5 million.

This was the greatest dollar amount of small business setasides in the first half of any fiscal year since start of the agency, Mr. Barnes said. It was almost $50 million more than the setasides in the first half of fiscal 1958.

The setaside program also resulted in 10,521 contract awards totaling $316 million to small business concerns in this reporting period as compared with 5,705 contract awards for $222 million in the same period of 1957.

NEW BUSINESS INCORPORATIONS

The number of new business incorporations reached a record high of 150,263 in 1958. The previous record was 140,775 in 1956. The report states that, although not all incorporations are of newly formed businesses, some being established businesses which formerly were operated as proprietorships or partnerships, the number of incorporations is a significant indicator of the rate of formation of new businesses, particularly small ones.

MILITARY PRIME CONTRACTS

In the first 5 months of fiscal 1959, military prime contract awards to small business were approximately $180 million higher than in the comparable period of 1958, increasing to $1,203 million from $1,023 million. Although the dollar volume increased, the small business percentage of military awards was 16.8 compared to 17.2 percent in the same period of 1958.

This lower small business percentage was due to the increased awards for guided missile systems and research and development and to the emergency procurement of petroleum in the Lebanon crisis.

DISASTER LOANS—APPROVALS AND SERVICING

During the period covered by the report—July through December 1958— the Small Business Administration also approved 422 loans totaling $4,841,548 to assist victims of disasters, including small business concerns which had suffered substantial economic injury because of drought or excessive rainfall.

SBA now is servicing approximately 17,000 business and disaster loans, including loans which were made by the Reconstruction Finance Corporation and which have been transferred to the agency for servicing.

The rapid increase in SBA's loan portfolio has added to the loan servicing problems. To meet these problems, the agency's regional offices are giving increased attention to streamlining of procedures and training of personnel. Greater stress also is being placed on financial counseling and preventive measures to forestall loan delinquencies.

APPROVAL OF LOAN APPLICATIONS INCREASES

The ratio of approvals to loan applications acted upon in the first 6 months of fiscal 1959 was 58.1 percent, compared with 52.4 percent in the same period of the previous year.

The report states that 58.3 percent of the business loans approved by the Small Business Administration in the last 6-month period were in participation with banks.

Although the ratio of participation loan approvals to total loan approvals declined slightly, the percentage of deferred participation loans increased, reversing a downward trend which has prevailed since 1955.

BANK PARTICIPATION FEES REDUCED

In April 1958, the SBA Loan Policy Board reduced by 50 percent the fees charged banks for agency participation in loans on a deferred basis. This reduction has enhanced the attractiveness of deferred participation loans to banks and is partially responsible for the increased percentage of deferred participation loans during this reporting period.

SMALL BUSINESS INVESTMENT ACT PROGRAM

The last half of 1958 saw the Small Business Administration get started on a pioneering effort in the financing of small business enterprises through creation of privately owned and privately operated small business investment companies. This effort is the outgrowth of enactment by Congress on August 21, 1958, of the Small Business Investment Act.

Designed to provide equity-type capital and long-term loans to small business concerns, the act also grants to SBA new authority to assist State and local development companies. Numerous details incident to operation of the Investment Division have been largely cleared and final regulations were issued on December 4, 1958, slightly over 3 months after enactment of the law. It then was announced that applications for licenses would be accepted.

The regulations issued by SBA emphasized the great importance of sound management of investment companies to insure accomplishment of the aims of the act. In the short time remaining in 1958, after the regulations were published, a number of applications were received by SBA and given careful review.

SMALL BUSINESS EDUCATIONAL PROGRAM

During the 6 months which ended December 31, 1958, the Small Business Administration and 45 leading educational institutions cosponsored 58 courses in administrative management for small business owners and managers.

About 1,500 small businessmen attended the courses. On a cumulative basis, the Agency has cosponsored 477 administrative management courses attended by about 15,000 small business officials since start of the program in 1954.

## Labor Legislation

EXTENSION OF REMARKS
OF
## HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 19, 1959*

Mr. GOLDWATER. Mr. President, as the Committee on Labor and Public Welfare finishes marking up the so-called labor reform bill, I believe it to be appropriate that we keep up to date with the editorial attitude of the press around the country.

The press, as is true also of the American public in general, is beginning to become aware of the fact that the bill which will be reported by the committee in this Congress will be a hope, but will not cover the field as completely as it should. In that respect, I ask unanimous consent that there be printed in the Appendix of the RECORD three editorials dealing with the subject.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

ABUSES OF PICKETING

All the sponsors of reform legislation in the labor-management field agree that some additional curbs on picketing are essential. The mildest of the measures before Congress, the Kennedy-Ervin bill, would prohibit what Senator KENNEDY has described as "shakedown picketing", the use of picket lines to force an employer to buy off a union boss. The need for such a provision is self-evident. Controversy has arisen because this very limited curb would not touch various other abuses that are no less despicable than a shakedown.

The McClellan Committee has brought to light numerous cases in which picketing has been used as an instrument of blackmail. In Flint, Mich., a Teamster Union local began picketing an employer to force him to sign a collective bargaining contract even though none of his employees belong to the union. When he refused, a fire bomb was tossed into his store, sugar was poured into truck gasoline tanks and employees were assaulted.

It is a common practice for the Teamsters to tell small employers to deliver their employes into the union—or else. The or else may be either blackmail picketing or a secondary boycott against the victim, or both. A small employer has the alternative of yielding or of watching his business destroyed. If he yields, of course, the rights of his employees to join a union of their own choice or not to join any union are grossly violated.

Under the present law employees have a right to vote in a NLRB election on whether they wish to be represented by a union. If they reject the union, however, it may nevertheless picket the plant and perhaps destroy the business and wipe out their jobs. Even in cases where the employer has recognized a union composed of his employees under the terms of the National Labor Relations Act, a stranger union is free to picket the business if the union already established there does not happen to have been certified by the NLRB.

Protection of these collective bargaining rights of employees is no less important than the protection of employers against shakedown picketing. Secretary of Labor Mitchell has proposed amendments to the Kennedy-Ervin bill that would strike at these additional abuses of the picket line. His suggestions are moderate and reasonable, but of course not sacrosanct. If any legislator, labor leader or employer can produce better or more effective methods of curtailing blackmail picketing, it is certainly his duty to do so. But these abuses ought to be dealt with (without impairing any of the legitimate rights of organized labor), and in our opinion an overwhelming majority of the American people want Congress to do its duty in this particular.

---

[From the Wall Street Journal, Mar. 9, 1959]

UNIONS AND THE LAW

Senator MCCLELLAN, whose committee has turned up so much of the corruption and strong-armism in unions, has introduced the first of five measures designed to cure some of the labor movement's ills.

His first bill sets standards to protect the union members' rights to know what goes on in their union and to require financial responsibility from all union officers charged with handling union funds. His other four bills will cover such union practices as secondary boycotts, hot cargo, picketing for purposes of organizing, and certain areas of union-management relations where the National Labor Relations Board declines to exercise jurisdiction and the States, by law, cannot. This creates a no man's land where neither Federal nor State law applies.

Unquestionably, acceptable legislation in these fields, some of it also urged by the administration bill, ought to be adopted in the public interest. There are not many well-known labor leaders, aside from Mr. Hoffa who says no new labor laws should be enacted at all, who would openly oppose more fiscal responsibility for themselves and say-so for the members, and there are a number who would be glad to see these particular reforms come about. As to some of the other restrictions Senator MCCLELLAN proposes, one may be sure a large and vocal number of labor officials will not like at all suggestion that such tools as the secondary boycott and organizational picketing should be taken from their hands.

It is not difficult to understand why they feel that way. Unions have for a very long time operated with a sort of Government carte blanche, because unions are above some of the laws, notably the antitrust statutes, to which all other citizens are answerable. Neither the McClellan nor the administration bills, for all their other merits, touch this basic area.

The freedoms from the Federal laws that restrain all the rest of us are reflected on other levels of government, too. It is not at all strange, really, that when union organizers know they are above some laws that they come to believe they are above almost all law. Not only does this attitude affect the unions; it affects local law authority as well. Police sometimes apply different standards to the law when a union is involved than they do when an individual is involved.

It is this atmosphere that needs to be changed before union leaders can be expected to acknowledge that the public interest is paramount to union interests. But before it can be changed, there must be voices in Congress and elsewhere making clear that the public interest is paramount.

There must, in fact, be many voices like that of L. R. Curtis, the attorney general of Newfoundland, who spoke out recently against violence in a loggers' strike in Canada. He said:

"As the Queen's attorney, I have nothing to do with the right or wrong of the strike. My only duty is to see that the law is not broken by either side. When there is no strike on, no citizen has any right to hold up a truck or a car on the Queen's Highway. No citizen, when there is no strike on, has a right to interfere with another man's property. No citizen, when there is no strike, has any right to obstruct another citizen.

"A thing that was unlawful before the strike is unlawful when the strike is on."

It seems to us that this view expresses a responsible understanding of the relationship of union interests and the public interest. U.S. citizens deserve no less protection. And not only the Nation, but the unions, too, would be better off for equal laws equally applied.

---

[From the Washington Daily News, March 12, 1959]

BILL OF PARTICULARS

Members of the Senate Labor Committee are working on legislation to curb the labor rackets exposed by the MCCLELLAN investigation. So far, the action does not point toward a very strong bill.

The reluctance of the Democrats on the committee, under pressure from the union lobby, to write a tight law is frightening, in view of the MCCLELLAN disclosures. Surely they can hear what Senator JOHN L. MCCLELLAN, chairman of the investigating committee, has been saying.

Just this week in a New York speech, the Senator spelled out a bill of particulars in support of stronger measures he himself has proposed to correct the abuses revealed by his long inquiry.

"The instability or lack of integrity prevalent today in labor-management relations in this country is appalling," he said.

In the investigation, we have had to deal constantly with people of low character or no character at all. Of 1,200 witnesses so far summoned, more than 200 ducked behind the fifth amendment for fear of incriminating themselves. The evils which have been exposed, he said, are outrageously cruel, corrupt, and contemptible.

"No legitimate union, properly administered by honest and decent officials, would be penalized to any extent or degree whatsoever," the Senator said. "If these provisions are enacted into law, however, the power and opportunity of crooked labor bosses and criminal elements to continue the abuse and exploitation of union members and working people in this country will be substantially curbed and reduced."

That's the issue: Whether union members and their families, the public and decent union officials will be protected; or whether, by not passing such measures, Congress continues to protect the mobsters, thieves, extortionists and murderers exposed by the McClellan committee.

How can any honest and decent union officials, or Senators of like attributes, not know on which side to stand?

## Indian Economic Development and U.S. Aid

---

EXTENSION OF REMARKS

OF

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. HUMPHREY. Mr. President, in connection with the current efforts of the Government of India to secure from $650 to $800 million in loans from the United States, the World Bank, the United Kingdom, West Germany, Canada, and Japan, to underwrite the hard currency requirements of its second 5-year development plan, I ask unanimous consent that my article, "Indian Economic Development and U.S. Aid," which appeared in a special India supplement of the New York Times, January 25, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIAN ECONOMIC DEVELOPMENT AND U.S. AID

(By the Honorable HUBERT H. HUMPHREY)

India is a land of great economic and industrial potential. Her vast natural resources fairly cry out for development. Her people are willing and able to work. And her Government recognizes the economic and political necessity of raising living standards through greatly increased production.

In November 1957, Prime Minister Nehru said that India's second 5-year plan would help her to move out of the cow dung age into the sputnik age. When Mr. Nehru speaks of the urgent need for basic economic development he is expressing the authentic aspirations of his 380 million fellow countrymen.

India is at the crossroads. She has chosen democratic institutions to govern her life and her leaders have twice taken their policies to the people in the largest free elections in the world. But if her current 5-year plan fails, one of history's greatest experiments in government by consent may fail. This would be a disaster for India, for Asia, and for the entire free world.

PIVOTAL POSITION

Mainland China has cast her lot with the Soviet Union. Japan has cast her lot with the West. India is in a pivotal position as the most powerful and influential Asian nation unalined in the cold war. This does not mean that India is neutral in the struggle between totalitarianism and democracy, because a strong, democratic and genuinely independent India is an asset to the free world, to international peace and security and to the United States.

If India is to remain free and become economically strong, her second 5-year plan, now in its third year, must suceed just as her first plan succeeded. India's first 5-year plan proved that she was capable of steady economic growth by establishing a sound economic base in which the private sector plays a large and expanding role and by avoiding an excess of governmental regimentation and controls. She succeeded in creating a healthy environment for economic development without employing the totalitarian controls. In India's drive for development she placed primary emphasis on moving toward agricultural self-sufficiency and she made substantial progress in that direction. In contrast, China emphasized heavy industry. China put steel before rice, machines before men.

Placing men and machines in proper balance, India was able to increase her national income by 18 percent, 5 percent beyond the target, by 1956 when the 5-year period ended. In the same period her per capita income rose in spite of a continuing rise in population. Educational opportunities were also extended.

During the first 5-year plan the United States provided about $300 million in aid to India in addition to the special wheat loan of $190 million and World Bank loans totaling about $30 million.

SECOND 5-YEAR PLAN

Today the second 5-year plan is in great peril. It cannot succeed without substantial help from the United States. This presents the American people with a chal-

lenge and an opportunity. In the face of India's great need our compassion and our national self-interest impel us to respond with generosity and realism.

In March 1958 the Department of State announced that the United States had agreed to lend to the Republic of India $225 million to help finance its second 5-year plan. Of this amount $150 million was to be made available by the Export-Import Bank and the remaining $75 million was to come from the Development Loan Fund established by Congress.

This is good as far as it goes, but it does not go far enough. The second 5-year plan will breathe a little easier because of it, but it does not guarantee success. Late in 1957 when the Indian Finance Minister visited Europe and the United States he was seeking $600 million in immediate foreign credit to save the plan. The practical alternative to such credit was and is the abandonment of much of India's projected development, with all of the tragic consequences which might follow. Our $225 million loan falls far short of the demonstrated need.

India launched her present 5-year plan in April 1956, at an estimated cost of $15 billion. Of this amount, $12 to $13 billion was to be raised within India in local currency. The remaining $2.5 billion was to be in hard foreign currency which is needed to purchase machinery and supplies from abroad. In the remaining 3 years of the plan $1.4 billion is the absolute minimum required from foreign sources if the plan is to meet its 1961 goals. Not all of this, of course, would have to come from the United States, but much of it will.

In May 1958 the Government of India announced that the second 5-year plan would have to be substantially cut back, perhaps as much as 15 percent, for lack of funds. One of the projects that will suffer in the cutback is the quietly revolutionary community development program which is raising the standards of farming, health, and education in the villages. Since the goals for agriculture—by far the most important sector of the economy—had not been reached in the first 2 years of the present plan, it was announced that food production for 1957–58 would be 2 million tons less than in 1956–57.

ISSUES AT STAKE

The issues at stake are so crucial that an effort on the scale of the Marshall plan is required over and above the aid provided by the mutual security program, the Development Loan Fund, and the Export-Import Bank. The task is beyond these agencies, separately or together.

There are two problems confronting the second 5-year plan. The first and most important problem is the critical need for the foreign exchange necessary for basic industrial development. This will be necessary until India can reduce substantially her present balance of trade deficiency. The second problem is to find a solution for the continuing food crisis in India. Fortunately the United States has the resources and the instruments for helping to solve both of these problems.

Using the rockbottom estimate of a $1.4 billion gap in foreign credits over the next 3 years, it is clear that much remains to be done. After allowing for the $225 million loan announced in March, the possible conversion to rupees of the 1952 wheat loan, additional aid which can be granted through existing U.S. channels and possible funds from non-American sources, there still remains a gap of $900 million.

The U.S. Senate on June 6, 1958, acknowledged the problem when it added to the Mutual Security Act of 1958 a statement of policy declaring that the "Congress recognizes the importance of the economic development of the Republic of India to its people, to democratic values and institutions, and to peace and stability in the world. Consequently it is the sense of the Congress that it is in the interest of the United States to join with other nations in providing support of the type, magnitude, and duration, adequate to assist India to complete successfully its current program for economic development."

This bipartisan Senate declaration is to be commended, but it will become as a sounding brass if it is not translated into bold action by the administration and Congress. I have proposed on the floor of the Senate that the United States attempt to help meet this $900 million deficit by a judicious mixture of direct economic loans and grants. It is clear that if these funds are to be utilized effectively they must be allocated sooner rather than later. In this connection it is encouraging that the Government of India itself seems to prefer working on the basis of long-term low-interest loans than on the basis of grants. Whatever method is used, however, must involve amounts larger than any assistance currently contemplated. I hope that the administration will come up with appropriate proposals and the necesssary leadership to insure their careful consideration.

INVESTMENT ATMOSPHERE

Supplementing all types of aid provided by The U.S. Government, everything possible should be done to build an investment atmosphere in India that will attract private capital from abroad. The Government of India should be commended for the recent steps it has taken to deal with this problem. Modern investors should know by now that they cannot and should not make a killing by putting their money in less developed areas. But any investor has the right to expect a reasonable return for the risks he takes. I believe India has the stability which will make private investment increasingly attractive, especially in certain heavy industries, although friendly governments will need to provide direct loans for some time to come.

Industrial expansion in India depends upon the expansion of basic transportation and communication facilities. These things cannot be accomplished by private enterprise alone any more than the Erie Canal could have been built by American private capital, or our transcontinental railroads built without heavy Government subsidy in the form of land grants. Further, much American industrial development depended upon substantial private investment from abroad.

FOOD SURPLUSES

The United States is also uniquely endowed to help meet India's food crisis. Blessed with a surplus of food and fiber, we can use our surpluses to help fill the need for food and thus contribute to the economic stability necessary for the most effective utilization of the aid we provide.

Many times I have suggested that we transform our domestic surplus problem into a constructive foreign policy asset. Some time ago the Senate passed a bill, which I sponsored, to extend and broaden our agricultural export program under Public Law 480. Unfortunately the House has not yet acted because many of its Members want to make their decision in the context of overall domestic farm legislation.

DOUBLE OPPORTUNITY

The double crisis facing India's 5-year plan presents us with a double opportunity. What we need is a dramatic new Marshall plan of funds and food for India. This plan will contribute both to agricultural and industrial recovery in the United States at a time when our own economy needs a shot in the arm. A substantial portion of any credit extended to India will return to the United States to purchase the tools of economic development. Today a Marshall plan for India will benefit the United States as much as India, just as the European recovery program helped us and our allies. Enlightened self-interest bids us to accept the challenge before us.

## Tax Exempt Status of Certain Groups

EXTENSION OF REMARKS

OF

## HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the March 9, 1959, issue of the Lancaster (S.C.) News entitled "Off the Record." This editorial points up the need for denying tax-exempt status to such groups as the Fund for the Repubic because some of their activities do not entitle them to the exemption offered under the Internal Revenue Code.

The Lancaster News is under the able direction of Messrs. Bright, Tucker and Julion Starr, of Lancaster, S.C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OFF THE RECORD

South Carolina, along with some 17 other States, has a right-to-work law. Although they vary somewhat from State to State these laws generally safeguard the right of an individual to hold a job regardless of his membership or nonmembership in a union. Because they make closed or union shops impossible to enforce, right-to-work laws are feared and detested by labor bosses who think less of an individual's rights than the dues they can extract from him under compulsory unionism.

One of the legislative goals of organized labor is a change in the Taft-Hartley law to take away from the States this power to guarantee freedom of employment to their citizens. Because it involves so clearly a genuine freedom, congressional leaders have not responded with enthusiasm to the prodding of labor. Consequently, other and more devious pressures are being massed to force the issue.

Just recently the Fund for the Republic spent a pot full of tax-free foundation money to finance and distribute a report on "Right To Work in Practice," by Frederic Meyers of the University of California. It might be noted that the Fund for the Republic, established originally with Ford Foundation money, almost lost its tax-exempt status for its propagandizing of the leftwing line. It has been repudiated by members of the Ford family, as well, but continues on its way with a slight shift of emphasis to preserve its foundation status.

In sponsoring the Meyers report, the Fund for the Republic is offering a biased, opinionated study calculated to do nothing but confuse the right-to-work issue. Meyers chose for the subject of his treatise the law in Texas, which, as the editor of the Phoenix (Ariz.) Gazette was quick to point out, is not a typical right-to-work law. The Texas law goes beyond that of other States in that it is designed also to bar collective bargaining by employee majorities.

Why Meyers should use this untypical law as the basis of a study of the wholé subject is known only to himself and managers of the Fund for the Republic, who commissioned him to do the job.

"One would think," continued the Phoenix Gazette editorial, "America would applaud a law which makes it possible for individuals to live up to their moral principles without suffering economic reprisal. Meyers does not think so. He tips his hat politely to the idea that minority rights should not be disregarded, but then creates something he calls an industrial citizen—that is, some-

one who works for a living—and remarks that this industrial citizen can be reasonably required to assume the responsibility of citizenship.

"In case you hadn't guessed, he means union membership when he says citizenship. In other words, Meyers thinks it reasonable to force workers to join a union.

"His entire report is little more than an argument trying to justify this belief. He speaks of the duty of participation in unions. He even indicates that those who abstain from union membership are infringing the rights of others—although what rights these are, he does not specify. And, at the end, he makes the flat statement—a dead giveaway of his own approach—that those who support right-to-work proposals wish essentially to make a public demonstration of the power to defeat the labor movement in the political arena. Nuts. Right-to-work laws are intended to permit the individual, even if he is one out of a thousand, to exercise his liberty, if he wants to. The United States Constitution strives in the same direction."

We have written rather lengthily on this for a simple reason. Unless something is done quickly to unfrock the Meyers report, it is going to be foisted on the public as an example of pure research with foundation sponsorship. Once it has acquired that sanctity, its fallacies will be almost impossible to overtake.

If and when this report reaches Washington legislators would do well to take a closer look at the Fund for the Republic. Is such propagandizing a proper function of a tax-exempt foundation?

## A Colorado Wheat Farmer's Analysis of Farm Income and Expense

EXTENSION OF REMARKS

OF

### HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. JOHNSON of Colorado. Mr. Speaker, a competent wheat farmer in my district has submitted the following analysis of farm income and expense.

It shows that present price levels give him, as an operator, a 1.1 percent return on his investment if you compute his subsistence or personal income at $3,600 per year.

These calculations appear very modest and reasonable. I commend them to study by those interested in being fair to farm operators.

A COLORADO WHEAT FARMER'S ANALYSIS OF FARM INCOME AND EXPENSE

Here is an example of actual income and actual costs. It is based upon experience of a farm, consisting of 960 acres of good hard land, in the hard-wheat section of northeastern Colorado. This is an owner operated unit, using modern equipment.

The operator is in compliance with the ASC program, planting his aloitted acres to wheat and his excess acres to barley.

The operator combines all of his grain, but hires barley windrowed. He hires extra trucks during harvest. He does all of his own work, except that he hires one extra man during harvest.

He does nearly all of his own repair work and utilizes some work of children during summer. He does his own tax and accounting work.

*Analysis for owner-operator*

| Investment | Real estate | Equipment |
|---|---|---|
| 960 acres land, at $150 per acre | $144,000 | |
| Tractor | | $5,300 |
| Combine | | 8,300 |
| One-way | | 1,000 |
| 2 rod weeders | | 600 |
| 1 chisel | | 1,000 |
| 2 grain drills | | 1,600 |
| 1 truck with hoist | | 4,000 |
| 1 pickup truck (used) | | 1,000 |
| Shop equipment | | 1,000 |
| Shop and storage building | 9,000 | |
| ½ of automobile ($3,000) | | 1,500 |
| Total | 153,000 | 25,300 |
| Total investment | 178,300 | |
| 6 percent interest on investment | 10,698 | |

*Operating expense*

| | |
|---|---|
| Taxes | $1,518.00 |
| Labor | 200.00 |
| Seed | 700.00 |
| Supplies purchased | 200.00 |
| Repairs and maintenance | 750.00 |
| Gas, diesel fuel, oil, and grease | 1,212.80 |
| Insurance | 159.85 |
| Electricty and telephone | 150.00 |
| Trucking | 456.00 |
| Automobile upkeep (farm share) | 100.00 |
| Repairs to wells and buildings | 50.00 |
| Food for hired help | 15.00 |
| Small tools | 5.00 |
| Bookkeeping supplies | 5.00 |
| Total operating expense | 5,521.65 |

*Depreciation*

| | |
|---|---|
| Farm equipment, $25,300 at 10 year life | $2,530.00 |
| Shop and storage building $9,000, 30 years | 300.00 |
| Total depreciation | 2,830.00 |
| Total operating expense | 5,521.65 |
| Total operating expense and depreciation | 8,351.65 |

*Gross income and net income*

| | |
|---|---|
| Income at present prices: | |
| 300 acres wheat, 20 bushels per acre at $1.60 per bushel (6,000 bushels) | $9,600.00 |
| 180 acres barley, 30 bushels per acre at 80 cents per bushel (54,000 bushels) | 4,320.00 |
| 480 acres summer fallow (no income). | |
| Total gross income | 13,920.00 |
| Total operating expense and depreciation | 8,351.65 |
| Net operating income | 5,568.35 |

NOTE.—This is the amount the operator has for his management and labor, for his living for himself and family, to pay income tax, personal tax, car expense, etc., and for interest on his investment.

Allowing nothing for his own labor, and the costs of subsistence, his return is only 3.12 percent on his investment:

Net operating income, $5,568.35, divided by his investment of $178,300, shows that his interest on investment would be only 3.12 percent.

Assuming the labor of the owner is worth $300 per month to manage and operate the farm, which would be $3,600 per year, the net operating income as a return on investment would be only 1.1 percent.

Net operating income, $1,968.35, divided by investment, $178,300, equals interest on investment, 1.1 percent.

It would take a price of $2.60 a bushel for wheat and $1.35 per bushel for barley if the farm income is to cover all costs, or to meet operating expenses, to provide a living for his family, to pay 6 percent interest on investment, and to replace equipment by allowance for depreciation. Here are the calculations:

*Income*

| | |
|---|---|
| Wheat, 300 acres (6,000 bushels at $2.60) | $15,600 |
| Barley, 180 acres (5,400 bushels at $1.35) | 7,290 |
| Total income | 22,890 |

*Expense*

| | |
|---|---|
| Total operating expense and depreciation | $8,351.65 |
| Living expense, $300.00 per month | 3,600.00 |
| 6 percent interest on investment | 10,698.00 |
| Total expense | 22,749.65 |

ANALYSIS FOR LANDLORD AND TENANT OPERATION

In the second example which follows, the same farm operation is analyzed under the premise that the farm is operated by a renter who owns the equipment, and pays the landlord one third of the crops raised as rental.

He also pays $1,200 a year for the use of the buildings.

(NOTE.—The cost of owning a $9,000 quonset-type building is $1,129.80 a year. Forty-nine dollars and eighty cents insurance, $240 taxes, $300 depreciation, $540 interest on investment.)

The operator has a net income, for his labor and investment, at present prices, of $1,614; the landlord gets 2.53 percent return on his investment.

| | |
|---|---|
| Investment by landlord: | |
| 960 acres, at $150 (includes house, well, etc., valued at $9,000) | $144,000 |
| Storage building erected | 9,000 |
| Total investment, landlord | 153,000 |
| Investment by operator: | |
| Tractor | 5,300 |
| Combine | 8,300 |
| 2 rod weeders and hitch | 600 |
| 1 chisel | 1,000 |
| 2 grain drills | 1,600 |
| 1 truck with hoist | 4,000 |
| 1 pickup truck (used) | 1,000 |
| Shop equipment | 1,000 |
| Automobile ($3,000), 50 percent | 1,500 |
| Total investment, operator | 25,300 |
| Combined investment | 178,300 |

*Operating expense (operator)*

| | |
|---|---|
| Taxes and licenses | $332.16 |
| Labor | 200.00 |
| Seed | 700.00 |
| Supplies purchased | 200.00 |
| Repairs and maintenance | 750.00 |
| Gas, diesel fuel, oil, and grease | 1,212.00 |
| Insurance | 159.85 |
| Electricity and telephone | 150.00 |
| Trucking | 456.00 |
| Automobile upkeep (farm share) | 100.00 |
| Repairs to wells, etc. (minor) | 25.00 |
| Rental of buildings (farm share) | 600.00 |
| Machine hire (windrowing) | 225.00 |
| Food for hired help | 15.00 |
| Small tools | 5.00 |
| Bookkeeping supplies | 5.00 |
| Total operating expense | 5,135.81 |

*Depreciation (operator)*

| | |
|---|---|
| Farm equipment ($25,300 at 10 years) | $2,530.00 |
| Operating expense | 5,135.00 |
| Total operating expense and depreciation | 7,665.81 |

*Gross and net income (operator)*

| | |
|---|---|
| 300 acres wheat, at 20 bushels per acre, 6,000 bushels; ⅓ rent, minus 2,000 bushels; operator's share, 4,000 bushels, at $1.60 per bushel | $6,400.00 |
| 180 acres barley, at 30 bushels per acre, 5,400 bushels; ⅓ rent, minus 1,800 bushels; operator's share, 3,600 bushels, at $0.80 per bushel | 2,880.00 |
| Gross income (operator) | 9,280.00 |
| Less operating expense and depreciation | 7,665.81 |
| Net operating income | 1,614.19 |

NOTE.—This is the amount the operator has for his management and labor for, his living for himself and family, to pay personal taxes, car expense, etc., and for interest on his investment of $25,300 in equipment.

*Gross and net income at present prices (landlord)*

| | |
|---|---|
| Income: | |
| 2,000 bushels wheat, at $1.60 per bushel | $3,200.00 |
| 1,800 bushels barley, at $0.80 per bushel | 1,440.00 |
| Rental on buildings ($100 per month) | 1,200.00 |
| Total gross income | 5,840.00 |
| Expenses: | |
| Taxes on land, storage, house, etc | 1,185.84 |
| Insurance on buildings ($12,000 value) | 91.20 |
| Depreciation, 30-year basis | 600.00 |
| Repairs to buildings (½ of 1 percent value) | 90.00 |
| Total expenses | 1,967.04 |
| Net income from investment | 3,872.96 |
| Percentage of interest on investment | 2.53 |

SUMMARY

At $1.60 per bushel for wheat and 80 cents per bushel for barley the owner-operator would have a net operating income of $5,568.35. His income should be $3,600 for wages and $10,698 interest on his investment, which would be $14,298. In other words, he would have an income deficit of $8,729.65.

At $1.60 per bushel for wheat and 80 cents per bushel for barley, a renter-operator would have a net operating income of $1,614.19. His income should be $3,600 for wages and $1,518 interest on his investment, which would be a total of $5,118. In other words, he would have an income deficit of $3,503.81.

At $1.60 per bushel for wheat and 80 cents per bushel for barley, the landlord would have a net income of $3,872.96. His income should be $9,180. In other words, he would have an income deficit of $5,307.04.

Each individual farmer should figure his own farming operation on the basis that has been used in this computation. He should make the proper allowance for depreciation; make an allowance for his wages (if he is the active operator); and make an allowance for interest on his investment, all before figuring his profit.

It is a very common error of farmers to believe that they are profiting on their farm operation, when actually their income is from the depreciation on their equipment, the interest on their investment, and from their own labor and the labor of their family.

## Fair Trade

EXTENSION OF REMARKS
OF

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement I made before the Committee on Interstate and Foreign Commerce in the House of Representatives on H.R. 1253 and related fair trade bills, on March 18, 1959. The statement follows:

I want to thank the committee for this opportunity to testify on H.R. 1253 and the related bills which would have Congress enact a Federal fair trade law. Since these bills will have a direct effect on the distribution of virtually every commodity purchased by the consuming public, your hearings are very important. Before Congress takes any action, it is essential that there be a thoroughgoing study of the impact of fair trade legislation on the public welfare.

In my view these bills contain a complete reversal of congressional policy on resale price maintenance. They will have the effect of an atomic bomb on long established principles that support a competitive free enterprise system.

As you know, I have long been an opponent of the system of price fixing that is permitted by the so-called fair trade laws. The present collapse of fair trade, its repudiation by many States and its rejection by manufacturers that formerly supported it, vindicate the position I have taken.

Notwithstanding our experience with fair trade, however, its advocates persist in their efforts to have the Federal Government assure their private profits at the expense of the consumers and efficient economic progress. Their persistence is all the more amazing in the face of the fact that fair trade, because it shackles wholesalers and retailers to prices that have been established by manufacturers for their own purposes, has been demonstrated in the long run to be detrimental to the best interests of the very groups that support it.

The history of fair trade in the American economy has been a history of failure. Before World War I and for more than 20 years associations of brand-goods manufacturers, led by the American Fair Trade League, unsuccessfully sought a Federal fair trade law. Although Federal price maintenance bills were introduced in every session of Congress from 1914 to 1930, none were passed.

In the panic of the depression years, leadership of the fair trade movement was taken over by wholesale and retail merchant associations, primarily the National Association of Retail Druggists, who concentrated their effort at the State, rather than the Federal, level. By organizing a powerful lobby of druggists under captains in each district, in the 10 years following 1931, the NARD was able to pressure 45 States into accepting its draft of a fair trade bill. Only three States out of the first 32 that passed the druggists fair trade act had held public hearings.

In 1937, however, the NARD lobby contended to Congress that the States had carefully considered the issues and had adopted fair trade to support the public welfare. Congress nonetheless refused to exempt fair trade practices from the antitrust laws in a separate bill. The NARD was only able to secure enactment of the Miller-Tydings amendment to the Sherman Act through the device of attaching it as a rider to the appropriations bill for the District of Columbia.

After World War II the proponents of resale price maintenance received one setback after another. In 1951, the U.S. Supreme Court in the Schwegmann case ruled that Congress in the Miller-Tydings amendment had exempted only those price fixing arrangements which had been agreed upon by the parties. The coercive provisions in the state laws to control the prices of sellers who refused to sign fair trade contracts could not be enforced. Although Congress in 1952, in the McGuire Act, expressly exempted the nonsigner clause, fair trade since has been repudiated in an increasing number of States and abandoned by the manufacturers that were its strongest adherents. At the present time, the Supreme Courts of 16 States have stricken down all or part of their fair trade laws on the ground that they contravened fundamental principles guaranteed by their State constitutions.[1] When you add the States that never did accept fair trade (Vermont, Misosuri, and Texas), there is a total of 19 States opposed to this type of subsidy, which is exacted from the general consuming public.

The principal evil that results from fair trade—the maintenance of artificially high consumer prices—has been exposed in State after State. After the Supreme Court of Ohio ruled the nonsigner clause unconstitutional, for example, prices on automatic coffee-makers quickly dropped from the $39.95 fair trade price to a $29.97 competitive price. Electric frying pans, which had a list price of $19.95 were reduced to $13.87. After an initial flurry of reduced price sales, in Ohio as in the case of other states that outlawed fair trade, the market soon became stable. The dire consequences that had been predicted by the fair traders—widespread business failures, increased concentration, and predatory excesses by monopolists—did not occur. The only result was that the consuming public received the benefit of having prices settle in the competitive market at about 20 percent lower than the former fair trade list prices.

During the debate in the House on the McGuire Act in 1952, I compared prices of identical articles purchased in Peoples Drug Stores in the District of Columbia, a non-fair trade area, and Arlington, Va., and Montgomery County, Md., fair trade areas. This statement shows prices are 20 to 50 percent higher in fair trade stores and is appended to my statement.

Legal rulings, however, have not been the primary causes that have lead to the abandonment of fair trade. Consumer resistance to high prices, mounting unemployment, warehouses stocked with unsold merchandise and the relentless pressure of substitute merchandise from competitive distribution channels were equally as important. Fair trade simply doesn't work. The enormous costs involved in comparison shopping, legal fees and policing fair trade enforcement, alone, have been major causes for its abandonment by the manufacturers.

Fair trade essentially is a system of price-fixing at the retail level which is directly contrary to Federal antitrust principles. As the Supreme Court said in the Schwegmann case, unless expressly exempted by Congress, all fixing of retail prices, whether by agreement or by coercion through the nonsigner clause, is inherently an unreasonable re-

[1] Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Michigan, New Mexico, Oregon, South Carolina, Utah, Kansas, Kentucky, Ohio, West Virginia, and Nebraska.

straint of trade. For this reason the Congress has never permitted fair trade to operate in the District of Columbia.

All that Congress has ever done in the past for fair trade is to enact enabling legislation to suspend the Federal antitrust laws in those instances where the States have permitted fair trade. To overcome the manifest failure of fair trade at the State level, now its supporters, again led by the National Association of Retail Druggists, seek to override the States and have the Federal Government proscribe fair trade on a nationwide basis. In this effort they are resurrecting attempts at Federal legislation for resale price maintenance which were abandoned in 1930 after nearly 20 unsuccessful years. This new effort would have Congress enact for the first time, a substantive Federal fair trade law.

H.R. 1253, for example, would amend section 5 of the Federal Trade Commission Act by adding express authority for a manufacturer "* * * to establish and control, by notice to his distributors, stipulated or minimum resale prices. * * *" In addition, H.R. 1253 makes it unlawful "* * * for any distributor with notice * * * to sell, offer to sell, or advertise * * *" at a different price from the stipulated price or at a lower price than the minimum resale price. In this bill an inherently unreasonable restraint on trade, complete foreclosure of price competition at the retail level, would become an integral part of substantive Federal law. It would repeal the basic antitrust policy that has been embodied in more than half a century of Sherman Act enforcement. It would overturn and sweep away a multitude of court decisions. Even more significant, departures from prices fixed at the whim of manufacturers would constitute a positive violation of Federal law. We cannot scuttle the antitrust laws and abandon the very source of this country's economic well-being to gratify the misguided yearnings of the retail druggists.

Another consequence of H.R. 1253 is that it subjects the Federal Trade Commission to an untenable position. This bill makes the FTC responsible for preventing both unfair methods of competition and deceptive trade practices and, at the same time, for maintaining the prices fixed by all the manufacturers subject to its jurisdiction. H.R. 1253 makes unfair methods of competition and departures from the manufacturers' stipulated or minimum resale price equally unlawful under section 5 of the Federal Trade Commission Act. Despite the averments of the NARD to the contrary, how can there be any doubt that the FTC would be obliged to enforce and police the fair trade prices authorized in this bill?

It is indeed anomalous that an agency created by Congress to protect and preserve competition should, after a life of 45 years, be converted to an instrument to police and perpetuate unreasonable restraints on trade. And what of the cost? How much is Congress expected to appropriate to enable the FTC to maintain manufacturers' fair trade prices?

It is no answer to say that the FTC would have discretion as to the extent of its activities under the provisions of H.R. 1253. Can there be any doubt that the supporters of fair trade and this bill would severely criticize the FTC in the event it did not discharge its responsibilities as to all of the business conduct the bill makes unlawful?

H.R. 1253 also contains confusing contradictions that will require many lawsuits to resolve. In the bill, section 5 of the FTC Act, as amended, contains the enabling provisions of the McGuire Act, carried forward in subsections 5(a)(2), (3) and (4). At the same time, subsections 5(a)(5), (6), (7), (8) and (9), superimpose the provisions that make it a violation of Federal law for a retailer to vary the price charged to the consumer from the price fixed by the manufacturer. There is no indication in the bill as to whether the State law or Federal law is to prevail. If the State law has been held to violate the State constitution, will the Federal law be operative? Can a manufacturer select some States in which he will fix prices and select others in which he will not fix prices? Must the price he fixes be the same in every State, or can he vary it State by State, or even fix differing prices within one State?

The bill authorizes the manufacturer to "* * * establish schedules of resale prices differentiated with reference to any criteria not otherwise unlawful." Does this permit a manufacturer to discriminate between different types of stores in the same State or city on the basis of size, volume of purchases from his competitors, location, or for a host of other reasons?

It is clear that enactment of H.R. 1253, in addition to its price-fixing evils, will open a Pandora's box for litigation. Years would be required to define the commercial and governmental relationships that are affected by this bill.

In addition to the incorporation of resale price maintenance into Federal law for the first time, H.R. 1253 has another innovation that is even more dangerous. The bill delegates to private parties the determination of the content of Federal law as well as the determination of the acts that constitute a violation of Federal law.

H.R. 1253 is tantamount to making the breach of a private commercial contract a Federal offense. The bill would punish those who sell beneath prices established by private individuals.

Under H.R. 1523, the manufacturer is delegated the power to make illegal today what was legal yesterday. Since he can impose or remove fair trade on his goods at his sole discretion by the mere giving of notice, the manufacturer can determine when the retailers' actions are lawful or unlawful. Federal law is made a matter of the will and whim of any manufacturer who makes branded merchandise. The manufacturer can determine whether this particular retailer is to be bound by Federal law, but that another is not to be bound. Moreover, the FTC, an agency of the Federal Government, will have its jurisdiction dependent upon the uncontrolled discretion of mere private parties, the manufacturers.

Surely such a sweeping delegation of the commerce powers of the Congress will never be permitted. Its mere proposal is shocking.

Although the power of Congress under the Constitution to regulate interstate commerce is plenary, I do not think we have the power to abandon its regulation to the extent permitted by H.R. 1253. I believe the factual situation in this instance is comparable to that presented to the Supreme Court when it considered the constitutionality of the National Industrial Recovery Act. Under NRA, legislative power had been delegated "* * * not to a public official responsible to Congress or the Executive, but to private individuals in the industries to be regulated."[2] The Supreme Court ruled: "Such a delegation of legislative power is unknown to our law, and is utterly inconsistent with the constitutional prerogatives and duties of Congress."[3]

When Congress was considering the McGuire Act in 1952, the Judiciary Committee conducted extensive hearings on the effects of fair trade. In this investigation I found that resale price maintenance has the following results:

"1. Concentration of economic power is promoted. The small merchant, with his prices rigidly fixed by fair trade, cannot meet the competition offered by his powerful competitors, the chains, the department stores, and the mail-order houses. Fair trade aids big business at the expense of small business, promotes the growth of monopoly power, and relegates the independent merchant to a subservient position in the economy.

"2. Violations of the antitrust laws, particularly boycotts, intimidation, and discrimination are fostered. Manufacturers have been coerced to maintain fair trade by campaigns to put the offender's merchandise under the counter. Price-cutting outlets have been persuaded by organized pressure to revise their policies. Wholesalers have been exhorted in trade publications to boycott retailers who refuse to conform. Even its stanchest advocates admitted that resale price maintenance programs cannot work effectively in the absence of collective action among retailers, and between retailers and manufacturers.

"3. The consumer is treated unfairly and is required to submit to the artificially high price umbrella that protects the inefficient retailer."

In the face of all these facts, why do the advocates of fair trade want this legislation? They claim they want it to prevent loss-leader sales. Just how extensive are loss-leader sales? The District of Columbia has no fair-trade law, but I have heard no complaints that retail business here is jeopardized by sales below costs. Small business failures in the District of Columbia are no higher than in the States that have fair trade.

There have been no serious studies of the extent of loss-leader selling in the United States in recent years. In 1955 the Canadian Restrictive Trade Practices Commission, however, conducted an extensive investigation of this problem in markets which are comparable to those of the United States. The Canadian Commission found:

"That the practice of selling articles at prices below net purchase cost is not prevalent in any of the lines of trade for which information was obtained in the inquiry. In fact, it appears that sales on such a basis are made infrequently and the evidence does not suggest in any way that selling of this sort is a practice in any line of trade, even among a minority of the dealers."[4]

The cry of "loss-leader" is no more than an epithet applied to a person who sells below the high fair trade markup. There is no evidence that sales below actual cost of acquisition are frequent in either fair trade or nonfair trade States. The high markups of 40 percent to 50 percent on some fair trade goods, however, are notorious. Protection of these high markups from the competition of efficient retailers who are willing to do a profitable business on a lesser margin, is the real objective of fair trade, not the eradication of the loss-leader sellers.

In any event, it is not necessary to impose the fair trade straitjacket on all business to meet this problem. It would be sufficient to pass a law that restricted price cuts on goods to some minimum markup over invoice cost if real objective was to solve the loss-leader problem.

In conclusion, I want to emphasize my opposition to fair trade and to the enactment of these bills that would include it in Federal law. I believe fair trade is bad for the consumer, and for the small retailer. A Federal fair trade law would negate the most fundamental principles that have sustained

our economy under the free enterprise system.

---

Mr. CELLER. Mr. Chairman, I am going to read from remarks I have made which were the basis of a minority report on fair trade submitted by certain members of the Committee on the Judiciary. I am going to read in part from that minority report.

"While resale price maintenance injures competition and promotes the concentration of economic power, its most immediate impact is felt by the consumer. Any comparison shopping tour will readily disclose the large savings which can be had on purchases made in the District of Columbia, as against those made across the District line in the fair trade jurisdictions of Virginia or Maryland. Numerous studies have been made which bear these conclusions out. The consumer will no doubt be surprised to discover that Congress intends to prohibit efficient retail establishments from reducing prices on his wares. It will also certainly appear anomalous to the voters of the United States for Congress, during a severe inflationary period, which has necessitated rigid governmental controls to prevent prices from going up, seriously to consider legislation which, under the penalties of Federal law, prohibits the prices of many important commodities from coming down."

I went on one of those shopping tours referred to, and I want to give you the results, in terms of the prices of certain ordinary articles that are purchased at a drugstore, and indicate to you how the public is getting a rooking from so-called fair trade.

I purchased 10 cubic centimeters of u.40 protamine zinc Lilly insulin, used by diabetics. The price in the District of Columbia was 98 cents. The price in Maryland was $1.29. The Maryland price was 32 percent above the District price. In Virginia, in Richmond, for example, the same article, Lilly's insulin, was sold at $1.48. If you can tell me that the public is protected by fair trade, I would like to know why those differences in prices.

I purchased a BD Yale 26-gage, one-half-inch hyponeedle, used to inject insulin into a sick person's body. In the District of Columbia the price was 15 cents. In Virginia the price was 20 cents—33 percent higher in Virginia. In Maryland the price was 23 cents—53 percent more in Maryland.

I purchased 100 Bayer aspirin tablets in Virginia, Maryland, and the District of Columbia. In the District of Columbia, the price is 46 cents. What was the price in Virginia? The price was 59 cents. I paid 28 percent more for the same article in Virginia. What was the price in Maryland? Fifty-nine cents. Again, I paid 28 percent more for the same article in Maryland.

I purchased some 12-ounce bottles of Phillips milk of magnesia. Here are the bottles. In the District of Columbia, the price was 34 cents. In Virginia, it was 14 percent higher, or 39 cents. Similarly, in Maryland it was 14 percent higher, or 39 cents.

I purchased some large tubes of Ipana toothpaste. See the difference in these purchases. I paid 27 percent more for the Ipana toothpaste in Virginia than I did in the District of Columbia. In the District of Columbia, the price was 37 cents. In Virginia, the price was 47 cents; and likewise in Maryland, it was 47 cents.

I purchased packages of 20 Gillette blueblades. In the District of Columbia, the price was 87 cents, whereas in Virginia I paid 11 percent more, or 98 cents, and also 11 percent more in Maryland, namely, 98 cents.

I purchased 50 cubic centimeters of Mead's Oleum Percomorphum. These are baby vitamins which are very essential to the health of infants and growing children. It is a very, very important product. I paid in the District of Columbia $2.63. When I went to Virginia I had to pay not $2.63 but $3.29, or 25 percent more. In Maryland I had to pay 32 percent more, or $3.49.

Take a laxative like Ex-Lax. In Virginia the price was 25 cents, and in the District of Columbia the price was 19 cents. In Maryland, the price was 28 cents. To take a laxative costs you 47 percent more in the State of Maryland than it does in the District of Columbia. And it costs you 32 percent more in the State of Virginia.

Here are some Dr. West toothbrushes. They were the same price in all three States, an indication that I am not guilty of any particular selectivity to indicate deliberately that the prices are more in one place than in another. When it came to Dr. West's toothbrushes, the price in all three locations was 59 cents.

Now, take the large-size Mennen baby powder. Here they are. In the District of Columbia, the price was 47 cents. In Virginia it was 49 cents, and in Maryland 49 cents.

Mr. Chairman, these are 10 ordinary articles that are everyday needs for housewives, diabetics, and others. The total price in Virginia is $8.23. The total price in the District of Columbia is $7.05; and the total price in Maryland is $8.80. On these 10 articles in Maryland, I paid 25 percent more than I did for the 10 articles when purchased in the District of Columbia. When I went into Virginia I paid 17 percent more for these very same articles that I had purchased in the District of Columbia.

Here is a recapitulation:

| Item | Virginia price | Virginia percent increase over District of Columbia price | District of Columbia price | Maryland price | Maryland percent increase over District of Columbia price |
|---|---|---|---|---|---|
| 10 cubic centimeters U. 40 protamine zinc Lilly insulin | $0.98 | 0 | $0.98 | $1.29 | 32 |
| | [1] 1.48 | 51 | | | |
| BD Yale 26-gage, ½-inch hypo needle | .20 | 33 | .15 | .23 | 53 |
| 100 Bayer aspirin | .59 | 28 | .46 | .59 | 28 |
| 12 ounces Phillips milk of magnesia | .39 | 14 | .34 | .39 | 14 |
| Large Ipana toothpaste | .47 | 27 | .37 | .47 | 27 |
| 20 Gillette Blueblades | .98 | 11 | .87 | .98 | 11 |
| 50 cubic centimeters Meads oleum percomorphum (baby vitamins) | 3.29 | 25 | 2.63 | 3.49 | 32 |
| 18 Ex-Lax | .25 | 32 | .19 | .28 | 47 |
| Dr. West toothbrush | .59 | 0 | .59 | .59 | 0 |
| Large size Mennen baby powder | .49 | 4 | .47 | .49 | 4 |
| Total | 8.23 | 17 | 7.05 | 8.80 | 25 |

[1] Richmond, Va.

Now I hesitate to place in the well of the House two whisky bottles that I purchased, but I did purchase the whisky, and I have the bottles in this basket.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Iowa.

Mr. GROSS. On the items you have just mentioned, did that include tax, or was that the price without the tax?

Mr. CELLER. That, I understand, is without tax.

Mr. KLEIN. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from New York.

Mr. KLEIN. Did the gentleman ever hear of the expression "loss leaders"? I might call the gentleman's attention to the fact that it is the practice in many, many stores, not only in the District of Columbia but throughout the country, in order to induce people to come in and purchase in that store, to have articles on which they obviously lose money. I would like to call the gentleman's attention to the fact that on many other articles in the same store the purchaser pays a great deal more.

Mr. CELLER. I am going to offer a substitute which gets at the evil of loss leaders, but let us not burn down the house to roast a pig. Let us not indulge in price fixing, which in contrary to the very concept of our antitrust and antimonopoly laws, just to get at loss leaders. In these bills you have a cure worse than the disease. To get at loss leaders you usher in all the evils of price fixing, an evil for worse than loss leaders. In other words, make a direct attack on loss leaders. Do not seek to protect those who want to garner in these huge profits by virtue of vertical as well as horizontal price fixing. Horizonal price fixing is permitted indirectly under the provisions of this bill.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Arkansas.

Mr. HARRIS. I do not want to interrupt the gentleman, but on that particular point the gentleman has for the first time just advised the House that he proposes to offer a substitute in which he will get at loss leaders. Now, the gentleman is chairman of the Judiciary Committee. Has he at any time proposed any such bill to get at loss leaders?

Mr. CELLER. Of course. The bill has been in the hopper for a long, long time. Certainly I have offered it, and it has been considered. The bill is H.R. 6986, and was introduced on March 11, 1952, some 2 months ago.

As to the whisky, I will not exhibit it. The bottles may disappear too rapidly. But, in any event I purchased a fifth of Black Label Schenley whisky in the District of Columbia at $3.23. What did I pay in Maryland, just across the border, for the same identical bottle? I paid $4.32, a difference of $1.09. So that where fair trade prevails for that particular article, the public has to pay $1.09 more. If you can tell me there is anything fair in that kind of practice, I fail to see it. If you can call that fair trade, then I do not know what the meaning of fair trade is nor does anyone else.

Mr. PRIEST. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Tennessee.

Mr. PRIEST. Does the gentleman have any information indicating whether a part of that difference was due to the State tax in the State of Maryland?

Mr. CELLER. No. That has nothing to do with that tax. This was on a straight retail. I am not saying there is no license tax. Naturally, you cannot buy without paying the Federal tax. The Federal taxes are uniform. The Federal and State taxes are involved, but the State tax in those States is of no consequence. Actually the tax in the District of Columbia is 15 cents a fifth, in Maryland the tax is 19 cents a fifth—just

4 cents difference—the total retail price difference due to fair trade is $1.09.

Mr. PRIEST. But the gentleman knows there is a difference in the State taxes.

Mr. CELLER. A very trifling difference, only 4 cents a fifth.

Mr. CRAWFORD. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Michigan.

Mr. CRAWFORD. Would the gentleman mind yielding to let the gentleman from Arkansas tell what the difference is?

Mr. CELLER. I am agreeable to having him tell it.

Mr. HARRIS. I will get that and give it to the gentleman.

Mr. CELLER. I will put the information in the RECORD; namely, that the Maryland tax is only 4 cents higher.

I do not care what the tax is; the difference is so inconsequential as to nullify any argument that we are helping the general public by this kind of legislation.

## Mr. Herter's Qualifications

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert an article from the Boston Daily Globe for March 6, 1959, about Under Secretary of State Christian Herter, one of our former colleagues who served with honor and distinction as a member of this body and former Governor of the Commonwealth of Massachusetts.

MR. HERTER'S QUALIFICATIONS

To his press conference, Mr. Eisenhower seemed inclined to promote the Acting Secretary, Under Secretary Christian Herter, to Secretary of State, if that post becomes vacant. The President said that Secretary Dulles "has been, over the years, himself, selecting and training a team. There is a tremendous depth in the State Department of knowledge and understanding and capacity."

Commenting on the immediate situation, Mr. Eisenhower pointed out that "we do have an Acting Secretary and he is responsible until I have designated someone else or designated him in another capacity."

These remarks created the impression that the President would follow in the State Department the same policy of promotion that he has pursued in selections for the Bench. His mention of the Acting Secretary indicates that he has Mr. Herter in mind.

Such an appointment would appear best caculated to serve the interests of the United States at a dangerous time. Among those who have been mentioned, Mr. Herter seems to have the qualifications best suited to the post.

That is no reflection on others. Ambassador Lodge, whose performance at the United Nations has never received the public recognition it deserved, already sits at Cabinet meetings. Under Secretary of State Dillion has served as ambassador at Paris and is the State Department's leading expert in economic matters. There are other distinguished possibilities.

But Mr. Herter's experience is broadest and goes deepest. He was secretary to the American delegation which negotiated the Versailles Treaty after World War I. He headed the congressional committee which toured Europe before funds were appropriated under the Marshall plan. He has been Under Secretary for 2 years.

A Secretary of State is head of a large department. Mr. Herter has had administrative experience during four years as Governor of Massachusetts. As a lawmaker on Beacon Hill, as speaker of the Massachusetts House on Beacon Hill and as a member of the national House of Representatives, he is bound to have learned much which would be of value in the important matter of dealing with Congress.

Mr. Herter has been frequently elected to public office, something neither Mr. Dulles nor Mr. Acheson have ever done. As Secretary of State he might have happier public relations than either of his predecessors enjoyed. His greatest liability is arthritis, which makes him uncomfortable when he walks a distance or stands a long time. He uses crutches and sometimes a wheelchair. But his condition is local, and would hamper him much less in office than polio did Franklin D. Roosevelt.

Mr. Herter would enjoy the additional advantage that he is now Acting Secretary, working in direct cooperation with Mr. Dulles and Mr. Eisenhower, who, some believe, is beginning to operate increasingly as his own Secretary of State. Promotion of the Acting Secretary would create the impression of continuity and tend to inspire confidence at home and abroad.

Mr. Herter's experience has given him a grasp of the problems a Secretary of State must face. It is easy to see why the President may consider him as the man best qualified for the post, as he appeared to do at his press conference.

UNCLE DUDLEY.

## Bank Merger Legislation

EXTENSION OF REMARKS
OF
## HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement I made before the Committee on Banking and Currency, U.S. Senate, on S. 1062, Thursday, March 19, 1959. The statement follows:

STATEMENT BY HON. EMANUEL CELLER, OF NEW YORK, BEFORE THE SENATE COMMITTEE ON BANKING AND CURRENCY, ON S. 1062, MARCH 19, 1959

INTRODUCTION

I appreciate the opportunity to present to this distinguished committee my views concerning S. 1062 which would provide safeguards against mergers and consolidations of banks which might lessen competition unduly or tend unduly to create a monopoly in the field of banking. I would point out that the views I express are based in considerable part on extensive studies, hearings, and reports of the House Judiciary Antitrust Subcommittee, dealing with the competitive aspects of bank mergers. To summarize my position, I recommend favorable consideration of S. 1062 provided it is amended in the following respects:

First, by prohibiting the appropriate Federal bank supervisory agency from approving any bank merger or consolidation where, in any section of the country, the effect may be substantially to lessen competition or tend to create a monopoly;

Second, by requiring the appropriate Federal bank supervisory agency to give notice to the Attorney General of a proposed merger and to enable him to intervene or offer his views respecting the competitive phases of the transaction;

Third, by requiring notice with opportunity to be heard to the appropriate supervisory authority of the interested State in the event the transaction involves State banks;

Fourth, by adoption of a so-called antitrust savings clause for a merger between banks similar to that governing a merger between a holding company and a bank under section 11 of the Bank Holding Company Act of 1956, thus making it clear that applicable provisions of the antitrust laws pertaining to banks are not to be superseded;

Fifth, by adoption of provisions for a hearing on the record.

As background for these legislative recommendations, I propose to discuss first the trend of bank merger activity and the resulting concentration in banking facilities; second, the present provisions of Federal law dealing with bank mergers; and finally, the reasons why the recommended changes in the bill are necessary.

CONCENTRATION OF BANKING FACILITIES

At the outset I would emphasize that enactment of S. 1062 with the recommended amendments is the minimum necessary to maintain a sound, vigorously competitive unit banking system in this country and to arrest a trend which is concentrating control of the Nation's banking business into the hands of fewer and larger financial institutions. At the present time, while there are approximately 13,500 commercial banks in this country, the 100 largest control approximately 46 percent of the Nation's total bank assets, and more than 48 percent of the bank deposits. In 10 of the Nation's 16 leading financial centers, 4 banks own more than 80 percent of all commercial assets. Furthermore, in nine of these financial centers, two banks own more than 60 percent of all commercial bank assets. Again in each of the 16 leading financial centers, as indicated by the following table, the first 2 banks own more than 40 percent of all the commercial assets, the first 4 banks 60 percent.

*Percentage of total assets owned by largest banks in principal financial centers*

| | 4 largest | 2 largest | Largest |
|---|---|---|---|
| New York | 60 | 41.6 | 22.0 |
| Providence | 98 | 93.3 | 57.7 |

Source: Office of the Comptroller of the Currency.

The increase in banking concentration has been coupled with a comparative contraction in the credit extended to borrowers by the banking system. As banks have grown larger, they have tended to have fewer dealings with smaller businesses. A study conducted by the Federal Reserve Board demonstrated that the very large banks with deposits of $500 million or more had the least number of loans with small business of all classes of banks, the next to lowest dollar volume of loans with small business, and the smallest percentage of dollar volume of al loans with small business.[1] Considering the decrease in the proportion of small banks in the financial community, the overall drop in credit extended, and the frequent resort to Government agencies for funds, it seems likely that the increasing trend toward concentration has at times entailed credit shortages especially for smaller enterprises.[2]

Moreover, the present degree of concentration is contrary, I think, to the fundamental premise that the banking system of the United States should rely for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Unlike other countries, such as Great Britain and France, where a few mammoth institutions control nearly all the banking facilities, the American system is based on unit banking—that is, strong, growing community banks which provide a wide range of financial services to the people in the area. It is the unit banking system which has played a key role in the economic development of this country. And it is this kind of system, premised on independent banks effectively competing with each other that must be perpetuated and preserved. For independent banks not only act as a necessary balance wheel to offset the power of big business, they tend to provide a much healthier basis for effective community organization than does the absentee ownership of giant banking institutions. In fact, the independent bank—not the mammoth financial house—provides in many cases the new ideas from which widespread innovations originate.

I am constrained to conclude that unless additional legislative precautions are taken of the kind here recommended to preserve the competition that still exists, there is the very real possibility that banking credit wil be dominated to an ever-increasing extent by a small, tightly knit group.

BANK MERGER ACTIVITY

Largely responsible, in my judgment, for the concentration that now characterizes the banking system, has been a rapidly accelerating trend toward bank mergers which has been a major development in banking over the past 8 years. As shown by the following table, in the period 1950 through 1958, some 1,330 of the Nation's commercial banks have disappeared by way of mergers and consolidations:

*Decreases in number of commercial banks because of consolidations and absorptions*

| | Number |
|---|---|
| 1921 | 305 |

Source: Federal Reserve Board.

Of these 1,330 mergers and consolidations, 731 or over one-half involved national bank transactions approved by the Comptroller of the Currency. Total resources of the banks absorbed in these national bank mergers amounted to $11,303,146,733.

Another matter that I know is of interest to this committee is the gradual decline in the total number of banks in the Nation. During the last 35 years the banking population of the Nation has been reduced by more than half; in 1921 there were more than 30,000 banks serving the Nation's creditors and depositors as compared to approximately 13,500 at the present time. True, a large share of the Nation's losses occurred prior to 1933 because of the depression when approximately 9,000 banks were forced to suspend operations during the 4-year period between 1930 and the end of 1933. However, as Chairman Martin of the Federal Reserve Board testified "since 1933 the merger movement has been the major factor in the gradual decline in the total number of banks."[3]

The fact is that the banking population of our country is at a 35-year low despite the postwar boom, despite the 286 percent growth in bank assets, despite the new high level of loans and deposits, despite the greatly increased use of banking services, and despite the enormous growth in the number of depositors.

The continued downtrend in the number of the Nation's banks is even more striking when examined on a regional basis. In New York State, for example, where New York City is widely recognized as the financial capital of the world, there were 611 State-chartered banks in 1926. The State's banking structure weathered the depression with the loss of less than 100 banks between 1929 and 1933, and by 1935 New York State had 471 chartered banks in operation. Yet the number of banks kept decreasing until there are now less than 380, a loss almost as severe as that suffered in the depression years.

Let me make it clear that I would not quarrel with the reduction in the number of independent banks, if thereby only weak banks were eliminated. The fact is, however, that the banks that have been absorbed in merger activity during the past number of years have not been for the most part the financially weak. Nor have they been, in the main, the specialized, the poorly organized, or the inefficiently managed. On the contrary, most of the banks that have been absorbed have been growing, efficient, profitable, vigorously competitive banks taken over at peak earning capacity. In short, the merger pattern is not predominantly a situation where two or more small, inadequately financed or managed banks, falling behind in the competitive race, seek by merging to form a big integrated institution, able to compete on equal terms. Indeed, a large percentage of mergers involved one or more giant banks having assets of $100 million or more. And a large percentage of the absorbed banks had assets in excess of over $50 million.[4] Furthermore, many of these mergers have been primarily the outgrowth of a deliberate effort on the part of certain banks to expand their banking facilities, add to their capital and depositors, and, in general, increase their overall financial strength in the economy.

Take New York City, for instance, where there occurred in 1955 the three largest mergers in the history of the country in terms of total deposits. In March of that year the Chase National Bank with total assets of $5,669 million merged with the Bank of Manhattan Co. with assets of $1,629 million, and the Bronx County Trust Co. with assets of $76 million. This merger provided the new entity, the Chase Manhattan Bank, with total assets of $7,374 million or 21.7 percent of the total assets of all banks in New York City and jumped it to first place in New York City and second place in the Nation.

Also in March 1955 the National City Bank of New York, previously the second largest bank in the United States, with assets of

Footnotes at end of speech.

$5,767 million, took over the First National Bank of New York, which had total assets of $713 million. The new combination, the First National City Bank, then ranked second in the area, with assets of $6,480 million, or 19.1 percent of the total.

Less than a month later the Bankers Trust Co., with assets of $2,207 million, acquired the Public National Bank & Trust Co. of New York, which controlled assets comprising some $562 million. This was only the last of a series of acquisitions by Bankers Trust Co., which has been taking over other banks at a rapid rate for the last several years. Thus, since 1950 Bankers Trust has absorbed such substantial banking institutions as the Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., and the Bayside National Bank.

In December 1954 the Chemical Bank & Trust Co., with assets of $2,081 million, combined with the Corn Exchange Bank & Trust Co., which had assets of $821 million, to form the Chemical Corn Exchange Bank, which now has total assets of $2,902 million.

In part, because of this merger activity, New York City now has only 56 commercial banks, whereas at the opening of the century it had 127. Further, the city's 4 largest banks control 61 percent of all deposits, whereas in 1900 the 4 largest had only 21 percent of the total deposits.

Nor is merger activity in New York City at an end. Of great competitive significance is the proposed merger between the Guaranty Trust Co. of New York and J. P. Morgan & Co., both of which are engaged in commercial banking in the city of New York, primarily as wholesale banks. Guaranty Trust is the 9th largest bank in the Nation, while J. P. Morgan is the 22d largest. This merger not only would result in the new entity becoming the fourth largest bank in the Nation; it would accelerate the merger trend among other city banks. As reported in Business Week of January 10, 1959, "New York bankers predict that if and when [this] merger goes through, a series of competitive realinements will result that won't end until a new 'balance of power' is established among New York banks."

I would emphasize that the New York situation is by no means a local phenomenon. Other leading financial centers have likewise experienced a similar rash of bank-merger activity. In Philadelphia, Pa., for example, the Pennsylvania Co. for Trusts & Banking, the second largest bank in the area, with total assets of $805 million, merged with the First National Bank, which was fifth in size, with total assets of $218 million. The consolidated bank had total assets of about $1,023 million, making it the largest banking institution in the area, with control of 25.3 percent of total banking assets. Prior to that, in 1953, the Tradesman's National Bank & Trust Co., with total assets of $139 million, merged with the Land Title Bank & Trust Co., which had assets of $96 million. Also in 1953 the Girard Trust Corn Exchange Bank, with assets of $579 million, acquired the National Bank of Germantown, with assets of $39 million. The Girard Trust Corn Exchange Bank itself resulted from a merger in 1951 between the Girard Trust Co., one of the hundred largest banks in the United States, and the Corn Exchange National Bank & Trust Co., another leading bank.

In Pittsburgh, Pa., the Mellon National Bank & Trust Co. has risen after a long series of mergers to a point where it has assets of $1,861 million representing 61 percent of the total assets in that area. Between January 1950 and the end of 1954, Mellon National had absorbed at least 13 other banks, many of them small, independent banks which had previously served depositors and borrowers in the suburban communities in the Pittsburgh area. In 1948, eight banks had merged or consolidated by Mellon National and in 1947 it had absorbed two large banks in Pittsburgh and seven banks in the adjacent suburbs.

In Providence, R.I., the Industrial Trust Co., with assets of $312 million, merged in 1954 with the Providence Union National Bank, with assets of $168 million, which gave the resultant Providence Industrial National Bank control of some 57.7 percent of all banking assets in that city.

In California the First Western Bank & Trust Co., of San Francisco, a subsidiary of Tranasamerica Corp., absorbed 14 other California banks in 1954 and increased its assets in the process from $333 million to $798 million.

Many other cities have also experienced analagous bank-merger activity in the last several years; for example, Boston, Cleveland, Dallas, Kansas City, Mo., Cincinnati, Baltimore, Washington, D.C., Houston, Indianapolis, Hartford, Portland, Oreg., and Wilmington, Del.[6]

As a result of the depletion in the ranks of the country's banks through mergers, competition among banks has been lessened in communities throughout the Nation. What is more, over 76 counties in the United States have no commercial banking facilities whatsoever, while more than half the counties in the United States have only three or fewer banks serving the needs of the community. Hundreds of small, rural American communities have become bankless towns and many others are served by only one bank in place of two or three which existed in the 1920's.

The conclusion is inescapable, as the Federal Reserve Board testified before our Antitrust Subcommittee, that the bank merger trend is a matter of deep concern. This is particularly true since competition is one of the strongest factors safeguarding a sound banking system. To quote from the testimony of the Chairman of the Reserve Board in June 1955: [6]

"The CHAIRMAN. And would you say, as a very distinguished and very efficient head of the Federal Reserve Board that this merger movement is a matter of deep concern to you and your colleagues on the Board?

"Mr. MARTIN. It is, indeed, Mr. Chairman. As we note in a later paragraph, it is a matter that we have given a great deal of thought to."

Mr. Martin added:

"I would like to reiterate, Mr. Chairman, that this is a trend which has given us very serious concern. * * *" [7]

In March 1957, Mr. Martin of the Reserve Board again emphasized that the bank merger trend was a matter that gave the Board very serious concern.[8]

PRESENT PROVISIONS OF FEDERAL LAW DEALING WITH BANK MERGERS ARE INADEQUATE

Under the National Banking Act, approval of the Comptroller of the Currency is required for any merger between national banks, or between a national bank and a State bank, where the resultant institution is a national bank.[9] In addition, the Federal Deposit Insurance Act [10] requires that approval of certain mergers must be obtained from the Federal Deposit Insurance Corporation, the Comptroller of the Currency or the Federal Reserve Board, as the case may be, but only where the capital stock or surplus of the resulting bank will be less than the aggregate stock of the two institutions combined. Also, approval of the Federal Deposit Insurance Corporation is required for mergers between insured and noninsured banks.[11] None of these Federal banking statutes applicable to mergers, deals substantively with competition in the field of banking, and in no case is the competitive impact of the merger a necessary element to be considered by Federal banking officials in deciding whether or not to grant approval.

Bank mergers are also circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. Illegality is established by proof that the merger has actually resulted in an unreasonable lessening of competition; it is immaterial whether the merger was accomplished by stock or asset acquisitions.

Section 7 of the Clayton Act of 1914, on the other hand, deals specifically with corporate and bank mergers and bans those achieved by stock purchases where there is a reasonable probability of a substantial lessening of competition or a tendency to monopoly. Responsibility for enforcing the section insofar as banks are concerned is vested concurrently in the Attorney General and the Federal Reserve Board.

Section 7 was designed to stop mergers beyond the reach of the Sherman Act, but its failure to include mergers accomplished by asset acquisitions resulted in a loophole which so far as nonbanking corporations are concerned was closed by passage of the Celler-Kefauver Act of 1950. However, because of revisions made in subsequent versions of various antimerger bills, it became impracticable to include within the scope of the Celler-Kefauver Act corporations other than those subject to the jurisdiction of the Federal Trade Commission. This left asset acquisitions by banks unaffected by the new law, since authority to enforce the provisions of section 7 dealing with banks is vested in the Federal Reserve Board and not in the Federal Trade Commission.

Beyond this, virtually all bank mergers are accomplished by asset acquisitions by virtue not only of provisions of Federal law prohibiting member banks of the Federal Reserve System, with a few exceptions, from purchasing corporate stocks, but also of various State statutes prescribing similar limitations. For these reasons, section 7 of the Clayton Act has little value in coping with the mounting trend of bank merger activity. In fact, since section 7 was adopted in 1914, only one proceeding has been instituted—that a case brought by the Federal Reserve Board against the so-called Giannini group controlling Transamerica.

To close this loophole in section 7 and provide Federal enforcement agencies with the same authority to move against bank mergers accomplished by asset acquisitions, I introduced H.R. 5948 in the 84th Congress. This bill was adopted by the House without dissent on February 6, 1956, but was not brought up on the Senate floor for vote.[12] I might add that the measure was in accordance with the President's recommendations submitted to the Congress in 1956 and repeated in 1957, 1958, and 1959, calling for revision of antitrust legislation to cover bank mergers accomplished by asset acquisitions.[13]

One month after House passage of H.R. 5948, the Acting Secretary of the Treasury transmitted to the Senate and House proposed legislation to amend the banking statutes (specifically sec. 18(c) of the Federal Deposit Insurance Corporation Act) so as to give Federal banking agencies sole jurisdiction to approve or disapprove bank mergers. This Treasury Department recommendation was designed, I believe, to head off Senate passage of H.R. 5948. Moreover, it was contrary to the President's recommendation seeking revision via antitrust legislation to cover bank mergers accomplished by asset acquisitions as envisaged by H.R. 5948. In any event, a Senate bill embodying the Treasury proposal was adopted by the Senate in the 84th Congress and again in the 85th Congress as section 23, chapter 5, title III of the proposed Financial Institutions Act of 1957. S. 1062, the subject of the

Footnote at end of speech.

present hearings, is identical with these earlier proposals.

Let me make it clear that despite the foregoing considerations, amendment of the banking laws in this area would not be inconsistent with amendment of the antitrust laws to cover bank mergers accomplished by asset acquisitions provided that changes as here recommended are made in S. 1062. Indeed, to assure against the Judiciary and the Banking Comittees working at cross-purposes with each other in respect to this problem, the Antitrust Subcommittee of the House Judiciary Committee is deferring temporarily consideration of H.R. 4152, a bill I introduced last month which would plug the banking loophole in section 7 of the Clayton Act.

SUMMARY OF S. 1062

It is against this background that I turn to S. 1062. That bill would, first, expand provisions of existing law so as to require prior approval by the appropriate Federal bank supervisory agency for every merger or consolidation involving insured banks. Second, in granting or withholding consent, the Comptroller of the Currency, the Federal Reserve Board, or the Federal Deposit Insurance Corporation, as the case may be, would be required to consider not only the usual banking factors, but also to "take into consideration whether the effect (of the proposed transaction) may be to lessen competition unduly or to tend unduly to create a monopoly." Finally, the appropriate supervisory agency would be required to consult the other two Federal banking agencies on the question of competition and "may also request the opinion of the Attorney General with respect to such question," although there would be no requirement to do so.

COMPETITIVE CONSIDERATIONS ARE VIRTUALLY IGNORED

Under the bill, competitive considerations would be only one of the various factors that would have to be taken into account by the appropriate Federal banking agency in scrutinizing a proposed bank merger. Beyond this, an entirely novel test is proposed, namely, whether the acquisition "may lessen competition unduly or tend unduly to create a monopoly." Indisputably this proposed standard is far weaker than that of section 7 of the Clayton Act which applies to other businesses and prohibits any merger where the effect of the acquisition may be substantially to lessen competition, or to tend to create a monopoly. Moreover, in the 69 years since passage of the Sherman Antitrust Act no suggestion has been made that its provisions designed to prevent clogs on competition did not apply equally to banking and nonbanking corporations. Nor are the characteristics of the banking industry so unique as to justify such departure. As the Comptroller of the Currency has testified, "It is no less important to have competition in banking, when this can be done soundly, as it is in other fields of commerce and industry." [14] In these circumstances, I must view with the utmost gravity a proposed standard that would provide for the banking industry a preferred and favored position.

It will be recalled that the term "substantially lessen competition" has been imbedded in Federal jurisprudence for 45 years in the course of which it has received judicial content via numerous court interpretations. If we discard this standard for the vague [15] and novel standard of "unduly," we would find ourselves in a sea of trouble. It took years and years to determine through court interpretations what the term "substantially to lessen competition" means. Should S. 1062 be adopted in its present form, not only would the courts have to start all over again in interpreting a vague and untested term, there would be created—and without justification—a dual standard, one for banks, another for nonbanking corporations. The force of these considerations was noted by the Chairman of the Federal Reserve Board. He testified:

"We recognize * * * that you have a legal groundwork for substantial lessening competition already in the framework of the law and that it may not be possible to use unduly lessening competition." [16]

Indeed the present Comptroller of the Currency testified before our Antitrust Subcommittee as follows:

"We have no objection to the principle that the acquisition of one bank by another through purchase, merger, or consolidation should not be permitted if the effect of the acquisition may be substantially to lessen competition. It is no less important to have competition in banking, when this can be done soundly, as it is in other fields of commerce and industry." [17]

Beyond that, it must be recognized that if the Congress should adopt the standard here proposed and proscribe only bank mergers which tend unduly to monopoly, then the Congress in effect, would, be placing its imprimatur of approval on mergers which tend to monopoly. Stated otherwise, adoption of the unduly standard would mean that it is the policy of Congress that a bank merger which tends to monopoly is in the public interest; that only if it tends unduly to monopoly should it be banned. Apt in this connection is the comment of Judge Barnes, former head of the Antitrust Division: "I think that when we talk about 'tendency unduly to create a monopoly' it seems akin to speaking of a man that is not 'unduly dishonest.' I think that we have to pause a little bit to consider if that is exactly what we mean." [18]

Pertinent in this regard also is testimony by the Comptroller of the Currency before our subcommittee:

"The CHAIRMAN. Mr. Comptroller, as I get it, you would proscribe a merger which tends unduly to monopoly.

"Mr. GIDNEY. Yes.

"The CHAIRMAN. Is that right?

"Mr. GIDNEY. Yes.

"The CHAIRMAN. Then, the converse, it strikes me, would be true: that in your judgment, then a bank merger that tends to monopoly only, is in the public interest.

"Mr. GIDNEY. I don't——

"Mr. KEATING. Watch out.

"Mr. GIDNEY. I hear something I don't understand too well.

"The CHAIRMAN. I want you to watch out and listen very carefully. You would proscribe or prevent a merger that tends unduly to monopoly——

"Mr. GIDNEY. Yes.

"The CHAIRMAN. Then it strikes me if that is sound, then the converse must be true; that in your judgment a bank merger that only tends to a monopoly is in the public interest?

"Mr. GIDNEY. Well, we merely have to find it is not contrary to the public interest, don't we?

"The CHAIRMAN. Yes, you have got to find it; but when you say it is 'unduly,' then it is against the public interest——

"Mr. GIDNEY. Yes; that is right.

"The CHAIRMAN. If it is not 'unduly,' then it is in the public interest and you let it go on.

"Mr. GIDNEY. Well, do we have a neutral position somewhere there? Are we——

"The CHAIRMAN. At least you do not take any action then.

"Mr. GIDNEY. That is right. We have a certain amount of free enterprise, even in the banking system, and if it is not against the public interest, why should we——

"The CHAIRMAN. In other words, you figure that in the interests of free enterprise, you would allow the thing to go along, even if it tends to monopoly so long as it does not 'unduly'——

"Mr. GIDNEY. I won't accept that, because my difficulty is this 'tends' business.

"Mr. CHAIRMAN. Is that not what you really say? You say you only prevent it when it 'unduly' tends to monopoly.

"Mr. GIDNEY. That is to give us——

"The CHAIRMAN. Therefore, if it does not 'unduly' tend to a monopoly, then in the interests of free enterprise you let it go on without taking any action, even if it only tends to a monopoly and does not tend unduly to a monopoly.

"Mr. GIDNEY. Well, things are a matter of degree. I think we want the word 'unduly' in there so that this 'tends' word is something that we can live with and understand. In other words, we can have——

"The CHAIRMAN. Then your answer is 'Yes,' is that it?

"Mr. GIDNEY. I don't think I want to say 'Yes' on that, sir. I don't understand it well enough." [19]

In these circumstances, I am constrained to agree with the Attorney General who testified on a previous bill identical with S. 1062:

"First, the proposed banking legislation prescribed for bank mergers would weaken section 7 standards. The factor of competition would be only one of numerous considerations to be taken into account by a banking agency in scanning a merger. Beyond that, the competitive considerations of section 23 specified, whether the acquisition may 'lessen competition unduly or tend unduly to create a monopoly' are completely novel and are intended simply to be less stringent than those specified by the Clayton Act, section 7 for other American business. As the result, not only does that proposal prescribe pale antitrust standards, but even that lesser standard is only one of many factors banking agencies must consider. All told, then, that proposal does little more than give 'lip service' to insure competitive enterprise in banking. Banking agencies themselves recognize inherent difficulties in construing this jerry-built standard. While relevant language of the Clayton Act, section 7, has been on the books for almost a half century, proposed section 23's 'unduly' phrasing is completely novel." [20]

The short of the matter is that as former Assistant Attorney General Barnes testified the "proposal does little, if anything, to insure competitive enterprise in banking. Any pretense that it does seems to me hardly more than sham." [21]

The contention has been made that a test of "undue lessening of competition" would provide greater flexibility by permitting the approval of mergers and consolidations which for particular reasons would not be contrary to the public interest. It must be recognized, however, that in some circumstances a transaction may not be contrary to the policy of the antitrust laws even though it may lessen competition. Thus, in the *International Shoe Co.* case (280 U.S. 291), the Supreme Court held that where the concern acquired is: "a corporation with resources so depleted and the prospect of rehabilitation so remote that it faced the grave probability of business failure * * * the purchase of its capital stock by a competitor (there being no other prospective purchaser), not with a purpose to lessen competition, but to facilitate the accumulated business of the purchaser and with the effect of mitigating seriously injurious consequences otherwise probable * * * does not substantially lessen competition or restrain commerce within the intent of the Clayton Act."

On the same principle, the acquisition by a bank of the assets of another bank would not be precluded under the "substantially" test where otherwise there would be a reason-

Footnotes at end of speech.

able probability of the ultimate failure of the acquired bank or where, because of inadequate management, the acquired bank's prospects for survival seem dim.[22]

In addition to the acquisition of a bank which otherwise would be faced with a possibility of failure, there are other circumstances in which, from a banking standpoint, the acquisition of a bank by another bank may be in the public interest. For example, where the acquisition is the most practicable means of dealing with a problem bank having inadequate capital or unsound assets or where the acquired bank has not adequate provision for management succession. Also, where several banks in a small town are compelled by an overbanked situation to resort to unsound competitive practices which may eventually have an adverse effect upon the condition of the banks, the merger of two or more of the banks may well be in the public interest. The same principle applies where there are not adequate banking facilities. These various situations are illustrative of the circumstances where the consummation of the transaction would not be contrary to the public interest and not be banned under the "substantially" test. However, should there be any doubt in this respect, I would recommend that the report of this committee on the proposed legislation make this crystal clear.[23]

Manifestly, therefore, these banking factors do not make necessary abandonment of the "substantially" test. In addition to that, adoption of "unduly" would mean that there would be one standard for bank acquisitions by other banks, another for bank acquisitions by holding companies even though there is no real distinction between the two kinds of transactions. It will be recalled that under the Bank Holding Company Act, section 3,[24] the applicable standard for bank acquisitions is whether in any line of commerce in any section of the country the effect of such acquisition may be substantially to lessen competition or to tend to create a monopoly. This is indicated by the following extract from a letter which the Vice Chairman of the Federal Reserve Board sent to me on January 18, 1957:

"Section 11 of the Bank Holding Company Act of 1956 provides that nothing therein shall be interpreted as approving any action which may be in violation of existing law, nor is anything herein to constitute a defense to any action or proceeding on account of any prohibited antitrust action or conduct. Also, as you indicate, under the Celler-Kefauver amendment to section 7 of the Clayton Act the test is whether the effect of the acquisition may be substantially to lessen competition or to tend to create a monopoly in any section of the country.

"Section 3(c) of the Bank Holding Company Act requires the Board, in passing upon each application by a bank holding company for approval of its acquisition of bank stock, to consider certain specific factors, including whether or not the effect of the proposed acquisition would be to expand the size or extent of the holding company system beyond limits consistent with the public interest and the preservation of competition in the field of banking. The concept involved in this factor is a broad one, and in the Board's opinion adequate consideration of the facts in this regard necessarily involves consideration of the standards mentioned in section 7 of the Clayton Act; that is, whether in any line of commerce in any section of the country the effect of such acquisition might be substantially to lessen competition or to tend to create a monopoly." [25]

On the other hand, the test for an acquisition of one bank by another would be whether the effect of the transaction may be to lessen competition unduly or to tend unduly to create a monopoly. Beyond the fact that there is no basis for such distinction, the Federal Reserve Board would be faced with the grotesque task of having to administer dual standards involving similar types of transactions. Thus, in the case of a merger where the resulting institution is a State member bank, the Board, as the appropriate Federal supervisory agency, would be obliged to follow the "unduly" test. But in the case of a merger involving a bank holding company, the Board would be obliged to follow the "substantially" test. The short of the matter is that confusion would be compounded on confusion.

There is yet another consideration, namely, that the proposal would weaken the competitive standards which the Comptroller of the Currency now professes to follow with respect to bank mergers. As previously indicated, approval of the Comptroller of the Currency is required in all cases of mergers between national banks, or between a national bank and a State bank where the resultant institution is to be operated under a national charter. I point out that the Comptroller of the Currency has stated on numerous occasions that before granting merger approval, he will determine whether its effect in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in short, whether the transaction is violative of the policy of the Celler-Kefauver Act. Moreover, the Comptroller has stressed that he would not approve any bank merger or consolidation which he thinks would be a violation of the principles of this act. Thus, in a letter to me dated March 14, 1955, the Comptroller of the Currency stated in part:

"In determining whether the approval of this office will be given to any merger or consolidation, the Comptroller considers, among other things, how the proposed merger will affect the particular banks involved, the soundness of the national banking system, and the convenience and needs of the community concerned. There may be a technical question as to the specific application of section 7 of the Clayton Act to these mergers. However, it has been the practice of the Comptroller before giving his approval to determine whether the effect of the merger, 'in any section of the country * * * may be substantially to lessen competition, or to tend to create a monopoly.' " [26]

Again in March 1957, the Comptroller testified as follows:

"Mr. MALETZ. Is it your practice * * * not to approve any bank merger where the effect may be substantially to lessen competition or tend to create a monopoly?

"Mr. GIDNEY. I say, that has been our practice. We have not approved any where it could be.

"Mr. MALETZ. That is your practice?

"Mr. GIDNEY. We have not approved where it could be shown." [27]

The fact is, however, that from 1950 through 1958, the office of the Comptroller approved 731 bank mergers and consolidations involving in respect to banks absorbed total resources of approximately $11 billion.[28] During the period from 1950 to May 1955, that office did not disapprove a single merger application on the basis of competitive considerations. The report of our Subcommittee on Corporate and Bank Mergers issued in December 1955, made the following comment in this connection:

"Comptroller of the Currency, Ray M. Gidney has indicated that before giving his approval to any bank merger or consolidation coming within his jurisdiction, he will determine whether its effect in any section of the country may be substantially to lesesn competition or tend to create a monopoly; in short, he will determine whether the merger is violative of the policy of the Celler-Kefauver Antimerger Act. Mr. Gidney has stressed that he would not approve any bank merger or consolidation which he considers to be in violation of the principles of this act. But what does the record show? It shows that from 1950 to May 1, 1955, the Comptroller and his predecessors have approved 376 bank mergers and consolidations involving total resources of $7,464 million. It also shows that since 1950 the Comptroller's office has not disapproved a single merger application on the basis of a possible substantial lessening of competition. This is not surprising since the Comptroller's office has 'not issued anything specific to the examiners' in regard to considering anticompetitive factors; it has never notified national bank examiners or 'given them any specific admonition' that it is the Comptroller's policy to disapprove any bank merger violative of the Celler-Kefauver Act. Nor has it required examiners to make findings of fact with regard to competitive considerations in recommending approval or disapproval of proposed bank mergers." [29]

It should be added that within a few weeks after issuance of this report in December 1955, the Comptroller's office promulgated standards for considering the competitive consequences of bank mergers.[30] Furthermore, after the subcommittee hearings, the Comptroller's office in June 1955, for the first time, informally disapproved a merger application because of competitive considerations and followed that up in November 1955 by refusing, for similar reason, to approve certain proposed mergers in cases involving 11 banks. However, in 1955 the office approved 126 bank mergers involving, in respect of banks absorbed, resources of $2,015,225,452. In 1956 it approved 105 bank mergers involving banks absorbed having total resources of $2,380,816,965 and informally disapproved 8 applications for competitive reasons.[31] In 1957 it approved 83 mergers involving banks absorbed having resources of $1,142,000,000, without disapproving any application for competitive reasons. In 1958 it approved 83 mergers involving banks absorbed having resources of $1,704,000,000 while disapproving 2 mergers for competitive reasons.

In sum, during the period from 1950 through 1958, the Comptroller of the Currency approved 731 mergers and disapproved 22 for competitive reasons. This is indicated in greater detail in the following table:

| Year | Mergers approved by the Comptroller of the Currency [1] | | Mergers disapproved by Comptroller of the Currency on basis of competitive considerations | |
|---|---|---|---|---|
| | Number of absorbed banks | Total resources of absorbed banks | Number of cases | Total resources of banks which would have been absorbed |
| 1950 | 52 | $576,464,143 | 0 | 0 |
| 1951 | 30 | 384,389,647 | 0 | 0 |
| 1952 | 59 | 517,662,108 | 0 | 0 |
| 1953 | 67 | 523,680,925 | 0 | 0 |
| 1954 | 126 | 2,058,262,234 | 0 | 0 |
| 1955 | 126 | 2,015,225,452 | 12 | $182,712,000 |
| 1956 | 105 | 2,380,816,965 | 8 | 355,018,675 |
| 1957 | 83 | 1,142,000,000 | 0 | 0 |
| 1958 | 83 | 1,704,645,259 | 2 | 198,985,000 |
| Total | 731 | 11,303,146,733 | 22 | 736,715,675 |

[1] See hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R 264 and H.R. 2143 (Premerger Notification), pp. 146-171, 171 (85th Cong., 1st sess.). Data for 1958 was supplied to the Antitrust Subcommittee by letter from the Comptroller of the Currency, dated Mar. 16, 1959.

Source: Comptroller of the Currency.

Without in any way singling out the present incumbent—my remarks are applicable to his predecessors as well—it would appear, as the Attorney General has testified, that the office of the Comptroller of

Footnotes at end of speech.

the Currency has tended to give little or no consideration to the question as to whether or not competition would be substantially lessened.[32]

THE APPROPRIATE FEDERAL BANK SUPERVISORY AGENCY MUST BE REQUIRED TO GIVE NOTICE TO THE ATTORNEY GENERAL

The obvious reason for failure to take competitive considerations adequately into account is lack of expertise in the antitrust field on the part of Federal bank supervisory agencies. The Comptroller of the Currency has stated and I quote him: "I have no competency in that (the antitrust) field. I do not know what the courts have done."[33]

Similarly, the Chairman of the Federal Reserve Board pointed out that administration of the banking laws was in an entirely different sphere than enforcement of the antitrust laws. He testified:

"The principal functions of the Federal Reserve System lie in the field of monetary and credit policy and bank supervision. The prosecuting and adjudicatory functions involved in the enforcement of the antitrust laws are only indirectly related to the Board's principal responsibilities. They are of a character quite different from the functions normally exercised by the Board in passing upon particular transactions in the bank supervisory field. In other words, enforcement of the antitrust laws and the function of bank supervision represent, we believe, different spheres of governmental operation."[34]

As the Department of Justice has observed, failure to insure informed advice on competitive factors could have effects far beyond the banking field. Without (the Department's) right to intervene in bank mergers there might be as many different views of section 7 standards and scope as there were agencies charged with this enforcement. The result could well be disparities in view, which in turn, spell real enforcement inequities. Enforcement effectiveness as well requires some procedure for (the) Department's intervention. Otherwise in its overall responsibility for section 7's enforcement—outside of the banking area—(the) Department would be bound by bank merger precedents (it) had no voice in picking or shaping."[35]

In these circumstances, it would be little short of folly to require the appropriate Federal bank supervisory agency to obtain the views of the other two banking agencies, but not impose the same requirement in respect to seeking the informed advice of the Department of Justice—the agency specifically charged by Congress with responsibility for examining into competitive implications of proposed mergers. Actually, the Comptroller of the Currency testified before our subcommittee that he didn't really object to a provision requiring him to obtain the opinion of the Attorney General as to the antitrust implications of a proposed merger, provided it was submitted promptly or within a designated period.[36]

Furthermore, on the basis of past experience, unless a requirement of mandatory consultation with the Department is written into law, there is little, if any, likelihood that the Federal banking agencies will seek the informed advice of the Attorney General. Consider, for example, that although the Office of the Comptroller of the Currency approved some 731 mergers in the period from 1950 to 1958, many involving acute competitive problems, in only one instance did the Comptroller seek the Department's advice on the competitive effect of a particular bank merger problem. This was made clear in a letter from Assistant Attorney General Hansen to me, dated March 20, 1957, which reads as follows:

"In Attorney General Herbert Brownell's appearance before your subcommittee on March 6, 1957, it was requested that the Department furnish you with instances in which Comptroller of the Currency Ray M. Gidney sought advice from the Antitrust Division as to whether the effect of a given merger may be substantially to lessen competition or tend to create a monopoly. We have reviewed our records and find that in only one instance was the Department's advice sought on the competitive effect of a particular bank merger problem. In that instance, members of the Comptroller's staff conferred informally with the Division around the end of September 1956 on the proposed acquisition of the Peoples Saving Bank of Port Huron (Mich.) by the Michigan National Bank. This proposed acquisition has been subject to a rather thorough investigation because of Sherman Act as well as Clayton Act problems.

"In two other instances, the Comptroller's Office has forwarded information to the Division on bank mergers. On August 8, 1956, the proposed merger of Farmers & Merchants National Bank of Los Angeles and Security First National Bank of Los Angeles was brought to the Division's attention before the Comptroller had given his approval. It was with respect to this merger that I personally talked to Mr. Gidney on the telephone. Lack of section 7 jurisdiction because this transaction was consummated by an acquisition of assets precluded the Department from considering this matter under section 7. On August 17, 1956, the Comptroller called the Division's attention to his approval of the merger of the Delaware Valley Bank & Trust Co. of Bristol (Pa.) and the Philadelphia National Bank of Philadelphia.

"In three other instances, our records show that the Comptroller's office was notified of our interest in certain bank merger problems. Notice was given on January 5, 1955, on the Chase-Manhattan Bank merger; March 7, 1955, on the National City-First National Bank merger, and around the 1st of December 1956, on the pending New York bank holding company formation which is now before the Federal Reserve Board for approval. In the Chase-Manhattan and National City-First National Bank mergers, this Department specifically requested from the Comptroller's office information or data relating to competitive aspects of these mergers. In the pending holding company problems, our requests for information have been mainly channeled through the Federal Reserve Board, the agency with primary jurisdiction over this matter under the Bank Holding Company Act of 1956. However, a recent information request has been made directly to the Comptroller's office."[37]

As the Comptroller himself stated in a letter to me dated March 16, 1959:

"We have no established procedure with respect to obtaining the views of the Antitrust Division of the Department of Justice concerning the competitive consequences of bank mergers, but have on occasion, written to the Department. Should a situation arise in which we deemed it necessary to consult the Antitrust Division we would address a letter to it setting forth the facts. This office would seek the views of the Department of Justice in respect of competitive considerations in cases in which it appeared that there might be involved a violation of the antitrust laws. During the years 1957 and 1958, we had no liaison with the Department of Justice with respect to competitive consequences of a proposed transaction."

WHERE THE CONTINUING INSTITUTION IS TO BE A STATE BANK, NOTICE TO THE STATE BANK SUPERVISOR SHOULD BE REQUIRED

The foregoing considerations are equally applicable in respect to obtaining the views of the appropriate State banking supervisor when the continuing institution is to be a State bank. In such cases it is as necessary to obtain the views of the appropriate local official as it is to obtain the views of the other two Federal banking agencies since the State supervisor usually will have special knowledge of local banking and other matters—factors which are of the highest degree of relevance to a determination as to whether final approval should be granted or withheld. Consequently, I deem it important that the bill be amended to require notification to the appropriate State bank supervisors where the proposed merger will result in creation of a State bank.

NEED FOR ADOPTION OF AN ANTITRUST SAVINGS CLAUSE

Section 11 of the Bank Holding Company Act provides that:

"Nothing herein contained shall be interpreted or construed as approving any act, action, or conduct which is or has been or may be in violation of existing law, nor shall anything herein contained constitute a defense to any action, suit, or proceeding pending or hereafter instituted on account of any prohibited antitrust or monopolistic act, action, or conduct."

Purpose of this section is to insure that no provision of the Bank Holding Company Act is to supersede any provision of any other Federal law, particularly those "designed to control monopoly or break up trusts." To quote from the Senate report on the bank holding bill.

"The bill provides that none of its provisions are to be construed as approving any act, action or conduct in violation of existing law. It also provides that nothing in the bill shall constitute a defense to any action, suit, or proceeding pending or later instituted on account of any prohibited anti-trust or monopolistic act, action or conduct. In the opinion of your committee, approvals granted and action permitted under the provisions of this bill are not to supersede the provisions of other Federal laws, particularly those designed to control monopoly or break up trusts. For example, the Clayton Act has been judicially determined to apply to banks. Under the provisions of that act, the Federal Reserve Board has an administrative role to play in determining whether banks comply with the requirements of the Clayton Act. Under the provisions of this bill, any action taken by the Federal Reserve Board in accordance with its terms is not to interfere in any manner with the performance by the Board of such functions as may be assigned to it under the Clayton Act."[38]

Unless this same antitrust savings provision is made applicable to bank mergers, the contention would be advanced that S. 1062 has nullified the strictures of the Sherman Act forbidding any bank merger which results in an unreasonable restraint of trade or monopoly.

What is more, absence of such provision might perhaps render nugatory action that might be taken by the House Judiciary Committee in recommending legislation to plug the loophole in Clayton Act, section 7 so as to cover bank mergers accomplished by asset as well as stock acquisitions. This would necessarily follow if failure to include a savings clause was construed to mean that section 7's provisions dealing with bank mergers had been superseded by the present legislation.[39]

THE BILL SHOULD CONTAIN PROVISIONS FOR PUBLIC HEARINGS

In its present form, the bill, S. 1062, makes no provision for public hearings upon applications which may be filed. I am strongly of the opinion that the bill should be amended to include such a provision, at least in cases of disagreement between interested governmental bodies.

The role of the public hearing in modern regulatory procedure is so fundamental as to require a little exposition or defense. A

Footnotes at end of speech.

public hearing serves as a safeguard against arbitrary action; it assures interested parties of an opportunity to present their views, consonant with the dictates of due process; it provides a basis for evaluating the manner in which an agency applies the statutory standards under which it acts; it tends—especially in the circumstances envisaged by this bill, in which three different agencies will simultaneously carry out the objectives of the act—to encourage the development of uniformity in decisions. Most important, a public hearing provides the only adequate basis for judicial review—a testimonial record. In these respects, a public hearing both protects applicants against discriminatory denial of meritorious applications and safeguards the public interest against erosion of vital national principles.

Without provision for hearings, the public is deprived of its only practical opportunity for appraising the quality of regulation; interested parties may or may not be adequately heard; uniformity of regulatory policy is most difficult to achieve, and effective judicial supervision of agency action is greatly hampered. Arbitrary decisions could flourish virtually unchecked. Congress could have no assurance that the standards it promulgates would be administered in accordance with the Congressional intent.

Presumably for all these reasons, the Bank Holding Company Act of 1956 does provide for public hearings in cases in which a governmental body expresses disapproval of a proposed acquisition of bank shares or assets. The provision for public hearings of the Bank Holding Company Act of 1956 should, I believe, be adapted to and included in S. 1062. As so amended, S. 1062 would provide that the federal banking agency with which the application has been filed shall notify both of the other federal banking agencies, the appropriate supervisory authority of the interested State, and the Attorney General, and that if any of these bodies or officials within thirty days disapproves the application in writing, the agency before which the application is pending shall schedule a hearing, at the conclusion of which it shall by order grant or deny the application in writing, the agency before which the application is pending shall schedule a hearing, at the conclusion of which it shall by order grant or deny the application upon the hearing record.

In conclusion, I am enclosing as an appendix to my testimony an amendment which contains the changes which I have recommended.

APPENDIX—RECOMMENDED AMENDMENT OF S. 1062

On page 2 strike out the entire sentence beginning with the words "In the case of a merger," on line 11 and insert in lieu thereof the following: "; and for that purpose shall give notice to the other two banking agencies referred to herein and to the appropriate supervisory authority of the interested State if the resulting bank is to be a State member bank (except a District bank) or a State nonmember insured bank (except a District bank) and shall allow thirty days within which the views and recommendations of such supervisory authorities may be submitted. The Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, shall not grant consent under this section to any merger, consolidation, acquisition of assets, or assumption of liabilities, where in any section of the country the effect thereof may be substantially to lessen competition, or to tend to create a monopoly, and shall not approve any merger, consolidation, acquisition of assets, or assumption of liabilities without first obtaining the views of the Attorney General with respect to such question. In each case the Attorney General shall submit his views and recommendations to the appropriate agency within thirty days.

"If either or both of the other banking agencies or the appropriate supervisory authority of the interested State or the Attorney General disapproves the application in writing within thirty days, the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, shall notify in writing the applicant and the disapproving agency or agencies, or authority, or Attorney General of the date for commencement of a hearing by it on such application. Any such hearing shall be commenced not less than ten nor more than thirty days after the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, has given written notice to the applicant of the action of the disapproving agency or agencies, authority, or Attorney General. The length of any such hearing shall be determined by the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, but it shall afford all interested parties a reasonable opportunity to testify at such hearing. At the conclusion thereof, the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, shall by order grant or deny the application on the basis of the record made at such hearing.

"Nothing herein contained shall be interpreted or construed as approving any act, action, or conduct which is or has been or may be in violation of existing law, nor shall anything herein contained constitute a defense to any action, suit, or proceeding pending or hereafter instituted on account of any prohibited antitrust or monopolistic act, action, or conduct."

[12] During the 84th Congress, I sponsored a subsequent bill dealing with premerger notification (H.R. 9424) which incorporated the provisions of H.R. 5948. H.R. 9424 was passed by the House without dissent on April 16, 1956, and was reported favorably by the Senate Judiciary Committee on July 27, 1956, too late for final Senate action.

[13] See Economic Report of President, January 23, 1956, pp. 78–9; Economic Report of President, January 23, 1957, p. 51; Economic Report of President, January 20, 1958, p. 64; Economic Report of President, January 20, 1959, p. 53.

[14] Hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R. 5948 (bank mergers), p. 71 (84th Cong., 1st sess.). Similarly, in radio and television broadcasting, while licensing by the Federal Communications Commission is required as a condition of entry and while the Commission has detailed statutory power of regulation over broadcast stations, the antitrust laws are fully applicable. See *U.S. v. Radio Corporation of America* (U.S. Supreme Court, Feb. 24, 1958) holding that approval by the Commission of a station exchange does not bar the transaction from attack by the Attorney General under the antitrust laws.

[15] The following illustrates the vagueness of the proposed standard: The Comptroller of the Currency was requested to supply the Antitrust Subcommittee with a list of the types of bank merger situations his office would approve under a test based on a statutory provision requiring that consideration be given to whether the effect thereof may be "to lessen competition unduly or to tend unduly to create a monopoly" but would not approve under a test based on a provision reading "substantially to lessen competition or to tend to create a monopoly." In reply the Comptroller advised the subcommittee that after having studied the matter carefully, "it was not feasible to supply such a list in the form suggested." [31] Id., pp. 171–172. Attorney General Brownell testified on this point as follows:

"Senator DOUGLAS. Mr. Brownell, when the same proposal was up before us last year I gathered some figures from the records of the Comptroller of the Currency on approving and disapproving mergers since 1950. My figure showed that there were 6 years, from 1950 to 1955, inclusive, in which he had approved 460 mergers, had formally disapproved 9, had informally disapproved 13; therefore, he had approved between 96 and 98 percent of all mergers during those 6 years.

"Could you tell me if these figures which I collected are approximately accurate, according to your knowledge?

"Mr. BROWNELL. Yes; they are. And I am not so sure that the 22 that were turned down were turned down on the ground of competitive factors."

Hearings before subcommittee, Senate Committee on Banking and Currency on Banking Laws, Financial Institutions Act of 1957, p. 1027 (85th Cong., 1st sess.).

[32] The Attorney General testified in part as follows:

"Senator DOUGLAS. In other words, up to date the Comptroller of the Currency has tended to give little or no weight to the question as to whether or not competition would be substantially less?

"Mr. BROWNELL. I believe that is a fact. And I think his own testimony indicates that."

## Adlai Backs Ike on Berlin: No Knuckling Under Threats

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article which appeared in the Boston Daily Globe on March 6, 1959:

ADLAI BACKS IKE ON BERLIN: NO KNUCKLING UNDER THREATS

We meet as Democrats, but the grave crisis in Berlin reminds us again that we must think as Americans; indeed, our parties exist and should exist only as they serve the Nation.

After so much peace talk and propaganda, the Russian leaders have set the stage for another showdown in Berlin—the one place in Europe where the Western Powers are at an extreme tactical disadvantage.

The Soviet plan to maneuver the Western garrisons out of free Berlin was first thrust at us in such an uncompromising and abrupt manner that one could well question whether negotiations with Russia at any level could be anything but fruitless.

Not only were Mr. Macmillan's quiet efforts to sound out Russia's intentions drowned in a tirade of abuse and threats, but senior Russian officers chose this moment to boast of Russia's superiority in death-dealing missiles, and even the talks at Geneva on the control of atomic testing have, at this very time, reached a deadlock on the key issue of inspection.

All the talk of peace, of relaxing tensions, and of better relations hardened into cold uncompromising willfulness and power.

What purpose is served by this sudden return to the brutal hostilities of the cold war? Are such threats and bullyings the language of responsibility when the survival of humanity is at stake? Has Mr. Khrushchev no compassion for the feelings and the fear in so many human hearts? This was not the language of a man of peace. It was the deadly old jargon of the man of power.

IS KREMLIN MAKING TYRANTS' OLD ERROR?

But now, in the last few days another miraculous and sudden change in the Russian climate has taken place, and we are assured that this tough talk was only for campaign purposes. I haven't noticed that the Communist Party needed much help in Russian elections. And I get cold comfort from the Kremlin's fleeting flirtations with sweet reason.

This isn't a time for capricious talk and arbitrary positions by anyone, let alone the heads of states charged with preserving peace. And we are all grateful to Mr. Macmillan for his contrasting restraint, openmindedness, and firm dignity during his trying visit to the Soviet Union.

But why has this crisis been thrust upon us? Why is Mr. Khrushchev stubbornly insisting on his unilateral solution of the German problem? Why is he taking risks of such enormity?

I wonder if the dictators in the Kremlin could be making the mistake that has destroyed nearly all the tyrants of this time—the mistake of underestimating and misunderstanding their opponents? Has Mr. Mikoyan taken back from America the impression of a people enervated by comfort and the foolish slogans of "peace and prosperity"? Has he mistaken the voice of free debate for the expression of doubt and division?

I talked with him (Mikoyan) when he was here and detected no such confusion. But if this is by any chance an element in the Russians' sudden disregard for all save their own interests, let me add my voice at once, with all the energy and conviction that I can command, to warn them not to drive this Nation too far and not to mistake the underlying temper of our people.

KNUCKLING UNDER IS NO SOLUTION

The memory of Hitler is much too fresh for citizens in this country, whatever their political convictions, to believe that knuckling under to threats can pave the way to a lasting settlement.

Munich was the prelude to total conflict, not to peace in our time.

I would plead with the Russian leaders to remember their own terrible experience with appeasement of Hitler—or to recall the more recent miscalculation which sent North Korean troops into South Korea in the belief that the Americans, once out, would never come back.

These are not partisan memories in America. They are the very stuff of our most recent historical experience. When the President says we will not give in to force, he speaks for all of us. I pray that there are no illusions in Moscow on this vital score.

But Russia's new pressure may not spring simply from a miscalculation of the American mood. I believe the men in the Kremlin also suffer from some acute political compulsions which may be driving them to bring the situation in Germany to a head.

The satellite empire in eastern Europe is unstable. Tito's declaration of independence is now 10 years old. The East German outbreak of 1953, the riots in Poland and the Hungarian revolt of 1956 point to the insecurity of these minority Communist governments and the whole Soviet position in eastern Europe.

Whatever the other reasons for precipitating a crisis over Berlin, it doubtless reflects their fear that this island of freedom through which tens of thousands of Germans flee from East to West creates a special degree of instability in a generally unstable area.

IN ORDER TO TAKE WE HAVE TO GIVE

For this reason I trust that we shall not show too much unwillingness to negotiate at the summit or at any other level. In the critical field of popular support we play from strength in Europe. No bayonets prop up Western governments. They are rooted in the assent of the peoples. But in eastern Europe only Soviet military dominance insures Moscow's control.

Don't we have a supreme interest in reducing that control by gradual withdrawal of Russian forces? Have the eastern European countries any other hope of national freedom? Don't we in the West, and I include West Germany, have a supreme interest in exploring new ideas on the possible future shape of a European settlement?

Because of the dependence upon their garrisons in eastern Europe I doubt if the Russians will negotiate seriously on the possibilities of withdrawing their forces.

But if despite all their protestations and propaganda about peace, self-determination of peoples and noninterference, they dare not risk serious negotiation, we shall at least have recovered the initiative and made clear our own readiness for a more stable and hopeful settlement.

While under no circumstances will we forsake the people of free Berlin or compromise on the question of free access, we must face the fact that no Russian withdrawal can be secured without a modification of the Western position.

In order to take, we will have to give. And one must equally face the widespread fear in Western Europe that any search for an alternative to the status quo ultimately entails a total American retreat—back to isolationism and fortress America.

FORTRESS AMERICA OBSOLETE CONCEPT

We cannot dismiss this sense of insecurity, especially among our good friends in West Germany. But I wonder whether this fear of American withdrawal from Europe and its affairs is not becoming a real enemy to thought, maneuver and flexibility on the Western side?

Actually in the age of missiles, supersonic flight and lunik, the concept of fortress America is wholly obsolete. We cannot escape the human situation. It involves us all. The America of 1959 is not the America of 1939. And the deterrent in Europe today is not just the six American divisions stationed in Germany but the knowledge that a Russian attack means retaliation by America's strategic airforce.

The Russian leaders must know this. And I would urge them to ponder the Korean crisis of 1950. In that case, in a genuine effort to reduce tension, America withdrew its troops. The Communists misread the signals and evidently took this for an expression of American disinterest.

But the North Korean invasion brought America promptly back—fighting.

Though Korea is, in contrast, of marginal strategic importance, the American response was clear and immediate. Who can suppose it would be less so if the vital security of Europe were at stake?

I repeat, I do not believe we Americans can ever again stand aside while aggression attempts to take history by force. We are involved permanently in mankind's efforts to evolve a workable security system, and our concern is far too deep rooted to depend only upon the location of American soldiers. Any negotiated settlement in Europe would have behind it the full weight of American commitment and the full strength of our arsenal and our economy. In the missile age, fortress America is no more.

LET US YIELD NOTHING TO FORCE

So I would say: let us yield nothing to force in this Berlin crisis. But I don't think the issue of who stamps the passes is important. If the Russians hand over their control functions to the East German Government or sign a separate peace treaty, I cannot see that any great harm is done.

The East Germans are so blatantly and totally dependent upon Russian military support that no ceremonial dickering about their status or functions will change them from puppets even to puppies. I am reminded of the Finnish Communist Republic established by Stalin which so failed to command popular support that in the end the Russians forgot about it too.

Any interference with the West's freedom of access to Berlin must be understood by the Russians to entail the risk of war. But with this position clear, let us seek to explore with the Russians the possibility of a settlement in Europe less unstable and explosive than the present situation—one that gives some hope to the millions from the Baltic to the Black Sea who yearn for freedom again, one that is based upon the tremendous asset of freedom as a popular force, and one that is finally rooted in America's lasting commitment to Europe, whatever the local pattern of security may be.

DEMOCRATS MUST AVERT DEFICIENCIES

I would hope in this supremely difficult time, when Secretary Dulles' illness has deprived our Government in Washington of its only active practitioner in the field of foreign policy, that the Democratic Party, as a responsible opposition, would use its influence to focus public opinion, to make good the perilous deficiencies of the executive branch and provide a little of the leadership an uninformed and bewildered public so desperately needs.

I would trust that our distinguished Democratic leaders in the Senate would consult together and bring their collective weight and wisdom to bear responsibility on the crisis. This opportunity for a demonstration of party responsibility is matched only by the urgency.

We are fortunate that we have a number of Democrats in Congress, like Senator FULBRIGHT, with exceptional experience and wisdom in foreign affairs. And I trust that the administration too will draw upon these resources at this time so that we can face what may be the greatest test of this decade in a mood of national determination and unity.

The months ahead are far too grave for partisan bickering or for personal competitiveness in political influence. I believe the whole country would respond to a Presidential lead, telling us of both the danger and the opportunity we face. And if the administration is silent let us, as the loyal opposition, speak with all the gravity and wisdom that we possess. This crisis can still be a focus for new greatness. And the greatness of America is the greatest purpose of our great party.

## James S. Hunter, Legislative and Civic Leader

EXTENSION OF REMARKS

OF

## HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. MADDEN. Mr. Speaker, on Monday evening of this week, I attended a testimonial dinner in the city of East Chicago, Ind., for Hon. James S. Hunter, one of Indiana's outstanding legislators. Representative Hunter has served the Calumet industrial area of Indiana for over 20 years and during this period of time he has been recognized by State legislators of both parties from districts throughout the State as an honest, conscientious, and sincere public servant.

At the mammoth testimonial banquet in East Chicago last Monday evening, leaders of both political parties, businessmen, labor officials, and other citizens paid much deserved tribute to his record as a public official. Mayor Walter Jeorse of East Chicago was toastmaster of the banquet and he joined with others in reviewing Jim Hunter's record as a public servant and recalled the great debt that the citizens of East Chicago and Indiana owed to Representative Hunter for his service, not only as a State representative but as a member and director of the Public Welfare Board of Lake County for a great number of years.

Governor Handley of Indiana in his message stated: "It can truly be said that James S. Hunter loves his fellow man".

Other tributes to the guest of honor were paid by Mr. Fred Steininger, Director of Public Welfare, State Senator William Christie, Mr. Lester Thornton, director of AFL–CIO, State Representative Howard Steele of La Porte, Ind., and Mrs. Jessie Jacobs of Indianapolis, Ind. East Chicago Councilman James L. Dent introduced the Honorable Mercer Mance, superior court judge of Indianapolis. Other guests were introduced by Mr. Henry Walker, prominent East Chicago lawyer. Mr. Benjamin J. Wilson, lawyer and Gary City councilman introduced the main speaker of the evening Mr. Robert C. Weaver, educator, lecturer, and author, and also a resent member of New York's Governor Harriman's cabinet. Congressman J. EDWARD ROUSH of Indiana's Fifth District, who served with Representative Hunter in Indiana State Legislature, paid the following tribute to the guest of honor:

I learned with great interest that the folks of Lake County are giving a testimonial dinner for my good personal friend Jim Hunter. I have known Jim for over 10 years, having first met him during my term in the Indiana Legislature in 1949.

He was one of the finest legislators of that session, commanding the respect of people from both sides of the asile. We all respect his intelligence, commonsense, his great knowledge and humble spirit. Certainly the honor which Lake County is bestowing upon Jim Hunter could not come to a finer man.

In honoring this man I have the feeling that you are honoring the things which he stands for, namely good government, integrity in government and political honesty. I join with his many friends in wishing him well in the years to come feeling that his contributions have not yet ceased and that we will all benefit, as we have in the past, by his future services.

Hon. George Chacharis, mayor of the city of Gary, Ind., in presenting a plaque of appreciation to Representative Hunter, made the following remarks during his presentation address:

This is a great occasion.

It represents a tribute to a great man.

But it is not greatness alone that we acknowledge tonight.

Present with us tonight, as suggested by the character of our honored guest, are other qualities also—wisdom, compassion, and self-sacrifice.

Here in America, we stress service as the principal purpose of government. That is why we are here tonight. We have come to honor service as embodied by a man.

We are saying to him that you served with dedication, that you served the highest purposes of democracy.

And that the people of Lake County and Indiana rise tonight to express their heartfelt and their immeasurable gratitude.

Not infrequently and often erroneously, it is said that a membership in the State legis-

lature is a minor political office, that it is of no consequence, that it is unimportant.

That evaluation has been rejected by James S. Hunter.

He feels, as I do, that there is no such thing as an unimportant office—that any public honor conferred by the votes of the people is a solemn one, a sacred one, one which at all times calls for devotion and understanding.

Because he gave it the strength of his character, because he invested it with his heart and soul, because of his unsparing sacrifice or energy in the fulfillment of his duties, James S. Hunter brought meaning and dignity to the tasks he performed.

Working for the people was the most important job in the world for him.

Ours is a profound, and irredeemable debt to him. His achievements in economic, social, and educational legislation brought assurance of greater security and the promise of a brighter future to 4 million people in Indiana.

To speak of James S. Hunter, we need to rely, with some variation, on the superb language of Winston Churchill:

Never has one done so much for so many.

And now, godspeed, Jim. May your future abound in the blessings you labored to bring to others in the past.

Now, may I present you with this plaque, which will give permanence to the words in our hearts here tonight.

We present it as a token of our esteem and appreciation for statesmanship and eminent public service.

Inscribed on this plaque are these words:

"To James S. Hunter, dean of Lake County's State representatives. In grateful appreciation of 20 years outstanding service to his county and State.

"Presented by Mayor George Chacharis on behalf of the citizens of Gary, Ind. Dated: March 16, 1959."

## Closure of Bristol Bay Salmon Fishery

EXTENSION OF REMARKS

OF

### HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. RIVERS of Alaska. Mr. Speaker, the recent announced intention of the Department of the Interior to close the Bristol Bay Salmon Fishery is a severe blow to the residence of the Bristol Bay area in southwestern Alaska. This is so because fishing is the principal means of livelihood for the people of that area. They are in deep economic trouble and understandably indignant and angry. They have helplessly watched the fine resource of the Bristol Bay red salmon runs decline through the years because of Federal mismanagement and resultant overfishing. They have watched the situation get progressively worse since the Japanese started their high-seas fishery for salmon in the North Pacific, in 1952. Although only 2 million fish were taken by the Japanese in that year, their activity grew rapidly until they took 64 million salmon in 1955, and the catch has fluctuated between this figure and about 40 million since then. Although only a portion of the salmon caught by the Japanese are spawned in American streams, the area in which the Japanese fishing is conducted is an area in which there is intermingling of Alaska spawned salmon and Asian spawned salmon. This has been ascertained through scientific research by Canada, Japan, and the United States under the terms of the North Pacific Convention entered into between those countries 5 years ago. This is the treaty wherein the Japanese agreed not to fish east of 175° west longitude and which treaty will not expire for another 5 years. Although this dividing line is admittedly provisional and subject to modification by mutual agreement of said three countries on the basis of knowledge obtained through research, there is nothing in the treaty which would compel the Japanese to agree to any change. Thus, by staying on their own side of the line they are living up to the letter of the treaty, but not the spirit thereof. Furthermore, their miles of seines with mesh too small for conservation purposes are catching over 1 million immature salmon every year which were spawned in the streams flowing into Bristol Bay. Accordingly, the treaty also needs changing to avoid the destructive effect of catching immature salmon.

As a result of these events, including the bumper catch by the Japanese in 1955, the U.S. Fish and Wildlife Service estimates a low-cycle return of salmon into Bristol Bay during the coming 1959 fishing season, so small, in fact, as to not allow the catching of any salmon by American fishermen in Bristol Bay this summer. Unless estimates change, all of the salmon which reach Bristol Bay during the pending season must be allowed to go up the streams to spawn in order to perpetuate and improve this great American resource.

From what I have said, it is apparent that unless the Japanese relent and cooperate in negotiating a new abstention line at least 5° farther west than the present line, along with improved conservation standards, the United States will be in the position of doing all the conserving while the Japanese catch all the fish.

The only alternative, if the present arrangements persist, would be for the United States to decide to let the tail go with the hide, so to speak, and let our American fishermen participate in the virtual liquidation of this otherwise great replenishable resource. In that event the Japanese would be in the position of having improvidently forced the destruction of a vitally valuable asset, as important to them, if properly conserved, as it is to us.

This statement would not be complete without my saying that a research program still in its infancy shows that salmon from our west coast other than those spawned in Bristol Bay, and other than red salmon, also mingle in the same north Pacific feeding grounds about which I am speaking and it might well be that the entire west coast salmon fishery all the way from Oregon to Alaska's Seward Peninsula on the Bering Sea is being adversely affected.

In view of the fact that this untenable situation is of national importance, Congressman Thomas M. Pelly from the State of Washington, and others have joined with me in the introduction of bills which would ban the import into the United States of Japanese-caught salmon until such time as the Japanese cooperate with our State Department in renegotiating the North Pacific Fishery Convention for the long range mutual benefit of all concerned. As the situation now stands, and unless there is an early change for the better, it is going to be necessary in the national interest to enact such legislation.

In closing, I wish to say that I am not of the school of thought which advances the idea of terminating the treaty with Japan and Canada either by mutual consent or unilaterally, for to do so would remove the abstention line now existing and open the way for the Japanese to fish all the way to our 3-mile limit. We must vigorously press for adjustment of that line and better conservation restrictions in accordance with existing knowledge on the subject, which knowledge was not available at the time the treaty with Japan and Canada was consummated.

## Michigan's Eighth District Opinions

EXTENSION OF REMARKS

OF

### HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I would like to insert the results of my annual questionnaire which was mailed to 30,000 of my constituents. I was very pleased to have a return of about 30 percent—9,314 replies—which I feel speaks very well for the interest my constituents have in national affairs. I believe all Members of the House will find these results of considerable interest:

Out of some 30,000 questionnaires which were sent out in January, 9,314 were returned for a gratifying percentage of 30 percent. Here is the way the eighth district voted:

1. Do you believe that continued prosperity requires continued inflation? Yes, 6.8 percent. No, 88.7 percent. No answer, 4.5 percent.

2. To combat inflation, would you favor price, wage and rent controls? Yes, 51.1 percent. No, 40.3 percent. No answer, 8.6 percent.

3. Do you think the Federal Government should spend more for welfare pensions? Yes, 22.6 percent. Schools? Yes, 38.6 percent; housing, 13.7 percent; hospitals, 22.9 percent; agriculture, 8.7 percent; veterans, 17.6 percent. No answer, 25.7 percent.

4. If tax reduction becomes possible where should it come first? More liberal treatment for small business? Yes, 41.5 percent. Cut individual rates? Yes, 43.8 percent. Cut corporate rates? Yes, 6.2 percent. Cut excises? Yes, 20.7 percent. Do you believev any present rates should be increased? Yes, 6.3 percent. No answer, 23.7 percent.

5. Would you favor a national sales tax collected at the manufacturer's level (except food, clothing and medicine) if addi-

tional revenue is needed? Yes, 44.8 percent. No, 37.8 percent. No answer, 17.4 percent.

6. Do you agree with those people who say that organized labor is becoming too powerful? Yes, 81.2 percent. No, 13.1 percent. No answer, 5.7 percent.

7. Do you favor extension of coverage and increase in the minimum wage? Yes, 38 percent. No, 48.4 percent. No answer, 13.6 percent.

8. Do you favor hospital and surgical care for social security beneficiaries with an increase in the wage basis for social security taxes to $6,000? Yes, 42.6 percent. No, 46.4 percent. No answer, 11 percent.

9. Do you favor Federal aid to education in school construction grants and teacher pay? Yes, 39.8 percent. No, 51.8 percent. No answer, 8.4 percent.

10. Instead of a Federal aid to education program, would you prefer permitting taxpayers to take a credit aganist their Federal income tax for new or additional school taxes paid? Yes, 51.6 percent. No, 32 percent. No answer, 16.4 percent.

11. Do you feel that the small businessman needs more and bigger loan programs, protection and benefits to aid him to compete? Yes, 59.3 percent. No, 26.9 percent. No answer, 13.8 percent.

12. Do you feel that Federal action is needed in these fields? More guarantees of larger mortgages at lower interest rates? Yes, 30.6 percent. Public housing for middle as well as low income families? Yes, 24.7 percent. Problems of social delinquents in slum areas? Yes, 38.4 percent. Aid to the elderly? Yes, 47.4 percent. Aid to the handicapped? Yes, 54.3 percent. No answer, 30.5 percent.

13. Do you think that support prices on farm commodities should be tied more closely to market prices? Yes, 60.6 percent. No, 17.7 percent. No answer, 21.8 percent.

14. In foreign aid would you favor more emphasis on economic and less on military assistance? Yes, 64.3 percent. No, 17.9 percent. No answer, 17.8 percent. Do you favor gifts and sales of surplus farm commodities to underdeveloped countries? Yes, 73.6 percent. No, 15.9 percent. No answer, 10.5 percent.

15. In the field of public versus private power would you favor expansion of TVA? Yes, 16.4 percent. Large-scale Federal construction of power projects? Yes, 16.9 percent. More public projects in the development of atomic energy? Yes, 41.7 percent. Would you favor legislation to relax Federal controls over independent natural gas producers? Yes, 24.3 percent. No answer, 40.4 percent.

16. Do you think that more federally administered programs should be turned back to State control? Yes, 62.6 percent. No, 19.7 percent. No answer, 17.7 percent. Do you favor more Federal grants-in-aid? Yes, 16.6 percent. No, 52.3 percent. No answer, 31.1 percent. Do you believe that the State and local governments should have more powers? Yes, 49.2 percent. No, 24.3 percent. No answer, 26.5 percent.

17. Do you favor repeal of section 14–B of the Taft-Hartley Act which permits the States to enact right-to-work laws? Yes, 36.5 percent. No, 50 percent. No answer, 13.5 percent.

18. Do you favor Federal spending programs such as long-term, low-interest Federal loans for local public works or Federal aid to centers of chronic unemployment for plants and public works to attract new industry? Yes, 61.9 percent. No, 25 percent. No answer, 13.1 percent.

## The U.S. Air Force Band Good-Will Tour to Latin America

EXTENSION OF REMARKS
OF
## HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. KEARNS. Mr. Speaker, I wish to congratulate the U.S. Air Force band for making what is probably the most effective goodwill contribution ever made in the history of United States-Latin America relationships. Having recently completed a 3-week, 18,000 mile tour of Latin America, this visit proved to be the best example of the worthiness of President Eisenhower's people-to-people program for creating better international understanding. The overwhelming success with which this great musical organization has met in terms of strengthening the ties of friendship between the people of the Americas must be recorded as being a most positive, lasting, and vital one.

Although the record books show that the U.S. Air Force band has previously made 8 preeminently successful tours of 44 different countries on 4 continents, its most recent one stands in a class by itself and is unquestionably the most triumphant one it has ever made. The fact that it took place at a crucial time when renewed or reawakened friendship with our Latin American neighbors is of utmost importance, its tremendous impact is doubly valuable.

Commencing in Rio de Janeiro, Brazil, on January 31, and continuing through Ascuncion, Paraguay; Montevideo, Uruguay; Santiago, Chile; Lima, Peru; Quito, Ecuador; Bogota, Colombia; Managua, Nicaragua; San Salvador, El Salvador; and Panama City, Panama, the tour was an unvarying series of cultural triumphs and friendship-winning manifestations. Playing to a total of 243,500 people of divergent racial, economic, and political backgrounds, the tour was made conspicuous by the absence of jeers or reference to "gringos." Instead, America's musical ambassadors of goodwill were referred to as the "band of friendship" and were received with a sincere and unprecedented enthusiasm at each point on their itinerary.

A typical example of the prevailing enthusiasm was demonstrated at Santiago, Chile. Col. George S. Howard, the band's eminent conductor, and his airmen-ambassadors-musicians arrived in that most delightful city at a most inopportune time. Pro-U.S. sentiment was at a low ebb due to a most unfortunate circumstance which had occurred the previous week. An inferior basketball team representing the United States had suffered an ignominious defeat at the hands of a superior Russian team. Since the game of basketball was invented and first played in the United States, the sight of a U.S. team taking such a humiliating beating from the Russians was more than some Santiagoans could bear. Accordingly, they booed the North American team. To make matters worse, a leftist Santiago newspaper editorialized:

> Whether it comes to shooting baskets or sputniks, the United States just cannot keep up with Russia.

Such was the atmosphere in Santiago at the time of the band's arrival. That condition notwithstanding, the Air Force Band drew a total of 105,000 people during its 3 performances. However, that only tells part of the story because the important issues were how was the band received and what did Santiagoans think of its performances? As for the former, I have been assured by both officers and enlisted men alike that the organization has never played before a more wildly enthusiastic audience. Not only were its ovations tumultuous but their regard for the individual bandmembers bordered on hero worship. Upon the conclusion of its concert before 50,000 people at the National Stadium, a huge throng swarmed on the field to get a closer look at the players. Some of them sought autographs. Some of them just wanted to touch the North Americans. But most of them wanted some souvenir or memento of the occasion.

In most cases this amounted to a fragment of paper torn from the program but they would not depart until they had received it. One of the string bass players told me that it took him 1 hour to get his string bass case which was some 50 feet away. As for their opinions of the performances, here is what their music experts said:

> Our people which is authentic, uncontaminated, spontaneous, virile, and cultured, applauded with enthusiasm the interpretations of the "Band of Friendship." They left a mark of pleasant sentiment and memories. Chile and the United States are joined by a new tie, the soft emotions of the spirit.—El Diario Ilustrado. The beautiful spiritual success of the USAF Band has forged delicate but strong threads of union.—La Nacion. We all come out ahead and the friendly ties which has always united us with the United States has been greatly strengthened.—Ultimas Noticias.

These well-deserved plaudits are not peculiar to Santiago alone. In Asuncion, according to our official State Department report, the U.S. Air Force Band's appearance is generally regarded here as the most successful cultural event ever presented by the United States in Paraguay. Of their Managua performance, the official report says:

> Embassy personnel have been told by many Nicaraguans that this was the finest entertainment they had seen on the part of touring U.S. talent.

In Montevideo, where 5,000 people tried to break down the doors of the concert hall in an attempt to gain entry, a high-ranking government official told a large radio audience upon the conclusion of the program that the U.S. Air Force Band was the best of goodwill ambassadors.

As our Air Force ambassadors continued to play themselves into the hearts and minds of country after country, the results of their efforts were from time to time observed by highly qualified U.S. citizens. One of these, an American businessman with financial interests in Latin America had this to say in Lima:

I've been coming down here at least three times a year for the past 10 years. In that time I have seen many efforts on the part of the United States to assist our southern neighbors and to win their respect, admiration, and friendship. I can truthfully say that in my opinion, none mean as much to them as what they had seen and heard tonight.

In Santiago, a visiting American newspaper editor from Pittsburgh expressed himself this way:

This is the greatest thing I have ever witnessed. We should do more of it. If I could be certain the money would be spent for efforts like this, I would pay my taxes much more happily.

In the final analysis, though, it is the impression that these efforts make on foreign nationals is what counts. That this impression never fails to be an ideal one is best exemplified by an editorial in the same Santiago leftist paper which 1 week earlier made the United States-Russian, basketball-sputnik rejoinder. Only this time it had this to say:

We hope that the change over from arms to violins, clarinets, and so forth, continues to grow and that the men of the world, and a French poet once called for, form a circle around the earth hand in hand united by music, and that luck accompany these aviator-musicians who travel around the world with melody and good will.

## DAV Services in Colorado

EXTENSION OF REMARKS
OF
## HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. ROGERS of Colorado. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Colorado citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Colorado, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer N. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris, all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of fulltime trained national service officers, 138 of them, who are located in the 63 regional and three district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV national service officers in Colorado are Mr. Frank M. Cain and Mr. Lowell McGowan, located in the VA Center, Denver Federal Center, Denver, Colo. VA hospitals coming under the jurisdiction of this office are: A 530-bed GM hospital at Denver, a 681-bed NP hospital at Fort Lyon, and a 152-bed GM hospital at Grand Junction.

The offices of the Department of Colorado, Disabled American Veterans, are located in room 116, State Office Building, Denver, Colo.

During the last fiscal year, the VA paid out $60,101,000 for its veteran program in Colorado, including disability compensation to its 20,440 service disabled veterans. These Federal expenditures in Colorado furnish substantial purchasing power in all communities.

Only about 29 percent—6,002—are members of the 26 DAV chapters in Colorado.

This 29-percent record is the best among all States but, nevertheless, not good enough in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Colorado veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

| | |
|---|---|
| Claimants contacted (estimate) | 56,243 |
| Claims folders reviewed | 46,869 |
| Appearances before rating boards | 22,166 |
| Compensation increases obtained | 4,982 |
| Service connections obtained | 1,558 |
| Nonservice pensions | 899 |
| Death benefits obtained | 385 |
| Total monetary benefits obtained | $2,950,547.20 |

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Colorado veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranteed loans for homes, farms, and businesses and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult, too many times impossible. A Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his

skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued; and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1 percent—.0099—of such discontinuances and reductions have probably occurred as to disabled veterans in Colorado with a consequent loss of about $2,677,200 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Colorado to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nation-wide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag (miniature automobile license tags) Project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentlly, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag Department, 6,029 of whom, during the last 8 years, were Colorado residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nation-wide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all "serviced" claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund ranging from $100 to $1,000, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of Colorado.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Colorado by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice, the DAV.

## Views on Proposed Labor Legislation

EXTENSION OF REMARKS
OF
## HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I desire to include the following text of an interesting and detailed letter I recently received from Mr. Walker L. Cisler, president of the Detroit Edison Co. I believe Mr. Cisler's letter should be of considerable interest to all Members of the House since it concerns his company's views on proposed labor legislation now before the Congress.

THE DETROIT EDISON CO.,
*Detroit, Mich., March 12, 1959.*

The Honorable ALVIN M. BENTLEY,
*U.S. House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN: In view of the pendency before Congress of numerous proposals to enact legislation in the labor-management field, and particularly the so-called Kennedy and administration labor reform bills (S. 505 and S. 748) we would like to tell you about certain experiences of our company under existing legislation, and our reaction, based on these experiences, to three pending legislative proposals.

By way of preface we should say that we have two strong unions in our company which represent about 4,500 of our employees. Our relationships with these unions have been good.

We are generally in favor of the enactment into law of the reporting requirements of the two bills. It seems to us that most of these requirements, if properly enforced, will go a long way to curb the activities of thieves, racketeers, and gangsters in the labor movement as well as restrain conduct by employers which violates the spirit and language of the National Labor Relations Act.

Of the two bills mentioned, we prefer that proposed by the administration because it appears to contain better and more effective enforcement provisions. Both bills would create a new bureau in the office of the Secretary of Labor, but the administration bill gives this bureau the necessary power and procedures to effectively enforce the act. For example, the administration bill would preserve the rights of union members under existing laws to require their officers to observe the constitution and bylaws under which they serve, and add a new power in the Secretary to investigate and take appropriate action to secure compliance, including the setting aside of the election.

The Kennedy bill, on the other hand, would restrict the right of the Secretary to act except upon petition of a union member who has first exhausted his remedies within the union, and would provide only one type of remedial action, the setting aside of the election and conducting a new one. This remedy would be exclusive, and union members would thus be deprived of their existing rights and remedies. Under the Kennedy bill, the present monitorship of the Teamsters Union would not have been possible, as it resulted from an action by union members.

These are general comments. The experience we have had relate to three specific proposals that have been brought before Congress:

1. Restricting the definition of supervisor.
2. Requiring certain reports by employers.
3. Strengthening the prohibitions against secondary boycotts.

RESTRICTING THE DEFINITION OF SUPERVISOR

In our opinion, management can operate effectively only if all persons from the top to the bottom who are connected with the responsible direction of employees and the carrying out of management policies are management people and have loyalties only to management. There can be no dilution of this principle. The functioning of management authority will be impeded and greatly hindered if it is not preserved wholly.

We did not always feel this way. Prior to the Taft-Hartley amendments, we recognized the International Brotherhood of Electrical Workers as bargaining agent not only for the rank-and-file employees of our overhead lines department, but also for the first line supervisors of this department, called "A foremen." This arrangement went back long before the enactment of the Wagner Act. When the Taft-Hartley amendments were passed, we saw no reason to make any change in this arrangement. Our relations with the Brotherhood were good, and no problems arose from the representation of our A foremen by the union.

However, a few years ago the union fined one of our A foremen because he had carried out the policy of our management with respect to outdoor work in inclement weather. It had been provided in our agreement with this union that employees will not be required to work outdoors in inclement weather except in case of emergency and other stated situations. By this disciplinary action imposed upon our A foreman, who was also a union member, the union attempted to impose its interpretation of inclement weather upon this representative of management.

This incident brought to our attention very vividly the fact that a man cannot serve two masters, and emphasized that management cannot hope to have its policies carried out unless all persons connected with the administration of those policies, from the highest to the lowest supervisor, are unaffected by union loyalties and disciplines.

We are unaware of any hardship upon unions or employees that has resulted from the present definition of supervisor. It was the considered opinion of Congress in 1947 that all persons who responsibly directed the work of others should be excluded from the term "employee" as used in the act. This was a sound conclusion then and remains sound today. It should not be changed.

REQUIRING CERTAIN REPORTS BY EMPLOYEES

The second specific proposal about which we desire to comment is section 103(a)(2) of the Kennedy bill which would require employers to report expenditures for the purpose of inducing employees to refrain from joining a union. We see no purpose in this proposal as written and strongly oppose it. If enacted, this requirement would create a serious problem. How could we be sure we were complying with the law?

Some of our employees are represented by the International Brotherhood of Electrical Workers, some are represented by the Utility Workers Union of America, and the rest are unrepresented. We constantly communicate with our employees, both represented and nonrepresented, concerning a great variety of subjects. We attempt to keep them informed of management policies and decisions. We think we do a good job in this respect. And we have been charged before the NLRB only once in our history with engaging in unfair labor practices, and this charge was dismissed by the NLRB after a full hearing.

Nevertheless, if this proposal should become law, we would be hard put to know what communication of ours might be considered as designed to influence the union affiliations of our employees. Furthermore, the right of any person, be he an employer or not, to express his opinions concerning unions and union affiliations of his employees is expressly guaranteed by the National Labor Relations Act and by the first amendment. So long as such expressions of opinion are lawful and protected acts, there should be no requirement that they be reported. The current labor reform proposals pending in Congress are designed to prevent improper conduct by requiring that it be reported. To require that lawful and protected conduct be reported would place a stigma on such conduct and tends to discourage it. There should be no restraints upon the freedom of any person to discuss the vital and controversial subject of union affiliation.

STRENGTHENING THE PROHIBITIONS AGAINST SECONDARY BOYCOTTS

Finally, we strongly urge the enactment of the provisions of the administration bill which further regulate the secondary boycott, but without the exemption of construction site picketing, which is proposed in that bill. The Taft-Hartley amendments have been construed to prohibit secondary boycotts only when accomplished by influence executed directly against employes. Secondary boycotts accomplished by threats against and coercion of employers have been construed to be beyond the scope of this act. The Teamsters Union and the various building trades unions have taken advantage of this construction, and by coercing employers regularly carry on secondary boycotts which are as injurious to the public as those proscribed by the act.

Due to the disclosures of the McClellan committee, the common tactic of the Teamsters of organizing from the top, and coercing employers to place their employes in that union by use of threats against other employers is well known. We have been the victim of a secondary boycott accomplished by coercion of employers which was as pernicious in its effects upon the economy and the right of employees to organize freely and without coercion as anything the Teamsters have attempted.

In 1956 we were engaged in building a huge new powerplant at River Rouge, Mich., and were soliciting bids for the construction of a vast extension of our existing powerplant at St. Clair, Mich. The general contractor on both of these projects was the same. Both plants involved the fabrication and installation of large quantities of piping and a great deal of work for pipefitters both at the sites of the plants and in the factory where much of the fabricating is done. As a practical matter, on-the-site fabrication of pipe for an installation as large as this can be accomplished only with workmen who are members of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada. It is impossible to secure enough skilled pipefitters for such an installation except through this union and its locals.

A Detroit mechanical contractor who was interested in bidding for the piping contract at the St. Clair plant proposed to subcontract the off-the-site pipe fabrication to the Crane Co. in Chicago. The employees of the Crane Co. are organized and represented by unions other than the United Association. The Crane Co. competes with other pipe fabricators whose employees are members of the United Association.

On January 21, 1957, the first of the three generating units at the River Rouge plant had been finished and was in operation. Work on the second was well under way and the third had been commenced. Steel for the St. Clair addition was being erected. Suddenly, and without warning, the United Association, acting through its Detroit local, withdrew its men from the work of installing the pipe furnished by Westinghouse Electric Corp. as part of the turbogenerator portion of the second River Rouge unit. The immediate excuse for this strike was the fact that this pipe had been fabricated by workmen who were not members of the United Association. The Westinghouse plant in which this pipe had been fabricated was represented by the United Electrical Workers.

Within a few days the United Association sent a field man to the job and he frankly informed the general contractor, United Engineers & Constructors, Inc., that the real reason for the strike was the fact that Edison was contemplating the use of pipe fabricated by Crane at our St. Clair addition. He informed United Engineers that the entire dispute could easily be settled if we would agree to give the contract for off-the-site pipe fabrication for St. Clair to some fabricating shop which dealt with his union.

It has been our longtime policy to build our plants and facilities as cheaply as good engineering will permit, and to procure the materials, supplies, machinery and equipment which go into these plants from the supplier who gives us the best quality at the best price. We saw no reason to abandon this policy and to assist the United Association in its obvious attempt to monopolize the pipe fabricating business for its members and the employers with whom it dealt. We refused to make the requested agreement.

Instead, we filed a charge with the National Labor Relations Board alleging violation of the secondary boycott provisions of the act. The district director investigated our charge, filed a complaint, and petitioned the U.S. district court at Detroit for an injunction. After a long and bitterly contested hearing, the court issued its injunction on May 10, 1957, and the strike at the River Rouge powerplant against the Westinghouse turbine pipe was terminated.

However, the United Association was not through. On May 20, 1957, it called our general contractor, United Engineers, to a meeting. We do not know what happened at that meeting, or what threats were made and what coercion was applied. We do know that United Engineers, which had theretofore cooperated with us in our attempts to get our powerplants built, signed an agreement that it would not request pipefitters from the United Association or any of its locals for the installation of piping at the St. Clair plant, that it would not request any subcontractors to do so, and that it would not transfer to St. Clair any pipefitters presently working for it at River Rouge, until we agreed to have the piping for St. Clair fabricated in a United Association shop. This was all done under the pretext of complying with the provisions of a "hot goods" clause in the contract between United Engineers and the United Association.

Again we refused to be coerced into changing our purchasing policy. We removed United Engineers from its position as our general contractor at St. Clair and have been able to proceed with this project through other contractors who have been able to secure pipefitters.

This is a brief statement of a very complicated situation. It has, in our opinion, two significant and very pernicious aspects. United Engineers is one of the largest national contractors in the utility field and had been doing business with us for years. It had a valuable contract with us. Nevertheless, it was unable to withstand the threats of the United Association and endangered and ultimately lost its contract with us rather than run the risk of this

union shutting down the numerous construction projects in which it was engaged throughout the country. The power of the great international unions has become so great that even the largest and presumably the strongest employer must bow before it.

Secondly, we do not believe it is or should be the policy of our law to permit any group of men who follow a particular trade to band together in a labor union and monopolize the work of that trade. The employees of Westinghouse and of Crane have the right, under the Taft-Hartley Act, to choose the union they prefer. This right is jealously protected by that act. Yet it would seem that under the same act, these employees may be deprived of their work by a union which they did not choose, and which says, arbitrarily, no person can work upon pipe unless he pays dues to it.

In brief, our experience and we are sure the experience of many other employers show that secondary boycotts can and are carried on successfully without inducement of employees, and by means of threats against the coercion of employers. This should no longer be permitted.

EXEMPTION OF PICKETING AT CONSTRUCTION SITES

The proposed exclusion from the secondary boycott provisions of the administration bill, of strikes at construction sites, would largely render nugatory these provisions. Experience has shown that the secondary boycott is the favored tactic of the Teamsters and the construction trades. This exclusion would have the effect of permitting what the balance of section 8(b)(4)(B) of the proposed bill would forbid.

Under existing law, a construction union can effectively withdraw workmen in its own trade from almost any construction job, and such job cannot proceed until settlement has been made. We see no reason why, by the express permission of on-the-site picketing, these powerful and well disciplined unions should be added economic weapon of shutting down the entire project. It is hard to see how on-the-site picketing of a construction project can be any other than the unlawful inducement of employees of other trades under the secondary boycott provisions that exist. To legalize such conduct would largely nullify these provisions.

"HOT GOODS" CLAUSE

There has been much litigation in the courts regarding the effect of "hot goods" clauses which are used by many unions in an attempt to legalize secondary boycotts. The Supreme Court has held that "hot goods" clauses are no excuse for secondary boycotts effected by inducement of employees. However, the courts have not ruled that "hot goods" clauses are void and unenforceable. We believe that Congress should expressly declare such clauses to be contrary to public policy and void.

We trust that you will give serious consideration to the points made in this letter.

Sincerely,

WALKER L. CISLER.

EXTENSION OF REMARKS
OF
**HON. CARROLL D. KEARNS**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. KEARNS. Mr. Speaker, last Thursday, March 12, 1959, I voted for statehood for Hawaii. I did so partly because of my marvelous memories of one of the finest Members ever to sit on the floor of the House of Representatives—the Honorable Joseph Rider Farrington, Jr.

The vote last week culminated the groundwork that had been laid over the years by one whom I consider the real pioneer of statehood for Hawaii, Joe Farrington, assisted by his lovely wife, Betty, who also served as a Delegate in Congress from Hawaii.

## American Medical Association Dedicated To Improve Health Care of the Aged

EXTENSION OF REMARKS
OF
**HON. WILBUR D. MILLS**
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Leonard W. Larson, M.D., chairman of the board of trustees of the American Medical Association:

AMERICAN MEDICAL ASSOCIATION,
*Chicago, Ill., March 5, 1959.*

Representative WILBUR D. MILLS,
*Chairman, Ways and Means Committee, U.S. House of Representatives, House Office Building, Washington, D.C.*

DEAR CONGRESSMAN MILLS: You will recall that while testifying before the House Ways and Means Committee in Washington last June, I pledged the American Medical Association to a dedicated and continuing effort to improve the health care of the aged.

Speaking as chairman of the AMA board of trustees, I said:

"I shall devote all my energies to solving this problem and other problems of medical care plans in general. This is my primary interest."

The purpose of this letter is to summarize some of the forward steps we are taking. We will continue in the months ahead to send you similar reports.

I believe this first report will make it evident that we are making sustained and encouraging progress.

In particular, we wish to emphasize these developments:

The AMA's policymaking body—the house of delegates—took a big step when in December 1958, it unanimously approved a resolution urging "That the American Medical Association, the constituent and component medical societies, as well as physicians everywhere, expedite the development of an effective voluntary health insurance or prepayment program for the group over 65 with modest resources or low family income; that physicians agree to accept a level of compensation for medical services rendered to this group, which will permit the development of such insurance and prepayment plans at a reduced premium rate."

The AMA is working closely with Blue Shield Medical Care plans in implementing this proposal. The Blue Shield Commission has received approval by the AMA on a recommended scope of benefits for consideration by local plans to stimulate the availability of coverage for persons over 65 at reduced premiums. These plans would incorporate adjusted fees for physicians in accordance with the AMA recommendation.

State and local medical associations also are moving promptly and decisively to make this policy effective in the various States.

I will list here only a few examples:

The West Virginia State Medical Association's committee on Blue Shield has gone on record as recommending that physicians accept 50 percent of their normal fees for Blue Shield clients over 65 who have an income not exceeding $3,000 per annum, provided such Blue Shield insurance is the client's sole coverage for medical services rendered in hospitals.

In addition, the West Virginia committee went on record as recommending that hospitals in West Virginia accepting patients under the Blue Cross program adopt a similar policy with reference to the hospitalization of subscribers over 65.

The Medical Society of New Jersey, by action of the board of trustees, recorded its approval and support of the AMA resolution and recommended that the medical-surgical plan of New Jersey (Blue Shield) act with all possible speed to prepare a contract offering coverage at reduced premiums to people over 65 with reduced income, and that the proposed contract be submitted promptly to the State Commissioner of Banking and Insurance for his approval. The board of trustees also supported the recommendation that physicians of New Jersey accept the levels of payment established in the proposed new contract.

The California Medical Association, which established its California Physicians Service (CPS) 20 years ago and thus pioneered health insurance by the medical profession itself, approved a recommendation of its special committee on aging to move ahead with a positive program to meet the proved needs for medical and hospital care for the aged. Editorially, the San Francisco Chronicle described this action as "another progressive step in the field of prepaid medical care" and said that it "promises to contribute substantially toward solution of the difficult and increasing problem of medical care and attention for the aged." The editorial added: "The California Medical Association has displayed commendable zeal and wisdom."

The Voluntary Health Insurance and Health Care Costs Committee of the Texas Medical Association adopted a recommendation "that Blue Cross-Blue Sield of Texas be requested to prepare a program as a pilot plan for providing health care services to Texas citizens over the age of 65 on a prepaid service plan basis and that said program be presented to the house of delegates at the next annual meeting for consideration and action." The recommendation added: "It is understood that the plan is to be a joint endeavor of the Texas Medical Association, the Texas Hospital Association and Blue Cross-Blue Shield, and that both hospital and medical services be provided on a corresponding basis. It is also to be understood that the services or full indemnity feature would apply only to the low income individuals in this age group."

The Committee on Care of the Aged of the Ohio State Medical Association and Ohio representatives of the American Hospital Association, Blue Shield and Blue Cross voted to move promptly ahead with expanded and improved programs designed specifically to meet the needs of those 65 and above.

The Committee on Aging of the Florida State Medical Association approved the AMA policy declaration and Blue Shield contributed $5,000 to aid in a survey of the economic aspects of health needs of the Florida aged.

The Michigan State Medical Society's Executive Committee adopted a resolution identical to the one adopted by the AMA House of Delegates and urged its Medical Care Insurance Committee immediately to

study and develop a contract to care for persons in this group.

This AMA policy recommendation will be a primary item of business at the annual meetings of 34 State medical societies this spring. Other state societies, normally meeting in the fall, have indicated their intention of calling special sessions to expedite this policy.

In fact, the House of Delegates of the Iowa State Medical Society, in special session in late February, voted to develop a pilot program whereby persons 65 and over will be able to budget in advance for their medical needs at a cost in keeping with their financial resources. In making this announcement, the Iowa State Medical Society stated: "It is anticipated that this unique plan will provide broad full-service coverage. This means that a participating physician in Blue Shield will not make an additional charge to the patient beyond the Blue Shield allowance for those professional services specified in the contract. Under this program, a man and wife over age 65 whose combined income during a year is less than $3,000 a year will be entitled to full service coverage. In most cases, the financial return under the program will represent no more than the physician's actual overhead expenses."

The AMA is also working closely with commercial insurance organizations to encourage the development of new insurance programs and expansion of existing lower cost protection for persons over 65.

Among the many private hospital, surgical, and medical insurance policies available to persons over 65, the following are important examples: Guaranteed renewable contracts of the Metropolitan Life Insurance Co., New York Life Insurance Co., and Prudential Insurance Co. of America, and paid-up-at-65 policies offered by the John Hancock Mutual Life Insurance Co. and the Metropolitan Life Insurance Co. Some significant developments are:

Continental Casualty Co., Chicago, has offered its 65-plus policy to all persons over 65 in 12 States and the District of Columbia. This offering of hospital and surgical coverage to individuals, guaranteed renewable except in the event of withdrawal for the whole State, was accompanied by an intensive advertising and publicity campaign to assure maximum public knowledge of the plan's availability.

Mutual Benefit Health and Accident Association, Omaha, has introduced a senior security contract providing hospital, surgical, and medical coverage for individuals over 65. The original offering was scheduled in four States different from those covered by Continental.

The American Association of Retired Persons (membership open to anyone over 65) provides the advantage of hospital and surgical coverage on a group basis. Present membership of this association is now reported in excess of 300,000.

To further strengthen and improve private insurance coverage for those over 65, the Health Insurance Association's board of directors has forwarded the following recommendation to its 265 member companies:

1. Every insurer offering health insurance coverage, among the types of insurance contracts it offers, should promptly make available to insurable adults policies that are guaranteed renewable for life.

2. Every insurer offering individual family and hospital-surgical-medical care coverage should promptly take steps, if it is not presently doing so, to offer insurance coverage to persons now over 65.

3. Every insurer writing coverage on a group basis should develop and aggressively promote soundly financed coverages that will continue after retirement.

4. Every insurer offering coverage on a group basis should enocurage the inclusion in the group contract of the right to convert to an individual contract on termination of employment.

Clearly, real headway is being made as a result of AMA efforts. It is now evident that protection to persons in this age bracket is already in existence and is being broadened and improved even faster than many of us would have dared hope only a few months ago.

Solution of financial problems relating to health care of the aged depends, however, as much on reducing the costs of services as it does on developing financial mechanisms. One alternative to high hospital costs is the nursing home.

The AMA has long recognized the importance of proper nursing home facilities. It has made it clear in congressional testimony that it approves and vigorously supports a Government-insured loan program of the FHA type for nongovernmental hospitals and nursing homes whether their ownership is of a nonprofit or proprietary character. The AMA also has recommended changes in the Hill-Burton Act to make it possible for States to put more money into nonprofit nursing homes. We have taken these positions because we believe there is an undeniable need for new and improved facilities tailored to the specific health requirements of many older citizens.

This problem of additional facilities has a bearing, of course, on the availability of benefits for nursing home care. It is noteworthy that one insurance company (Mutual of Omaha) is now expanding its senior security policy in Nebraska, to provide benefits for nursing home care, in hope that it can be extended to other States in the near future. Further development of these programs will be facilitated by the following actions now under way:

1. Development of a program for classifying and listing nursing homes in accordance with the service each provides. (Such a classification program is now being worked out by the AMA, the American Hospital Association, the American Nursing Home Association, the U.S. Public Health Service and other groups.)

2. Development and acceptance of medical standards for nursing home care. The AMA has recommended minimum standards which are now awaiting approval by the American Nursing Home Association.

Both these actions are tied in closely with a recent survey of nursing homes throughout the United States—a survey conducted jointly by the AMA and the American Nursing Home Association. This survey has made available urgently needed information on the cost of care, the type of care and the kind of patient in the nursing homes, as well as other pertinent information. Details of the survey will be published soon.

As another means of reducing not only the need for high cost hospital care but even nursing home costs to the chronically ill and the aged, the AMA has moved to develop additional alternatives to institutional care. Among those alternatives are home care programs (to extend some hospital services into the home) and homemaker services (to provide a trained person in the home to handle household duties, thus permitting many patients to leave the hospital earlier and convalesce at home). These services have a common purpose: to reduce the length of hospital and nursing home care by permitting earlier discharge of patients or to avoid the need for such institutional care.

The AMA has now completed a careful analysis of all home care programs. This analysis has been distributed to medical societies and it is serving as a guide to the establishment of effective programs of this type in communities throughout the Nation.

The AMA sponsored (with the Public Health Service, the American Cancer Society, the Salvation Army, and others) a national conference on homemaker services in Chicago, February 9–11. The basic objective: extension of homemaker service programs from the present 150 communities to every community—and as quickly as possible.

Regrettably, too few people are fully aware of the home care, homemaker and similar services which now exist in their own communities. Dissemination of such knowledge often requires creation in the community of a central information agency. The AMA has just completed a study of such organized central service programs for the chronically ill. This study is now stimulating the establishment of these centers in more communities.

Further, the AMA feels strongly that major emphasis should be given to health maintenance; to medical, social, and economic steps that will help a majority of older persons who are well to stay well.

This demands intensive efforts to educate physicians, hospital administrators, nurses, employers, and others for the new era of aging.

This theme was emphasized to physicians at AMA's Planning Conference for Medical Society Action in the Field of Aging last September. This conference was attended by official representatives of 46 State medical associations and 27 State health commission officials. It will be reemphasized to other health authorities at the first national conference of the Joint Council To Improve the Health Care of the Aged in Washington, June 12–14. (The joint council consists of the AMA, the American Hospital Association, the American Dental Association, and the American Nursing Home Association.)

It obviously is no accident then that the first of six points in the AMA health program for older citizens calls for stimulation of a realistic attitude toward aging, nor that the second point calls for promotion of health maintenance programs and wider use of restorative and rehabilitation services.

Copies of this program, "Medicine's Blueprint for the New Era of Aging," and the report on the September conference are enclosed.

These two documents are serving as guides to the 45 State medical society committees on aging. A partial list of activities of these committees is on pages 88–89 of the report of the September conference.

They include:

Strengthening licensing requirements for nursing homes and similar institutions.

Sponsorship of homemaker service programs.

Pilot action studies in home care programs.

Surveys of hospital utilization and its relationship to the aged.

Planning of adequate housing and nursing facilities for senior citizens.

Development of rehabilitation activities in and outside institutions.

Statewide programs of annual physical examinations in the over-50 age group for health maintenance and disease prevention.

Above all, we hope and believe that the AMA has brought increasing public acceptance of the fact that whoever we are, we all share the social obligation of giving aging people a chance to lead rewarding and productive lives. The AMA has hammered hard at this theme; it is continuing to do so. We are seeking, with all the means at our disposal, to make it clear that those people reaching an age of 74 or 63 or 60, with their capabilities and desire for productive work still alive and strong, should not and must not be fenced apart from everyone else by artificial barriers, either for their sake or the sake of the economy. Certainly, ability found at any age is worth saving, and this emphatically applies to those with ability

backed by years of experience, by a deep knowledge of living and by the wisdom of knowing human problems.

These are some of our fundamental goals and what we are doing to reach them. We would be deluding only ourselves if we maintained that all of these problems can be solved overnight. They cannot, now, nor can they ever be solved by any waving of a magic wand. Yet it seems to me these facts are inescapable: We have made solid progress; there is much still to be done; we are in the process of helping to do it.

Sincerely yours,

LEONARD W. LARSON, M.D.

## New Giveaway Plan Has Doubtful Benefits

EXTENSION OF REMARKS

OF

### HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of an editorial which appeared in the March 5 issue of the Saginaw News regarding Senator DOUGLAS' proposed bill to provide Federal funds to help certain depressed areas find jobs for their unemployed. This is indeed a heartening and encouraging indication that certain communities in my State of Michigan are ready and willing to solve their own problems without Federal doles which would only temporarily relieve the situation, not solve it.

NEW GIVEAWAY PLAN HAS DOUBTFUL BENEFITS

Senator PAUL H. DOUGLAS, Democrat of Illinois, held a 1-day Senate subcommittee hearing in Detroit Monday, with the very apparent hope of building up support for his bill, now before the U.S. Senate, to provide $389 million in Federal funds to help the Nation's depressed areas find jobs for the unemployed.

As expected, he got ready testimony from Gov. G. Mennen Williams and UAW President Walter P. Reuther that Michigan needs and would welcome this Federal help. Naturally, too, they blamed Michigan's unemployment not ony Michigan shortcomings but on what they termed the "national recession." Even while calling it national in scope, they said that Michigan had been hit much harder than most other States by it.

What Senator DOUGLAS did not expect, however, was the testimony of representatives of Battle Creek, Muskegon, and Jackson that the problem of industrial development was a State and local matter, and that Federal aid was not needed, nor would it help.

It would be only a drop in the bucket, anyway, since the hearing disclosed that the most Michigan could expect would be $13½ million. And Michigan's share, in Federal taxes, to pay the $389 million would be considerably greater than that. It always is, in any Federal aid plan.

The Douglas-Williams-Reuther philosophy of Federal aid for everything, as a means of redistributing the wealth of the Nation, got quite a shock when F. Joseph Buckley, managing director of the Battle Creek Area Development Corp., told Senator DOUGLAS, "Each community should roll up its sleeves like Battle Creek has and organize an area development corporation. They should take good care of the industry they have and create a good local business climate."

Certainly, there was no call for Federal aid in this statement.

Then Mr. Buckley declared further: "If our State would be as active as my community, there would be little need for an area redevelopment act. (That's what Senator DOUGLAS calls his bill.) If Lansing would drop its political axes and become Michiganders and Americans instead of Democrats and Republicans, the fundamental problems would be licked."

Among the fundamental problems was the big difference between Michigan and Indiana taxes on business, as poitned out by Robert J. Mason, vice president of the Muskegon Manufacturing Association. Mr. Mason's solution of Michigan's unemployment problem was a climate of good labor relations and taxes reasonably apportioned. The proposed Douglas bill, he declared, would be of no benefit to his city.

Muskegon, he pointed out, has an industrial development fund which has made 43 loans to industry, which helped to locate them in Muskegon, and helped to put 12,000 men on payrolls.

That, we must say, is a pretty good record of self-help.

A danger in the Douglas plan was cited by James O'Neil, of the Jackson Development Corp. Mr. O'Neil suggested that Federal aid for so-called distressed areas could backfire on nondistressed areas by helping the former take industries away from the latter. This eventually could make distress areas out of the nondistressed.

Senator DOUGLAS hastened to tell Mr. O'Neil that this was not the intent and purpose of his bill. But he could not guarantee that it might not be one of the consequences.

Senator DOUGLAS, we suspect, will interpret the Detroit hearing as an endorsement of his bill, inasmuch as Governor Williams, Mayor Miriani, of Detroit, and Mr. Reuther supported it.

But there will be many who have their misgivings about the ultimate accomplishments of this Federal giveaway bill, especially in the light of its rejection by communities who have had the gumption to roll up their sleeves and do something about their own problems.

Those problems will be settled—not just momentarily relieved—by this energetic, on-the-scene, local self-help method much better than by any handout from Washington, which would be only, at best, a drop in the bucket.

Michigan can work its way out of its employment, or unemployment, problem. And it will be a sounder State for having done so itself.

## Equal Time Nonsense

EXTENSION OF REMARKS

OF

### HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. CUNNINGHAM. Mr. Speaker, the Washington Daily News commented in its usual straightforward editorial manner Monday on the recent Federal Communications Commission ruling on the Lar Daly case in Chicago.

I urge my colleagues to pay special attention to the last two paragraphs of this editorial. The danger of government tampering with news program content is brought home most clearly.

Under leave to extend my remarks in the RECORD, I include the editorial from the Daily News:

EQUAL TIME NONSENSE

Frank Stanton, president of the Columbia Broadcasting System, has asked the Federal Communication Commission to reconsider a ridiculous ruling it made last month.

The ruling compelled Chicago TV stations to give equal time to a rival candidate for mayor because Mayor Richard J. Daley, also a candidate, had been shown briefly on newscasts.

There was a flash shot of the mayor filing his nomination papers, a 22-second glimpse of him greeting President Frondizi of Argentina at the airport, and a 1-minute shot of him opening the March of Dimes campaign.

These were not pictures of the Mayor making a political speech. The Mayor didn't ask for the time, it wasn't given him, he didn't buy it. It was part of a general news program.

But Lar Daly, a perennial candidate for whatever is going, demanded equal time and the FCC, by a 4-to-3 vote, said he was entitled to it. This is the same Daly who once announced he was a candidate for President, then sued the TV networks for equal time with Ike. A judge threw out the case.

The law, in what the trade calls the ulcer section, requires TV stations to give equal time, if asked, to political candidates who "use" the facilities. That is, if a candidate buys or is given time for a political broadcast, his rival may have a like time under like conditions.

The FCC frivolity in the Daly case goes way beyond that—it tampers with the news. Mr. Stanton says if the FCC doesn't reverse this nonsense, he will appeal to the courts, to Congress and to the public. It's a question of self-preservation. If the Government bureaucrats get to telling the news media what they must broadcast or print, it won't be long before they are dictating what they cannot broadcast or print.

Then, friends, we will have had it.

## Limitation on Advancement of PTS Substitutes

EXTENSION OF REMARKS

OF

### HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mrs. GRANAHAN. Mr. Speaker, on March 5, 1959, I introduced H.R. 5337 which would remove from the Postal Classification Act a serious inequity affecting only a very small group of postal employees. That group is the Postal Transportation Service substitute, whose position is allocated to salary level PFS–5 as a distribution clerk in a railway or highway post office.

When the Postal Classification Act became law in 1955, all Postal Transportation Service substitutes were limited to step 4 of level 5. In November 1957, the Post Office Department placed some Postal Transportation Service substitutes in postal field service level 4, and gave them dual appointments.

A few weeks ago, the Post Office Department again found that the limitation on advancement would not apply to Postal Transportation Service substitutes performing service as transfer clerks under key position 15.

The opposition by the Post Office Department to amending Public Law 68 by striking out this limitation has centered upon a fear that if Postal Transportation Service substitutes were able to advance to the top step of level 5, they would be reluctant to accept regular positions, and that this would be particularly true if the position to be accepted was assigned to postal field service level 4.

In view of the fact that the Post Office Department by its own actions has now very notably moved away from its original conclusion about the problems that would be developed, the restrictions are not now appropriate. Further, in view of the fact that by giving dual appointments to the top step of level 5 in some cases, and to the top step of level 4 in other cases, there is no longer any sound reason for withholding advancement to the top step from substitutes in railway and highway post offices.

I hope that my bill can be brought up for speedy action in the Committee on Post Office and Civil Service, and that my colleagues in the House will support the legislation when it comes to the floor.

## Fortieth Anniversary of the Founding of the American Legion

EXTENSION OF REMARKS
OF
### HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. OSTERTAG. Mr. Speaker, one of the Nation's outstanding organizations is celebrating its 40th birthday this week. I am speaking of the American Legion which was organized in Paris in March 1919, by men from all ranks and from all services in the AEF of World War I. They dedicated their organization to God and country, and the American Legion has honored this dedication ever since that day.

From this little group in 1919 the American Legion has grown to be the largest veterans' group in the world with more than 17,000 community posts throughout the world. In many of these communities the American Legion post is the center of patriotic, civil and social activities. Its members are in all walks of life: educators, lawyers, laborers, scientists, industrialists, farmers, athletes, clerks, clergymen, and yes, Congressmen. Along with a number of my colelagues in the Congress, I have had the privilege and honor of being a Legion member since the time it was founded.

In its relatively short history, the American Legion has served admirably as the champion of the veterans of our wars, and has served just as admirably the best interests of the Nation as a whole. It pioneered in obtaining deserved rehabilitation assistance for those who suffered physical disabilities in military service. It led the fight for deserved assistance to widows, orphans, and dependents of those who gave their lives in military service. It obtained increased educational and training opportunities for veterans with its sponsorship of the GI bill of rights for World War II veterans and the Korean GI bill. And, of course, the American Legion played a prominent role in the creation of the Veterans' Administration in 1930.

Very well known, too, are the American Legion efforts to maintain adequate national preparedness for our Nation, and its efforts in opposition to communism. Though these are perhaps the best known of the Legion programs, it has promoted many other activities, too, in the interest of better America. The Legion is in the fore of programs of child welfare, the training of youth for good citizenship and leadership, and the support of national medical programs. The American Legion spends about $8 million a year for its child welfare programs alone. Its youth training program is one of the Nation's largest, including junior baseball, sponsorship of Boy Scout troops, Boys State and Boys National government, and oratorical and essay contests on patriotic themes.

The American Legion has established an outstanding record of service to God and country during its 40 years of existence and looks forward to many more years of leadership and service. Though its founders knew the destructiveness of war, the American Legion is a vital force for building and strengthening the human resources of our country.

## President Carlos P. Garcia of the Philippines

EXTENSION OF REMARKS
OF
### HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting and enlightening letter which I have just received from Mr. P. W. Reeves, an old friend who has spent the past several years in the Philippines. I am sure the facts which Mr. Reeves has pointed out about President Carlos P. Garcia and the Philippines will be of interest to all of my colleagues. Having been a personal friend of President Garcia for many years, and having visited many of the islands of the Philippines, I can attest to those things which Mr. Reeves sets forth in the following letter:

MARCH 15, 1959.

Hon. JAMES B. UTT,
*House Office Building,*
*Washington, D.C.*

DEAR CONGRESSMAN UTT: I believe in fair play and justice and feel that I am warranted in making this rebuttal to the criticism which has been systematically leveled at President Carlos P. Garcia and his administration by certain periodicals in the United States during the past few months. I feel sure that your colleagues will be interested in hearing the other side. I hope, therefore, you will help in bringing to their attention the following facts.

One of the charges made was that the wife of President Garcia accepted gifts. Another charge was that Mrs. Garcia displayed her jewelry at receptions. The asininity of these attacks demonstrates the extent to which political enemies will go in order to smear a faithful public servant whose life has never been touched by the breath of scandal.

The wife of the head of state in every country in the world accepted gifts from friends and admirers. Ambassadors and Ministers from foreign countries invariably present gifts to the wife of the head of state. The wife of every President of the Philippines accepted gifts. The political enemies who have penetrated the sacred and personal domains of President Garcia's life, and the life of his charming and gracious wife, never uttered one word of criticism against former Presidents of the Philippines whose wives accepted gifts.

Another charge against President Garcia is that he brought forth an omnibus claims bill against the United States in the sum of $972 million. President Garcia did not manufacture this omnibus claims bill since he became President of the Philippines. He did not pull it out of a hat. Requests for payment of that old claims bill have been discussed in the Philippine Congress for many years. Four former Presidents (Osmeña, Roxas, Quirino, and Magsaysay) pressed for payment of those old claims. Why should so much criticism be leveled at President Garcia at this time because those old claims have been revived?

Another complaint set forth in American periodicals in recent months is that President Garcia stated in a public address that the Filipinos must stand on their own feet and be self-sustaining and not depend indefinitely on assistance from outside of the Philippines. That statement of President Garcia was a laudable one and worthy of commendation rather than condemnation. Perhaps the critics of President Garcia would have preferred that the President tell his people to sit down, stop producing, stop saving, and spend all they have because financial help is on the way to the Philippines from abroad.

Certain American periodicals criticized President Garcia because some emotional Filipino congressman proposed a bill in the Philippine Congress to change the name of Dewey Boulevard. The bill in question was proposed by a congressman of the opposition party, a man who fought President Garcia when he was a candidate for President in 1957. No sane person would hold former President Truman responsible for the introduction of every bill in the American Congress. Certainly, President Eisenhower cannot be blamed for the introduction of certain bills in the American Congress since he has been President, regardless of how obnoxious some of the bills happened to be. The American people did not turn on France when MacArthur Street was abandoned; nor did they turn on Japan for changing the name of MacArthur Boulevard.

An American magazine complained because the Philippines sought a loan to stabilize the peso because reserves were low. Under the

administration of the late President Magsaysay, the reserves were low. President Magsaysay sent the governor of the Central Bank to the United States for help. No complaint was made against the late President Magsaysay.

President Garcia is also blamed by certain American writers because the value of the peso (in the black market) is about 30 or 35 cents in U.S. value. The present value of the peso did not reach this low level just since President Garcia has been in power. The value of the peso was at the same low level during the administration of the late President Magsaysay.

In the opinion of certain American writers, President Garcia committed an unpardonable blunder when the Philippine Ambassador in Washington was instructed to return to Manila for conferences in February 1959. Before President Garcia instructed his Washington Ambassador to return to Manila, President Eisenhower called his Ambassador in Manila to Washington for conference.

The most baseless of all charges made against President Garcia in the U.S. periodicals refers to the stalemate in connection with the U.S. bases in the Philippines. This same stalemate existed during the 6 years President Quirino was in office; and it also during the 3 years and 3 months President Magsaysay was in office. Apparently the writers who are so hostile expected President Garcia to wave a magic wand and immediately dispose of the long-discussed U.S. bases problem. It is obvious that this bases problem was a hard nut to crack even before Garcia became President. I recall that during the second year of President Magsaysay's term, a group came from Washington headed by Mr. Bendetsen and this group had daily meetings with the Filipino group for many, many months without arriving at any satisfactory solution. President Garcia assumed office on March 18, 1957, and for the following 9 months he meticulously carried out every policy and every action which had been inaugurated by his predecessor (Ramon Magsaysay). Therefore, when these attacks were made on President Garcia, he had been president on his own less than 1 year. The critics must have thought President Garcia was a miracle man and could accomplish within a period of less than 1 year what former Presidents Magsaysay and Quirino had been unable to accomplish in a total of 9 years.

Two prominent periodicals in the United States have emphasized in bold type that President Garcia's popularity has plunged downward. Certain Filipinos who are conducting this tirade, this carefully conceived attack, against President Garcia, were opposed to President Garcia in 1957 and they did all within their power to prevent his election in November 1957. Unquestionably, the ammunition against President Garcia by certain writers in the United States has been supplied by certain individuals in Manila who opposed President Garcia in his bid for election in November 1957, and a number of the enemies of President Garcia at this time also opposed the team of Ramon Magsaysay and Carlos P. Garcia in November 1953.

The Philippines and America are bound by strong ties historically, politically and economically. The mutual feeling of friendship between the two countries stood the test of a bloody, devastating war. America has helped the Philippines and America should continue to help the Philippines. The best way to preserve a democratic way of life in the Philippines is for America to continue to assist her friendly ally. Lasting world peace can be made possible only through economic stability in all parts of the world.

The Filipinos gained political freedom and now their goal is economic freedom. The Philippines has vast undeveloped mineral resources in unlimited quantities. Capital is needed to develop these mineral resources. Lumber is one of the five major industries in the Philippines. This industry could be expanded. There are vast potentialities for the development of waterpower. The Filipinos are a proud race. They are filled with pride. The road which they have traveled has been long, rugged and uphill. They are striving to make new paths toward economic stability and abundance. America's friendship and financial assistance is needed in the Philippines at this time more than at any time in her past history. The Filipinos need encouragement and cooperation now as never before. Now is not the time to rock the boat as some writers in America are now boldly trying to do. We must help the Philippines strengthen its economy and by so doing we will help the Filipinos in their drive to prevent the spread of communism in their country.

Carlos P. Garcia has spent his entire life opposing everything which communism stands for. President Garcia believes in and worships God and he knows that the Communists strive by force to drive God out of the hearts of all men. The scatterings of Huks in the Philippines received their orders from the Communist leaders in China. In the early stages of the war with Japan, the Huks in the hills and mountains caused a lot of trouble. Everybody knows that during the Japanese occupation of the Philippines there were many Filipinos who surrendered. There were many Filipinos who accepted assignments by the Japanese to serve in various capacities. Carlos P. Garcia was one outstanding man who defied the orders of the Japanese high command to surrender. He fled to the hills and he led the resistance movement.

President Garcia is not a "Johnnie come lately" who has just been called into service by his people. He has served his people faithfully in the following capacities: 6 years as congressman, 9 years as governor of his home province of Bohol, 13 years as senator, 3 years and 3 months as vice president, and since March 18, 1957, he has served as president. Thus he has served his people almost 34 years. He has never been defeated for any office to which he aspired. In the November 1957 election, Carlos Garcia did not defeat a "stick-in" candidate or a dummy. The candidates for president in 1957 were outstanding men. Jose Yulo was the nominee of the Liberal Party. Senator Claro M. Recto was the nominee of the Nacionalist-Citizens Party. Manuel Manahan was the nominee of the Progressive Party. Antonio Quirino was another nominee on an independent ticket. President Garcia received 43 percent of the vote and the other 57 percent was divided among the other four presidential candidates. It is utterly absurd to say that President Garcia is not the choice of a majority of his people. To make such a statement is to imply that all of the voters who voted for Yulo, Recto, Manahan, and Quirino were against Garcia. If Recto had not been a candidate a large percentage of the Recto vote would have been cast for Garcia. If Yulo had not been a candidate, certainly a percentage of the Yulo votes would have been cast for Garcia. If Manahan had not been a candidate, a conservative estimate is that 25 percent of the Manahan vote would have voted for Garcia.

From the time he entered congress in 1925 until the present moment, the thought uppermost in the mind and heart of Carlos P. Garcia was how to strengthen or improve Philippine-American relations.

When I was in the States in August 1958, President Garcia wrote to me under date of August 7, 1958, about his trip to the United States in 1958. He closed his letter in the following manner:

"If only for the reason that I was able to win more American friends for the Philippines, I believe my visit was sufficiently fruitful from the standpoint of better Philippine-American relations."

Those of us who have lived in the Philippines know that when the bombers and Zero fighters from Japan finished their deadly work at Cavite, Olongapo, and Manila and forced the United States Asiatic Fleet to withdraw from Philippine waters, and when enemy bombs were destroying lives, churches, houses, schools, and business edifices, the Filipinos stood their ground and did not waver in their steadfast loyalty to the United States of America. On Bataan there were seven Filipino soldiers for every single American soldier. The Filipino and American soldiers battled against an enemy army three times their size. The indomitable courage, the unparalleled heroism, the devotion and loyalty to America displayed by the Filipino people and their never-say-die soldiers furnish proof of the wisdom of our American policy in the Philippines during the past 50 years. Bataan revealed to the world the genuineness and depth of Filipino-American friendship.

The superb stand made against impossible odds on Bataan gave America 4 months to recover from the staggering blow which was dealt to us at Pearl Harbor. The defenses at Hong Kong, Singapore, and Java surrendered with little delay when the first blows were struck by the Japanese. The Filipinos and Americans stood their ground on Bataan for 4 long months. The free world shudders when we think of what would have happened to us and to all civilization if the defenses of Bataan had crumbled and surrendered under the terrific onslaught of the Japanese. Yes, indeed, a receipt in full for all that America has done for the Philippines has been written in blood by the Filipino people whose loyalty to America never faltered. I do not think the Americans have forgotten so quickly.

The Philippines is America's friend, and has always been our friend in war and in peace. Philippine-American friendship matured through a period of 50 years. The crucibles of fire test was applied on Bataan, Corregidor, and Leyte. The Philippines has served as America's show window of democracy in Asia. The Philippines has done more than any other country to help America's prestige in Asia. If America were to turn thumbs down on the Philippines at this time, it would be very difficult for America to sell democracy to any other country in Asia.

President Garcia has made an excellent President. He is doing his utmost for his people. He loves his country. He is a man of great learning and high ideals. During the 34 years he has served his people in public office, he has used his wisdom, experience, influence, and energy to help make his country a better country. No man has done more than President Garcia to help his country gain its place in the society of nations of the free world.

President Garcia's philosophy has taught him that triumph always comes to the side of truth. He is frank and straightforward in all of his decisions and dealings with his fellow men. He does not resort to subterfuge, camouflage, or deception. He answers any question propounded to him without the slightest equivocation. There is no part of his makeup which even approaches demagoguery. He is not a glory seeker.

Some men are not dismayed by defeat or disappointment. Some men do not surrender their convictions when a majority of his friends suggest a different course of action. Such a man is Carlos P. Garcia.

Leadership is that rare and elusive quality by which some men are destined to lead. If a leader is fortified with truth and given the proper cooperation he can lead his people to limitless horizons of happiness, prosperity, culture, and morality. Carlos P. Garcia is endowed with this type of leadership.

Members of the President's own party often differ with him but never question his integrity and honesty of purpose. No man in the Philippines is more highly respected than the even-tempered President Garcia.

The enemies of President Garcia have lost sight of the fact that the will of God cannot be arrested. It was the will of God that Carlos P. Garcia became the President of the Philippines. When the vice president took over the job left unfinished by the late Ramon Magsaysay, he brought with him to Malacañang a wealth of experience in the guiding, shaping, and managing of public affairs. The Filipino people were, indeed, fortunate to have on hand and ready the right man to carry on. With his distinguished public service record, both in the legislative and executive branches of the government, Carlos P. Garcia was well equipped to guide the ship of state. There are legions of Filipinos who look upon President Garcia as a man of destiny, but these poor common folks do not have the benefit of a powerful magazine to tell the world what they think of their God-fearing, faithful, sympathetic, intelligent, and distinguished President who has rendered conspicuous service since he was a young man when he was elected to the House of Representatives.

President Garcia stands for progressive ideas in government, in economics and in world affairs. He is a man of culture, a scholar, a gentleman, a statesman of the highest order. His courage, foresight, strength of will, his patience under adversity, his unwavering conviction on all matters and his sterling integrity stand out like the Rock of Gibraltar. Fortified with this armor, he can with absolute ease weather the storms of opposition.

Most of the countries of the world are experiencing difficulties. Certainly the countries in Asia have many problems at this time. President Garcia cannot perform miracles and turn the Philippines into an Utopia or a paradise. He does not have a panacea for all aches and pains. He cannot arrest every ill wind which blows. Give him time and he will disappoint his critics. He assumed office on March 17, 1957. The term of the late President Magsaysay had 9 months yet to run. President Garcia did not make any changes in the cabinet or government personnel. He did not change any of the policies or plans formulated by his predecessor until January 1958. Thus he has had only one year as President in which to formulate his own plans and policies. He has never failed his people in the past. I am sure he will not fail his people now as President.

There is something all-compelling about this man Garcia. He is one of the truly great men of the Philippines—the attacks against him to the contrary notwithstanding.

I am an American citizen. My father, my mother, my paternal grandfather and my maternal grandfather were born in the United States of America. My legal voting residence is in the United States.

I am not now and have never been employed by President Garcia or the Philippine Government in any capacity whatsoever. I am not now and have never been engaged in any kind of business ventures in the Philippines.

I have never sought a favor at the hands of President Garcia or any of the former Presidents of the Philippines—and I have known all of them personally from the late Manuel L. Quezon to President Carlos P. Garcia.

It was my good fortune and rare privilege to meet Hon Carlos P. Garcia for the first time in the spring of 1937. My admiration for him increased with each succeeding year. I have presented the foregoing facts because I am his friend, because I am an American and want to see the friendly relations between America and the Philippines continue, and because I believe in fair play.

Sincerely,

P. W. REEVES.

---

## The Success of the Export-Import Bank

EXTENSION OF REMARKS
OF
## HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. FULTON. Mr. Speaker, the United States in the Export-Import Bank has an excellent agency not only to assist our U.S. relations abroad, but to finance transactions of U.S. industry. This has helped many U.S. areas in expanding their business which has added to the employment and prosperity of many U.S. industrial communities.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the President of the Export-Import Bank of Washington:

FOREIGN TRADE AND FOREIGN AID—ADDRESS BY SAMUEL C. WAUGH, PRESIDENT, EXPORT-IMPORT BANK OF WASHINGTON, BEFORE THE OVERSEAS PRESS CLUB OF AMERICA, NEW YORK CITY, FEBRUARY 19, 1959

A week ago today the Export-Import Bank reached its 25th anniversary. In observing this event, we issued a brief statement summarizing our loaning operations which this year crossed the $10 billion mark. The Export-Import Bank, our statement pointed out, "became the first public agency, either national or international, to arrange credits for large-scale economic development throughout the world."

The Bank was founded February 12, 1934. For 11 years it was a small institution, exploring and pioneering new programs in support of U.S. foreign or overseas trade. It made its first credit of the type which has come to be known generally as a development loan in 1938. In 1940 it authorized the first of a series of loans to Brazil which made possible the establishment of the now famous integrated steel mill at Volta Redonda.

Until 1945 the amount of funds available for lending by Eximbank, as we are known, was only $700 million. But in that year the Bank was enlarged, made an independent agency responsible directly to the President, and its lending authority expanded to $3½ billion. Today the Bank is authorized by Congress to have loans outstanding at any one time up to $7 billion.

When the Export-Import Bank became a multibillion dollar institution in 1945, it was the only institution of its kind. It was, and it is today, a unilateral agency and the principal international lending arm of the U.S. Government. Since 1945 a variety of banks, funds, and agencies have come, or are coming, into being to provide loans or grants for purposes generally similar to those financed by Eximbank. Some of these—particularly the U.S. agencies—already have passed from the scene or been greatly reorganized. Others, especially the international agencies, are growing. We have today in Washington in addition to Eximbank:

The International Bank for Reconstruction and Development; the International Monetary Fund; the International Finance Corporation; the Development Loan Fund; the Commodity Credit Corporation; the foreign currency lending program of the United States under Public Law 480 (which Eximbank directs and executes); the International Cooperation Administration (successor to the Economic Cooperation Administration which administered the Marshall Plan); and the President's Emergency Fund. And today still more institutions are in sight, such as the Inter-American Development Bank and, possibly, a Middle-Eastern Development Fund.

Secretary Dulles told the Senate Foreign Relations Committee recently, "The demand for economic and social betterment is now universal." This is the philosophy, at least in part, for the creation of additional lending institutions.

The problem with which the administration is confronted, in my opinion, is the extent to which support should be given the international type of agency as compared with the wholly owned U.S. agencies, all of which are loaning in the international field. In other words, the question is bilateral or multilateral loaning, and the relative degree to which both should be supported, realizing, of course, our Government is definitely committed to both types of agencies. The final decisions rest with the Congress.

From my experience during these past 6 years—first in the Department of State as Assistant Secretary and later as Deputy Under Secretary for Economic Affairs, during which period I served as Deputy U.S. Governor of the International Monetary Fund and the International Bank for Reconstruction and Development, and then for the past 3 years plus as President of the Export-Import Bank—I have had an opportunity to study both phases of this problem.

There is one point upon which I believe we will all agree, and that is that the international loaning agencies could not or would not endure without the generous dollar support of the United States. This support to existing institutions, in my opinion, should be continued. I do firmly believe, however, that every effort should be made to—and here I am using a mild word—encourage our fellow members of these international organizations, particularly those where the recovery has been marked, due in part to U.S. aid in one form or another, to carry their full share and in certain instances to pay their back dues.

The importance of the role of the Export-Import Bank in the international lending field has not been sufficiently appreciated in the United States, in part, I believe, because its activities have not been sufficiently understood.

This is due possibly to the fact that the art or profession of making loans for economic development—whether from a national or international source—is not well understood even by many knowledgeable people. I speak with experience on this point for I have devoted a large share of my time since I came to Eximbank explaining to private financiers, industrialists, businessmen, exporters, and students of Government and foreign policy, what I shall call the philosophy and practice of sound lending.

In the past 6 years as a Government official I have visited 37 countries, talked to the representatives of many more, traveled 330,000 miles, and have come into direct connection with most of the different types of financial and economic problems facing the various governments of the world. From this experience I have learned one lesson thoroughly: the fundamental basis of the economic strength of the free world today rests upon the United States.

If this country continues to maintain a strong and vigorous economy, our friends

and allies abroad will be able to grow and develop in accordance with their broad aspirations. To be sure, this rate of growth will not be uniform because of the various types of national economies. The problems of Latin America today are indicative of uneven situations and varying economic foundations. But, as a dictum, we may say that the economic stability of the United States is vital to the free world.

On the contrary, if the U.S. economy is not maintained at a high level most countries of the free world will be in serious difficulties because the United States is either their best customer or their source of important financial support by one means or another.

This point was emphasized recently in a speech by Under Secretary of State for Economic Affairs Douglas Dillon, on the subject of what he called "Imperatives of International Economic Growth." Here is what he said:

"The first imperative—and a major one—is to maintain a sturdy, growing economy in the United States. Our ability to extend aid, to offer the capital which is so badly needed in the newly emerging countries, is conditioned upon our domestic strength. Our prosperity also helps to assure them a market for their output. The movement of goods is, of course, closely related to the movement of capital. Not only must we import in order to export. We must import to keep investment flowing overseas. For without the prospect of returns, the expanding flow of private investment is impossible."

We see, therefore, why the stability of the United States is economic law No. 1 and why it is necessary to maintain a high level of business activity, or trade, both with ourselves domestically and with our friends and allies overseas. It is in support of the latter activity that the role of the Export-Import Bank has been paramount for many years.

Eximbank sometimes has been questioned for making "tied loans," meaning that its loans are restricted to purchases of equipment and goods manufactured in the United States. In this sense Eximbank loans are "tied." But let me give you another perspective. Our loans are "tied" for the purpose of assisting the U.S. economy which, as we have just seen, is of vital importance to our friends abroad. I submit, therefore, that "tied" loans in the sense the term is used here, are a blessing to our borrowers overseas. Criticism of this policy probably arises largely out of misunderstanding.

When in India in October of last year, I was asked both at Bangalore and Madras whether or not it would be possible to use a portion of the Eximbank credit for purchases to be made either in Europe or Japan. My answer was that we certainly had no objection to the purchases being made in the areas referred to, but that we felt that the countries in question had made sufficient recovery, in part due to U.S. aid, that they were now in position to finance the purchases made in their respective countries. I submit this is not an unreasonable position to be taken by the directors of the Export-Import Bank.

It is difficult to estimate with pin-point accuracy the extent to which Eximbank credits benefit the U.S. economy but rather easy to understand that the benefit has been great. The following analysis, with examples, will demonstrate this point.

Let us take a credit for the establishment and expansion of a steel mill. From purchasing agents' records available on our credits of $61.5 million to the integrated steel mill at Huachipato, Chile, we know that for every dollar which the Bank loaned for development of that mill, its owner—Compania de Acero del Pacifico, S.A.—spent an additional $2 for supplies and services in the United States. That means that the Bank's loan of $61.5 million brought orders to this country totaling $184.5 million.

To express the point in another way, the Bank's assistance to the Chile steel mill resulted in the placing of 7,807 individual orders with 780 suppliers in the United States.

Incidentally, when this company received its first loan from the Bank in 1951, it was largely owned by the government. Gradually ownership has been transferred and today the mill is controlled by private enterprise.

Less than a month ago, or to be precise on Saturday, January 31, two of our directors were in Pittsburgh and made an inspection of the Lewis plant of Blaw-Knox. There we found orders for steel mill equipment in various stages of manufacture and for shipment to Monterrey, Mexico; Huachipato, Chile; and Donawitz, Austria.

I asked the plant manager what percentage of the work in the plant was represented by these orders, all under Eximbank financing. The answer was 90 percent. The president of Blaw-Knox, without hesitation, said that this plant would not be operating if it did not have the three orders referred to. He then went on to say that the following Monday another plant that had been closed for some time would be reopened and reemploy some 600 men as a result of a recent order for steel rolls to be shipped to Spain, also under Eximbank financing.

When you recall that Eximbank has assisted the development and/or expansion of steel mills in Mexico, Brazil, and Argentina—as well as Chile—in Latin America, and in Japan, Spain, Italy, and Austria, you begin to understand the strong support which Export-Import Bank credits give to the U.S. economy.

Here are a couple of other examples: The Bank has made a number of credits in Japan to assist the expansion, greatly needed, of electric power in that country. We know that two of these credits, totaling $16.5 million, generated orders in the United States for approximately $25 million. These orders were distributed among 40 companies in 15 States.

In Brazil a year or two ago we extended a credit of about $1 million for grain silos, desperately needed in a relatively poor section of the country to enable farmers to store their grain crops which, until now, have often rotted before they could be sold. This credit brought orders to 29 plants in 16 States, and affected 80,390 Americans employed in those factories.

Taking these examples, you can see from the following two figures how important the Bank has been to the U.S. economy. In its 25 years the Bank has made some 1,600 individual credits and disbursed some $6.6 billion (an additional $1.6 billion is committed for disbursements). Obviously, these credits have generated orders of additional billions which have contributed to U.S. business activity in recent years, including the past rather difficult year, 1958.

In Africa, Asia, Europe, Latin America, and Oceania, the Bank has assisted the development—in addition to steel mills and electric power—of iron, copper, nitrate, manganese, and uranium mining; cement mills; fertilizer plants; chemical plants; innumerable types of industrial plants; large-scale irrigation projects; highways; ports; and public works. As we have seen by example, the immediate result of these credits has been to provide hundreds of thousands of orders for U.S. industries throughout the country and many millions of hours of employment for American workers.

But this is not all. While the Export-Import Bank by statute is directed to make loans which offer "reasonable assurance of repayment," the Bank has made it a policy for many years to make loans which would improve the borrower's economic position, and, wherever possible, increase his country's ability to earn dollars in their trade with the United States. Thus, our development credits have resulted in economic growth abroad which has expanded U.S. oversea markets permanently.

From this rather brief report you may be able to visualize the importance of a national institution such as the Export-Import Bank to a country's foreign trade. I hope I have been able to make clear how the Bank's development credits have been designed for the dual purpose of assisting borrowers abroad, by leaving them in a stronger position than before the loan was made, and by improving U.S. oversea markets. This Bank accomplishes, therefore, the same goal as other lending institutions of assisting the economic aspirations of other countries; but, in addition, it does so in a way that strengthens the economy of the United States, and this, as we have seen, is of the greatest importance to our friends and allies.

Having said all this, I do not mean to imply that I think the Export-Import Bank is the only type of agency that should be in the business of international lending for economic purposes. We all know that the economic needs of the world are very great, and in some regions, desperate. These areas require, therefore, varying types of financial assistance.

There is, in my opinion, still a need for grants or so-called soft loans in our foreign economic assistance program. An effort has been made, through the creation of the Development Loan Fund, to make project loans on a soft-loan basis in areas not covered by either the Export-Import Bank or the International Bank for Reconstruction and Development. To my orthodox training, in certain instances grants are preferable to soft loans—that is, very long term loans made in dollars but repayable in local currencies and at low interest rates.

There is no loaning agency today, either United States or international, to make loans in the field of so-called social overhead purposes, that is, low-cost housing, schools, hospitals, and so forth. The President's Emergency Fund is the only source available at present for grants, and this is, of course, definitely limited in amount.

You appreciate the impossibility of discussing the broad question of economic development lending in any full or comprehensive sense in the limited time of 15 or 20 minutes. You undoubtedly will have many questions unanswered, so let us now go directly to the questions and I will answer them to the best of my knowledge and ability.

## Illegal Secrecy in Washington

EXTENSION OF REMARKS

OF

### HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. HARRISON. Mr. Speaker, it seems that every few days brings us new evidence of a bureaucratic determination to withhold from the taxpayers, nonsecurity information with respect to how Pentagon, where there is some valid basis for secrecy as to the details of our readiness to defend ourselves, there seems to have developed a fixation as to the absolute necessity of placing everything under a security classification, even

though many matters so classified contain no data important to be protected from potential enemies.

In this connection, I include an editorial which appeared on March 17, 1959, in the Richmond, Va., Dispatch:

ILLEGAL SECRECY IN WASHINGTON

The U.S. Navy has joined the Air Force in illegally refusing to make available to the General Accounting Office, vital, but unclassified, information concerning its expenditures.

Our readers are doubtless familiar with the fact that the International Cooperation Administration, which spends billions of the taxpayers' money overseas for foreign aid, has likewise refused to cooperate with the GAO. Its cooperation seems to mean working with the Vietnamese and the Filipinos, but only to a minimum degree with its own General Accounting Office.

President Eisenhower's Federal budget is under fire from various directions—partly because of such attitudes as are being manifested by the Navy, the Air Force, and the ICA.

Clark Mollenhoff, able Washington correspondent of the Cowles newspapers, writes in the latest Bulletin of the American Society of Newspaper Editors:

"The Navy has put such a tight secrecy around its contracting and procurement reports that it is impossible for the Comptroller General to fulfill his responsibility to audit Navy financial affairs. * * * WILLIAM L. DAWSON, chairman of the House Government Operations Committee, has instructed Representative JOHN E. MOSS to prepare for public hearings on this matter.

"'I am sure everything possible will be done to overcome the repeated arrogance of Federal executive officials whose denials of information to the General Accounting Office flout the clear law of the land,' DAWSON has written Comptroller General Campbell."

Thus we have one more clear example of a Federal department head (this time Secretary of the Navy Charles S. Thomas), arbitrarily refusing to permit the Comptroller to study records to which he is entitled by law, and which nobody claims involve national security. Specifically, the Comptroller wishes to look at procurement and contracting practices of the Military Transportation Service. The Navy has come up with the amazing thesis that under executive privilege it can refuse to let the GAO see these records.

This despite the fact that it is required by law to do so.

The forthcoming hearings before the Moss subcommittee should focus the spotlight on this arrogant bureaucratic attitude. It is to be hoped that the hearings will, by implication, teach other Federal departments that the country isn't going to put up with this sort of thing.

Inability of the General Accounting Office to exercise the controls given it by Congress is one of the best reasons why taxes keep going up and the Federal budget is seldom balanced. Federal departments which are illegally thwarting the GAO must be forced into line.

## Oregon Centennial Highlights

EXTENSION OF REMARKS

OF

### HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, February 16, 1959*

Mr. ULLMAN. Mr. Speaker, I believe my colleagues will be interested in the following news release regarding some Oregon centennial highlights.

As many of the Members already know, Oregon is this year celebrating its 100th birthday as a member of the Union. Numerous events are planned throughout the State and I am hopeful that many of my colleagues will be able to visit Oregon during 1959 to join with us in commemorating our anniversary.

The news release follows:

CENTENNIAL HIGHLIGHTS

Throughout the State, churches are setting certain Sundays apart as Centennial Sundays with sermons and services built around the 100th birthday theme. In many localities, the centennial year is serving as a springboard for church school and adult programs dealing with the early days of their denominations and the coming of their faiths to Oregon. Many churches have colorful stories to reveal through the history of early-day missionaries, priests, and circuit riders.

In Pendleton, the residents are planning to don western dress May 1 and will continue to wear it through September 18. A national Indian encampment from July 18 to 26 will offer eastern centennial visitors a glimpse of Indian life as authentic Indian dances and games are presented for the public.

More than 2,000 Indians, representing every tribe in the Nation, are expected for the encampment which will commemorate the signing of a treaty in 1855 between the United States and the Walla Walla and Umatilla Tribes.

Oregon's Van of History, a mobile display of the State's history, continues its travels to acquaint the population with the dramatic story of the pioneer days. The van is a truck trailer 40 feet long, outfitted with exhibits ranging from the tomahawk that killed Marcus Whitman, an early Congregational missionary, to the diary of John Hoskins, supercargo aboard the ship *Columbia*, when it discovered the Columbia River in 1792.

This week the van left Springfield Monday for Cottage Grove. On Wednesday it makes a stop in Yoncalla and arrives in Sutherlin for showings on Thursday and Friday. Next week it will be in Roseburg Monday, Tuesday, and Wednesday, leaving Thursday for Myrtle Creek and moving on to Canyonville on Friday.

Beaverton's post office is displaying an original Pony Express saddle. Weighing only 31 pounds it is constructed in a light and comfortable fashion with a wide scoop to allow air under it. This was used for the U.S. Continental Express, established April 3, 1860, and continuing until October 1861, when it was replaced by the telegraph system. Starting point was St. Joseph, Mo., and it took 9 days for a rider to travel the 1,966 miles to San Francisco. Cost of mail was $5 per half-ounce.

On June 7 and lasting through the summer, the Pony Express will ride again in Oregon. Two trunk lines with feeder lines will connect all parts of the State and it will be possible to mail a letter anywhere in Oregon and have it actually carried by horsemen to any destination in the State or to the edge of the State for transfer to trains.

Inspired by the Indian teepee of the Umpqua Indians, Douglas County is building what is expected to be the largest county exhibit at the centennial exposition in Portland. It is the only county exhibit to be on the grounds outside the exposition building.

The structure, 40 by 70 feet in dimensions, is being built of plywood with precut sheets used for both roof and siding. Modern techniques are being used to duplicate Indian architecture with interesting results, according to Roy Cornwell, Roseburg architect who was awarded the contract for the exhibit.

County organizations, civic groups, and municipal agencies in Douglas County are cooperating to keep the cost at $18,000, although construction, if done through the usual channels, would run close to $24,000.

Roseburg Chamber of Commerce is arranging for direct teletype service from the building. This will enable Roseburg area residents to make personal reservations for visits to the exhibition.

## Kennedy-Roosevelt Bill "Ambushed" by a Western Editor

EXTENSION OF REMARKS

OF

### HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. ROOSEVELT. Mr. Speaker, I believe my colleagues will agree with me that the many lengthy, detailed and technical proposals that are introduced in Congress offer problems of interpretation and understanding by our fellow citizens, although many of them are indeed proficient in analyzing measures. But, in any event, I would venture to say that none of us becomes annoyed or disturbed by letters from individuals accusing us of legislative intent quite apart from the real intent or purpose of a given proposal. Personally, I am more than pleased to have the opportunity to clarify the issue and gratified to see public interest in a given matter.

However, I do not think I am alone in this body when I say I am duly concerned about and disturbed by misrepresentation of proposed legislation by a person, group or organization that has the responsibility to know better, and to compound the dilemma, is in a position to foster misconceived conclusions or misrepresentations through the means of public media.

I make this point because on March 12 a community paper in Los Angeles County, the Whittier News, carried an editorial in which it presented erroneous information about the Kennedy-Roosevelt bill to increase the minimum wage and expand coverage under the Fair Labor Standards Act.

The editorial claims that our proposal would make it impossible for a lad of less than 16 years to be gainfully employed in many businesses. Of particular concern to the editor, based no doubt on his own hasty conclusion, was that this meant no newspaper carrier boys could be less than 16 years old.

As I explained in a letter to the editor, this bill in no way precludes ambitious youngsters under 16 years of age from engaging in the proud American tradition of helping to distribute the words of the free press. Unfortunately in this instance the words were not true. Nor does the bill prevent a lad less than 16 years old from mowing lawns or from engaging in other activities in which young boys have long excelled.

I am bringing this matter to the attention of my colleagues who may be receiving inquiries on this or similar points made about the bill and to allay

any future misinterpretation that may possibly be generated through the mass media.

Mr. Speaker, I hereby submit for insertion in the RECORD the complete text of the editorial and my reply to the editor:

[From the Whittier News, Mar. 12, 1959]

GIVE THE BOY A CHANCE

For a long time it's been a firm conviction with a lot of people that a busy boy is not likely to end up among the delinquents. Keep a young fellow busy doing something he likes to do and, even though he has only limited parental guidance, or possibly none, his chances of getting in with the wrong crowd are considerably lessened.

This is the principle upon which many of the youth organizations and welfare groups base their programs. They keep boys and girls busy doing things and thus curb delinquency.

Furthermore, under the American system by which we've been living for a long time, it has been proven wise to introduce youngsters to the free enterprise system as early as is practicable. This means getting jobs and earning money. Once the thrill of such achievement stirs a youngster, he often has no time left for dillydallying.

Such facts are what make the current efforts of a couple of famous Americans despicable, in our opinion.

The famous Americans are Senator KENNEDY, of Massachusetts, who aspires to be President of this country, and Congressman ROOSEVELT, of California, who owns a fairly well-known name.

They have introduced identical bills in Congress to expand the coverage of the Fair Labor Standards Act. Such extension would, in many instances, be helpful.

But one of their proposals would make it impossible for a lad of less than 16 years to be gainfully employed in many businesses. We happen to know about it because, among others, no newspaper carrier boys could be less than 16 years old. The principle is the same whether it's carrier boys or grocery boys or errand runners or lads ambitious enough to mow lawns.

This business of saying that no person less than 16 years of age may be gainfully employed is a bunch of rot.

The movement has already gone so far that many youngsters even now seek employment in vain until they pass the magic mark of 16. Ask the parents of 12- to 15-years-olds what they think of such legislation.

Misguided do-gooders who think they are still saving children from sweatshops need to reevaluate their crusade. Thousands of communities throughout the country could be aided in their campaigns against juvenile delinquency by a repeal of the laws that make work impossible for many under 16, rather than an extension of this foolishness.

Many of today's business leaders weren't hampered by such rules and they have done fairly well.

---

MARCH 18, 1959.

Mr. MYNATT SMITH,
*Editor and associate publisher, the Whittier News, Whittier, Calif.*

DEAR MR. SMITH: One of your readers was good enough to send me your editorial of Thursday, March 12, 1959, which attacks certain portions of my proposal, and that of Senator JOHN KENNEDY, to increase the minimum wage and extend coverage under the Fair Labor Standards Act.

I am gratified to note that regarding the extension of coverage, you state that "such extension would, in many instances, be helpful."

However, I am dismayed by the fact that you apparently have not carefully read the proposal because you come to the following conclusion, and I quote from your editorial:

"But one of their proposals would make it impossible for a lad of less than 16 years to be gainfully employed in many businesses, We happen to know about it because, among others, no newspaper carrier boys could be less than 16 years old. The principle is the same whether it's carrier boys or grocery boys or errand runners or lads ambitious enough to mow lawns."

I am enclosing a copy of the proposed minimum wage bill, and I direct your attention to section 9 (c) and (d), page 12, which you may have read but inadvertently misinterpreted. One line 5 you will observe that reference is made to provisions of section 12 of the present act (Fair Labor Standards Act of 1938, as amended), which attempts to prevent oppressive child labor practices.

Reading further, you will note that the child-labor provisions, as set forth in section 12, shall not apply to children employed in agriculture "outside of school hours for the school district where such employee is living while so employed, or to any employee employed as an actor or performer in motion pictures or theatrical productions, or in radio or television productions." Certainly this does not in any way preclude a youngster under 16 years of age from engaging in such activities.

I think the real confusion lies in the fact that the language regarding newspaper delivery employees was not carefully read and analyzed. It was never my intention to preclude youngsters under 16 from participating in the proud American tradition of helping to distribute the words of the free press.

Starting on line 15, page 12, of the bill, you will note that provisions of certain sections of the present act shall not apply to those engaged in the delivery of newspapers to consumers at their residences. These provisions of the present act cover minimum wage, maximum hours, and child labor, respectively. I call your attention to the fact that section 12 (the child labor provisions of the present act), according to the language of the bill, shall not apply (1) to any employee engaged in the delivery of newspapers to consumers when such an employee is employed outside of school hours, and (2) to such employee if he is 16 years old or older.

This language is important because it in no way states that a child under 16 cannot deliver newspapers. It merely states that a person over 16 would not come under the child-labor provisions of the present act, and those under 16 would come under the said provisions of the act and thus would be protected from oppressive child-labor practices.

Since your editorial was a complete misinterpretation of certain sections of the measure, which certainly would not prohibit an ambitious youngster under 16 from delivering newspapers, mowing lawns, delivering groceries, or running errands, I felt it necessary to write to you so the public record will be set straight in this matter.

I realize that this letter is somewhat lengthy, but I am hopeful that it may be printed in your newspaper in its entirety.

Sincerely yours,

JAMES ROOSEVELT.

## Speech and Hearing Bill

EXTENSION OF REMARKS
OF
## HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. FOGARTY. Mr. Speaker, I rise to speak for the 15 million Americans handicapped with hearing and speech defects who cannot speak for themselves or hear your answer to their pleas for help.

It is no wonder that over 3 million of these are children, since more children are handicapped from hearing and speech defects than from any other single cause. Many of these children have neither heard their mother's voice nor learned about God. Yet they have received scant attention from the public because their plight is not dramatic. Since they neither speak nor hear they are considered dumb and stupid. Other physical ailments, being self-evident, have attracted sympathy and received considerable help from individuals and agencies, yet those children who live in a silent noncommunicative world have had little thought or opportunity given to them.

Ten thousand children are forced to leave grammar schools each year because of hearing or speech defects. The rehabilitation potential of those pupils makes this waste a national tragedy.

The problem is farreaching. The economic loss alone is staggering. Servicemen, particularly those flying the jets, veterans, labor in the noisy industries, and certain research workers, are debilitated from hearing losses. With the present lack of facilities, many of the above persons receive no help. Consequently, many are forced to retire or change jobs. It is conceivable that these losses could affect our defense effort. To say the least, millions of dollars are required to train new personnel.

The effects of hearing and speech defects are also widely felt in medicine and dentistry. No program for the treatment of cerebral palsy, polio, mental health, cleft palate, hairlip, and some other diseases can function adequately without a companion hearing and speech program.

There is necessarily great interest in the aged at this time, 10 percent of whom have an incapacitating hearing loss. Cancer takes a toll of 2,000 or more voices each year, necessitating the removal of the vocal box. These laryngectomized patients can talk again, provided you give them the means.

I am advised that there are only 4,000 professionally trained audiologists and speech pathologists in this country, many of whom are without adequate training. It is conservatively estimated that 20,000 additional postgraduate students need education training in this

field. Until this figure is approached, hearing and speech centers will be unable to expand and few new centers will be established. Until expansion is possible, research for the numerous problems discussed above, will continue to lag, the teaching programs for this needed graduate personnel will remain under par and the growing rehabilitation problem cannot be met.

With the purpose of alleviating this situation I have introduced a bill which would make grants to institutions of higher learning for the instruction of graduate students in the field of hearing and speech. The bill provides that the program is placed under the direction of the Secretary of Health, Education, and Welfare. The Secretary will be assisted in determining policies and programs by an advisory committee serving without compensation and appointed by the Secretary with the approval of the President of the United States. This committee is to consist of outstanding individuals from specific groups, competent to render advice.

Institutions would be required to meet certain standards as outlined in the bill in order to participate in the program. Funds granted to institutions, meeting requirements as may be determined by the Secretary and the advisory committee, shall use funds in a hearing and speech program as defined in this bill solely for: first, salaries for members of the faculties teaching graduate students; second, payment of stipends to college graduates who are awarded fellowships; third, the acquisition of equipment as needed for teaching purposes; and, fourth, the administration of such a program. The bill also would make it possible for persons in allied fields, such as many branches of medicine, physics, psychology, and so forth, to receive training.

With the broad concept of this bill the great needs of approximately 10 percent of our population, those people handicapped with hearing and speech defects, would be served.

Mr. Speaker, I plead for urgent passage of this measure. In addition to the great humanitarian need, immediacy is important to the Nation. The lack of trained personnel is largely responsible for: first, the discontinuation of over a thousand pupils from public schools monthly; second, incurable deafness in a number of children living noncommunicable lives who should have received treatment before the age of three, if they were to be enabled to communicate with other people; third, the failure to rehabilitate 80 percent of the remedial cases of children who daily are becoming less able to absorb training because of age; fourth, the lack of one or more comprehensive speech and hearing centers in many States; fifth, labor, veterans, members of the aged, research men and women, industry, the Government, and society as a whole, are daily paying heavy penalties through the lack of an effective program of assistance.

The precepts of this bill are humanely just and economically sound. Prevention of deafness and restoration of millions of individuals to usefulness is cheaper than any form of charitable maintenance. A normal life, including the ability to pay taxes, is their right and their wish.

## My Citizenship in Action

EXTENSION OF REMARKS
OF
### HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. BREEDING. Mr. Speaker, the Kansas Federation of Women's Clubs sponsored a citizenship essay contest for high school juniors. The Seventh District of the Federated Clubs consists of 32 counties in western Kansas and Miss Marilyn Miller, of Larned, won the contest out of 571 entries with her essay entitled "My Citizenship in Action." I would like to bring this essay to the attention of this esteemed body:

Today, our local football team won the championship of our league. What lies behind this victorious achievement? I believe citizenship in action accounts for the successful record.

A player on a winning team must endure rigorous training. He must often deny himself pleasures which others regard as a birthright. He must eat temperately. He attends social functions but excuses himself at an early hour to get adequate rest. Each day he practices to perfect his skills. In short, he masters the art of self-discipline which is citizenship in action.

My citizenship in action is likewise characterized by self-discipline. It implies social obligations. It is like the regimen demanded of the athlete who plays the game of football to win. I must regulate my life carefully, develop my skills diligently, not as an end in itself, but in order better to serve my home, my school, my community, my State, and my country.

First, I must take my schoolwork seriously. I must learn as much as possible, and this learning process must continue throughout life. I must know something of the governmental processes on all levels. I must know the basic history of my home town, my county, my State, and my country. I must read widely that I may be well informed. I must avoid making decisions until I have the facts necessary to make them intelligently.

In a football game the boys play according to the rules. Our public laws are the rules of the game of life. I must obey them because I believe Theodore Roosevelt was correct when he said, "No man is above the law."

A successful football coach must have the full cooperation of all the boys on the team. Every boy is expected to do his part. My citizenship demands similar dedication. I, therefore, must take an active part in church, school, and community enterprises. I must cast an intelligent vote in school elections. This is democracy in action. I must help to elect honest, faithful, capable class officers who will do their jobs well. Justice Brandeis has said, "The greatest menace to freedom is an inert people."

The cheering section at a game is a great help to the team. My citizenship in action will applaud those who are giving their best in their work. I must encourage those who work for peace, and those who stand ready to perform a national service in time of war. I must assist those who would improve our tax-supported schools and those who work for a well-balanced, productive, and free economic system.

A football game is an exercise in the art of fair play. My citizenship in action must stress courteous, friendly, unselfish relationships. I must appreciate what others do for me and I must be ready to return such kindnesses.

I shall put my citizenship in action by playing the game of life fairly, by living the golden rule, by doing my work well, and by cooperating with others whose ideals are worthy of my support. This I am sure will bring me a victorious citizenship.

## India

EXTENSION OF REMARKS
OF
### HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. POWELL. Mr. Speaker, I wish today to salute the people of India, their Prime Minister, Jawaharlal Nehru, and His Excellency the Ambassador to the United States, as that country moves into its 12th years of independence.

Though only half the size of the United States, India is the home of every sixth person in the world, ranking it as the second most populous nation. Its people present a colorful mosaic of races, religions, and cultures. Centuries before the birth of Christ, India gave to the world the first discoveries in science, mathematics, and metaphysics; the first classics in literature, art, and law. Five thousand years ago a highly developed civilization flourished in India, and there is evidence today of once well-planned cities, sanitary underground drainage, baths, wide roads, and houses made of burnt brick. Moreover, findings reveal that the Indian people even then were skilled in many arts and crafts and had developed a form of writing.

If modern India is viewed today against this historical background rather than its past independence, development, and maturity the richness of her philosophy and the significance of her tradition will offer greater meaning to a disordered world.

India has never embarked on a war of conquests, her leaders maintain. Moreover, they add, through all the centuries of her life, India has usually lived at peace with her neighbors, and her only relationship with them has been one involving an exchange of culture through pilgrims and peaceful delegations. This is not to imply invaders have not come to India and effected conquests, but the Indians remind they have been absorbed by her and have become Indians.

So when India came face to face with the community of nations for the first time in 1947, she presented a curious blend of the old and young: old because of the traditional values which direct successfully her destiny through the ages and young because she was free of a

background of aggressive conquest or any other such inherited legacy of behavior. Thus, Nayantara Sahgal, the daughter of Madame Pandit, wrote in 1953:

Hers was the unique and happy position of launching into international affairs with a blank slate, of regarding the whole world with friendship, and announcing that her own moral sense and no other consideration would be her future guide in matters of policy.

Madam Sahgal admits, however, the handicap that is India's, having so recently awakened in a highly industrialized world climate and finding herself so far behind her Western neighbors in many important respects. She is concerned with immediate survival—food, housing, health, and education of her people with which she must cope while attempting at the same time to pull her weight around with the politically mature and highly industrialized nations while attempting to adjust herself to the international scene.

In response to Western demand for India's abandonment of neutralism that the countries of its hemisphere may successfully grapple with "the resulting disturbance in that carefully contrived centuries-old balance of power, the author gave the following response:

When a European or an American friend asks me, "Where does your country stand?" I can only reply, "Just where your country stood at the dawn of her nationhood, with perhaps many similar problems." I would say to America, for example, "In 1776 you became a sovereign, independent nation. Yet it was 1917, and three-quarters of a war involving the entire world was over, before you allowed yourself to be drawn into it. Up to that time you were occupied in consolidating your frontiers and your independence. Are you not better equipped than any country to understand India's position?"

India, with her reverence for her own traditions and culture, has at the same time a tremendous admiration for the scientific acumen of the Western nations. She sends her young people abroad to study medicine, science, and technology. She employs foreign experts and seeks foreign advice for her irrigation and other large-scale projects. She invites foreign investment and welcomes foreign aid. The self-sufficient attitude is not hers. She is an active member of the United Nations, and her helping hand has been outstretched wherever it could be of service. Her good neighbor policy extends around the globe, for in this atomic age every country is a neighbor.

But the spirit of satyagraha which accomplished a unique revolution is a justly proud spirit. It seeks friendship rather than favor, it wishes to learn but not to imitate; it will take advice but not dictation. It will continue to work out its salvation in its own serene way, and by its example, perhaps, accomplish an even greater revolution—that of making nonviolence as real and workable a creed on the international plane as it has proved in India's national life. Only if this comes to pass, will the world have taken it first step toward making peace an abiding reality.

If the above quotation of this, the brilliant young Indian woman becomes a part of our thinking when discussing policies and devising programs for not only India but all other members of the Afro-Asian bloc nations, we will become increasingly enlightened and the world may know peace everlasting.

One can hardly touch any aspects of India without absorbing particles of the noble ideals of Mohandis K. Gandhi and the aspiration for peace which motivates the Prime Minister. For today we have chosen two such reminders:

From Gandhi:

Hatred ever kills, love never dies. Such is the vast difference between the two. What is obtained by love is retained for all time. What is obtained by hatred proves a burden in reality, for it increases hatred. The duty of a human being is to diminish hatred and to promote love.

From Nehru:

We have seen in the last year or two that it is not easy for even great powers to reintroduce colonial control over territories which have recently become independent.

Whatever we may think about it, we have arrived at a stage in the world when an attempt of forcible imposition of ideas on any large section of people is bound ultimately to fail. In present circumstances, this will lead to war and tremendous destruction. There will be no victory, only defeat for everyone.

Prime Minister Nehru's remarks before the British House of Commons January 22, 1947, grow in meaning with the years—we want to be friendly to all. We want to be friendly with the British people and the British Commonwealth of Nations. What I would like this House to consider is this: when these words and these labels are fast changing their meaning—and in the world today there is not isolation—you cannot live apart from the others. You must cooperate or you must fight. There is no middle way. We wish for peace. We do not want to fight any nation if we can help it. The only possible real objective that we, in common with other nations, can have is the objective of cooperating in building up some kind of world structure, call it One World, call it what you like. The beginnings of this world structure have been laid in the United Nations Organization. It is still feeble; it has many defects; nevertheless, it is the beginning of the world structure. And India has pledged herself to cooperate in its work.

India can add meaning, give directions to a world adrift—maybe not in things, but ideas. After all, "Man cannot live by bread alone."

## The Need To Do Something About Our Classroom and Teacher Shortages

EXTENSION OF REMARKS
OF
### HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to include in the Appendix of the RECORD the text of my statement, "In Support of the School Support Act of 1959," presented to the General Education Subcommittee of the House Committee on Education and Labor, March 6, 1959:

STATEMENT OF HON. JAMES ROOSEVELT BEFORE THE GENERAL EDUCATION SUBCOMMITTEE OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR, FRIDAY, MARCH 6, 1959

Mr. Chairman and members of the General Education Subcommittee, I am pleased to have the opportunity to join with my other colleagues who have appeared before you to ask for a realistic approach to offset national educational deficiencies in the richest Nation in the world.

The need to do something about our classroom and teacher shortages existed before Sputnik I beeped overhead, but it is apparent that this scientific achievement spotlighted the need. Last year, the United States Commissioner of Education undertook an on-the-spot study of the Soviet Union. He offered this telling observation:

"We are today in competition with a nation of vast resources, a people of seemingly unbounded enthusiasm for self-development, and fired with conviction that future supremacy belongs to those with the best-trained minds, those who will work hard and sacrifice."

Yet, notwithstanding the views or observations of one of its own top officials, the administration has failed to offer leadership in meeting this challenge on the education front. Thus, the conclusion is obvious: This Congress must alone carry the full responsibility to fill an unfortunate void created by the administration's inaction and failure to present a workable program—the plan offered by the administration and made public February 9 of this year is not a workable, realistic program and in my mind is a means to go on record that the administration is concerned, while at the same time offering a program that is destined for defeat. It is a program aimed not at helping financially destitute States and communities, but rather one aimed at helping moneylenders. Its features would require constitutional amendments by many States that have constitutional limitations on bonded indebtedness. State action to overcome this would be most difficult; thus the administration's proposal to underwrite bond issues would be of no help to such States.

It is unfortunate, to put it mildly, that the state of the Union message does not contain a solitary word on the critical classroom shortage; a shortage that States and communities have not been able to alleviate properly, not because of a lack of concern and effort, but because of a lack of adequate public finances. As a matter of fact, the President evaded the whole issue in his message by the less than concrete remark that the Nation's schools "conform to no recognizable standards."

Equally disturbing is the intent of the administration, as expressed in the budget message, to work toward eliminating or cutting Federal funds to education in fields where Federal participation is well established. The message calls for ending in fiscal 1931 the Federal grants for vocational education, although a $63 million grant is proposed to continue Federal participation in this and other areas through fiscal 1960. If the vocational education program is worth keeping in fiscal 1960, why not in fiscal 1961 and thereafter? I think it is worth keeping and improving. With automation forging a new technological revolution, it seems imperative that workers learn new skills in order to be gainfully employed. Presently, vocational education programs in most local communities are inadequate in intent and scope, but even these inadequate programs will suffer materially if present limited Federal funds are denied.

And a most alarming suggestion of the President, contained in the budget message, is to cut off aid to impacted areas. This would be a grave mistake. Many cities are plagued by the increase in school enrollment resulting from Federal employees coming in to work on Federal projects. The problem of increased school enrollment is compounded by the fact that Federal property is tax exempt, so the city is forced to stretch its tax income not only to take care of the additional burden on its schools but to expand its city facilities to serve the new residents.

In view of these proposals, it really should come as no surprise that the administration has offered no budget item for Federal aid to education.

With its fixation on classical economics, the administration has retrogressed on its approach to education, at least as the approach appeared to be some 2 years ago. It will be recalled that at that time the President's White House Conference on Education called for Federal aid in the field of education, and when Sputnik I made known its presence in the ether, the administration noted the need for Federal action; congressional programs were advanced by members of both parties.

And 2 years ago, the administration's Department of Health, Education, and Welfare highlighted the crisis proportions of our educational plant deficiencies when it noted the Nation was short some 159,000 classrooms. At this time the need to do something was further accented by the assertion of the National School Boards Association that a new classroom was needed every 10 minutes to meet the Nation's growing population requirements.

Now 2 years later—1959—despite record building at the local level, the problem is still with us and crying out for solution. The January 28 report of the U.S. Office of Education gives factual testimony that this is the case. The States reported they needed 140,500 more instruction rooms; of these, 65,300 are needed to take care of enrollments in excess of normal capacity to handle, and 75,200 to replace unsatisfactory or obsolete school facilities.

Because this committee is well apprised of further data in this regard, I shall not press the point, but I do wish to stress that the teacher shortage has reflected itself in all too many instructors teaching on substandard credentials. The reason is that we have failed to offer financial incentive and security and due recognition to the teacher in the community.

The fact that the Metcalf bill covers both the school plant and teacher shortages makes it the most comprehensive approach offered to date. Parenthetically, I wish to point out that another school construction measure which I have also introduced in no way conflicts with the Metcalf proposal which I cosponsored—rather, it supplements the Metcalf bill by providing for a general authorization for Federal financial assistance to build schools, with no amount specified.

If the issue is going to be joined on monetary considerations, I think then that it is important to point out that the present position of the administration is based on false economy. To economize at the Nation's expense—at the expense of both parents and their children—is a classic example of sophistry. Federal expenditures for assistance to education would be the soundest, safest investment the Government of the United States could make, for it would bring in dividends from the Nation's economic, cultural, and social progress that would ensue. Not to invest in an adequate school program is a dangerous risk.

The "economy" brigade—and I use the term "economy" advisedly—in the administration has its supporters, of course. Prominent among these is the U.S. Chamber of Commerce. I only wish that this organization would declare that it objects to Federal aid to education because it doesn't want to see the money expended, rather than using the old bromide that Federal aid means Federal control of education at the local level. Neither the intent of the supporters of the Metcalf proposal nor the intent of the measure itself is to bring Federal policy into school administration, curriculum, etc. And I have an idea the chamber of commerce really knows this.

I think the chamber of commerce ought to have the courage of its convictions to tell the American people and schoolchildren now attending half-day sessions or crowded into classrooms like sardines that Federal funds should not be spent to help them because it would upset the economy, create inflation, ad infinitum. At least the education bill now before the committee could be argued on its merits, its real effect on the economy and fiscal policy, rather than becoming the means to evade the central issue by using it as an example of Federal usurpation of local education.

Since this perennial argument is still with us, I think it might be well to note, in brief fashion, that Federal aid is not a new or startling concept. A check into history will prove this. Such a check would show, for example, that Federal aid has existed in one form or another since the year 1785, 2 years before the adoption of our Constitution. Other facts to note:

1. In the 1930's the Federal Government aided in the building of many needed schools under the PWA and WPA programs.

2. In the 1940's more aid was given under the Lanham Act.

3. In the 1950's Public Laws 815 and 874, which continue the principles of the Lanham Act and under which aid is given for the construction, maintenance and operation of schools in federally impacted areas.

Can the opponents lay claim, much less prove, that any of these measures resulted in Federal control of education? I think not.

Mr. Chairman, in addition to the need to meet the Communist challenge by educating our young people in adequately constructed, well-spaced facilities with a sufficient number of well-qualified teachers, I think there is another compelling reason for enactment of Federal legislation that will permit this objective to become a reality. And this reason is a positive one; I say "positive" because it is not based on our reacting to another nation's actions, but rather the reason stems from our concept that a free, well-informed citizenry is the prerequisite for the survival of democratic institutions. This is part of our thinking; this is part of our proud heritage. This whole concept was set forth with clarity in 1830 in "A Plea for Public Education," prepared by the Philadelphia Working Men's Committee:

"The original element of despotism is a monopoly of talent, which consigns the multitude to comparative ignorance and secures the balance of knowledge on the side of the rich and the rulers. If then the healthy existence of free government be * * * rooted in the will of the American people, it follows as a necessary consequence, of a government based upon that will, that this monopoly should be broken up and that the means of equal knowledge (the only security for equal liberty) should be rendered, by legal provision, the common property of all classes."

It is my hope that our concept of the importance of public education will be implemented by the passage of legislation based on this concept: the Metcalf proposal.

## Need for Enlightenment

EXTENSION OF REMARKS
OF
## HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. SCHERER. Mr. Speaker, those of us who voted against statehood for Hawaii have been rather severely criticized by some people.

I call to the attention of these critics the column of highly competent and respected Victor Riesel which appeared in the Cincinnati Enquirer of March 18. With more enlightenment such as Mr. Riesel and the able JOHN PILLION, Congressman from New York, are giving the American people, it will become more and more apparent that those of us who opposed Hawaiian statehood at this time were not entirely wrong.

NEED FOR ENLIGHTENMENT

(By Victor Riesel)

There is no pretender to the throne of Queen Liliuokalani, unless it's Harry Bridges. Hawaii always has been the pineapple of his eyes. He has poured more money, time, and talent into tightening a labor vise on the island outpost than Dole has juice. So it came as startling news that some Congressmen meeting Tuesday behind the House Rules Committee closed doors put themselves on the secret record with statements that Hawaiian labor was free of pro-Communist influence.

In the Rules Committee meeting, they were battling over Hawaiian statehood. Congressmen were trying to beat down charges by some of their colleagues that the 50th star in the flag may glow a little red. Friends of Hawaii pointed to the report of a special three-man House Interior Committee which went out to Honolulu last winter—a delightful voyage. They returned with news that they had been told that pro-Communist influence was just as solid as a grass skirt.

Those three men were asked by Congressman WALTER ROGERS, of Texas, who had given them the glad tidings about the islands, through which pass more than 1,000 of our most strategic ships each year. The retort, born of great philosophical introspection, was: "We can only tell you this—it wasn't Santa Claus."

This was of great cultural value to my friends at the National Geographic, for they may have thought the old boy winters there—as who wouldn't. What the three travelers had put into the record—and what apparently was the basis of the Rules Committee decision that there was little pro-Communist influence in Hawaiian labor—was this:

"We were told that the FBI investigation, plus the Federal Court action, crippled the Communist apparatus in Hawaii and with the continued white light of publicity and the alert citizenry, it would remain crippled. We were also told that no proof exists of Soviet espionage contacts on the part of Communists in Hawaii."

No one raises the question of proof of Soviet espionage contacts. Nor can anyone quote the FBI on this particular matter. It has issued no statement. That is not the Bureau's practice.

The point is that one member of the House Rules Committee, RICHARD BOLLING, Kansas

City, Mo., told the group he had it on good authority that there was no substantial pro-Communist influence in the unions. Representative BOLLING, a former teacher, was asked on what he based his information. He told the off-the-record Rules Committee session that he had a letter from a reliable source. The one-time teacher should find it fascinating, therefore, to sit in on a session of the House Un-American Activities Committee on March 24. Bridges, president of the International Longshoremen's and Warehousemen's Union, has been subpenaed to appear before it to answer questions on his recent conferences with Communist leaders in Rome, Prague, Moscow, and East Berlin.

For example, Bridges will be asked to explain why he said the Soviet labor unions are more democratic than some U.S. unions—when virtually all students of Russian trade unions see them as State-controlled production speedup mechanisms without the right to strike.

It is anyone's privilege to be uninformed. But it doesn't appear to be the right of those making our laws to abuse that privilege. The question of statehood is one thing. But a realistic analysis of union power is another.

It was Bridges' union newspaper which printed a big two-column spread friendly to those U.S. soldiers who turncoated against us in Chinese prison camps. It was Bridges' union which was tried by its peers in the CIO 9 years ago and found to be following the Communist line. It is this union chief who has blistered U.S. positions, and talked warmly of Soviet China. It is Bridges who met regularly with the pro-Communist bloc inside the old CIO.

It is this man and many of his followers who are sufficiently powerful to paralyze the Hawaiian economy and who have considerable influence inside the island legislature. That is fact. The rest is rhetoric and a prelude to history.

---

## What Conservationists Expect of Water Pollution Control Authorities

EXTENSION OF REMARKS
OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD a paper presented at the conference of State sanitary engineers in Washington, D.C., on May 8, 1958, by Carl D. Shoemaker, conservation consultant of the National Wildlife Federation entitled "What Conservationists Expect of Water Pollution Control Authorities":

Gentlemen, for me to tell you about water, its abundance, its pollution, its need for the existence of every living thing on this earth, its distribution and its purity is like bringing coals to New Castle. It is your life. You live with it every day of every year. You are confronted with its problems in an expanding population and the ever-increasing needs of industry, agriculture, mining, and recreation. Because of this some of us may not be able to see the forest for the trees. We have a tendency to narrow our vision, lower our sights, see only the most important facet of the problem and confine ourselves to providing pure water for drinking and other domestic uses.

That is good as far as it goes but it does not go far enough. It does not take into account the other facets which society in general has come to believe are next in importance in our everyday life.

There is one truth that we often fail to consider. It is that there is only so much water—and no more—on this globe and every day there are more and wider uses for it.

During the past half century there has developed a new philosophy—a new concept about the use of water in our country as well as many other parts of the world. It is that everyone has a stake in our water supply and it is not always the same stake. The steelmaker knows definitely how much water he will need and how clean it must be. The farmer cries constantly for more water to use on his cropland—and he is going to ask for more—not less. We know almost to the gallon what amount of water—clean, pure water—is daily required by every person in the home.

And the recreationist, an important and growing segment of our population, is on the prowl for clean water in which to swim, fish, and boat. And we must not forget he is most vocal in his demands and is not afraid to register them at the polls. I am not here to say that he is always 100 percent right, but he constantly points his finger at the problem and his insistence usually gets some official response.

Secretary of the Interior Seaton at a meeting of the American Forestry Association in Madison, Wis., last October, in discussing various conservation aspects of his Department said, "The Bureau of Reclamation and the Corps of Engineers now have underway nearly 300 projects for flood control, water supply, irrigation, navigation and power. * * * The present program will not be the final step, by any means. Within a relatively few years, water may well be our No. 1 domestic problem." He continued by saying that the Interior Department has "entered into 49 research and development contracts with individuals and private organizations" to make sea and brackish water into usable water. He said that there is a "reasonable expectation" of bringing the cost down to 60 cents a thousand gallons. And it will have to go still lower. And this figure assumes production at the sea level.

Almost every use of water is dependent to a greater or lesser degree upon the cleanliness of that water.

And, gentlemen, that is your job.

Have you measured up to that responsibility? Have you had the vision—and, yes, have you had the courage to face it in all of its conflicting and complexing aspects?

Have you too often based your decisions on purely engineering judgments instead of considering the human and cultural sides as well?

Have you seriously planned and developed a positive long-range program for presentation to the people of your State?

Have you used to the best advantage your presently existing powers of enforcement?

Positive answers to these questions apply generally throughout your membership, but enough are negative, to cause a louder and louder demand to transfer to some other agency the administrative responsibilities of the health authorities in water pollution control.

The sanitary engineer can no longer sit in his ivory tower and complacently be content with his fine record of reducing waterborne diseases. His pollution problems is far from solved. As a matter of stark reality it is getting worse and more complicated. A distinguished engineer has said that "right now about 90 million people are drinking water taken from the same streams into which they dump their slop buckets and garbage pails." "Furthermore," he said, "the health aspects of radiation contamination in water is a completely unknown quantity at the present time. Some authorities predict that if we do not solve this problem soon, there will be a tremendous increase in the total number of lukemia cases. They also predict that radiation contamination of our water supplies may cause a marked increase in our mental diseases and even in the physical makeup of the human being." You may or may not agree with these statements. However, there is widespread public concern about them.

One fact we must face. No longer can the health authority nor any other agent of the State look upon water pollution control with one single purpose in view. The day has come when we must recognize the multiple use of water—and that includes conservation right along with agriculture, industry, and mining. Of course domestic use has first priority, but we must fit into the picture these other uses or we will lose the battle.

I don't need to tell you that the sportsman—conservationists are swarming over the States in their zeal to get clean water—not alone for themselves, as recreationists, but for all the people for all of their needs and uses. They are the crusaders to conserve all of our natural resources—and those of you who have followed the work of Congress and the State legislatures are aware of this. "Better fishing conditions" is no longer their battle cry. It has changed to "clean water for everyone." They are interested in the humanities and the well-being of their fellow men.

They expect you to have and they will help you to get adequate legislative authority, sufficient appropriations, personnel, and the technical assistance to plan, develop, and carry out a positive water pollution control program.

They expect you to control water pollution in your State, and to control it for all uses—not just to provide a safe domestic water supply. They expect you to keep the other public officials, including the conservation departments, informed with respect to your problems, your accomplishments and your plans.

They want to keep in touch with your problems in the hope that they may be able to help. They will not hear the excuse that you cannot get the job done because you do not have adequate resources to do it.

There are a number of States in which the water pollution control agencies are carrying on water pollution control with antiquated laws, inadequate appropriations, and personnel which are not technically competent. There are also a number of examples where the State water pollution control agency had the vision to call upon the conservationists regarding their problems, and secured their help and influence with other public officials and the public generally.

Adequate laws and appropriations followed. These are tools you must have to carry on a successful program.

I do not need to tell you that in a number of States the authority over pollution has been taken away from the State health departments and placed in a separate State agency to control pollution for all legitimate water uses.

I hope that you will not misunderstand me if I call to your attention these facets of the vital story of pollution. I know that considerable progress, knowledge, and know-how has been made in the past generation. Your organization was formed some 20-odd years ago for the purpose of exchanging ideas and profiting from the experience of each other. This you have done well.

In the final analysis construction of corrective treatment plants is what is required to clean up the waters in your State. This is true and I know it is. Clean water is the yardstick by which your efforts are measured.

You know the magnitude of the problem in your State. The problem is not decreasing. Each year the load becomes heavier.

I suggest you ask yourself the following questions:

1. Do you know how much new pollution will be added in the next 10 years? In the next 25 years?

2. Is the rate at which corrective measures are being taken in your State adequate to show substantial gains on overall pollution control?

3. Are you making plans to control it and are you telling constantly and everlastingly the people of your State the truth about your needs?

If you cannot answer these three questions in the affirmative then you are not adequately doing your job.

The conservationists are behind you and when approached will give you substantial and affective support. They will help you make the people of your States aware of your problem and help provide the tools that you need to do your job. It is a long-time program and as long as there is a human being alive, a mill in operation or a plow in the ground there will be work to be done in this matter of supplying clean, pure water to the people of this country.

I am reminded of the lady who for 35 years worked in the State Department and then announced one day that she was going to retire. Her assistant said, "Why, Miss Blank, how can you retire now with the crisis that exists in Greece?"

"My dear," the lady replied, "when I came into the State Department 35 years ago there was a crisis in Greece. I expect that 35 years from now there will still be another."

This is probably true of the pollution problem, however, our people are demanding that we do everything that can be done now, to provide clean water for all uses.

I may have been a little too harsh in some of my comments but I feel that the time has come when we must marshal every force to control this increasing menace of polluted waters.

## Salute to St. Patrick's Day

EXTENSION OF REMARKS

OF

### HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. GALLAGHER. Mr. Speaker, I can think of no more fitting way to commemorate St. Patrick's Day than by calling attention to the following editorial which appeared in the Jersey Journal of Jersey City, N.J., on March 17, 1959:

ST. PATRICK'S DAY

(On St. Patrick's Day in Hudson County the principal editorial should discuss the occasion. However, no editorial could improve on Hal Boyle's column; first published here 7 years ago today. So here it is again.—THE EDITOR.)

What is it to be Irish?

On 364 days of the year being Irish isn't visibly different from being Scottish, French, Italian, Jewish, Serbian, Dutch, or—yes—even English.

The Irishman pays his bills, complains against his taxes, does his work, listens to his wife like the man of any other race.

But on this 1 day of the year—holy St. Patrick's Day—the Irishman becomes an Irishman.

And on this day you have to be Irish to know what it is to be Irish.

The other signs, of course, can be seen by all. The Irishman overnight grows a foot taller and stalks the earth like a giant. All traffic signs turn green for him, and if they don't he sees red.

But this air of majesty is only a token evidence of internal change. The men of other races who envy the Irishman his bearing on St. Patrick's Day would envy him for more if they could look inside the Irishman's soul.

What is it to be Irish?

How can you put the wonder of it into words?

If a psychiatrist stretched himself out on his own warm couch after his last customer had gone home, and he dreamed of the man he himself would most like to be—well, he might be perfect, but he'd still be only half an Irishman on St. Patrick's Day.

What is it to be Irish?

It is to have an angel in your mouth, turning your prose to poetry. It is to have the gift of tongues, to know the language of all living things. Does an Irishman pause and turn an ear to a tree? It is because on this day he hears what one sleepy bud says to another as it opens its pale green hands to the warm sun of spring.

What is it to be Irish?

Oh, on this day it is music, not just the cornet in the parading high school band, but the deep, deep music of living, the low, sad rhythms of eternity. The Irishman hears the high song of the turning spheres, the dim lullaby of the worm in its cocoon. All the world is in tune, and he is in step with the tune, the tune that only he can hear.

What is it to be Irish?

It is to live the whole history of his race between a dawn and a dawn—the long wrongs, the bird-swift joys, the endless hurts of his ancestors since the morning of time in a forgotten forest, the knock of his heart that is a part of his religion.

What is it to be Irish?

It isn't only the realization that he is descended from kings. It is the realization that he is a king himself, an empire on two feet, striding in power, a strolling continent of awe.

Why on St. Patrick's Day, to be Irish is to know more glory, adventure, magic, victory, exultation, gratitude, and gladness than any other man can experience in a lifetime.

What is it to be Irish?

It is to walk in complete mystic understanding with God for 24 wonderful hours.

## UNESCO

EXTENSION OF REMARKS

OF

### HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 26, 1959*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled UNESCO from the Pilot of January 24, 1959, published in Boston, Mass.:

UNESCO

Unfortunately there are still places where the word UNESCO is considered to be a bad word. The very title—United Nations Educational, Scientific and Cultural Organization—is enough to send some people into a frenzy, since to them it is perfectly plain that anything so high sounding must be subversive. Now that the new UNESCO headquarters have been permanently established in Paris, it is about time that even the diehards came around to the understanding of the organization and its aims.

To be sure, the UNESCO beginnings were not on every account promising. It was, and is, a mammoth undertaking requiring the cooperation of many divers peoples and attempting the solution of problems never before encountered in just this fashion. In those early days the remarks of certain UNESCO leaders were mistakenly taken as general UNESCO policy, which they were not, and there were also some efforts to cause partisan views to prevail in certain UNESCO programs. All of this was contrary to the meaning of UNESCO itself and the imbalance of those early days was corrected with the passing of time. Not before, however, certain spirits were alienated and the oversanguine discouraged.

Now 10 years have passed and these first hazards are far behind; for some, nonetheless, the memory lingers on, and this is very unfortunate indeed for UNESCO deserves far better. It deserves better primarily because its purpose is so genuinely good; it seeks international cultural and educational cooperation through the ready exchange of thought and ideas. This is the road to true understanding among men and no one who seeks a better world can hold back without blame from a project so necessary. Everyone will agree that not all the UNESCO programs carry out this purpose with equal validity. Some indeed by almost any standard have something of the zany about them—perhaps this is inevitable in a group representing so many different and often conflicting traditions.

At the same time, UNESCO has set in motion operations which are bound to be successful in bringing nations closer together and in assisting underprivileged peoples. The work being done to combat illiteracy and promote the translation of classics, as well as the collaboration on scientific research, already is beginning to show results. The program to foster better understanding between East and West is a long-range cultural effort which aims at healing one of the sensitive sore spots in contemporary international life. The very existence of UNECSO as an international clearinghouse for educational scientific and cultural materials is itself a milestone and its ability to act as a catalyst for many kinds of worldwide cooperation is bound to increase as the years pass. When its charter was first discussed back in 1945 only 44 nations were represented; today 81 nations make up the UNESCO family.

Catholics have been active in UNESCO from the beginning, despite the reservations of those who sought to remain aloof and leave the field to others. It should be recalled that the present pontiff, Pope John, was a delegate observer at UNESCO for 7 years and he was the first permanent observer from the Holy See appointed in 1952. The present nuncio in Paris, Monsignor Marella, celebrated a mass opening the 10th general conference last fall and Monsignor Perozzi is now permanent observer for the Holy See. Moreover the new Director General, UNESCO's top position, is Vittorio Veronese, Italian head of the world organization of the lay apostolate. Perhaps it might be added that the present U.S. delegate is the esteemed Dr. George Shuster, one of our country's best known Catholic laymen.

It is possible, we might say that it is even likely, that UNESCO will make some mistakes in the years ahead—nearly everyone who does anything makes a certain number—but it is at the same time set on a road that is full of hope for men and nations. It should receive the attention and support of all men of good will everywhere, and if this support is given, our generation will be blessed in time to come for having dared to set up an ideal so high and for having had the patience and zeal to make it work.

## H.R. 3610: A Bill To Amend the Federal Water Pollution Control Act

EXTENSION OF REMARKS

OF

## HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mrs. GREEN of Oregon. Mr. Speaker, this morning Mr. M. James Gleason, a member of the Board of Commissioners of Multnomah County, Oreg., appeared before the Committee on Public Works. His appearance before that committee was in support of the bill introduced by the able and devoted gentleman from Minnesota [Mr. BLATNIK]. Commissioner Gleason, speaking for the Tri-County Authority of Multnomah, Washington, and Clackamas Counties, as well as for his own colleagues on the Multnomah County Board, presented a detailed and, I hope, persuasive statement in favor of the passage by the Congress of this important legislation, which will go far toward helping local governments throughout the Nation meet the costs of waste disposal plants. The time and energy which the gentleman from Minnesota has given to the cause of preserving and restoring the purity of the Nation's water supplies are a tribute to his foresight and to his deep interest in the public well-being. I am proud that a commissioner of the county which I call home has spoken out in support of the legislation offered by my respected colleague, JOHN BLATNIK.

STATEMENT FOR NATIONAL ASSOCIATION OF COUNTY OFFICIALS ON H.R. 3610, A BILL TO AMEND THE FEDERAL WATER POLLUTION CONTROL ACT TO INCREASE GRANTS FOR CONSTRUCTION OF SEWAGE TREATMENT; TO ESTABLISH THE OFFICE OF WATER POLLUTION CONTROL, AND FOR OTHER PURPOSES

(By M. James Gleason, commissioner, Multnomah County, Oreg., and chairman, Tri-county Authority, before the Committee on Public Works of the U.S. House of Representatives, 86th Cong., 1st sess., Thursday, March 19, 1959, 10 a.m.)

Mr. Chairman and members of the committee, my name is M. James Gleason. I am a commissioner for Multnomah County, Oreg., and chairman of the tricounty authority, comprising the Oregon counties of Multnomah, Clackamas, and Washington. I am a member of the National Association of County Officials (NACO), vice chairman of its natural resource committee, and vice president of the NACO western regional district. I appreciate your kind invitation to testify this morning on behalf of the nearly 6,000 elected and appointed county officials from 47 States who compose the membership of NACO.

The National Association of County Officials speaks, essentially, for counties and their citizens. However, we at once recognize that the crucial subject of these proceedings touches and affects the health and welfare of every American. This committee has earned the gratitude of the people of this Nation by its unwaivering dedication to the program embodied in the subject legislation. Having seen firsthand the great and almost immediate benefits of that program, I firmly believe that these sessions will make further contribution to the life abundant for all our people.

The bill, H.R. 3610, would double the size of the present grant program for the construction of waste treatment plants by increasing the maximum grant for any one project from the present $250,000 to $500,000 and by increasing Federal appropriations to a rate of $100 million a year each year for a 10-year period. This should perpetuate and bolster the program by increasing construction to the $575 million level necessary to adequately abate water pollution in this country. By thus breathing new life into the fight on water pollution the bill H.R. 3610 seeks to achieve a goal long and steadfastly advocated by NACO as an unwaivering policy. The NACO American county platform (sec. 8–3) recommends:

"Stream pollution: Stream pollution is a national problem that has greatly reduced the amount of usable water available for agriculture, industrial and local water supply purposes. In many cases this pollution is of an interstate nature and quite beyond the economic capacity of local governments to control. Therefore, we believe that there is justification for Federal assistance to counties and other local agencies in the construction of local sewage treatment facilities and we strongly recommend that the Congress and the Federal administration make available sufficient funds to implement this part of the Water Pollution Control Act."

I might say too, Mr. Chairman, that we feel that the provisions of H.R. 3610 which would allow reallocation of funds into other States in those cases when a State did not use its total allotment is a significant step forward. Likewise, the provision which would permit local units to band together to construct a single areawide sewage treatment facility and receive Federal aid proportionally is a much-needed and foresighted development. NACO heartily endorses both vital measures.

Mr. Chairman, earlier this week while in Washington attending the historic sessions of NACO's first national Urban County Congress, I had the brief opportunity to look through two new Government publications concerning sewage treatment works in the United States. The studies cast some interesting additional light on the stimulating effect Federal grants have had on the construction of vitally needed pollution abatement facilities. The first of these publications is Public Health Service Publication No. 609 entitled "Statistical Summary of Sewage Works in the United States." On page 27 of this report, for example, I find that in 1957, 99 percent of all sewered communities in the United States had populations of less than 100,000. The second publication I refer to is Public Health Service Publication No. 633 entitled "Sewage Treatment Works Contract Awards, 1952–57." On page 13 of this publication I find that contract awards for sewage treatment works serving communities of less than 100,000 population jumped from a 1952–56 annual average of $106 million to $193 million in 1957. Significantly, 1957 was the first full year of the grants-in-aid program. This represents an increase of 82 percent over the previous five-year average and 56 percent over the previous high of $124 million experienced in 1956. Since over 95 percent of all Federal grants have gone to communities in this population group, there can be no doubt but that this substantial increase in construction has been due to Federal grants-in-aid.

It was my privilege to preside over a hard-working panel at the Uurban County Congress devoted to water pollution control facilities. I can assure this committee, after hearing 2 solid hours of discussion by county leaders from all over the country charged with the responsibility of protecting the people from the menace of polluted water, that county officers feel that it is absolutely imperative that the program go forward as revitalized in the bill H.R. 3610. The urgent deliberations of the Urban County Congress demonstrated only too clearly the belief of county water pollution control officials that any program providing less stimulation than H.R. 3610 would create a real health hazard to populous urban counties.

My experience as a commissioner in Multnomah County, Oreg., and a chairman of the tricounty authority (Multnomah, Clackamas, and Washington) testifies conclusively to the real grass roots value of the Federal water pollution control program. Frankly, it is not too pleasant to think what the picture might now be in our area were it not for the impetus provided by Federal assistance in combating water pollution.

Since 1957, Multnomah County, acting for the tricounty authority has—

1. Purchased capacity and operates two small sewerage plants.

2. Enlarged a trunk in cooperation with the city of Portland and private developer to provide capacity for a suburban district.

3. Formed four sewage districts which are now under construction or in operation.

4. Contracted with the cities of Gresham and Fairview and the Union Pacific Railroad, to provide service to 1,000 acres of residential and industrial development.

5. Purchased land for the pumping station site and the permanent treatment plant site.

6. Purchased land for a 15,000 population capacity interim treatment plant site.

7. Completed contract discussions with the West Slope Sanitary District to jointly build an interim treatment plant and sewers and connecting interceptors for a potential 10,000 population.

8. Begun contract discussions with the cities of Beaverton and Portland to treat some of their sewage.

9. Completed engineering contracts for the design and inspection of one 15,000 population and one 10,000 population treatment plants, and the intercepting sewers for them.

10. Begun planning with the Oak Lodge sanitary district to provide them with pumping and treatment facilities.

The total cost of this construction is in excess of $4.5 million. Because of the staggering cost burden financing is, and probably will continue to be our most complex problem. And that is why the help provided by H.R. 3610 means so much to us. At the same time, we believe that local communities must not depend entirely on Federal aid for needed public projects and in line with that outlook we have endeavored to secure State legislation allowing adequate financing on the local level. The funds provided by H.R. 3610 will assist us and stimulate us to vigorous action when our own finances are strained to the breaking point but with the public health and safety still in jeopardy because the job is not finished.

CONCLUSION

The bill, H.R. 3610, is a vitally needed measure and should be enacted to insure that the American people will no longer be confronted with the peril of contaminated water. The National Association of County Officials supports and recommends its passage. I thank you again for this opportunity to appear before you. I will endeavor to answer, to the best of my ability, any questions that you may have.

## Equal Time Ruling Called Slightly Silly

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. CUNNINGHAM. Mr. Speaker, the recent ruling by the Federal Communications Commission giving equal newscast time to America First candidate Lar Daly in Chicago has caused the Washington Star to comment editorially:

Applied nationally, this ruling strikes us as being worthy of some sort of prize for utter impracticality and unreasonableness.

The Star also urges a reversal by the FCC or appropriate corrective action by Congress or the courts. I have introduced H.R. 5389 to eliminate the equal time requirement from newscasts and news commentary programs. It would not alter the equal time requirement for paid political broadcasts, panel shows, or discussion programs.

Under leave to extend my remarks, I include the entire editorial from the Washington Star, which appeared Monday:

SLIGHTLY SILLY

President Frank Stanton, of the Columbia Broadcasting System, is on sound ground in attacking the Federal Communications Commission for its decision in the so-called Lar Daly case.

Mr. Daly is a perennial candidate for public office. Politically speaking, although he has sought both the Democratic and Republican nominations for mayor of Chicago, he has no real strength or standing in either party. Despite this, the FCC has handed down a ruling entitling him to as much time on television news programs as that accorded the major figures in the race.

Thus, when Chicago's mayor appeared recently on a TV newscast having to do with the official reception of Argentina's President, the FCC decided that Mr. Daly had to be granted the same amount of news time. Applied nationally, this ruling strikes us as being worthy of some sort of prize for utter impracticality and unreasonableness. Consider, for example, the 1956 political campaign. In Dr. Stanton's words:

"Under the Daly decision we would have been required to give equivalent time—on these regular newscasts—to all candidates of all parties who asked for it. There were—as near as can be calculated—24 presidential and vice presidential candidates of 12 parties. To furnish them all with equivalent time would have taken * * * approximately 20 percent more than all the time spent by all our television newscasts on all the news. The absurdity of this can be multiplied by almost any factor you choose when you apply the Daly ruling to primaries, where you may have a dozen or a score of candidates for a single nomination—and many more than a dozen or a score once the crackpots learn the implication of this decision."

The public interest, and not just the interest of networks like CBS, NBC, or ABC, is clearly involved here. As far as political campaigning goes, the American people are concerned only with the significant candidates. After all, when we turn on our radio or TV sets, we do not want to be bored or afflicted with every Tom, Dick, or Harry who may take it into his head to run for office on platforms (such as compulsory vegetarianism for everybody) which no sane party would indorse.

Certainly, considered against this background, Dr. Stanton's complaint is wholly justified. The FCC, as he has urged, ought to reverse itself accordingly. Otherwise, appropriate corrective action should come from Congress or the courts.

## H.R. 3505: The Area Redevelopment Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Banking and Currency Committee in favor of H.R. 3505:

STATEMENT OF HON. THOMAS J. LANE, OF MASSACHUSETTS, BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE IN FAVOR OF H.R. 3505, THE AREA REDEVELOPMENT ACT, MARCH 19, 1959

Mr. Chairman, seasonal unemployment in the rural areas, and brief layoffs in the industries that are usually located in cities and towns, have gone hand-in-hand with the development of the American economy. We adjusted ourselves to these variables, and took it for granted that there would always be a low level of unemployment due to shifting changes within the labor market.

In fact, unemployment compensation was conceived and put into operation for the purpose of providing some income for people who were in between jobs. Since the end of World War II, however, we have been confronted with a new economic problem; namely that of areas where unemployment has far exceeded the normal level, and has persisted for a long time.

These are not temporary, local recessions. They indicate serious weaknesses in the basic economies of these areas. New economic problems require new remedies.

Communities where people live and work, were never intended to be unchanging clusters of factories and stores and homes and public buildings and utilities and services. They are living organisms, responding to change and challenge, or failing to adjust themselves to economic realities because of reasons beyond their control.

Buildings and factories grow old and die. Industries come and go. Through its slum clearance and urban renewal programs, the Federal Government has recognized its responsibilities. Communities are being encouraged and assisted in tearing down and rebuilding the deteriorated areas that are no longer fit for human habitation or for retail enterprise.

It owes a similar responsibility to help in the reconstruction of those ancient, rundown, and abandoned industrial areas of those communities where there is a chronic labor surplus, in order to revitalize their economies.

The decline of some local industrial economies followed by the tragic inertia of heavy unemployment, is a postwar problem that cannot cure itself. It continues, in spite of national prosperity, and this fact alone should convince us that the problem is not transient, and that time alone will not solve it.

Some of the affected communities, based upon an older industry that is steadily contracting, or has moved away, or has simply died, have been bogged down in the labor surplus category for the past 7 years. Meanwhile, the empty and obsolete multistoried factory buildings are a drag upon the life of the whole community. Modern industry will have no part of these ancient plants. The small and struggling enterprises that sometimes avail themselves of this space, usually pay substandard wages.

Our experience with this problem has proved that local groups and local initiative, despite valiant and partially successful efforts, cannot complete the heroic task of redevelopment without help from outside. Show me just one community, suffering from prolonged labor surplus, that has managed to lick this problem entirely by itself. Neither municipal government, nor private groups, are equipped to do this job.

The danger of industrial blight is one that, sooner or later, could affect the economic health of any community. That is the fundamental reason why we must have a national policy and national legislation, providing adequate remedies, to help the distressed areas of tomorrow as well as those in need of immediate assistance.

The older textile, coal mining, and railroad centers, have been in the doldrums for some time. Statistics from the Bureau of Employment Security reveal unemployment in these communities considerably in excess of 6 percent for year after year. And these figures do not reflect the unknown thousands who have exhausted their unemployment benefits, and have had little or no opportunity to build up reentitlement, because there are no work opportunities for them.

The depressing effect on business is a natural consequence. Check along the main streets of these communities and you will find a number of empty stores. Check with the local governments and their shrinking tax base. Observe that some recovery has been made, through local effort alone, but that it has not been enough, because local resources, unaided, cannot cope with the whole problem.

Look at the middle-aged displaced workers in these communities who have given most of their lives to an industry that has gone. It is inhuman and unrealistic to suggest that they should move to another community where the invisible barrier of age-discrimination would stand in the way of reemployment. These people need new and growing industries in their own communities, and a program of retraining to fit them for new occupations.

If there is a fault in the proposed legislation, it is the failure to recognize and to eliminate the prejudice that will operate against the employment of middle-aged or older workers, in the new plants that will be built in labor-surplus areas, as a result of a redevelopment bill.

These people are the chief victims of the economic-readjustment problem. Due to the intricacies of insurance and pension plans, they will be politely discriminated against when they seek employment in the industries that are encouraged to locate in the areas we intend to help. The occupations to which they have given two-thirds or more of their lives have vanished. Some of these people in their late forties or early fifties, will be artificially considered as unemployable by replacement industries, and will have to wait out the years until they become eligible for social-security benefits—a burden to their families and crushed by the loss of their own self-respect—unless, through this bill we make provisions that will give them a fair share of the jobs that become available.

Social scientists are aware that we must reduce the hours of the workweek in order

to spread employment opportunities because of our increasing population and the development of automation which is ever reducing the number of workers required by industry.

This is a longer range problem on the national level, but I bring it to your attention because it is affecting—right now—the middle-aged displaced workers who must be our primary concern in this area redevelopment problem. As long as they cannot get work, we shall achieve only partial success in our efforts to put these areas and their people, back on their feet again.

You see, gentlemen, why local resources do not have the capacity to meet all angles of this problem. Any political or economic system that neglects this problem, or fails to solve it, is suffering from a basic weakness that could hurt larger areas of our economy. As slums spread the cancer of deterioration, so too can rundown and obsolete industrial areas affect other enterprises in their neighborhood.

When I first introduced an industrial redevelopment bill in 1953, due to the collapse of the textile economy in my home city, the suggestion for remedial action was slow to win support. There was the understandable hope that so-called natural economic forces would bring about a short and painless transition to the replacement industries that would move in and take up the slack.

Within a few years, however, as the problem continued to plague a number of other communities, public opinion has awakened to the fact that energetic measures are required to restore these areas to economic health.

A pledge to enact legislation along these lines was written into the Democratic and Republican Party platforms. In 1958 the House and the Senate passed an area redevelopment bill that was vetoed by the President. Events since then have but reinforced the need for this pioneering type of legislation. The only question is: "How soon and to what extent?"

This is not a bill to help communities suffering from seasonal or temporary unemployment. That is a separate and far less critical issue. The yardsticks determining eligibility under this bill are clear and definite. Its purpose is to help only those communities where unemployment is a nagging and chronic problem. It calls for a gradual but major shift in the economic base of these areas so that they will have the diversification necessary for programs. In the past, they were built around one industry and were completely dependent upon its ups and downs. We have learned that communities cannot afford to put all of their eggs in one basket, and through the proposed legislation we intend to help them toward a new economic life that will be productive and prosperous in its variety.

The administration proposes a $53 million program which is hardly better than no program at all. The target of $389 million is far more realistic.

The latest available information indicates 23 major areas, and 110 smaller areas with substantial and persistent unemployment, that would be helped by S. 722 and H.R. 3505. In Massachusetts alone, we have four major areas that have been in this category for a number of years. More than half the States have one or more areas with substantial and prolonged unemployment.

The Area Redevelopment Act faces this problem squarely and realistically. It limits eligibility to those areas that cannot find any other way out of their predicament. When its mission has been accomplished, and economic recovery has been achieved, there will be no need of further Federal participation. Bear in mind also, that the major emphasis is on loans, which, as they are repaid, will revolve to assist other affected communities in the future.

This is the type of legislation that proves the values of cooperation.

I am convinced that the Area Redevelopment Act, H.R. 3505, will assist depressed communities so that they will share as equals in our national progress.

## College Boom Is Nearing

EXTENSION OF REMARKS
OF
### HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. ULLMAN. Mr. Speaker, a recent article in the Des Moines Sunday Register, Des Moines, Iowa, contained some valuable information concerning the impending boom which is facing Iowa colleges. Needless to say, Iowa's situation is not unique, for nearly every other State is facing the same problem.

I think it particularly noteworthy that the largest percentage increase in enrollment in Iowa's institutions of higher education occurred in the public junior college. As pointed out in the Register's article, this enrollment during the present year increased 13.8 percent. Here again is further support for much needed expansion of public junior community colleges as well as further support for a sound program of Federal aid for the expansion of such institutions.

The article follows:

COLLEGE BOOM IS NEARING

The enrollment in Iowa colleges and universities this year has increased about as expected.

The statistics prepared by the Association of Iowa College Presidents show a total of 49,648 students enrolled this year. That's an increase of 5.3 percent (2,511 students) over 1957. The percentage gain is more than twice that of 1957 over 1956.

But the biggest increase in college enrollment is still to come. This is what worries the leaders of both private and public colleges: Will they be prepared to provide high quality education when the youngsters born in 1946 and 1947 are ready to go to college?

The 13,754 freshmen who have entered Iowa colleges this year are mostly the youngsters who were born in 1940. The number of births in Iowa in 1940 was 45,000.

The number of births continued about the same from 1940 through 1945. Then it jumped tremendously—to 56,000 births in 1946 and to 63,000 in 1947. These 1946 and 1947 babies will be of college age in 1964 and 1965.

Dr. Gaylord M. Couchman, president of the University of Dubuque and head of the Association of Iowa College Presidents, points up very well the significance of the increase in college enrollment this year.

"With the total number of high school graduates at a relatively low figure, the enrollment in Iowa colleges and universities continues its steady rise," he says. "Very soon the percentage of enrollment will rise phenomenally and the situation confronting the citizens of Iowa will become critical."

Dr. Couchman stresses that both private colleges and the State institutions of higher education are being asked to assume responsibility for greatly increased numbers of students. The planning is based on the expectation that private colleges will take care of about 50 percent of the students. If they don't—and a few of them do expect to put maximum limits on enrollment—the State's problem will be more acute.

This rough 50–50 split of students between private colleges and tax-supported colleges has existed for about 25 years. This year 47.3 percent of all students are in the State University, Iowa State College, and Iowa State Teachers College. Another 5.9 percent are in public junior colleges. The rest are in private colleges. The percentage increases in enrollment this year were highest in public junior colleges, 13.8 percent, but the total is only 2,913. The increase in private colleges was 9 percent compared with a 1-percent increase in State institutions.

The major problem in assuring continued educational opportunities for Iowa youngsters is the same for both State and private colleges. This is adequate financing to provide the needed classrooms and to pay the salaries essential to get good teachers.

We agree with Dr. Couchman that it is an obligation of the "citizens of Iowa, through the legislature, to provide State institutions with the financial resources for that quality in higher education of which Iowans may be proud."

We also agree with his statement that it is "necessary for private citizens and corporations to increase their financial support to help the independent institutions meet the tremendous financial burden which they have been asked to assume."

Iowans must keep the door of educational opportunity open by giving increased financial support to both private and State colleges.

## Across Antarctica in Sno-Cats Made in Medford, Oreg.

EXTENSION OF REMARKS
OF
### HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. PORTER. Mr. Speaker, the only automotive industry in the Fourth District of Oregon is the Tucker enterprise in Medford. The factory makes Sno-Cats and Mud-Cats, the like of which are made nowhere else and which are known over the entire world for their ingenuity and durability.

Under leave to extend my remarks, I am including an article appearing in the Sunday Oregonian of March 1, 1959, by Leverett Richards, aviation editor of the Oregonian, who was in the Antarctic when the Sno-Cats helped Sir Vivian Fuchs and Sir Edmund Hillary make history.

The article follows:

STORY OF ANTARCTICA CROSSING REALLY STARTED IN MEDFORD

(By Leverett Richards)

"The Crossing of Antarctica," by Sir Vivian Fuchs and Sir Edmund Hillary, just off the presses of Little Brown & Co., at $7.50 per copy, is a book to remember. Here is living history.

This story really starts in Medford, although the authors neglect to note this fact specifically. For the sno-cats that purred and growled across the Antarctic continent on this last great adventure of all time on this earth were made in Medford by the Tucker Sno-Cat Co. As Sir Vivian Fuchs told J. M. Tucker in London, June 1958, at the end of this epic: "We couldn't have made it with any other known equipment.

This story might also be said to end in Oregon. Sir Vivian—"Bunny" to all who know him—was so grateful for Oregon's contribution to his expedition that he donated one of his trans-Antarctic sno-cats to the Tucker Co., the one called Rock and Roll, the one that hung by its toenails over a bottomless crevasse to pose for a portrait that is becoming world famous.

David Pratt, energetic young engineer for the expedition, spent 3 weeks in Oregon studying the sno-cats before accepting them. For 2 days he ripped and snorted recklessly around the slopes of Mount Hood in August 1955, putting the ungainly vehicle through its paces.

Two weeks he virtually lived with the vehicles in the Tucker factory at Medford. "Pratt is the livest wire I know," J. M. Tucker recalls. "He didn't give us a minute's rest. Wanted to work all night. Wanted to know everything, even the composition of the metal in every part."

This knowledge paid off when repairs had to be made on the sno-cats at 30 and 40 below zero on the 2,158-mile trip across the bottom of the world. All four sno-cats completed the record journey. Two are still at McMurdo Sound in the Antarctic. One is in Europe. The other is at Medford.

"The Crossing of Antarctica" is a well-organized, compact, matter-of-fact account of an adventure that was anything but matter-of-fact. Told with British restraint it reduces to the casual many a blood-chilling misadventure which would be enough to leave a TV audience limp with excitement if treated with dramatic skill.

Fuchs casually mentions that "twice in one day we nearly lost Ken Blaiklock" in crevasses. These crevasses, up to 50 feet wide and of unknown depth, are not gaping cracks, as pictured by Buz Sawyer in the comic strips. They are covered by bridges of snow, which gave way scores of times beneath the weight of the expedition's 6- to 8-ton vehicles.

Sometimes they gave way beneath the skis of the adventurers who went ahead to probe the snow for a safe route. It one case the snow gave way beneath John Stephenson "and left him hanging by one elbow over a deep dark hole from which it is doubtful if anyone could have been recovered, even if he had survived the fall."

It is something of a miracle of courage, and luck, that not a man was lost in either the British or the New Zealand expedition, despite the grim determination with which Fuchs pushed his vehicles through glacial icefalls over snow bridges that repeatedly trapped his rugged Sno-Cats. The four-tracked Weasels didn't make it.

Yet, Fuchs complains, worst hardship of the epic was the lack of sleep and the ordeal of greasing the vehicles every third day at freezing temperatures in slimy, slippery overalls. Exploration, which used to be hard on the feet, is now harder on the seat. Nearest the expedition came to disaster was from carbon monoxide from the engines, which struck down both David Pratt and Ed Hillary in the closed cabs of their vehicles at different times.

Sir Edmund Hillary, conqueror of Mt. Everest, leader of the New Zealand expedition, starting from Ross Island on McMurdo Sound, two miles from the U.S. base, crossed the Ross Ice Shelf, climbed the Skeleton Glacier and laid down depots of food and fuel for Fuchs with nothing more than a lone single-engined airplane and five Ferguson farm tractors.

Hillary, who could step over the Ferguson without stretching his long stride, regarded the garden tractors, a gift to the modestly financed New Zealand party, with ill-concealed doubt at first. But when they performed impossible tasks during the first winter without so much as skipping a beat he gained sufficient confidence to take them 700 miles to the last depot on the polar plateau.

The expedition committee had made it plain in the New Zealand press that Hillary was under orders to leave the glory of the pole to Sir Vivian, head of the overall British Trans-Antarctic Expedition. But when we of the press at McMurdo Sound asked Hillary what his intentions were, he laughed in a way that made it plain nothing was going to stop him from getting to the South Pole. He felt he owed it to the thousands who contributed their pence to the New Zealand expedition.

He did, on January 4, 1958, 16 days before Fuchs and his Sno-Cats, accompanied by 2 dog teams, reached the pole from the Weddell Sea side of the continent. That made Hillary the first man to reach the pole overland since Scott, who perished on his return from the pole in March 1912, 47 years ago.

Fuchs was a month behind schedule by that time and Hillary, with the unanimous backing of all the polar experts, advised him to stop at the South Pole and let the U.S. Navy fly him out, resuming the crossing next year, lest he be caught in the howling blizzards and 60-below temperatures which cost the lives of Capt. Scott and his 4 companions 47 years before. But Fuchs pressed on, and, guided and supplied by Hillary, completed the 2,158-mile journey in 99 days, just in time to ship out for England before the sea froze.

These were major crises at the time, but in the backlight of history they are lost in the major theme of the book—the conquest of the last great unknown area on earth. Purpose of the crossing was not only exploration, but scientific probing of the extent of the ice, the shape of the mountains buried under the ice, magnetic and meteorological studies.

These were well and thoroughly pursued, but little is reported in this volume of the scientific findings, beyond the bare fact that 26 miles from the South Pole on one side mountains rise to within 2,000 feet of the 10,000-foot surface of the ice cap, then drop to an altitude of about 2,000 feet above sea level at the pole where the surface of the snow is about 9,200 feet above sea level.

Most of the scientific data obtained on the trip must be studied and correlated before being published. The crossing did prove, however, that the Antarctic is indeed a continent, not a series of islands under the ice, as had been surmised.

The book avoids the usual fault of expedition books by segregating into appendices the technical data on the vehicles and equipment of the expedition and skipping much of the usual detail on preparations for the expedition.

The monumental modesty of the authors tends to minimize the full magnitude of their courage, skill and fortitude. But the pictures scattered throughout the book pull no punches.

They tell as no words could the full magnitude of the achievement of Fuchs, Hillary and the determined men who risked their lives literally scores of times on a journey equal to the greatest epics of human history. Some 59 black and white pictures and 33 in full color paint the sinister beauty of the Antarctic in all its glory—and show the hazards as words cannot.

## Statement by Hon. Fred Wampler, of Indiana

EXTENSION OF REMARKS
OF
## HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. WAMPLER. Mr. Speaker, under leave to extend my remarks, I am including a statement which I made today before the House Committee on Banking and Currency in support of my own area redevelopment measure and all similar measures.

The statement follows:

STATEMENT BY THE HONORABLE FRED WAMPLER BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY IN SUPPORT OF THE BILL H.R. 4048 AND SIMILAR MEASURES, TO ESTABLISH AN EFFECTIVE PROGRAM TO ALLEVIATE CONDITIONS OF SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT AND UNDEREMPLOYMENT IN CERTAIN ECONOMICALLY DEPRESSED AREAS

Mr. Chairman, I am appearing before your distinguished committee today in support of my bill, H.R. 4048, and all identical measures, which would establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in the economically depressed areas of the United States.

The bill, H.R. 4048, Mr. Chairman, is identical to the bill, S. 722, authored by Senator DOUGLAS of Illinois, which was approved by the Senate Banking and Currency Committee, March 11, 1959, and ordered reported to the Senate with certain amendments which I understand do not affect the essential features of the program.

The program proposed in both measures is, I'm sure, quite familiar to all. However, in the interest of a complete record, the program, in brief, contemplates the establishment of three revolving loan funds of $100 million each to assist private firms and public agencies in their industrial redevelopment activities, both in urban and rural areas. In addition, a $75 million fund would be set up to make Federal grants to areas which are so underfinanced that they cannot contribute their share to the loan program. The measure also authorizes $10 million for subsistence payments for vocational retraining, and $4.5 million for providing technical assistance, that is, technical information, market research, etc., to economically depressed areas.

Under the terms of the bill, the Federal Government would provide up to 65 percent of the cost of each area project—land, buildings, equipment, and machinery, etc.—and the State or locality would contribute 10 percent; private sources would make available 25 percent of the costs; at least 5 percent must come from non-Government sources.

Loans made from two of the $100 million revolving funds—one for industrial projects in industrial redevelopment areas and the other for industrial projects in rural redevelopment areas—are to be made for 30-year periods. Loans made from the third $100 million revolving fund, to be established to improve and develop depressed area community facilities so as to enhance the opportunities in the area for the attraction or expansion of industrial or commercial plants and facilities, will run for 40 years.

Loans made will bear interest at the rate of one-half of 1 percent above the Treasury's borrowing cost.

I have been informed by the Department of Labor, Mr. Chairman, that in the State of Indiana there are 12 labor market surplus areas which, as of March 18, 1959, based on January 1959 ratings, suffer from a 6-percent-plus ratio of unemployment to the total labor force.

These 12 areas, which I feel would surely benefit extensively from the proposed area-redevelopment program, are at the moment areas classified in Department of Labor categories D, E, and F, and are, therefore, sufficiently depressed to meet the requirements for designation as areas of substantial labor surplus, or areas of substantial unemployment for purposes of Defense Manpower Policy No. 4, the policy on accelerated tax amortization for labor surplus areas, and Executive Order 10582, implementing the Buy American Act.

Labor Department area classification criteria places a surplus labor market area in class D when the ratio of unemployment to the total labor force stands at 6 percent or more, when jobseekers are in excess of job openings and that situation is expected to continue during the succeeding 4 months. Class E areas fall in the 9 to 12 percent unemployment ratio category, and class F in the 12 percent or more ratio group.

Major and smaller labor surplus areas in the State of Indiana include Evansville, with 9.7 percent of the total labor force unemployed; Fort Wayne, where 7.4 percent are unemployed; South Bend, where 7.4 percent are unemployed; and, Terre Haute, where 10.5 percent of the total labor force is unemployed. In Anderson, the unemployment ratio stands at 8.9 percent; in Columbus, at 7.0 percent; in Connersville, at 8.9 percent; in the Michigan City-La Porte area, at 10.9 percent; in Muncie, at 10.3 percent; in New Castle, at 13.3 percent; in Richmond, at 7.6 percent; and, in Vincennes, at 9.6 percent.

I think the extreme economic seriousness of the Nation's unemployment problem and the necessity for effective, farsighted remedial action can be graphically illustrated and understood when one reduces to bread and butter terms the daily privation and distress faced by America's 4,724,000 jobless, but potential breadwinners who comprise 7 percent of the Nation's total labor force of 67,430,000.

By comparison, of Indiana's total labor force of 1,725,900 7.3 percent or 126,400 are unemployed.

To take the illustration a step farther, Mr. Chairman, in 1950 the Census Bureau estimated that the median annual income in the Nation was $1,917, and the median annual income in the State of Indiana was $2,116. The Bureau informs me that the national annual median income for 1957, of persons who had income, was $2,452. By arithmetically projecting these figures, the annual median income in Indiana for 1957, of persons with income, is computed to be $2,706. Now assuming that the State of Indiana's total labor force was active, or that the 126,400 Hoosiers currently jobless were gainfully employed, Indiana payrolls would be expanded by the sum of $341,938,400, or, in other words, practically the entire cost of the proposed area-redevelopment program, estimated to be $389.5 million.

Granted, Mr. Chairman, that full employment represents the ideal labor picture, that full employment is perhaps a bit utopian; it is nonetheless exactly what we are striving for. And, when the above formula is applied on a nationwide scale, the total loss in gross national income and economic strength, is absolutely staggering.

The Department of Commerce has announced that personal income, which is a measure of the dollars people receive, jumped $1.5 billion in February, to a yearly rate of $364.5 billion. However, it is reported that there are strong indications that that one-half of 1 percent gain is due largely to fatter dividend checks and more overtime pay. Thus, leading many economists to the conclusion that merely regaining old output levels won't have much effect on current unemployment levels.

As I've stated before, Mr. Chairman, I wish to express my unqualified support for this and all similar measures introduced by Members of both bodies, from both sides of the aisle.

These distressed communities in Indiana, and elsewhere in the country, are in dire need of assistance if they are to regain their economic health and thereby be in a position to contribute materially to our national industrial strength.

Thank you, Mr. Chairman, for this opportunity to be heard.

---

## Statement Before House Committee on Veterans' Affairs, by Judge David B. Williams, National Commander, Disabled American Veterans

EXTENSION OF REMARKS

OF

## HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

STATEMENT BEFORE HOUSE COMMITTEE ON VETERANS' AFFAIRS, BY JUDGE DAVID B. WILLIAMS, NATIONAL COMMANDER, DISABLED AMERICAN VETERANS

Mr. Chairman, ladies and gentlemen of the House Committee on Veterans' Affairs, may we first express our appreciation for this opportunity—annually accorded to the national commanders of the several congressionally chartered veteran organizations—to present the viewpoints of the Disabled American Veterans, as to the relative merits of proposed legislation referred for disposition to your committee.

May I remind you, ladies and gentlemen, that the DAV—as the Disabled American Veterans is usually referred to—is the only congressionally chartered organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. The DAV is therefore composed only of America's disabled defenders.

Increasing thousands of war-handicapped veterans soon learned, following World War I, that there was then no nationwide setup of experts to advise and assist them in the solution of their service-incurred disabilities, and to obtain needed medical treatment, hospitalization, and suitable physical and vocational rehabilitation, as well as disability compensation to compensate them for their war-incurred physical handicaps.

Five different governmental agencies were then administering the inadequate Federal laws pertaining to veterans and their dependents, and the widows and orphans of those who had made the supreme sacrifice.

Group efforts, here and there—particularly among vocational trainees—to solve the problems of distressed disabled veterans, developed into the formation, early in 1920, of the organization first known as the Disabled American Veterans of the World War. Granted a congressional charter in 1932, its name was shortened by congressional amendment in 1942, to Disabled American Veterans, and its membership eligibility thereby extended to all of America's disabled defenders.

Ever since its formation in early 1920, the DAV has emphasized, and specialized in extending, much needed rehabilitation service, advice and assistance to, for and by America's war-disabled veterans. The DAV has continually insisted that our Nation owes a primary obligation to those citizens who have sacrified parts of their bodies or of their health by reason of active service in its Armed Forces during war periods.

It is strange, but true, that because legislation originally enacted has included many deficiencies and inequalities, each successive Congress has enacted some liberalizing amendatory legislation affecting the welfare of disabled veterans and/or their dependents.

Realizing that legislative enactments frequently fail, in their administration through governmental agencies, to match up technical legal entitlement with equitable entitlement to benefits provided for under certain specified circumstances, the DAV has had the distinction, during all of the intervening years, of having maintained the largest staff of full-time national service officers, located in the regional, district, and central offices of the U.S. Veterans' Administration, of any veteran organization.

Although the DAV continues to have financial difficulties to maintain them on an adequate basis, the DAV is determined to continue their personalized rehabilitation services in future years. Very much does the DAV desire to be enabled financially to maintain at least 1 full-time national hospital contact service officer in each of the 173 hospitals of the U.S. Veterans' Administration, where they could accomplish so much for so many discouraged and disheartened disabled veterans.

Despite some disappointments, much progress has been made in the liberalization and administration of laws intended for the benefits of war-disabled veterans and their dependents, by reason of the understanding cooperation of the members of this committee and of the U.S. Congress.

Incidentally, the DAV was the first organization, I believe, to advocate consolidation of all House committees, dealing with veterans' legislation, into one major House Committee on Veterans' Affairs. Probably largely by reason of such consolidation, many successive enactments occurred, gradually uniformizing the benefits of service disabled veterans and their dependents of all of America's wars, and finally, as long advocated by your committee and the DAV, in the codification in 1958 of all such laws, into Public Law 85-857, now known as title 38, United States Code.

The guiding principles of the DAV, as to proposed legislation affecting veterans, have been much the same throughout the years. As adopted by the national executive committee of the Disabled American Veterans on January 30, 1959, its guiding policy was then enunciated as follows:

"Because the Disabled American Veterans was founded on the principle that this Nation's first obligation is to its war disabled veterans, and their dependents, the DAV believes that our Government should provide:

"1. Proper medical care and treatment of veterans for disabilities incurred in or aggravated by active service in the Armed Forces of the United States.

"2. Adequate disability compensation for service-connected disabilities.

"3. Vocational rehabilitation and education to restore employability of war-disabled veterans in gainful, useful employment; and

"4. Adequate death benefits for the widows, minor children and dependent parents of veterans who die as the result of service-connected disabilities and of veterans who were handicapped by service-incurred disabilities.

"It therefore follows that the DAV believes that the Congress of the United States (1) should extend priority of consideration of proposed legislation which aims to provide benefits for veterans, with service-incurred disabilities, and for their dependents, and (2) that the DAV will consider giving its support to proposed legislation for the benefit of other veterans, and their dependents, only if convinced that its enactment will in no way jeopardize existing or proposed benefits for veterans with service-incurred disabilities, and for their dependents."

Long before my time, a review of past history discloses that following the Civil War governmental benefits were originally provided only for those who could establish the fact that their wounds and disabilities were incurred during their war service. Increasing scores of thousands found it impossible technically to prove service connection of their disabilities, mostly because of the lack or loss of medical records. No service officers were then maintained by any organization. Technical assistance was obtainable only through pension attorneys, who collected fees equivalent to 10 percent of whatever they procured.

As a consequence of such distressing conditions, a general pension law was enacted, about 25 years later, as to all Civil War veterans, based upon attained ages or degree of disabilities, regardless of their service origin. No further liberalizing legislation affecting those with service-connected disabilities was thereafter enacted.

The same pattern was followed after the Spanish-American War, with the same results, with a similar general pension law being enacted in 1918—about 18 years later. Free technical assistance to distressed disabled veterans was still not available. It is significant, I think, that following each such war, no organization existed composed exclusively of the wounded and disabled veterans of such war. Thirty dollars per month payable for permanent-total service-connected disability, in effect prior to the Spanish-American War, was still in effect in 1918 and 1919. Then, in 1920, such basic rate was changed to $100 per month.

Although no increases in basic disability compensation payments were provided for prior to 1930, it is very significant to note that the pensions payable under the general pension laws were periodically liberalized, both as to veterans of the Civil War and then of the Spanish-American War.

Looking back, it is apparent that the same pattern might have followed World War I, as was put into effect following the Civil War and the Spanish-American War, stopping any liberalization of benefits for the service-connected disabled veterans and submerging their benefits under periodic liberalizations of the general pension laws, if it had not been for the guiding principle—as repeatedly emphasized by the DAV—that priority of consideration should be given as to proposed legislation affecting veterans with service-incurred disabilities and their dependents.

In this connection, it is important to keep in mind that inflation is not something new in this Nation. Costs of living have followed an upward trend with some deflationary periods in between—ever since the formation of our Nation. As the cost of living goes up, the purchasing power of monetary benefits received by service-connected disabled veterans obviously goes down. A DAV past national commander after detailed studies, came to the conclusion that the cost of living has doubled about every successive 25 years.

Finally realizing the probability of the continuance, indefinitely, of such upward trend in our American cost of living, the DAV first adopted a resolution at its 1941 national convention insisting upon legislation whereby all monetary benefits for disabled veterans and their dependents should be geared upward in accordance with increases in the cost of living. Three years later, after our bigger brother veterans organizations had adopted somewhat similar resolutions, Public Law 312 was enacted, providing for a 15-percent increase in the basic rate of disability compensation.

Although such basic rates have been increased several times since then, the cost of living increase has been still higher. Relatively, therefore, the purchasing power of disabled veterans, who are dependent upon their disability compensation payments has not kept up with increases in the cost of living.

Consequently, the DAV fervently believes that primary consideration should be given to proposed legislation now before this committee, H.R. 3508, introduced by your respected chairman, in effect to increase the basic rate of compensation for permanent and total disability from $225 to $250 per month, and for other lower ratings to amounts equivalent to their percentages of $200 per month—in effect about a 10 percent increase in such disability compensation payments.

The DAV has also long maintained that extra allowances should be granted to such disabled veterans, based upon their dependents. Although Congress has granted such dependency allowances as to those disabled to the extent of 50 percent or more in degree, the DAV sincerely believes that dependency allowances should also be extended to all war-handicapped veterans with lesser degrees of disabilities, proportionate to the rating percentages of their service-connected disabilities, as would be provided for by enactment of H.R. 930.

These two important legislative proposals deserve priority of consideration and enactment into law, by this session of Congress.

The primary purpose of providing governmental benefits to service-connected disabled veterans, is, of course, to enable them (and their dependents) to live in the American way, for which they acquired vocational handicaps, which have limited their opportunities for suitable, useful, and continuous employment.

Inasmuch as more than 90 percent of our compensated disabled veterans are rated as less than permanently and totally disabled, it is obvious that they must necessarily be enabled to supplement their disability compensation by other income, preferably through useful and suitable employment.

Too many of them, unfortunately, are unable to procure and to retain suitable, useful employment, in part because of their handicapping disabilities, but, in too many instances, because of the unwarranted fear, in the minds of potential employers, that they would thereby run the risk of increasing their State Workmen's Compensation premium rates.

The DAV therefore ardently advocates the enactment of H.R. 931, in effect to provide for VA reimbursement to any employer, insurer, or fund, of amounts of workmen's compensation paid out on account of death or disability arising out of on-the-job injuries or disabilities.

Not only do we believe that the enactment of such a legislation would greatly facilitate the useful suitable employment of war-handicapped veterans, with benefits thereby accruing to such handicapped veterans, and their families, but also to their communities, and certainly thus making them much less interested in trying to prove their entitlement to higher rates of disability compensation.

Canada has, since 1920, found such legal provisions to be very helpful, in facilitating the suitable employment of its war-handicapped veterans. Every handicapped veteran is intensely desirous of being self-sustaining—as so much emphasized during the last 10 years, by the President's Committee on Employment of the Physically Handicapped. Nevertheless, more than 1 million veterans are now registered with public employment offices as being unemployed, including 92,500 who admit having physical handicaps.

Unfortunately, an increasing number of war veterans are also being adjudicated as unemployable by reason of permanent and total disability, non-service-connected, and therefore awarded pensions of $66.15 as to those less than 65 years of age; $78.75 as to those so rated for more than 10 years, or 65 or more years of age, or $135.45 for those in need of constant aid of an attendant, provided that their incomes from other sources do not exceed $1,400 per year, if single, or $2,700, if married or having dependents. Many of these unemployable war veterans are required, under existing law, to forfeit entitlement to their disability compensation, particularly those with partial ratings of less than 40 percent. This forfeiture requirement is not fair and equitable, because he earned the right to receive his disability compensation.

No veteran should be required to forfeit any disability compensation for a service-connected disability because of becoming unemployable, in part, certainly, because of such service-connected handicaps, and possibly in part because of age and/or some other non-service-connected disability. Rather, his basic disability rating should be increased on the basis of the factors of age and unemployability, as I understand is the situation in other countries, such as Australia and New Zealand.

Moreover, if, on top of his service-connected disability, he has become unemployable because of the combination of some other non-service-connected disability and/or his age, then in addition to his disability compensation he should also be awarded the pension benefits payable for permanent total non-service-connected disability, or at least such portion thereof as, on a sliding scale, would not exceed specified totals, the details of which would need to be determined on the basis of careful studies and analyses.

Inasmuch as intensive studies are, we understand, now being made by this committee and its staff, as well as by VA officials, as to proposals for changes in the income limitations as to eligibility for pensions for permanent total disabilities, we are not in a position to furnish our reactions, except generally to assert that relative needs should be taken into consideration. On the contrary, no needs clause should ever be required as to disability compensation.

In connection with all non-service-connected benefits the DAV must be ever mindful of the fundamental consideration as previously set forth in our current and historical policy statement, to wit:

"That the DAV will consider giving its support to proposed legislation for the benefit of other veterans, and their dependents, only if convinced that its enactment will in no way jeopardize existing or proposed benefits for veterans with service-connected disabilities, and for their dependents."

Your committee was previously furnished with a volume of all the resolutions, both administrative and legislative, adopted at

the 1958 national convention, and it is not my purpose or desire to impose upon your time by reading at length from the voluminous record in this connection. I do, however, wish to dwell briefly upon certain items of proposed legislation we believe should be enacted at this session of the 86th Congress.

H.R. 113 has for its purpose the protection of service connections in effect for at least 10 years, except where fraud is involved. It has been our experience that, over a 10-year period, the cases with service-connected disabilities of compensable degree are reviewed by the Veterans' Administration anywhere from 2 to 10 or more times and if rating boards cannot find clear and unmistakable error in a grant of service connection over that lengthy period of time then any severance after 10 years would almost assuredly be based on opinion, or a change to less liberal policy, or some other reasons that should not be allowed to have the attributes of an ex post facto law.

H.R. 283 would simply pay two statutory awards instead of one only where the veteran has the loss or loss of use of both an eye and a limb. We know your committee is in sympathy, in view of your action on a similar bill before the 85th Congress which, however, failed to become law.

H.R. 282 would freeze the VA schedule for rating disabilities and its extensions in their present forms and would permit changes or modifications, and so forth, to be made only with the approval of the Congress. There is a very interesting history behind this proposal regarding which your committee and staff are thoroughly familiar. In the interest of protecting veterans and their ratings, the national convention mandated this proposed legislation.

H.R. 268 is a bill of unusual appeal especially to anyone related to or closely associated with a veteran suffering with the great handicap comprised in total deafness, bilateral, with absence of air and bone conduction. One of our most intelligent and literate members, himself a victim, has well expressed the impacts of such an impairment upon daily living in substantially the following words:

The totally deaf veteran, in the complete absence of air and bone conduction, is practically isolated from the social and entertainment world of sound and this includes his loved ones and his church. He is unemployable in industry and other systems because of insurance laws. Such a veteran is deprived of governmental schooling of his choice and aptitude because schools and resident colleges do not have facilities to accommodate the deaf. He is considered an assigned risk to automobile insurance companies, regardless of his accident-free record or driving skill, and his State issues him a restricted operator's license. This veteran is informed by the VA loan guarantee officials that it is doubtful if he can qualify to build a home because of his unemployability and the amount of his income, regardless of his credit rating. He has been told by VA physicians and other top ear specialists that his hearing is gone forever and that no medical or mechanical help or treatment known by science can restore that loss. It is, therefore, deemed only right and proper that a veteran with service-connected total deafness of both ears, with absence of air and bone conduction, should receive additional compensation in the form of $47 monthly statutory award, which award is now payable by law in cases involving certain other conditions which quite often are not nearly as incapacitating and distressing to the individuals concerned as is the type of handicap contemplated by H.R. 268.

With reference to death pensions, you have copies of our convention resolutions on this subject. We advocate placing the widows and children of deceased World War II and the Korean conflict on a parity with those of deceased World War I veterans, for pension purposes, and we believe that this is a worthy adjustment that is long overdue. This would eliminate the requirement that the survivors of the above mentioned later war and conflict must show service connection and ascertainable residuals in the cases of their deceased veteran relatives. As this is not required of World War I survivors the discrimination is obvious and should be corrected.

H.R. 3060 would provide a 1-year probationary period for veterans leading to permanent status in Government employment. This would change the present 3-year career-conditional requirement.

The Disabled American Veterans is strongly opposed to any weakening of the Veterans' Preference Act but would, however, favor granting preferential treatment to those persons who entered upon service in the Armed Forces after January 31, 1955, and who sustained service-connected disabilities after that date, as long as the Selective Service Act is in full force and effect.

The DAV is naturally interested in the appropriation of adequate funds for Government agencies dealing with veterans, on the subject of employment, and these include the Civil Service Commission, the Bureau of Veterans' Reemployment Rights, the Federal and State employment agencies, and the Department of Labor.

This organization, as you know, supported the House versions of direct loans-to-veterans legislation, both in the 85th Congress and during this first session of the 86th Congress. We know that this legislation is needed by veterans residing in many areas and we hope that final congressional action thereon may be completed with a minimum of delay. When it is borne in mind that the money thus loaned will eventually be returned to the Government, and most certainly with a sizable profit, some of the arguments made against the veterans' loan program, in the press and elsewhere, are unreasonable indeed and at variance with the facts.

Your committee has before it a number of bills that would extend eligibility relative to vocational rehabilitation and education benefits to former members of the Armed Forces who entered service subsequent to January 31, 1955, as long as the Selective Service Act remains in full force and effect. We endorse such an extension of the VR and E program as to those otherwise qualified peacetime veterans under the conditions cited, where disability in line of duty was incurred during service subsequent to January 31, 1955, and prior to the termination of the draft.

In passing, permit me to say that the Disabled American Veterans, as a patriotic organization of the wartime disabled, was extremely gratified at the expedited action accorded H.R. 2260 by the House in passing and sending to the Senate for action this bill so vital to the Nation's defense. The extension of the Universal Military Training and Service Act to July 1, 1963, is indeed a must if we are to survive the Communist threat to existence.

The question of permitting judicial review of the VA decisions subject to appellate review has been one that has come up through the years and has resulted in controversial expression of reviews. The DAV strongly supports legislation of this nature.

At this time there are several bills before the Judiciary Committee and your committee and there are at least three different approaches advocated by the proponents of these bills. It is my understanding that a bill will be brought out from your committee on the subject and you may be certain that it will have our most careful study and consideration. The problem sought to be solved is appreciated and it is realized that there are many difficulties in the way of coming up with a satisfactory formula. Certainly, a specialized court to hear such litigation would be greatly preferable to a system opening wide the whole Federal courts setup to veterans' appeals.

Lastly, I wish to leave with you my thoughts on a subject of paramount importance. The DAV believes that a primary obligation of this Republic is to see that men disabled in service have fine hospitals, the best of medicine and drugs, and the finest doctors and surgeons this Nation can provide. These the VA hospital system must provide.

We believe that the service-connected disabled must have a priority. We are pleased that care can be given to the nonservice connected. We are delighted that the President has signed a policy that will make more beds available to the nonservice connected in the future. But I offer one word of caution. We must insist that VA always leave adequate beds for the service connected, that the quality of care for them not be diluted nor reduced because others have been given equal priority.

I certainly want to commend the chairman of this committee and all its members for the vigorous conduct of the hospital hearings a year ago. The DAV is pleased that the 125,000 authorized bed plan originally proposed by the previous Administrator, Mr. Harvey Higley, came into being. We believe this a great step forward.

We certainly think that this committee's insistence upon highlighting the problem of how many beds were available for veteran care was most helpful. We understand this has resulted in more accurate statistics being used which will provide a good starting point for further progress.

Much as I would compliment this committee for the vigor of its action, much as I would compliment the President for his signature on this policy, I must add that I feel it only a beginning.

There are needs in many places. Populations have shifted. Florida and California are most outstanding examples where the increasing populations will demand additional beds, but there are other places in the Nation where waiting lists are rising and where the DAV believes additional beds must be provided.

It is not readily possible at this time to tell whether 125,000 beds will meet the expanding needs. The DAV intends to watch the correlation between waiting lists and available beds with great care and it may be that the 125,000 total will have to be changed upward to really fit the true needs of America's veterans. We will watch the operation of the new policy with great care and scrutiny to see whether the new freedom to convert TB beds to other uses, to transfer beds and hospitals as needed will actually take care of the needs as they develop.

I must point out, however sound the new policy, it can be nullified and vetoed by a limitation on the expenditure of funds. The DAV firmly believe in adequate appropriations for the hospital system.

We are pleased that additional funds were requested in the 1960 budget for additional staffing. This is a step forward. We believe that beyond these forward strides of the present year there are higher goals in staffing which much be reached, and we shall support money for additional employees in the hospital system.

I recognize that the cost of hospitalization in all hospitals, private and public, has gone up severely under the impact of inflation. Then too, the improved drugs are very expensive. The DAV believes that the hospitals of the VA must have adequate funds for the best possible medicines. We recognize that the appropriations for the hospital system have been rising steadily, but the question we must ask is not have the appropriations gone up, but have they gone up enough to take care of the galloping effect of inflation? Unless the amount required to meet these rising costs is provided as a minimum the system cannot take steps forward in progress.

We believe that the managers of the hospitals should have adequate funds for maintenance. Some of the newer VA hospitals are splendid, but many of the hospitals in the system are old and need additional funds for repair and refurbishing. We believe this is the No. 1 need of the program at this moment and the DAV strongly supports more money for addition maintenance.

It is penny wise and pound foolish to defer maintenance. Yet this is the area most frequently used to make savings. If you do not repair a building this year, you will have to provide a whole new building before long.

We believe in medical research by the VA. We certainly feel that at least the $15 million granted by the Congress last year should be continued. The magnificent research done by the VA in the field of chemotherapy as applied to tuberculosis has shown dramatically its value. This contribution has saved many lives, reduced the time in hospitals for many patients by years and months, and has served all mankind. Indeed it has made many beds available for other types of patients. This one contribution undoubtedly has saved more than enough to pay for all that has been spent by the VA on research.

Adequate funds must be provided for outpatient care for disabled. This year the shortage of outpatient funds resulted in many difficult and serious situations. We note with interest that additional funds are provided in 1960 for these services.

We have read that some Members of Congress are considering policies which will cut back and permit the filling of only 1 job out of 4 vacancies. We are not opposed to saving money if it can be properly and wisely accomplished but we believe any such policies applied to the hospital system would be false economy at the expense of our disabled veterans and we would oppose its application to the VA medical system.

To supplement the foregoing the DAV is sponsoring H.R. 3752, which would increase the Federal aid to State homes from the present $700 per annum to $1,000, for the maintenance of each veteran therein.

In concluding this statement I wish to again thank you and the distinguished members of this committee for your patience and kindness, and to assure you that if there are any questions I shall do my best to answer them, or have one of my staff members do so. We are most appreciative of your kind attention and fine cooperation.

## Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
### HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. METCALF. Mr. Speaker, as you know, the Secretary of Health, Education, and Welfare, Dr. Flemming, has developed what he claims is a formula for solving the nationwide classroom shortage. In order for the Flemming formula to work, however, some States would have to amend their constitutions; some would be forced to raise their statutory debt ceilings; some would have to change basic tax concepts.

Daily, for several weeks, I have been calling to the attention of my colleagues that Dr. Flemming was wasting his talents operating in only a single field—that his famous formula, which would work if only we change the rules, has a much wider application.

I applied the Flemming formula to the Agriculture Department, and developed a square egg that would be easy to store in the refrigerator and would not roll off the table when the children were coloring it for Easter. We developed a cow that only required milking once a day, 5 days a week, so our dairy farmers could have their weekends off. And we applied the Flemming formula to our lagging space program—and showed how, by announcing a new ratio of translation between Soviet kilograms and American pounds, which by a simple shift of two decimal points would make the U.S. payloads heavier than the Soviet performance.

All these wonders, and many more, could be accomplished by changing rules, and constitutions. These changes Dr. Flemming says are minor obstacles when he seeks to apply his formula to the States in connection with classroom construction.

Yesterday I got a close look at the new penny—and I was gratified to note that Dr. Flemming also realizes that his formula has a much broader application. That he has been down at the mint is evident from the inscription on the back of the new penny. It reads "UNITED STATES oF AMERICA." With application of the Flemming formula to the rules of capitalization, we capitalize the last letter of a word instead of the first.

## The Golden Years?

EXTENSION OF REMARKS
OF
### HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent article by John L. Springer in the New York Times magazine for February 15, 1959. This article deals with the extremely important question of the problems of those who have retired, but who are ill-prepared for this great change in their lives.

The article follows:

WHAT IS THE RIGHT TIME TO RETIRE?

(By John L. Springer)

Twenty-four years ago an alluring vision was added to the American dream. It was the vision of happy, carefree retirement for the working masses. Aided by old-age payments under the Social Security Act of 1935 and by corporate pension plans newly added to work contracts, the average employee could look ahead to years free from want and tension. He could fish, hunt, travel, or enjoy other activities he had always lacked the time or money for. Retirement would be his "golden years." So the vision ran.

Today, however, social scientists, doctors, corporation executives, and many retired persons themselves are no longer convinced that retirement is the happiest, or even a happy, time of life. In fact, increasing numbers are convinced of the opposite. They center their fire mainly on the common rule in business and industry which says that when an employee reaches a fixed age—usually 65—he must quit working and accept a pension. Arthur S. Flemming, Secretary of Health, Education, and Welfare, recently has called compulsory retirement at 65 "a lazy man's device for dealing with a difficult problem."

The rank-and-file opposition to compulsory retirement was summed up by one man who was forced to quit work 3 years ago after 44 years with a large electrical concern. "When I was 45, the thought of moving to Florida and sitting in the sun was a beautiful dream," he said. "Ten years later, it still seemed like a good idea, but I had begun to wonder whether I'd really enjoy loafing all day long. When I reached 65, I was almost sure I'd be bored to death, but I was willing to try. Now I'd work for $10 a week if I could get a job."

Of course, many persons do adjust well to retirement and live happily ever after. But if you consult social scientists who have studied what enforced leisure does to people who do not want to retire, you find that their records bulge with examples like these:

A vice president of a large corporation retired at 65 because company rules said he had to. After 11 months in which a sense of uselessness and loneliness mounted, he killed himself.

Soon after retiring, Mr. A. began developing aches and pains. Friends who see him now cannot believe that this semi-invalid is the same person they knew. His doctor can find no physical cause and puts the blame for all the ills on one factor—boredom.

A retired factory worker goes from door to door in his community pleading for work, any work. He does not need the money, and those who give him small jobs are often embarrassed because he is so patently grateful for the chance to serve.

The problem of what to do with aged workers is not, of course, a private one between the employer and employee. It is society's problem, and a growing one. Latest available estimates indicate that 15 million Americans—about one-twelfth of our population—are covered by private pension programs, almost all of which State that employees must put down their tools at a specific age. In addition, 50 million Americans are covered by Federal old-age insurance under the Social Security Act.

The number of Americans at retirement age increases by almost half a million every year; in 1965, persons in this category will constitute a population equaling that of the United States in 1858. And while the number of oldsters increases, the percentage of those employed is declining. In 1920, before social security and pensions, 55 percent of men 65 and over were at work. In 1940 the rate was down to 42 percent. At present only about 30 percent of men 65 and over are in the labor force.

An irony of the present disenchantment with rigid retirement programs is that those who once agitated for them—like social scientists and labor leaders—are now most vocal concerning their defects. G. Warfield Hobbs, chairman of the National Committee on the Aging, says that compulsory retirement and pension plans have robbed the Nation of skilled technologists at a time

when we need them in the missiles race with Russia.

A survey by Hobbs revealed that half of our 32,500 engineers and 9,000 scientists over 65 are retired. "We talk of educating youngsters in science," he says, "but we neglect the obvious truth that a scientist in the hand is worth two in the cradle." Despite shortages of science teachers in the schools, thousands of pensioners who might be utilized remain on the sidelines.

Other critics say that the folly of forced retirement at 65 is proved by the success of organization which hire only those required to stop working elsewhere. Hastings College of Law of the University of California adds to its faculty only professors retired by other law schools. The average member of the faculty is 73, but Roscoe Pound, dean of Harvard Law School from 1916 to 1936, has called it the strongest faculty in the country. Dozens of organizations—like one headed by Walter D. Fuller, former chairman of the Curtis Publishing Co.—make the services of pensioners available to industry on a part-time basis. Fuller has a list of 500 high-level executives with invaluable experience—and their talent is in constant demand.

However, there is a severe drawback to a part-time employment program for oldsters. It lies in the provision of the Social Security Act that, when women reach 62 and men 65, they must not earn more than $100 per month or they will forfeit their retirement benefits.

The regulation exists partly to create employment opportunities for the young by pressing retirement on the old. But it penalizes industrious older persons who seek to supplement their income. If, psychologically, the Social Security Act offers them the security of knowing they will not be destitute in their declining years, it may also promote insecurity by forcing them into a life of inactivity.

Gerontologists—medical men who specialize in problems of old people—have testified that forced leisure often results in retirement shock—a numb inability to adjust that leads to depression, illness, and premature death. Dr. Don E. Johnson, of Philadelphia, say that some persons are emotionally equipped for work only, and seem unable to turn their interests elsewhere. They have "more time and plenty of energy for previously latent maladjustment to come to full bloom and dominate all spheres of living." They become anxious, depressed, self-critical—and miserable.

If compulsory retirement systems have proved so defective in practice, why were they adopted in the first place? Basically, their sponsors made a fundamental error in assuming that the average person views loafing as a more desirable way of life than working. As Dr. Gunnar Gunderson, president of the American Medical Association, said recently, they ignored the basic fact that productive work is the very heart of life.

Personnel managers who still favor compulsory retirement often argue that the older employe has more accidents, lower productivity, and higher absenteeism than the younger one, and that younger employees deserve to be promoted to positions held by older workers. Social scientists reply that statistics prove the average employe over 65 is more responsible and careful and is absent from work less than the average younger one and that most old persons would gladly take lesser responsibility so that younger ones could advance.

How can we correct the obvious defects which have come to light with experience? A few farseeing employers now do three things: (1) Recognize that some men are still physiologically young at 65 and are more capable of productive labor than prematurely old men of 45; (2) utilize the services of older workers, even in part-time work, where possible; (3) try to minimize the "retirement shock" of those who willingly retire or who are severed from their jobs because they can no longer do their work.

Some employers have adopted "do-it-yourself" retirement programs. Thus, Carson Pirie Scott, the Chicago department store, has no compulsory retirement age. But each year every person 65 or older receives a physical examination, and a company official reviews his work record. When facts suggest that the employee should retire, he is encouraged to make his own decision to do so. In this way, says a company official, "the dignity of the individual is spared."

To the objection of management men that this method might result in an accumulation of employees who have outlived their usefulness, the store personnel counselor replies that when a worker is given the facts and helpful guidance, he makes the decision that is best for him—and the company.

Other firms make retirement optional—on their part as well as their employees—at 65 or later. Last year the Consolidated Edison Co. of New York adopted a policy of annually reviewing work records of employees from 65 to 68. About 95 percent of the workers are given the option of staying on after 65 if they desire. Dwight Sargent, personnel director, says that those who remain earn more than twice what they would receive in pensions and their morale continues high because they are making a useful contribution to society. The company profits from their know-how and reliability, and the drain on its pension plan and on social security is relieved.

Many large corporations—the General Electric Co., Westinghouse Electric Corp., Standard Oil Co. of New Jersey, United States Steel Corp., Con Edison, and others—try to find part-time jobs for retired workers. In some concerns, business fluctuates on a seasonal basis and extra workers often are needed for a few months. Retired persons often substitute for regular employees during vacation periods, and may work in retail stores during the Christmas season.

Along with several small firms, the Department of Health, Education, and Welfare is studying plans to enable older workers to taper off—to do less work as they advance in age. Such plans may ultimately be adopted on a wide scale.

Tapering off takes several forms. If 65-year-olds wish to continue working in one firm, they must take an extra month's unpaid vacation. At 66, they take 2 months; at 67, 3 months, and so on. In another firm, older employees work only in alternate months. Under other programs, workers may taper off by working fewer days per week, fewer hours per day, or both.

These programs seem to be more closely related to reality than those which say that a man is capable of working 1 day before he reaches 65, but incapable of it a day later. Humans do not lose their touch that suddenly. There is, instead, a slow loss of energy.

Tapering off also enables a worker to taste retirement without swallowing it all at once. He has more time to accustom himself to increased leisure—and to a lower income. He can experiment with various kinds of retirement living.

One couple had planned for years to move from the New York area to Florida after the husband retired. They intended to buy a trailer, set it up at a park permanently, and lead a life of indolence. Not until he began to taper off did the man have a month in which to test that kind of existence. The couple rented a trailer but within 3 weeks were convinced that their best chances for happiness lay in their own neighborhood, among their lifetime friends. Had they been denied the opportunity to experiment, they probably would have sold their furniture, bought a trailer, and made a costly and perhaps permanent mistake.

Tapering off also helps in another area which has been found to be a source of trouble in retirement—the husband-wife relationship. As Dr. William Menninger commented recently, the modern man often is a bigamist; he is married to a job as well as to a woman. Many men, abruptly retired, discover with a shock that their wives are strangers. They need time to reestablish the close relationship which may not have existed since they were first married.

An indication that many corporation policymakers realize the shortcomings of compulsory retirement is the elaborate effort they now make to persuade employees to like getting paid without working. "Planning for happy retirement" is a phrase you hear more frequently in personnel offices.

One corporation urges employes to begin thinking of retirement when they have completed 15 years of service—and perhaps 30 years before the compulsory retirement age. Others gently call the employe's attention to his future about 5 years before he will retire, and interview him each year thereafter to get him ready for his last day. Many personnel officials have been impressed by reports by Cleveland sociologists (and others) that the happiest retired people generally are those who kept occupied with personal interests during week-ends and vacations when they were employed. The retired-to-be are therefore strongly urged to develop off-job interests.

Some personnel men advocate group therapy: prospective pensioners and their spouses are invited to attend meetings on company time with others who will soon, or have already, quit work. There is a frank discussion and exchange of experiences about all aspects of life without work.

Despite progress in preparing the rank-and-file for retirement, much remains to be done in preparing executives for the step. Presidents and vice presidents often prefer to look the other way when they see the ax hanging over one of their own.

"I can't bring myself to discuss the awful subject with a man on my level," one personnel executive commented. "I'd as soon ask him what arrangements he's made for his death."

The cause of this may be that one type of executive virtually lives his job. He often drives himself through a 6- or 7-day week and his hours of recreation are spent only with business associates or customers. Such a man faces an almost overwhelming task of adjusting to new conditions when he leaves his desk for the last time.

Obviously, most of the responsibility for a successful adjustment to changed conditions rests upon the individual. No amount of effort by employers or social institutions will help if he himself resists the need to prepare—psychologically, financially, and in other ways.

Since the basic trouble afflicting the retired is that they have leisure time which they do not know how to employ satisfyingly, it follows that the man who develops absorbing interests outside his work is likely to make the best adjustment. Traditionally, these absorbing interests have been taken to mean hobbies. But they need not be; anything that keeps the mind and body active will serve. One man began helping his wife with her housework when she was incapacitated by arthritis. After his retirement, he found himself preparing meals, washing clothes, and cleaning rooms. Cleveland researchers came across him in a survey of retired persons and, by all appearances, he was one of the happiest individuals they met.

At 60, one corporation executive undertook to repair a brick planting box outside his

home. He became so intrigued with the results he achieved that he decided to build a brick wall around his entire property of 1 acre. The last month of his working career was painful to him—not because he dreaded the end of paid employment, but because he could hardly wait to devote full time to his wall.

Most employees may not be so fortunate. The errors of compulsory, abrupt, and unplanned retirement will not be corrected suddenly. Widespread adoption of new policies is not expected for many years, just as today's fairly universal pension plans were many years in the making. But many experts also believe that changes are inevitable, for society's well-being as well as for the happiness of millions.

## Phillips Petroleum Officials Say Higher Prices Likely

EXTENSION OF REMARKS
OF
### HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. VANIK. Mr. Speaker, the President's March 10 proclamation restricting oil imports for the benefit of the "poverty-stricken and depressed domestic oil industry" is without question the most inflationary and arbitrary action executed by the President during his term of office.

The obvious purpose of the Executive order is to prop up and support the domestic prices of oil and petroleum products in a sagging world market. While import controls close out competition from abroad, the Texas Railroad Commission, controlling most of the domestic oil production is limiting production to 11 days per month. The combination of controlled imports and controlled domestic production results in controlled supplies and controlled consumer prices. The only thing that remains uncontrolled is the stranglehold which the oil industry has on our economy.

There is no doubt of the inflationary result of the oil import control order. The price of oil and petroleum products will soon rise—and every American will be called upon again to increase his Texas tribute. The following news article which appeared today in the Wall Street Journal entitled "Phillips Petroleum Officials Say Higher Prices Appear Likely" is proof of the new and unreasonable demands which will soon be made on the American consumer:

PHILLIPS PETROLEUM OFFICIALS SAY HIGHER PRICES APPEAR LIKELY—FIRM'S NET, GROSS REVENUES SHOULD TOP 1958 IF RISE IN DEMAND CONTINUES, REPORT STATES

BARTLESVILLE, OKLA.—The best balance of product inventories to demand in several years now offers "prospects for higher prices in the oil industry," officers of Phillips Petroleum Co., said in the annual report.

"For years prices for the industry's products and raw materials have lagged far behind ever-rising costs of wages, supplies and equipment," the officers stated, adding: "Higher prices are needed now to recover the general 5 percent wage increase of early 1959."

Discussing 1959 business prospects, the officials stated if the pickup in demand for petroleum products continues, Phillips' 1959 earnings and gross revenues "should be higher than those of 1958." They predicted an increase in 1959's total U.S. petroleum demand of 5 percent over last year.

As released earlier, the annual statement reported net earnings of $84,236,994, equal to $2.45 a share on gross revenues of $1,072,867,267. This was a decline in earnings of 12 percent from $96,209,353, or $2.80 a share, on revenues of $1,136,892,901 for 1957.

Phillips' natural gas liquids production in the United States increased 3 percent to 90,000 barrels daily last year from the 1957 rate, the report said, but crude-oil production, affected by reduced State allowables, declined 10 percent to 118,600 barrels a day. As a result, total net domestic production of the company's basic liquid raw materials decreased 5 percent, it added.

At the Phillips' refineries, the recession limited crude runs to an average of 218,000 barrels a day, 8 percent below 1957, the report said. It noted, however, the company's capacity to handle crude oil had been increased by the end of 1958 to 266,500 barrels daily compared with 258,500 barrels a year earlier.

In 1959, the report said, Phillips expects to start receiving income from the sale of crude oil from Venezuelan reserves discovered last year. Phillips owns about 50 percent interest in these concessions. Despite the recent Venezuelan income tax increase, the "substantial cost of the new concessions already has been justified," the report said.

Capital expenditures in 1959, the officials stated, are expected to be "slightly in excess" of the $138,818,000 spent last year. They stated there "would be no need for outside financing."

## Fate of the City Before Congress

EXTENSION OF REMARKS
OF
### HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. TOLL. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by the distinguished development coordinator of the city of Philadelphia, Hon. William L. Rafsky. Mr. Rafsky's letter, written in reply to a recent editorial, appeared in the Philadelphia Evening Bulletin on Saturday, March 14, 1959. It clearly shows the need for urban renewal and public housing programs in the cities of the Nation:

Your February 27 editorial "Mysterious Mandate," questions whether there is really a demand for urban renewal and public housing programs. The American Municipal Association and the U.S. Conference of Mayors, which speak for the bulk of the Nation's urban communities, both testified to the need for significantly larger appropriations for these programs. A survey jointly sponsored by these organizations indicates a backlog of $600 million in pending applications and a need for at least $500 million a year for each of the next 6 years for urban renewal.

Nor is there any mystery about Philadelphia. Applications pending for center city redevelopment alone will require more Federal funds than Philadelphia would be eligible for during the first year of the program as envisioned by either the Senate or House bills. Any reduction in the amounts will delay the needed redevelopment around the State Mall off Independence Hall and the proposed industrial park around Franklin Square. This is exclusive of applications pending to conserve sound residential neighborhoods in south and west Philadelphia. It does not include long standing programs for the city's universities, Temple, Pennsylvania, Drexel, as well as planned work for such hospitals as St. Luke's in north Philadelphia.

When one considers that urban renewal produces on the average $10 of private investment for every $1 of public investment as well as adding to the city's tax base, it can hardly be considered inflationary. Even public housing is essentially self-supporting with less than 5 percent of its total cost in the form of subsidy.

Opposition to public housing, except for real estate interests, is confined to choice of sites. People who do not want public housing in their neighborhoods proclaim they are for the public housing program and do not hesitate to suggest other locations. Because of the large number of low-income families scheduled to be displaced by slum clearance and code enforcement, low-rent public housing is necessary if these programs are to succeed. Incidentally, the investigation by Congress to which you refer is aimed at the hardship redevelopment causes small businesses, and not to the storm allegedly produced by Eastwick redevelopment.

The fate of the city depends on adequate appropriations for these programs. The city is in danger of losing its economic strength, its tax base, and its most productive population. Since the Nation must depend on the vitality and prosperity of its metropolitan centers, this is not a local but a truly national concern.

WILLIAM L. RAFSKY,
*Development Coordinator.*

## Practical Defense Expenditures

EXTENSION OF REMARKS
OF
### HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 24, 1959*

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, of the Gary, Indiana Post Tribue, offers some practical suggestions on foreign-aid legislation. The space age does not mean much to underdeveloped nations. They need food and education more than supersonic weapons.

The editorial follows:

[From the Gary Post-Tribune, Mar. 16, 1959]

THE FOREIGN AID PROGRAM

President Eisenhower has sent a $4 billion foreign aid proposal to Congress. The emphasis is heavily on military assistance programs, and the President's message warns of the "growing Communist potential to launch a war of nuclear destruction."

The President probably has great justification for the military funds he is asking—$1.6 billion for weapons and equipment and $835 million for defense support. Whether or not our own military budget is large enough or properly distributed, we should be giving material assistance to a number of our allies. We should enable them to maintain good defense establishments of their own; they are of value to all members of NATO.

What is a matter of regret is that military programs take up 62 percent of the whole foreign aid program. There is only about $1.5 billion for all other forms of assistance. It is regrettable, too, that the overall emphasis is so much on our defense against communism rather than on our brotherly desire to help underprivileged nations strengthen themselves and provide more abundant lives for their peoples.

The largest item on the nonmilitary part of the program is $700 million for the Development Loan Fund. There is $272 million for aid in such fields as health and education, $211 million for technical cooperation, $200 million for emergency projects, and only $112 million for such projects as the U.N. Children's Fund and our atoms-for-peace program.

In the past the President has found it easier to sell foreign aid to Congress on the basis of the military support it would buy, and that is the sales pitch again. But that is not always the best way to sell the program to the other nations.

Military aid is for right now. Economic assistance is of more value for the long pull. If we can enable a have-not country to lift its living standards, improve its national health and build a stable economy, we will have a more substantial friend than if it is bent over trying to support a military establishment larger than its resources provide for.

## President Eisenhower Calls Present Equal Time Provision Ridiculous

EXTENSION OF REMARKS
OF
### HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. CUNNINGHAM. Mr. Speaker, the President has joined many others in and out of Government in criticizing the equal time provision as it pertains to political candidates appearing on regular radio and television newscasts.

He has asked Attorney General Rogers about the need for remedial legislation, and I have notified the Attorney General of my bill, H.R. 5389, which would exempt newscasts and news commentaries from this equal time provision. My reading of congressional committee reports in the past has convinced me that the Congress has never intended that the equal time provision include newscasts.

Chairman OREN HARRIS, of the House Committee on Interstate and Foreign Commerce, has written me of his concern over this situation and has stated that this committee will consider remedial legisiation such as the Cunningham bill as soon as it can be worked into the committee schedule.

Under leave to extend my remarks, I include a portion of an article in yesterday's Washington Star by Garnett D. Norner:

PRESIDENT CRITICIZES "EQUAL TIME" PROVISION

President Eisenhower today described as "ridiculous" any requirement that television and radio newscasts give equal time to all political candidates asking for it.

The President asked Attorney General Rogers to consider whether any remedial legislation should be drafted or whether any other appropriate action can be taken to correct the situation.

His concern arose from a Federal Communications Commission ruling February 19 that under the law all political opponents must be given equal time on newscasts as well as for regular campaign appearances.

In announcing the Persident's reaction and instructions to Mr. Rogers, White House Press Secretary James C. Hagerty emphasized that Mr. Eisenhower "is not criticizing the FCC decision under the law."

REFERS TO NEWSCASTS ONLY

Mr. Hagerty also said the President's concern is directed at the equal time requirement as it affects newscasts, and that his action has not gone beyond this to question the requirement for equal time in political campaigns for even what a reporter termed "crackpot candidates."

"The emphasis in the President's discussion with me," Mr. Hagerty said, "is that this is news and he thinks it is ridiculous to have the law tell radio and television stations that they have to give equal time to all candidates in coverage of the news."

The FCC ruling, which has stirred a storm of protest from broadcasting officials and in newspaper editorials, was handed down in the Lar Daly case in Chicago.

ALL-OUT FIGHT PLANNED

Mr. Daly is a perennial unsuccessful office seeker who announced himself as a candidate for both the Republican and Democratic nominations for mayor of Chicago.

Chicago television newscasts showed both Mayor Richard Daley, Democratic candidate for nomination, and Timothy Sheehan, his Republican opponent, filing their nomination papers.

Mayor Daley also was telecast greeting President Frondizi, of Argentina, when he visited Chicago.

The FCC held this news coverage must be matched by allotting equal time to Lar Daly on a regular newscast.

Dr. Frank Stanton, president of Columbia Broadcasting System, announced last week an all-out fight will be waged against the ruling.

## North Dakota Contractors Support Legislation To Keep Hoodlums Out of State Labor Unions

EXTENSION OF REMARKS
OF
### HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. SHORT. Mr. Speaker, the Associated General Contractors of North Dakota have endorsed, in a letter to me, the bill recently passed by our State Legislature to keep racketeers from gaining control of labor unions.

The association is aware, as are most North Dakotans, of the threat of racketeering and corrupt practices to the ultimate welfare of organized labor. Certainly no one has any quarrel with the right of labor to organize, bargain collectively, or to strike. The general public has come to wonder, however, as to whether or not the rank and file members of unions, in many instances, were given any choice in making decisions. It, too often, appears that a small group controls the union completely and exploits its position of power for the benefit of a few leaders, rather than the welfare of the entire membership of the union.

Mr. Speaker, under leave to extend my remarks, I include here, the letter received from the Associated General Contractors of North Dakota, together with the text of the bill passed by our State legislature. I commend this information to my colleagues:

ASSOCIATED GENERAL CONTRACTORS
OF NORTH DAKOTA,
*Bismarck, N. Dak., March 11, 1959.*

Hon. DON L. SHORT,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. SHORT: We are pleased to enclose a copy of a bill recently passed by the North Dakota Legislative Assembly. Obviously it it the hope that this Act will prevent the racketeers, hoodlums, and gangsters from gaining control of labor unions in this State as has already happened in so many areas. This bill passed both houses of the legislature by votes of 70 to 40 and 37 to 12 and with members of both political parties voting in its favor.

Despite the many declarations by organized labor that they want to "clean up" and avoid the very thing which this act is intended to accomplish, they vigorously opposed this bill. Why? Obviously because they have but one objective in mind, the complete control and domination of the political and economic forces of the country, and they want no restrictions on any means to that end. Openly they avow to dominate and control every elected official or have his job. Even in North Dakota where there is less organization of labor than in most States, the great majority of people are afraid to speak out in opposition to their acts and their objectives.

It is a tribute to the courage of the legislators of North Dakota that this bill was enacted into law. They have seen the writing on the wall and, as one Senator said, "We are going to lock the barn before the horse is stolen." If labor is to have the rights they demand and the position they seek politically and economically, then it is only fair, reasonable and right that they be made to assume equal responsibilities for the public welfare. If they are to be permitted to dictate to management, then they must assume equal responsibilities of management and be subjected to the same controls and restrictions. Above all, such power should not—must not—be permitted to fall into the hands of criminals, racketeers and gangsters whose only concern is their own wealth and power.

It is our hope and prayer that the Congress of these United States will face the obvious facts—have the courage to do all those things which are so apparently necessary for the protection and welfare of the greatest Nation on earth, and "lock the barn before the horse is stolen".

Respectfully yours,

C. L. HOFFMAN,
*Manager.*

---

A BILL TO CREATE AND ENACT SECTION 34–01093 OF THE 1957 SUPPLEMENT, RELATING TO QUALIFICATIONS TO HOLD OFFICE IN LABOR UNION OR LABOR ORGANIZATION

*Be it enacted by the Legislative Assembly of the State of North Dakota:*

SEC. 34–01093. Qualifications to hold office in labor union or labor organization: No person who has been convicted of any crime involving moral turpitude or of a felony, excepting traffic violations, shall serve in any official capacity or as any officer in any labor union or labor organization in this State. No such person, nor any labor union or labor organization in which he is an officer shall be qualified to act as a bargaining agent or representative for employees in this State. Such disqualification shall terminte whenever such officer is removed or resigns as an officer in such labor union or labor organization.

## The Face of Poverty

EXTENSION OF REMARKS
OF
## HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent that the last in a series of articles by Eve Edstrom of the Washington Post be inserted in the Appendix at the conclusion of these remarks. Miss Edstrom's articles, which have been appearing in the Post each day this week, have been a revealing and a sobering picture of the effects of poverty upon the people of the District of Columbia and upon their children. To read them all numbs the sensibilities and makes any comment seem anticlimactic. Miss Edstrom's superb talents have, I believe, never been put to better use than in beating these cold, cruel, shameful facts into the consciousness of those of us who may yet retain some smugness about conditions in the Nation's capital and the need for social welfare services. As Professor John K. Galbraith is quoted as saying at the end of this article, "We will hear much of the corrupting effect of help. It would be well if it were compared to the corrupting effect of ignorance and starvation."

The article follows:

(By Eve Edstrom)

For the District's dependent children there was no more room at the inn last month.

And so 47 children were moved to the District's facilities for delinquent children.

In many instances the most serious "crime" committed by these children was being born to inadequate parents

Yet welfare officials had no other placement choice for the 47. The population at the city's only public home for homeless children, Junior Village, recently soared as high as 392. Its planned capacity is 240.

DOOMED TO INSTITUTIONS

"Many of these children face life in institutions until they come of age because cities lack imagination in solving the problems of hard-to-place youngsters," states Joseph Reid, executive director of the Child Welfare League of America.

Recognizing the great lack of adoptive home placements for Negro children, he suggests cities could hire adult Negroes to serve as parents for these children.

Other children remain in institutions because of what Reid calls the blind and unrealistic protection of parental rights. These children, he notes, frequently are not visited by their parents in a year or more and should be released for adoption.

What parental right, for example, does Mrs. Jones have?

Her two sons have lived most of their young lives in a children's home here. Each week she telephoned the boys to say she would visit them but more than a year elapsed before she did.

She arrived the day the boys went on an outing with a childless couple. Mrs. Jones waited for the children to be returned so she could scold them for going out on "her" visiting day.

Or what "right" does Mr. Smith have?

In freezing weather at 11 p.m. he took his two youngsters—one just recovering from pneumonia—to a downtown restaurant. He bundled himself in a heavy overcoat, but the children wore only soaking wet diapers. When asked why he took the children out in this condition, he said it was his "right" because he wanted to embarrass his wife who was with her boy friend at the restaurant.

RESPONSIBILITIES URGED

Both public and private welfare agency workers—far from being babysnatchers—attempt to work with such parents in the hope they will assume responsible behavior toward their children.

But as Jule Bouchard, executive director of the Southwest's Barney Neighborhood House, asks:

"How can these parents assume something that they have never known themselves? Family responsibility is not built in."

Quite similarly, Bernard W. Scholz, who heads the District's relief programs, asks: "How can we help families when we never see the fathers?"

"We close shop at 4:45 p.m.," he said. "We should have workers on duty from noon to 9 p.m. in the neighborhoods where the families live, so we can get to know all of the family, not just a part of it."

MANPOWER NEEDED

Welfare Director Gerard M. M. Shea believes a partial answer may be the establishment of team of workers—professionals as well as volunteers, those from public as well as private agencies—to work with these families at the neighborhood level.

But beyond what can be done by any local community many welfare experts believe no substantial help will be forthcoming for the Nation's impoverished families until the Federal aid to dependent children's program is broadened to give aid to all children in need, not only those whose fathers are absent from the home.

It has been more than two decades since Franklin D. Roosevelt saw one-third of a nation ill-housed, ill-clad, ill-nourished.

Since then enormous progress has been made. In Washington, for example, the number of low-income families has been reduced almost by one-half in the last decade.

But it still is estimated that one-fifth of the District school children under 16 years of age live in poverty and one-sixth of the families in the Nation's Capital live on substandard incomes.

This is not peculiar to the Nation's Capital. Throughout this country, it was reported in 1956, there were more than 10 million families attempting to live on incomes below $2,000.

CALL FOR A PROGRAM

Nor is it peculiar to this city that there is no overall plan for attacking the problem of poverty. Just a few weeks ago in a speech here, John K. Galbraith, author of "The Affluent Society" and professor of economics at Harvard, stated that as a nation "our greatest need is for a plan—a design—for the final elimination of poverty."

"We need to know who our poor are and where they are and why they remain excluded from the richer current of our economic life," he said.

"And we need a solid design for seeing that they, and above all their children, are rescued from this now anachronistic privation.

"Nor should we be bound by ancient notions as to how this may be done or what can be afforded. The problem must be attacked in a large and generous frame of mind.

"It means much better schools and health and welfare services and help to communities that do not have these in adequate quality and quantity and which cannot afford them.

"Almost certainly it means supplementary income for families that cannot afford proper care and education for their children.

"We will hear much of the corrupting effect of such help. It would be well were it compared to the corrupting effect of ignorance and starvation."

## Face to Face With Tomorrow

EXTENSION OF REMARKS
OF
## HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. HUDDLESTON. Mr. Speaker, on February 20, 1959, Mr. Arthur V. Wiebel, president of the Tennessee Coal & Iron Division of the United States Steel Corp., in my district, addressed the national directors meeting, National Society of Professional Engineers, in Birmingham. Mr. Wiebel's speech, which has been well received throughout the country, points out that current critical reports on the South have tended to obscure a much bigger story—that of the great economic and social progress which is being made in the Southern States. Mr. Wiebel outlined some of the outstanding advances which our section has made in recent years.

With the thought that Mr. Wiebel's speech would be of great interest to our colleagues in the House of Representatives and in the Senate, I am pleased to insert it herewith in the RECORD under leave heretofore granted:

FACE TO FACE WITH TOMORROW

(By Arthur V. Wiebel, president, Tennessee Coal & Iron Division, United States Steel Corp.)

I am glad that you chose Birmingham for your meeting place this year, for several reasons. The fact that you are meeting here probably had something to do with the invitation having been extended to me to talk with you. And I do like to talk. Also, Birmingham is the industrial capital of the southeast—and in what more appropriate place could a group of engineers choose to gather?

Finally—and by no means least important—you from other sections of the Nation are having an opportunity to see for yourselves a region, a State and a city which have figured prominently in the headlines recently. And I'll wager what you have seen thus far is entirely different from the impression of our area that you had previously gathered from the various news media.

Something over 300 years ago, a rather well-known playwright—who has since also gained a reputation as an outstanding amateur psychologist—had one of his characters to observe: "The evil that men do lives after them; the good is oft interred with their bones." As usual, William Shakespeare knew whereof he spoke. It is a sad commentary on human nature that evil always attracts more attention than good. This has certainly been the case with the South. Since so many readers, listeners and viewers are inclined to pay more attention to stories of tragedy, catastrophe and misfortune than to those of a more cheerful nature, that is what the news media tend to stress. It's natural, I suppose. All of us who are in business concentrate our efforts on our most popular products.

Then, too, in this present situation one is tempted to suspect that some selfish per-

sonal, professional, and sectional axes are being ground to razor edge.

THE REAL PICTURE

Be that as it may, the end result has been that the critical reports about the South have obscured what in the longer run is a much bigger story; and certainly a brighter one. I think I could attempt no more worthwhile task than to use this occasion to tell that other story. It is my sincere hope that you will take it back with you to your respective homes and businesses. You can help us to set the record straight.

The plain truth of the matter is that the South is going to live down its present rash of bad publicity; and ultimately the more important story—the story of tremendous advancement—will be the big news, as it should be. There is a revolution going on in the South, but it has nothing to do with courts or Congress, laws or legislatures. The revolution of which I speak is economic in its nature, but it has sociological implications which far outweigh anything you may have been reading about us recently. This region today is fast moving out of the agrarian blind alley in which it has been trapped for so long, and is moving toward that position of economic leadership to which its geography, its climate, and its natural resources entitle it. And that should rate a banner headline in any newspaper of the Nation.

Before I tell you that story, you have a right to know why I consider myself qualified to tell it. Where did I get my information? Am I trying to sell you a bill of goods, or are my conclusions solidly based on facts? What axes am I trying to grind?

First, let me assure you that I am a Southerner—and proud of it—although I cannot lay claim to being a native of the Deep South. As a matter of fact, I was born so near the North that as a child I could have played hopscotch across the Mason-Dixon Line. It has been my privilege to be associated with United States Steel's operations in the Birmingham district for only a little more than a decade. But during that time, I have come to have a deep understanding of the problems of the people in this region, and a great admiration for the courage and determination they have shown in their efforts to catch up with the economically better developed sections of America. Such understanding and admiration is not based on the bias of a native son.

Second, in conducting the business affairs of the Tennessee Coal and Iron Division, my associates and I travel frequently the length and breadth of the South. We have talked at length with people in all walks of life—other businessmen, professional men and women, educators, civic leaders, men in political life—people with varied viewpoints and interests. From all of those conversations, one point has made itself crystal clear: Today there is a new South which sees its fortunes at its own doorstep and finds its hope for the future in the abilities of its own people.

Third, the industrial organization with which I am associated has for the better part of a century been an integral part of the southern business scene, and has participated fully in the development of this region. As the South's first and largest commercial steel manufacturer, it has been sensitive to every bump and lurch on the rocky road of progress. It can be said truthfully and without exaggeration that the Tennessee Coal and Iron Division has not only been influenced by—but has in a very real way influenced—the industrial growth of the South. It is interesting, but certainly not surprising, that one can almost chart the progress of these States by the record of growth and expansion that comprises the history of TCI. Steel, of course, is fundamental to the modern industrial structure. Little can be accomplished without steel. Thus I propose to discuss with you the birth and growth of the new South generally in terms of steel and specifically as it relates to Tennessee Coal and Iron.

GEOLOGY OF THE SOUTH

Some have said that the South is not a place; it is a state of mind. To a degree, this is true—although there is room for considerable disagreement as to just what this state of mind may be. But it is very definitely a place and, as a matter of fact, a pretty big spot on the map. In land area, it comprises about one-quarter of the United States, not counting Alaska. Populationwise, it has about one-quarter of the Nation's people, even counting Alaska. Climatically, it is probably the best spot in the United States, insofar as business is concerned. Its relatively mild temperatures and short winters make it ideal for both industry and agriculture.

But where the South really shines is in its geology. Although we are only one-quarter of the land area of the 48 contiguous States, we produce approximately one-half of America's minerals. The South has 48 percent of the Nation's clay, 53 percent of the coal, 65 percent of the petroleum, 76 percent of the natural gas, and 100 percent of the bauxite and naturally occurring sulfur.

With the greatest average rainfall, we are better fixed for water than any other region, for industrial usage, for electric powerplants, for transportation. Alabama ranks second in the Nation in miles of navigable waterways.

Minerals are irreplaceable. Once they have been used they are gone. But there is a natural resource which can be renewed over and over again. That, of course, is timber—and the South has 40 percent of the Nation's forest area. In 1953, there were in these States more than 14,000 manufacturing and processing concerns based on our timber resources, and they employed half a million people. Trees are grown as crops in the South today, just as cotton has been grown for so many years.

STOREHOUSE OF WEALTH

With the South sitting atop a vase storehouse of natural wealth, one is inclined to ask why its development came so late. Why should New England, for example—with its harsh climate, its rocky, inhospitable soil, and its relative lack of raw materials—have so far preceded us in the development of business and industrial accomplishment? The reasons are far too many and varied to be compounded into a simple answer. One of the more obvious, however, is that the pre-1865 South was built upon an unsound system—*and the abrupt destruction of the plantation system gave southerners neither the time nor the means to evolve a more soundly based business system.

Another highly important reason for our lag is simply that until comparatively recent years, we have not been aware of the natural and personal resources we have had at our disposal. A century and a half ago, a traveler stopped on the crest of Red Mountain—which forms the southern boundary of this city—and curiously examined some reddish stones he found there. When a bearded, weatherbeaten mountaineer wandered up to see what he was about, he inquired what the peculiar rocks might be.

"Red dye rock," was the brief reply.

"What's it fit for?"

The answer to that one was even shorter: "'Taint fitten."

Even the mineral around which the predecessor of TCI was built was largely unrecognized or ignored by the pioneers of Tennessee's Cumberland Mountains, where it was discovered. The outcrop of coal into which the Sewanee Mining Co. sank its first shaft about a century ago was discovered by two farm boys as they attempted to dig a fox from beneath a stump. They had no idea what the substance was, but its shiny black appearance appealed to them, so they took some sample back to their father, who correctly identified them.

Obviously, the boys were not exceptional in their lack of knowledge. Until outsiders hit upon the idea of opening a mine, the original owners could not find buyers for the coal-bearing lands at the asking price of 12½ cents an acre. And when the mine was opened, prospective customers showed what might be termed an enthusiastic disinterest in the product. The company could not sell even two carloads of coal a day—and in 1 year the company commissary made more than twice as much profit as the firm realized from its coal sales.

A GRAND AWAKENING

But probably the greatest drawback to southern progress has been its people's lack of awareness and belief in their own inherent capabilities, which prevented the most effective use of their personal resources. In just about two decades, there has been a grand awakening to the potential of the South, and a new aggressive attitude is fast supplanting the apathy that was for so long the hallmark of this region.

Pick up any business or trade periodical, and within its covers you will find one to a half-dozen advertisements designed to sell the South as an ideal place to establish plants and offices. Cities, States, and aggregations of businessmen are working hard to bring new business to the area. Less noticeable but more significant is the fact that a tremendous proportion of the new business concerns of Dixie are completely southern concerns—conceived and established by southerners and largely financed by southern capital. That is particularly apparent to us at TCI, because an overwhelming percentage of our customers are in the small business category, and a majority of those are home owned and home operated.

The course of progress at TCI has been shaped, to a great extent, by this division's policy of offering the best practical service to the many and diverse small business firms which comprise the major portion of southern industry. Since its advent into the Birmingham district, TCI has sought out the steel needs of southern industry, and has endeavored to meet them. As a result, our product range is almost as wide as that of any single primary steel manufacturer in the world.

In the waning months of the 19th century, TCI tapped the Birmingham district's first commercial heat of steel, and thus became the South's pioneer steelmaker. At the turn of the century, the South had 9 percent of the Nation's manufacturing facilities. Today, the South has 22 percent of American manufacturing facilities, and TCI has an annual net ingot capacity of approximately 4 millions tons—with a product range of about 100 items of steel and steel byproducts. Step by step, the growth and expansion of our division has paralleled the industrial growth and expansion of the South * * * and more often than not, our entry into new phases of steel manufacture has served as the stimulus for the creation of new industrial enterprises.

GROWTH AND EXPANSION

As the 20th century dawned, a vast network of railroads began to grow rapidly across the face of Dixie * * * linking formerly isolated communities and providing the facilities of transportation and communication so vital to the establishment and growth of business. Just 3 years after it tapped its first heat of steel, TCI installed a rail mill, to supply the requirements of southern railroads. That was no mere expansion of plant and facilities. In undertaking rail manufacture, the division shattered technological precedent. For the first time in the history of steelmaking, TCI

demonstrated that rails of suitable quality could be made from open hearth steel as well as from Bessemer steel. It was a bold step, but subsequent experience has proved that it was well worth the risk. Since 1907, we have turned out several million tons of rails and accessories for southern railroads.

About 10 years after the rail mill was installed, our division was among the first to install facilities for recovery of the gases driven from coal during the coking process, and for the conversion of those gases to crude chemicals. Since that time, coal chemicals have formed the basis for the establishment of southern plants for the manufacture of an amazingly wide variety of products—running the gamut from the new manmade fibers to industrial solvents and high explosives.

Coal chemicals and petrochemicals form the major basis for the Southern chemical industry—which in the post-war period has expanded at an almost unbelievable rate. Thirty-nine percent of American chemical manufacturing is now in the South, and the percent is still rising. Nylon, the first true man-made fiber, was introduced just 20 years ago, but it and its first cousins—orlon, dacron, acrilan, and the like, have already wrought a revolution in the clothing industry. The bulk of production of man-made fibers is in the South. Synthetic rubber and plastics of every description are turned out here in great volume.

AMAZING PROGRESS OF A REGION

At approximately the same time our coal chemical plant was constructed, a wire mill was also added to our complex of steel plants. Although one of the major products of that plant is nails—vital to construction—the significant factor in establishment of the wire mill was that it coincided roughly with the great national change in agriculture and livestock farming, in which fenced fields and pastures supplanted the open range.

If fencing worked a great transformation on the West, its effect upon the South has been even more drastic. The enclosure of fields and grazing lands has gone hand-in-hand with the application of scientific methods and efficient business procedure to reshape entirely the agricultural situation of Dixie. When cattle and hogs were allowed to roam free, they were more often than not scrub stock, almost valueless to the meat and dairy markets. The bony, nondescript cow and the razorback pig were almost the trademark of southern farming. At the same time, cotton was a king—reigning over sterile and gullied fields.

Now, if you drive across the South in almost any direction, you will pass farm after well-kept farm where pure-bred or scientifically cross-bred cattle are being grown for the markets of the Nation. It is not necessary to leave the highways to see evidences of rural prosperity which border on affluence. As much intelligence and effort are being devoted to the maintenance of grazing lands as to improvement of the bloodlines of the cattle. Formerly, livestock got its forage if, as, and where, it could find it. Today it is standard practice to fertilize, condition, and rotate grazing lands. Application of modern techniques, coupled with our long green seasons and ample rainfall, is shifting the livestock business away from the West and into our own region. The growing of cotton is going west, and we consider the exchange of cotton for cattle one of the best bargains the South has ever struck.

DIVERSIFIED INDUSTRIES

Until World War I, the United States was not a major maritime Nation. With our entry into the war, it became necessary for us to overcome our shortage of merchant ships with extreme speed. To aid in that effort, TCI built a shipyard near the port of Mobile. But to build ships, plates and structural shapes were needed; and so the Fairfield steelworks, one of the Nation's most modern and diversified steel plants, was constructed. Only 14 ships were built at the Mobile facility. Then, with the passing of the national emergency, it was closed. But the installation of plate and structural production equipment at Fairfield had given fresh impetus to the southern shipbuilding industry—which today leads the field in American ship construction. From Maryland around the Atlantic and gulf coasts to Texas, and at various inland ports, plants are building vessels of every size and description: shrimp boats and tugs, tankers and barges, luxury liners and atomic submarines. During the World War II emergency, approximately half of all American merchant ships of greater than 2,000 tons gross weight were built at southern shipyards.

But the output of our Fairfield steel plant has by no means been limited to supplying the shipbuilders. With the closing of its shipyard, TCI built at Fairfield a railroad car plant, to be supplied with plates and structurals from the steelworks. That plant was later purchased by the Pullman-Standard Car Manufacturing Co., at nearby Bessemer, Ala. Steel for its operations is still furnished chiefly by our division. Also, the steel plant was augmented with the addition of blast furnaces, open hearth furnaces, and additional rolling mills for a diversity of products. It also supplies intermediate shapes for two other TCI plants which were later built to meet the changing and growing needs of southern industry.

In 1925 TCI's Fairfield Sheet Mill was put into operation, to supply sheets for a fast-increasing number of manufacturers of consumer products. Almost as soon as southern-made sheets became available, there was a great upsurge of plants manufacturing all sorts of metal products: such things as toys, kitchen appliances, bus bodies, street signs, porch furniture, and automobile parts. As we foresaw the demand for new or improved products, and as more efficient manufacturing techniques have evolved among sheet-metal fabricators, we have been quick to alter our manufacturing facilities and methods to supply steel best suited for the job. When it was seen that customers might advantageously use galvanized sheet steel in coils rather than in individual sheets, continuous galvanizing lines were installed so that steel could be delivered in coil form. At the same time, we began producing a better zinc coating, more resistant to breakage and flaking in drawing and forming processes. Helping to promote further advances in southern consumer manufacturing, we also found it advisable to install—at considerable expense—facilities for the production of cold-reduced sheets. The availability of cold-reduced sheets has led to the formation in the South of a great many types of fabrication for which hot-rolled sheets are not suitable.

With the decline of cotton, and with the advent of diversified farming, the production of fruits and vegetables is gaining ever-greater dimensions in the South. Because of its geographic and climatic advantages, this area has long been a chief supplier to the dinner tables of America. Food processing in the South is an $11 billion industry, and the prospects for future growth are excellent. A generation ago, TCI recognized the growing importance of southern fruit and vegetable production and processing. Acting on faith that the trend would continue, our division 21 years ago put into operation the South's first tin mill. The largest single portion of our ingot production now goes into the manufacture of tin plate. With the establishment of the tin mill, the major can manufacturers located plants in this and adjoining States. Today there are almost 12,000 food-processing plants in the South employing almost a half-million people.

OUR HEADLINE STORY

It is generally believed, even by southerners, that World War II was directly responsible for the South's rise toward economic equality with the rest of the Nation. That, happily, is not the case. During the war, that part of the South which comprised 17 percent of the total population, received only 6 percent of defense expenditures. A few months ago, at a conference on the economic future of this region, it was pointed out that in the postwar decade from 1946 to 1956 factory employment in the Southeast rose 22 percent, as compared with only 9 percent for the Nation as a whole.

During that period, Tennessee Coal & Iron undertook a major expansion program, to supply the additional steel required by the growing number of manufacturing plants. Since the war, our rated annual ingot capacity increased by 50 percent—and within the last few months we have announced several programs for the addition of several items to our product list to improve still further the quality of our steel and to provide products in the new forms and dimensions as required by our progressing customers.

And that, my friends, is the story that has not made the headlines. If events of a more emotional flavor push it from the front pages today, you may be sure that historians of a later time will give it the recognition it deserves. Whatever dissensions and disharmonies may beset us from time to time, the course toward the future is set; and nothing can check our progress toward a better day. The busy humming of our factories and the ringing of our cash registers are going to overwhelm the clamor of hysterical debate.

Take that story back with you. Tell your associates that under all the mountains of bombast and oratory there are cold, hard facts and figures that reveal a South with which the world has not yet become familiar. And tell them for me that the conscientious, levelheaded citizens of the South may one day hold the destiny of America in their hands.

When you came to visit the South, you came face to face with tomorrow.

## Hawaii Greets Statehood

EXTENSION OF REMARKS
OF

### HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. BURNS of Hawaii. Mr. Speaker, press reports circulating the reactions of the people of Hawaii to the final passage of S. 50 by the House of Representatives indicated that the people of Hawaii quite naturally demonstrated their exuberance in many ways.

However, in justice, it should be told that a great many people of Hawaii reacted in an entirely different way. For, according to numerous reports received, the most immediately spontaneous reaction of the people of Hawaii was one of prayerful thanksgiving to the Almighty and of seeking His guidance in meeting new responsibility.

One of Hawaii's news reports contains the story of an unplanned service held at Kawaihao Church. This church is the denomination of the missionaries who came to Hawaii in 1820. A crowd of more than 1,000 people, including the Honorable Neal Blaisdell, mayor of the city and county of Honolulu, gathered and paid respect to the Divine Provi-

dence within minutes of the news being received that the bill was passed by the House.

The next morning, thanksgiving services were held at this same church. The Reverend Dr. Abraham Akaka, pastor of Kawaihao Church, gave the sermon, which is included here:

STATEHOOD SERVICE, KAWAIAHAO CHURCH, MARCH 13, 1959

"One Nation under God, indivisible, with liberty and justice for all". These words have a fuller meaning for us all in Hawaii today. And we have gathered in this mother church of Hawaii, our Westminster Abbey of Hawaii, to give thanks to God, and to pray for His guidance and protection in the years ahead.

Our newspapers have been full of much valuable historical data concerning Hawaii development and growth and aspirations. I will keep the copies of these stories as long as I live, and for my children and grandchildren after them. For they have called to our minds the long train of those whose prayers and hopes and sacrifices through the years were fulfilled yesterday. There remains the formal expression of our people for statehood, and the entrance of our islands into the Union as a full-fledged member.

I would like to speak the message of self-affirmation this morning, that in the days ahead, we take courage to be ourselves, to be the Aloha State.

On April 25, 1820, 139 years ago, the first Christian service of worship was conducted in Honolulu on this very ground. Like our Pilgrim Fathers who arrived at Plymouth, Mass., in 1620, so did the fathers of a new era in Hawaii kneel in prayer to give thanks to God who had seen them safely on their way after a long and trying voyage.

Gathered around the Rev. Hiram Bingham on April 25, 1820, here at Kawaiahao were a few of our kupunas who had come out of curiosity. The text for the sermon of that day, though it was April and near Easter time, was from the Christmas story. And there our people heard these words for the first time: "Mai Makau Oukou, No Ka Mea, Eia Hoi, Ke Hai Aku Nei Au Ia Oukou I Ka Mea Maikai, E Olioli Nui Ai E Lilo Ana No Na Kanaka A Pau. No Kai Mea, I Keia La I Hanau Ai, Ma Ke Kulanakauhale O Davida, He Ola No Oukou, Oia Ka Mesia Ka Haku. (Fear not, for behold, I bring you good tidings of great joy which shall be to all people. For unto you is born this day in the city of David a Saviour which is Christ the Lord)."

Although our grandfathers did not realize it then, the hopes and fears of all their years through the next century and more, were to be met in the meaning and power of those words, for from that beginning, a new Hawaii was born. For through those words, our missionaries and people following them under God became the greatest single influence in Hawaii's whole development—politically, economically, educationally, socially, religiously—so that Hawaii's real preparation for statehood can be said to have begun truly on that day 139 years ago on this spot.

Yesterday when the first sound of firecrackers and sirens reached my ears, I was with the members of our Territorial senate in the middle of the opening prayer for the day's session. How strange, and yet how fitting it was that the news should burst forth while we were in prayer together. Things had moved so fast. Our mayor, a few minutes before, asked if the church could be kept open, because he and others wanted to walk across the street to the sanctuary here for prayer when the news came. By the time I got back from the senate, this sanctuary was well nigh filled by people who happened to be near when the sirens started ringing, people from our government buildings nearby. And as we sang the great hymns of Hawaii and of our Nation, and lifted up our voices in psalms and prayers, it seemed that the very walls of this church spoke of God's dealing with Hawaii in the past, of great events both spontaneous and planned that they had seen here. For the love and power of God has been a refuge and a guide for our people through the past century and more.

There are some of us to whom statehood brings great hopes; and there are some to whom statehood brings silent fears. One might say that the hopes and fears of Hawaii are met in statehood today. There are fears that statehood will motivate economic greed toward Hawaii, that it will turn Hawaii into a great big (as someone has said) spiritual junkyard filled with smashed dreams, worn-out illusions—that it will make us a lonely, confused, insecure, empty, anxious, restless, disillusioned—a wistful people.

There is an old Mele that reminds me of fears such as these, and the way God leads out of these fears. "Kaku'i I ka uahi O Ka lua, Pa I Ka Lani, Haahaa Hawaii, Moku O Keawe I Hanau Ia, Po Puna, Po Hilo, Po I Ka Uahi O Kuu Aina, Ola Ia Kini, Ke A Mai La Ke Ahi" (there is a fire underground but the firepit gives forth only smoke, smoke that burst upward, touching the skies, and Hawaii is humbled beneath its darkness. It is night over Hawaii, night from the smoke of my land, but there is salvation for the people, for now the land is being lit by a great flame).

We need to see statehood as the lifting of the clouds of smoke, and the opportunity to affirm positively the basic gospel of the fatherhood of God and the brotherhood of man. We need to see that Hawaii has potential moral and spiritual contributions to make to our Nation and world. The fears Hawaii may have are to be met by men and women who are living witnesses of what we really are in Hawaii, of the spirit of Aloha, men and women who can help unlock the doors to the future by the guidance and grace of God.

Self-affirmation is the need of the hour. And we can affirm our being, what we really are, as the Aloha State by full participation in our Nation and world. For any collective anxiety, the answer is collective courage. And the ground of that courage is God.

We do not understand the meaning of Aloha until we realize its foundation in the power of God at work in the world. Since the coming of our missionaries in 1820, the name for God to our people has been Aloha. One of the first sentences I learned from my mother in my childhood was this from Holy Scriptures: "Aloha ke Akua." In other words, Aloha is God. Aloha is the power of God seeking to unite what is separated in the world—the power that unites heart with heart, soul with soul, life with life, culture with culture, race with race, nation with nation. It is the power that can reunite where quarrel has brought separation; it is the power that reunites a man with himself when he has become separated from the image of God within.

Thus when a people or a person lives in the spirit of Aloha, they live in the spirit of God. And among such a people whose lives so affirm their inner being, we see the working of the Scriptures: "All things work together for good to them who love God. From the Aloha of God came His Son that we might have life and that we might have it more abundantly."

Aloha consists of a new attitude of heart, above negativism and legalism. It is the unconditional desire to promote the true good of other people in a friendly spirit, out of a sense of kinship. Aloha seeks to do good to a person, with no conditions attached. We do not do good only to those who do good to us. One of the sweetest things about the love and Aloha of God is that it welcomes the stranger and seeks his good. A person who has the spirit of Aloha loves even when the love is not returned. And such is the love of God.

This is the meaning of Aloha. I feel especially grateful that the discovery and development of our islands long ago was not couched in the context of an imperialistic and exploitive national power, but in the context of Alaho. There is a very deep correlation between the charter under which the missionaries came—namely, "to preach the Gospel of Jesus Christ, to cover these islands with productive green fields, and to lift the people to a high state of civilization"—correlation between this fact, and the fact that Hawaii is not one of the trouble spots in the world today. Aloha does not exploit a people and keep them in ignorance and subservience. Rather it shares the sorrows and joys of people; it seeks to promote the true good of others.

Today, one of the deepest needs of mankind is the need to feel a sense of kinship, one with another. Truly all mankind belongs together, for from the very beginning—all mankind has been called into being, nourished, watched over by the love of God who is Aloha. The real Golden Rule is Aloha. This is the way of life we must affirm.

Let us affirm ever what we really are—for Aloha is the spirit of God at work in you and in me and in the world, uniting what is separated, overcoming darkness and death, bringing new light and life to all who sit in the darkness of fear and the shadow of death, guiding the feet of mankind into the way of peace.

Thus may our becoming a State mean to our Nation and the world, and may it reaffirm that which was planted in us 139 years ago on this grounds: "Fear not, for behold I bring you good tidings of great joy, which shall be to all people."

## Wrapping Our Flag Around Communists

EXTENSION OF REMARKS

OF

## HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. REECE of Tennessee. Mr. Speaker, Mr. Albert Emmet Reitzel, formerly Assistant General Counsel of the U.S. Immigration and Naturalization Service and now chairman of the Committee on Immigration and Nationality of the American Bar Association, has written an article entitled "Wrapping Our Flag Around Communists," which is quite pertinent to some present-day problems. Mr. Reitzel is a distinguished lawyer, originally from North Carolina and now in active practice in Washington. His article is as follows:

WRAPPING OUR FLAG AROUND COMMUNISTS

(By Albert E. Reitzel)

It is difficult to accept the fact that the 85th Congress, 2d session, adjourned without passing any law which would prohibit the issuing of passports to American citizens who refuse to make affidavit as to present or past membership in the Communist Party. All this has happened in the face of a law of Congress of 1954 which declares that the Communist Party of the United States, which claims to be a political party, is in fact an active part "of a conspiracy to overthrow the Government of the United States."

More than a month before Congress adjourned in August 1958, the Secretary of State urged the passage of a law to give him authority to refuse to issue passports in such cases; but Congress failed to do so. The result of these decisions is that the Secretary of State is required to issue passports to American citizens even though there may be evidence of Communistic affiliations.

At the present time the Passport Division is operating under the continued existence of the national emergency declared by presidential proclamation during the Korean war (1950). The regulation prohibits any citizen without a passport, with some exceptions not in point here, to go or attempt to go from the United States during a national emergency, or in time of war, to any country outside of this hemisphere. The special law prescribes a severe penalty on any citizen who violates the regulation. The passport does more than say that the person named in it is a citizen of the United States. In the passport the Secretary of State requests "all to whom it may concern to permit safely and freely to pass, and in case of need, to give all lawful aid and protection to" the citizen. This request from the Secretary of State clearly shows under international practice an intention of our Government to extend reasonable protection to the citizen. At any time passports are considered so much convenient proof of the name and citizenship of the owner that transportation lines generally require American citizens to have U.S. passports for trips between the United States and countries overseas.

The decisions of the Supreme Court on June 16, 1958, in the suit of Weldon Dayton against Secretary Dulles and the suit of Rockwell Kent and Walter Briehl against Secretary Dulles, compelled the Secretary of State to issue passports to them. In each case the opinion of the majority of the Court was by Justice Douglas, Chief Justice Warren and Justices Frankfurter, Black, and Brennan concurring. The dissenting opinion insists that Secretary Dulles had authority to deny the passports. It was by Justice Clark joined by Justices Burton, Harlan, and Whitaker, and applied to both cases. In short, five of the Judges decided the two cases in favor of Dayton, Kent, and Briehl; and four judges were in favor of Secretary Dulles. Every patriotic citizen should strive to understand these two five-to-four decisions and their menace to our safety just as they are being studied and used by citizens to obtain passports for trips abroad to aid the Communist movement.

In the Dayton case the opinion of the majority of the Court states that Congress had not authorized the Secretary of State to deny a passport to Dayton on the ground that its issuance would be contrary to the national interest. The opinion includes a copy of the decision by Secretary Dulles in which he had refused to issue the passport. Mr. Dulles said, "I have reason to believe on the balance of all the evidence, that the applicant is going abroad to engage in activities which will advance the Communist movement for the purpose, knowingly and willfully of advancing that movement." That view is amply supported by facts stated by the Secretary in that copy.

In the case of Kent and Briehl the opinion of the majority of the Court was in their favor for three reasons: A passport is necessary to travel abroad; the right to travel is a part of the liberty of which a citizen cannot be deprived except by a law of Congress; and Congress has not authorized the Secretary of State to withhold a passport from a citizen who refused to submit an affidavit as to his past or present membership in the Communist Party.

Kent had been informed by the Director of the Passport Office that the issuance of a passport was precluded on two grounds: "(1) that he was a Communist; and (2) that he had had a consistent and prolonged adherence to the Communist Party line"; and that before a passport could be issued, it would be necessary for him to furnish an affidavit as to present or past membership in the Communist Party. Briehl, after his application for a passport had been temporarily denied because of allegations as to his Communist activities, had been informed by the Passport Office of the State Department that it would be necessary for him to file such an affidavit. Both refused to furnish such an affidavit. The refusal was described in the opinion of the majority of the Court as a "refusal to be subjected to inquiry into their beliefs and associations." It must have been forgotten by the majority of the Court that a law of Congress of 1950 and one of 1954 make clear that membership in the Communist Party means more than having beliefs and associations. The 1950 law states that "the nature and control of the Communist movement itself, present a clear and present danger to the existence of free American institutions"; and the 1954 law says that the Communist Party of the United States, which claims to be a political party, is in fact an active part "of a conspiracy to overthrow the Government of the United States." These two statements had been cited in the brief in the Supreme Court on behalf of Secretary Dulles.

The regulations of the Secretary of State, which had required the passports to be denied, are consistent with a law of Congress of 1926 and were issued by Presidential proclamations which are within the terms of a law of Congress of 1952. The law of 1926 declares that the Secretary of State may grant and issue passports "under such rules as the President shall designate and prescribe for and on behalf of the United States." The law of 1952 declares that "While the United States is at war or during the existence of any national emergency proclaimed by the President it shall be unlawful for any citizen of the United States to depart from or enter, or attempt to depart from or enter, the United States unless he bears a valid passport." The law prescribes a serious penalty for a violation. That law merely repeated a law of Congress of 1918 as to requirement of passports in time of war and a law of Congress of 1941 as that requirement during a national emergency. The view of the majority of the Court was that at the time this 1952 law was passed by Congress it intended only to authorize denial of passports in two classes of cases; they are cases involving questions of citizenship or criminal or unlawful conduct. None of these matters, the opinion said, were involved in these cases.

The dissenting opinion of Justice Clark, joined by three other Justices of the Supreme Court, insists that the law of Congress of 1952 had authorized denial of passports in these cases. That opinion is based on these points: At the time that law was passed by Congress there was in effect a Presidential proclamation declaring a national emergency caused by the Korean conflict, and that proclamation is still in effect. The travel restrictions of that law were put into effect by a proclamation of the President in 1953. The proclamation pointed out that it did not revoke any regulations "heretofore issued relating to the departure of persons from, or their entry into the United States." Among the regulations were those under which passports were denied to Dayton, Kent, and Briehl; and those regulations had been issued to be effective August 22, 1952, which was before the date on which the 1952 law came into effect though after the passage of that law. Thus, the dissenting opinion asserts, Congress by the 1952 law has approved "whatever use of his discretion the Secretary had made prior to" that law. Hence, the opinion describes as nonsense the statement in the opinion of the majority of the Court that the Secretary's wartime exercise of his discretion, while admittedly more restrictive, is not relevant to the practice which Congress can be said to have approved. The statement in the opinion of the majority of the Court that the Secretary's denial of passports in peacetime extended only to two kinds of cases, those involving allegiance and those involving criminal activity, is described in the dissenting opinion as "contrary to fact." In support of that view, the dissenting opinion states that the peacetime practice of the State Department indisputably included denial of passports for reasons of national security. That statement is proved by excerpts in the report of the Commission on Government Security from documents of the State Department. The excerpts are quoted in the dissenting opinion and show these facts: Shortly after the 1917 Russian revolution, the State Department "became aware of the scope and danger of the worldwide revolutionary movement and the attendant purpose to overthrow all existing governments, including our own."

From that time until 1950 the practice of the State Department as to denying passports to Communist sympathizers was not consistent. However, beginning with September 1950, the Department consistently denied passports to American citizens with Communist affiliations, after it was pointed out that the Internal Security Act of 1950 clearly showed the desire of Congress that no Communists should be issued passports of this Government. The State Department's legal adviser agreed that it was the duty of the State Department to refuse passports to all Communists, including journalists.

In January 1958, several months before the above decisions of the Supreme Court, Congressman WALTER, of Pennsylvania, introduced a bill, H.R. 9937, in Congress to authorize the Secretary of State to deny passports. Some of the provisions of the bill were broad enough to authorize denial in such cases as those of Dayton, Kent, and Briehl. Many of the provisions are based on recommendations made in the report of the Commission on Government Security which was sent to Congress and the President on June 21, 1957. The Chairman of the Commission was Mr. Lloyd Wright, formerly president of the American Bar Association. On the day after the two decisions were handed down by the Supreme Court, Congressman WALTER introduced H.R. 12989, a bill to permit the Secretary of State to deny passports to Communist sympathizers.

The President sent a message to Congress on July 7, 1958, referring to the two decisions of the Supreme Court and urgently requesting legislation to authorize denial of passports where their possession would seriously impair the conduct of the foreign relations of the United States or would be inimical to the security of the United States. He said the lack of that power is exposing us every day and week to great danger. The following day Senator GREEN, chairman of the Senate Committee on Foreign Relations, introduced S. 4110 at the request of the Secretary of State. S. 4410 (same as H.R. 13318 introduced by Congressman KEATING, a member of the House Foreign Affairs Committee) was written by the State and Justice Departments; these bills had practically the same provisions as those introduced previously by Congressman WALTER.

At this time Secretary Dulles sent a letter to the Vice President of the United States as the Presiding Officer of the Senate and to the Speaker of the House of Representatives. The letter said: "The international Communist movement seeks everywhere to thwart United States foreign policy. The issuance of United States passports to supporters of that movement fa-

cilitates their travel to and in foreign countries. It clothes them when abroad with all the dignity and protection that our Government affords. Surely our Government should be in a position to deny passports to such persons."

Mr. Robert D. Murphy, Deputy Under Secretary of State, included the following points in his argument before the Senate Foreign Relations Committee on July 16, 1958: The legislation proposed in S. 4110 is based on the existence of a national emergency. The international Communist movement eagerly seeks the use of the citizens of the free countries wherever possible. Contacts with such citizens are necessary and travel by them is essential. Party conferences in many countries and meetings of a host of front organizations throughout the world are an essential part of the movement. Those who attend meetings of the front organizations may be ardent Communists; others may be innocent persons who lend themselves, their prestige and facilities to the development of contacts and operations so necessary to the international Communist movement. Laws to prevent Communist couriers and agents from going abroad would deal the Communist movement a very serious blow, just as the McCarran-Walter law of Congress has in prohibiting the travel of Communist aliens into this country. Even the Magna Carta recognized the obligations of a government to exercise some control over the issuance of passports in time of war and national emergency. The need for action by Congress is urgent.

Since the 2 decisions of the Supreme Court, passports have had to be issued by the State Department to 60-odd applicants with proved records of Communist activities; thus, they are in a position to travel abroad and aid the International Communist movement. Seventy more applications of people of this sort are pending in the State Department. Many more such applications must be expected. Mr. Murphy assured Congress that under this bill the State Department will not be in a position to deny passports to persons whose sole activities abroad would be to voice their own opinions and even to criticize our foreign policy, if they be so inclined. He said that the executive branch of our Government is convinced that our national security is threatened by the free issuance of passports to American supporters of the International Communist movement who wish to travel abroad. Without congressional authority, he said, such passports cannot be denied, and Congress is being requested to give that authority on an urgent basis. He stressed that our national security requires no less.

Doubtless, it was in view of the present open gate to citizens with Communist affiliations to go on visits to foreign lands that Attorney General Rogers, in July 1958, urged Congress to amend our laws against spying to include violations against the United States by our citizens while in foreign countries. Such an amendment was passed by the House of Representatives but failed to be voted on in the Senate.

On August 8, 1958, after hearing a number of witnesses, the matter of new legislation to give authority to deny passports to Communists and Communist sympathizers was shelved by the Senate Committee on Foreign Relations. On August 13 a bill, H.R. 13760, introduced in the House of Representatives by Congressman SELDEN of Alabama, states that Congress finds that the activities of the international Communist movement constitute a clear, present and continuing danger to the security of the United States. The bill would give authority to the Secretary of State to deny passports to persons knowingly engaged in activities intended to further the international Communist movement. The bill would require that no person be denied a passport on that ground except after opportunity for a hearing and that a denial of a passport on that ground shall be subject to be canceled in the district courts of the United States, whenever the denial is contrary to law. The bill was approved on August 23, 1958 by the House of Representatives by a voice vote. The bill is without effect because no action in favor of that or any other bill relating to denial of passports was taken by the Senate committee.

We are in these critical times with an international Communist conspiracy against us that causes our Government to draft every year thousands of men from their homes and chosen pursuits to serve in our Armed Forces anywhere in the world. The Secretary of State has been left in a straitjacket of law that requires him to issue passports to citizens with Communist associations to make visits anywhere abroad, thus free to aid the conspiracy. Verily, the Stars and Stripes are being wrapped around them. This danger to our country is all due to the two 5-to-4 unconvincing decisions of the Supreme Court and to the incredible, and terrifying failure of the Senate Committee on Foreign Relations to give the Senate a chance to vote on and approve any of the bills.

## American Good Government Honors Senator McClellan and Admiral Strauss

EXTENSION OF REMARKS
OF
### HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. REECE of Tennessee. Mr. Speaker, in recent years the annual George Washington Day dinner sponsored by the American Good Government Society, of which I have the honor of being a trustee, has assumed increasing importance and has become one of the high points of the year for the many who attend.

This year, the dinner will be held on April 30 in the Sheraton Park Hotel. The date is the 170th anniversary of the inauguration of George Washington as first President of the United States.

At the dinner the society will present its two annual George Washington Awards for distinguished service and contributions to good government to two outstanding Americans, Senator JOHN L. MCCLELLAN, of Arkansas, and Secretary of Commerce Lewis L. Strauss. The speech of the evening will be delivered by Senator BARRY GOLDWATER, of Arizona.

I feel that the society's selection of Senator MCCLELLAN and Admiral Strauss for its awards is on the same high plane that has characterized its selections in past years. Many of you will recall that past recipients of the awards include such distinguished Americans as the late Senators Walter E. George and Robert A. Taft, former President Herbert Hoover, Senator Harry F. Byrd, and such distinguished Members of the House of Representatives as the Honorable WILLIAM M. COLMER and the Honorable HOWARD W. SMITH. Last year, the awards were given to Senators William F. Knowland and RICHARD RUSSELL.

With pardonable pride, the American Good Government Society reports that both Houses of the Legislature of the State of Arkansas adopted unanimously, a few days ago, a resolution commending the society for its good judgment in selecting Senator MCCLELLAN as one of its 1959 honorees. This resolution read:

SENATE CONCURRENT RESOLUTION 14

Whereas the American Good Government Society of Washington, D.C., commemorates the anniversary of the inauguration of the first President of the United States, and the enduring contributions made to good government by its first President, George Washington, by holding an annual anniversary dinner and reception in the city of Washington, D.C., which event is known as the George Washington Day dinner; and

Whereas a part of the ceremonies of said George Washington Day dinner is the presentation of the George Washington Awards to two Americans for their outstanding contributions to good government in our times; and

Whereas the selection of these two Americans from the entire Nation is made after full and complete deliberation concerning those considered for this high honor and award; and

Whereas one of those designated and selected for this high honor and award to be made at the George Washington Day dinner on April 30, 1959, commemorating the 170th anniversary of the inauguration of George Washington as first President of the United States, is the Honorable JOHN L. MCCLELLAN, senior Senator from the State of Arkansas—(the other one being the Honorable Lewis L. Strauss, Secretary of Commerce of the United States): Now, therefore, be it

*Resolved by the Senate of the State of Arkansas, in legislative session (the House concurring therein), as follows:*

1. That the State of Arkansas and its people applaud the selection of its distinguished senior Senator JOHN L. MCCLELLAN as one of the recipients of this coveted award.

2. That the State of Arkansas and its people express their great satisfaction in knowing that the contributions to good government made by Senator MCCLELLAN are worthy of national note and repute.

3. That the State of Arkansas and its people rejoice in the great esteem in which Senator MCCLELLAN is held not only by his constituents at home, but by the Nation as a whole; be it further

*Resolved*, That the Good Government Society be commended for its program which gives recognition and encouragement to outstanding national leaders for their contributions to good government.

## RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

# Appendix

## Address by Hon. Lyndon B. Johnson, of Texas, at Jefferson-Jackson Dinner, Hartford, Conn.

EXTENSION OF REMARKS
OF
## HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. DODD. Mr. President, last night in Hartford, Conn., our great majority leader, LYNDON JOHNSON, was the principal speaker at the annual Jefferson-Jackson dinner of Democratic Party in Connecticut. This was his first public appearance in New England, and the reception which he reecived there must have cheered him greatly because it was further evidence of the esteem in which he is held all over the country.

From the moment of the announcement that Senator JOHNSON would appear, the success of this important fundraising dinner was assured. The Democrats of Connecticut stood in line to pay $100 to hear LYNDON JOHNSON speak.

More than 1,600 persons crammed into every nook and cranny of the great ballroom of the Statler-Hilton and overflowed into all other dining rooms. This crowd surpassed by far any dinner attendance in the history of either party of Connecticut, and the hotel management announced that it was the greatest turnout of any kind in its history.

From the moment the Senator from Texas entered the banquet hall, the reception accorded him was tumultuous. Hundreds crowded close to the head table to shake his hand and wish him well.

Connecticut newspapers report this morning that Senator JOHNSON captivated with his warm personality the largest political gathering of this kind ever assembled in Connecticut, and that he then moved and inspired it with a masterful address. His speech was perhaps the most eloquent statement of principle and policy that I have heard. In it he sets forth, in words which will not be forgotten, the goals of our country and our party.

I ask unanimous consent that Senator JOHNSON'S compelling address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

### THE WAY OF STRENGTH

(Address by Senate Democratic Leader LYNDON B. JOHNSON at Jefferson-Jackson Dinner, Hartford, Conn., March 19, 1959)

Governor Ribicoff, Senator DODD, Chairman Bailey, fellow Democrats, Thomas Jefferson was a partisan. So was Andy Jackson. The world barely remembers what they were against. The world will never forget what they were for.

This lesson is eternal. History measures men by what they support, not merely by what they oppose. It is by this standard that we should measure what we do—and what we say.

### RESPONSIBLE PARTISANSHIP

This is a partisan gathering. I come with a partisan title. It has always been my belief—and my guide—that the first rule of responsible partisanship is responsible citizenship. By this rule the Democratic Party has served and by this rule we now shall abide.

No one man speaks for the Democratic Party.

One man does speak for the United States.

In those concerns of war and peace—addressed to other nations—his voice is our voice and the voice of all Americans.

We want neither our friends to misunderstand this nor our enemies to misinterpret this.

For those vital meetings underway now, our President has our support as Democrats, Mr. Macmillan has our warm welcome as Americans, and the statesmen of the free world have our prayers as freemen.

### FREEDOM'S DEADLINES

Tonight the world is little concerned with Democratic headlines.

The world is much concerned with freedom's deadlines.

It is to this concern we speak, for there is before us all a fundamental decision of our times:

Shall freemen live their lives under deadlines?

This is not complex or complicated.

The choice it presents is simple.

Which do we value most?

Western freedom or Khrushchev peace?

### THE ROAD TO BUDAPEST

Like all tyrants before him, Khrushchev offers the peace of darkness. We know that to accept it we would have to put out the candles men have lighted through centuries past—and stumble blindly down whatever road Khrushchev might lead.

That road would not be the road to Berlin.

It would be the road to Budapest.

This is not a road down which freemen of the free alliance will ever turn. I say it is not a road down which we are forced to turn.

### THE WAY OF STRENGTH

There is another way—a way more worthy of the West.

That is the way of strength. I speak not alone of the strength of arms but, in a greater sense, of the strength of freedom unbound.

Men speak of lost initiative, of new approaches, of flexibility. These would seem to be the consuming anxieties of Western freedom today. I do not believe this needs to be—if we face squarely the basic fundamentals.

Freedom has no flexibility when it has no strength.

Give freedom strength and it will make again the approach no tyranny has ever successfully resisted.

Give freedom strength and it will have again the initiative that has remade and reshaped the world.

The point is this: When we add strength to our freedom, most of the anxieties which consume us disappear.

This is the way the West must choose. This is the way we must walk once more—proudly and uprightly—with confidence in ourselves and faith in our cause.

### BERLIN: OUR IMMEDIATE CONCERN

Our immediate concern is Berlin. None can know and none can presume to say what will be the ultimate consequences of the trial we face. I will say what we have learned from the expert witnesses who have testified before our Senate Preparedness Subcommittee.

Our best military minds believe we now have in the Armed Forces of the United States the strength that will be necessary to meet any situation in Berlin.

The Commander of NATO wants more of our strength deployed to his command. If he wants such strength, I believe it is the will of the American people that he should have it.

It is a fundamental beyond debate that freedom is going to remain in Berlin.

Finally, we are going to maintain the men, equipment, supplies, and, above all, the will to support the foreign policy of the United States.

These points relate to the present. They deal with Berlin.

But I would emphasize the point that is often overlooked.

### BEYOND BERLIN

Freemen—if they are to respect their freedom—must think and plan beyon Berlin. If we do not, the drama being enacted now will become the continuing serial of the world stage.

We have now the capacity for one Berlin. But the Communist nations have the capacity to impose upon us a dozen Berlins—or more.

We can respond, and will respond, with strength at Berlin. As we do so, we leave the position of freedom at its other outposts exposed and freedom stands at those points not by the strength of its defenders but the grace of its foes.

Neither freedom, nor freemen, can long live in such a world. There are limits to the advantages prudent men can afford to concede to their enemies, and there are limits to the concessions proud men will ever make against their freedom.

I do not believe that the people of the West, and most certainly the people of America, are prepared to concede first place in strength to the Communist powers.

I will say to the Communists, and I will say to our own allies, that whatever the race, Americans reject second place as our goal.

Most assuredly in the building of missiles, and the maintaining of strength, we reject the conception that for a decade or for a day second place can be the place of freedom.

### FIRST PLACE IS OUR GOAL

The fundamental truth, beyond Berlin, is that the sights of America and the sights of the free world must be raised.

What is first in our hearts must be first in our policy.

Freedom is first in our hearts. The strength of freedom must be first in our policy always.

This raises a basic point. The strength of tyranny is always, and only, the strength

of arms. With freedom this is not so, for freedom draws on many sources for its strength. This we must never forget.

We and our allies are partisans of freedom. As such we must remember that history will measure us by what we support, not merely by what we oppose.

We talk now at length of what we oppose. At home we are against recession and depression, against inflation, against unbalanced budgets, and unsound dollars. Abroad, all members of the free alliance are against war and aggression, and beyond question against retreat and surrender.

Of these things there has never been doubt and there is none now. Of all issues we might choose to debate, these are the least rewarding, for on these there are no differences among us, and our debates in no way delineate what we are for.

The statesmanship of the times is not the reaffirming of what needs no affirmation. The leadership of the West is not to extricate ourselves from the impossible but to involve ourselves in the probable.

NEW DIMENSIONS OF FREEDOM

I say let us willingly and enthusiastically involve ourselves in the probability that freedom is the way the world will choose if freemen give to freedom the fullness of its meaning.

We have united against aggression.

Let us unite now as well against poverty, against illiteracy, against disease, against injustice. Let us unite to trade, unite to educate, unite to offer opportunity. Let us add new dimensions of freedom by adding new dimensions to our treaties and make them into treaties of prosperity and compassion and human dignity.

It is with works like this—as well as with armed strength—that we should give our answer to Mr. Khrushchev.

Yes, this is new. This is a new reach. I would call to mind, though, a brief stanza which Dr. Frederick Brown Harris, the Chaplain of the Senate, recently quoted:

"Some men die by shrapnel,
Some come down in flames;
But most men perish inch by inch
Who play at little games."

Freemen must not in these times play at Mr. Khrushchev's little games, for if we do we shall perish inch by inch.

The outer limits of human freedom remain unexplored. The challenge there awaits. For our times—beyond Berlin—we must have a sense of adventure to carry us across the threshold of glory—not to leave us standing, wondering if this is the doorstep of bankruptcy.

I say freemen must act because they want to act—not merely because they are forced to act. This is the creed by which the West must now live.

WHY SAY THESE THINGS?

Why do I say these things at a party meeting now? There are two reasons. I have tried, first, to speak as an American, not as partisan, because that is the only context in which we should speak tonight.

Secondly, I remember 20 years ago—in 1940—a great American President called me to the White House. He said, "LYNDON, I have accepted an engagement for you—to keynote the convention of Young Democrats at Louisville, Ky. What I want you to tell those young people is this: There will be no danger to freedom in America if young Americans are as fanatical about freedom as Hitler's young Germans are about nazism."

That I believe remains true today. We face a resolute and zealous foe. We and all freemen must match that resoluteness and that zeal with a sense of adventure into the new dimensions of freedom.

In these things, there is no party and no partisan concern.

The line we defend is not the line across the heart of Berlin. It is the line across the heart of freemen—the eternal line between freedom and serfdom, honor and shame. As we will not retreat a literal inch in Berlin, so we will not retreat a figurative inch from the line across our hearts.

LET US MOBILIZE FOR PEACE

There is no thought of retreat in the minds of freemen and no room for retreat in their hearts. We know that and we want the world to know it. But the world must know something more.

Standing against retreat is not the only stance of freedom.

Freedom is more than a fortress. Freedom is the fountainhead of peace—and freemen must stand willing and able to carry forward the cause of honorable peace.

This is our cause and this is our calling.

Let the free nations of the world, in this hour of challenge, respond as only they can respond. Let us now mobilize our resources and our strengths and our will in a grand mobilization for peace. Peace is the work of all. Let us make room in this work for all our people—every veteran, every parent, every man, every woman, every child.

That is the real statesmanship of the West in these times.

To a waiting and watching and wondering world, let us—and all free nations—offer the leadership only we can offer by uniting our forces in a great adventure for peace.

Mobilize for peace—mobilize all that we have, our talents, our minds, our spirit as well as our force—and this generation will be honored in history as responsible partisans of freedom.

---

## The Works of Peace

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. HUMPHREY. Mr. President, it was my privilege to address the National Council of Jewish Women here in Washington on March 10, 1959. I ask unanimous consent that my address, entitled, "The Works of Peace," be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY SENATOR HUBERT H. HUMPHREY BEFORE THE NATIONAL COUNCIL OF JEWISH WOMEN, MARCH 10, 1959, WASHINGTON, D.C.

Even as we demonstrate to the world that we are utterly determined to resist Communist aggression, in this latest Soviet-precipitated crisis over Berlin we must be alert to the opportunities to wage peace—consistently, vigorously, and dramatically.

We must constantly seek to express the American dedication to people, peace, and progress throughout the world—not only in the words of peace, but in the very deeds and works of peace.

American foreign policy must recapture the initiative. And it must be reoriented to make better use of America's natural advantages.

With our magnificent food and fiber production in a hungry world, with our leadership in medicine in a world filled with disease and suffering, we are in a magnificent position to spearhead an international drive to feed the hungry, clothe the naked, heal the sick, and to teach the illiterate.

The works of peace: Food for peace, health for peace, education for peace, science for peace, atoms for peace.

The works of peace ought to be as conspicuous in American foreign policy as the Washington Monument in our Capital City.

We must hammer away on this theme unrelentingly—and develop a whole series of specific, concrete programs to implement—generalities are not enough.

The Senate will shortly take favorable action on one such concrete program—the proposal by LISTER HILL, myself, and others to establish an International Medical Research Institute.

Here again is an example of constructive programing, with dramatic impact—the kind of action and program that cannot be effectively disparaged or destroyed by the most virulent Communist propaganda attacks.

As another example of how we could dramatically underline a constructive American foreign policy founded on health and education and food for peace, we could develop with a small expenditure of funds a new American white fleet of hospital ships and disaster relief vessels—as a dramatic symbol of American intentions and American concern with the well-being of other peoples.

I intend shortly to introduce legislation to provide two such white fleet task groups of presently mothballed U.S. Navy ships—designed to be operated partially by Government and partially by voluntary agencies—as disaster relief and technical assistance units along the coasts of Africa and Asia.

For a maximum cost of between $10 million and $15 million per year, the United States could provide effective—and vivid, easily recognized—relief to coastal areas which are the victim of earthquakes, floods, hurricanes, famine or disease epidemics; and in between they could carry on a dramatic program of medical and public health training and technical assistance.

Each of these white fleet task groups—composed perhaps of one 800-bed hospital ship, two cargo vessels for emergency supplies and food, and a converted electrical power ship, could throw into an emergency situation 800 to 1,000 hospital beds, operating facilities and laboratories, power for a good-sized city, and emergency rations for 300,000 to 500,000 people for a full week.

An earlier American White Fleet was used by President Theodore Roosevelt to dramatize to the world the emergence of the United States as a world power. Today a White Fleet of mercy, armed with food, clothing, and medicine, literally stretching out the hand of friendship and compassion to other peoples, would do more to bring home to the peoples of Asia and Africa the real spirit of the American people than 10 years of broadcasting of American good intentions. Outstanding progress of health and medicine in Israel is one of the great achievements of the Jewish culture—a vivid example of what can be done through the words of peace, a dramatic beacon light to encourage similar achievement throughout Asia and Africa.

OUR SENATE WORLD HEALTH STUDY

As you know, it is my privilege to serve as chairman of a Senate subcommittee which is making a study of international health. We have invited judgment of the great medical leaders of the world.

Included in the responses have been many messages from outstanding medical leaders of Israel, including, of course, from the famed Weizman Instiute and other facilities.

Israel has, as you know, perhaps the greatest and most favorable ratio of doctors to population anywhere in the world. It has a reservoir of scientific talent which is proportionately unmatched in almost any other country.

I know that Israel is going to play a great role, therefore, in expanding international medical research. Expansion of research was my topic in testifying this very morning on our farsighted bill to create a new International Institute of Medical Research. I know, too, that in the International Public Health and Medical Research Year, commencing in mid-1961, Israel can become a great radiating center of health works of peace.

SEPTEMBER 1959 CANCER MEETING IN ISRAEL

Let me cite a specific illustration. In September of this year, there will be held an International Symposium on Cancer Causation. The International Union Against Cancer has an International Cancer Research Commission which is the sponsor of this meeting. This commission selected the Weizmann Institute as the site for the symposium. Eleven countries will be represented, including: Canada, Great Britain, France, Finland, India, West Germany, Holland, New Zealand, U.S.S.R., Israel, and ourselves.

A moving figure in the plans for the symposium is the distinguished head of the experimental biology department of the institute, Prof. Issac Berenblum.

I cite this symposium as one excellent illustration of what the United States and Israel can and should do to multiply the works of peace.

Here in the United States, cancer wipes out a quarter of a million lives a year. In the Soviet Union, as I pointed out in Moscow to the Soviet authorities in December 1958, another quarter of a million lives are snuffed out by cancer. In the State of Israel, a somewhat proportionate toll is taken. And the Arab States as well, are hardly immune to cancer.

What I am saying, in effect, is that Israel can spearhead international medical research.

It can also spearhead international medical assistance. Why? Because it is one of the few nations which has a relative surplus of doctors which it can make available to other less fortunate countries.

You are all familiar with Israel's technical assistance program which is already under way—ranging from its agricultural help to Burma, to its maritime help to Ghana.

I would like to see Israel's medical technicians working throughout the developing world. And I envision the day when its medical know-how will become available throughout the Arab countries as well. You and I are aware that today the Arab population within Israel receives the benefit of Israel's high health standards. This should become just as true within the Arab countries themselves.

But this is more than a matter for Israel itself; it is a matter for action throughout the free world.

PHILANTHROPIC TRADITION IN JEWISH FAITH

Welfare work is a special tradition of the Jewish people and of Jewish women, in particular.

I need not remind you of the hundreds of hospitals, homes for the aged, organizations for the orphaned, for the blind which Americans of Jewish faith, yes, which you of this audience serve in your respective communities.

The dedication to philanthorpy is a deep tradition among the Jewish people, and I say that the world is in great need of further like-minded efforts among all faiths.

From the standpoint of American foreign policy, however, it is absolutely essential that we make available more of the scientific, medical, educational talent from the free countries to the underdeveloped world.

You and I read each day of riots sweeping Africa, Nyasaland, the Belgian Congo, and other areas.

The answer to riots and rioters is not clubs and police; the answer is housing and doctors and schools and jobs and equality and basically freedom.

I want the U.S. Government to help make available this answer to Africa and South Asia.

HOW TO AVOID MORE DYNAMITE IN AFRICA

Colonial Africa will explode in more violence unless the fuse is put out and unless the TNT of bitterness and frustration and fear are converted into a new and more stable type "chemical."

I refer to the chemistry of hope and growth, fulfillment and pride. This is the social chemistry from which will come not explosions, but peaceful development and building.

I point out, therefore, to the colonial powers that they may keep the lid on temporarily if they fly in more armed troops and tear gas and if they fly out into exile more native leaders.

But this is not the answer to statesmanship. It is not a permanent answer, nor one compatible with the Judao-Christian heritage.

Colonial Africa needs more point 4, not pointblank fire of water hoses or rifles. It needs additional responsible leaders, and not to be deprived of the few native leaders which it already has.

It needs the spirit of Tom Jefferson and Abe Lincoln and Chaim Weizmann—builders, creators, men of uplift and inspiration, not overseers of downgrading and repression.

This, then, is the challenge to the United States and to all like-minded nations.

## High Rigid Support Agricultural Program

EXTENSION OF REMARKS
OF
## HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the February 27, 1959, issue of the New York World-Telegram and Sun.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

TAKE AND TAKE, YOU PUT

Senator JOHN J. WILLIAMS has put another silly face on the farm laws.

Earlier in the week he gave the Senate a list of 54 corporation-size farming outfits each of which—quite legally—had collected $100,000 or more (up to nearly $1.5 million) as price supports on crops grown in 1957.

Now he informs the Senate that 10 of these same corporations also had collected—quite legally—amounts ranging from $20,761 to $125,942 in the same year for taking land out of production.

In sum, 10 corporations got nearly $3.5 million for growing crops and the same 10 got an additional $557,000 for not growing crops.

Most of them got paid for not growing the same crops they got paid for growing. Four got checks from Uncle Sam for not growing different crops.

The corporations take their crops to Government storehouses and take home a check, charged to you taxpayers. The Government rents the storehouses; you taxpayers pay the rent. Corporations take some of their land out of production; you taxpayers pay them for that.

This is supposed to stabilize agriculture and save the family farm. But the big farms get the most subsidy because they raise the most crops. And they get the most from the soil bank because they have the most land to spare for it.

## Wayne Parrish, Man of the Month of the National Aviation Club

EXTENSION OF REMARKS
OF
## HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. BIBLE. Mr. President, a close personal friend and one of the leaders in the field of aviation, Mr. Wayne Parrish, was honored on Wednesday of this week when he was selected as Man of the Month by the National Aviation Club.

Mr. Richard Fell, president of the club, made some interesting and complimentary remarks on behalf of Mr. Parrish's accomplishments in the field of aviation at the reception honoring Mr. Parrish. I ask unanimous consent that these remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY RICHARD E. FELL, PRESIDENT, NATIONAL AVIATION CLUB, IN HONOR OF WAYNE W. PARRISH, MARCH 18, 1959

Ladies, gentleman, fellow members, as we are assembled at the National Aviation Club, I know that most of us think of Aviation Daily. However, as I was en route to the club this evening, I was thinking particularly of American aviation and the tremendous advances that airlift has made from the crude designs of the Wright brothers to the highly technical missiles and rockets of the present day. In fact, this industry has grown to the extent that it would be difficult for most of us to make contact with many of our associates without the aid of the World Aviation Directory.

My opening remarks have been made to emphasize the names of a few publications that are the very pulse of our industry because of Wayne Parrish, the man we welcome tonight. The National Aviation Club is honoring him for his truly magnificent contribution to the advancement of aviation through the publication field.

For a brief background, Wayne graduated from the University of Illinois and received his master's degree from the Columbia University School of Journalism. He spent a few years as reporter, correspondent and staff writer for leading newspapers and magazines. In 1937 he established American Aviation magazine; and for the past 20-odd years, except for the years 1944–45 when he distinguished himself as a war correspondent in the Pacific and European theaters, has devoted his talents to building the American aviation publications of today.

Among other honors, Wayne has received two coveted awards. He is the permanent winner of the TWA aviation writing trophy, and receive the Strebig-Dobben award for distinguished aviation reporting in 1939, 1943, and 1944.

The road to success is sometimes hard, and for Wayne it has been no exception. He has been a crusader to bring about beneficial changes in aviation and, although at times he did not see eye to eye with all in the industry, fought his battles through to the finish and stimulated the minds of many for the general advancement of the industry.

On the lighter side, his friends know him as an independent thinker with a keen sense of humor. For example, many people collect items such as lighters. Not Wayne, he collects airports—and there are few in the United States where he has not made a landing. Even his car is a conversation piece, and he has sold his enthusiasm for the Bentley to many a diehard. His editorials and articles are anticipated for his subjects are varied from politics to bidets, but whatever—each carries the Parrish touch that has built a following of ardent fans. As evidence, the wonderful attendance tonight.

My enthusiasm for the accomplishments of this grand guy challenges the time limit I have imposed for this introduction.

So, in conclusion, let me say that Wayne has been a spirited supporter of the National Aviation Club since its inception, serves on the board of governors, and has given time and counsel toward the club's development In spite of this, because he is the outstanding publisher in the aviation field, our wall plaque in the entrance hall listing notable aviation personalities we have honored would not be complete without his name.

Wayne, it is sincerely a great pleasure to award you this plaque as aviation's man of the month for March 1959.

## Tribute to Dr. John I. Kolehmainen

EXTENSION OF REMARKS
OF
### HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. LAUSCHE. Mr. President, it is always a pleasure to honor a constituent who has rendered outstanding service in his profession or contributed to the general knowledge of humankind. An example of this type of service which has received recognition is the recent presentation of the decoration of the Order of the Finnish Lion, First Class, of the Republic of Finland to Dr. John I. Kolehmainen, professor of political science and director of integrated studies at Heidelberg College, Tiffin, Ohio.

Mr. President, I ask unanimous consent that a short account of Dr. Kolehmainen's accomplishments be printed in the Appendix.

There being no objection, the account was ordered to be printed in the RECORD, as follows:

Dr. John I. Kolehmainen was born at Conneaut, Ohio, of Finnish parentage. He received his doctorate of philosophy at Western Reserve University, and significantly, his doctoral thesis was on "The Finns in the Western Reserve."

He is presently chairman of the department of political science and director of the program of general studies, Heidelberg College, Tiffin, Ohio. He has been honored as visiting professor of history, Suomi College, Hancock, Mich., 1945–46; visiting lecturer, program in Scandinavian area studies, University of Minnesota, 1951–52; Chief, Finnish Service, International Broadcasting Service (Voice of America), Department of State, New York, 1952–53; and Fulbright lecturer, University of Helsinki and the State Teachers College, Jyvaskyla, Finland, 1956.

He has received the following scholastic honors and fellowships: Social Science Research Council grant, 1945–46; American Philosophical Society grant, 1948; Committee on Wisconsin Economy and Culture, University of Wisconsin, 1949–50; Regional Writing Fellowship grant, University of Minnesota, 1950–51; Social Science Research Council grant, 1955–56; Ford Foundation grant (through the Library of Congress, for microfilming historical materials in the State Archives of Finland), 1955–56, grant renewed 1956–57; and corresponding member, Finnish Literary Society, 1956.

Dr. Kolehmainen has published in English the following books dealing with the Finns: "The Finns in America: A Bibliographical Guide to Their History" (Hancock, Mich., 1947); "Haven in the Woods: The Story of the Finns in Wisconsin" (with George Hill, Wisconsin Historical Society, 1951); "The Scandinavian Countries in International Affairs" (with Folke Lindberg, University of Minnesota program in Scandinavian area studies, 1953); and "Sow the Golden Seed: A history of the Finnish-American newspaper, the Pioneer, 1905–54" (Fitchburg, Mass., 1954); and is author of many articles appearing in both English and foreign language publications.

In presenting the decoration, the Finnish Vice Consul, Joel Allan Pekuri, said, "If cultural exchanges have been of vital importance in the good and hearty relations between our two countries, I cannot refrain from mentioning especially today also another factor which is evident in the living bond that the people of Finnish descent form between Finland and America.

"As early as 1638, the first Finnish settlers came to this country. The number of their descendents is now about 400,000. Many of these people, although being good Americans, have not forgotten their origin and the northern country of their fathers. Without sparing time and effort, they have often made most valuable contributions in spreading general knowledge of Finland in America and creating good will toward it. At the same time, they have been, through their personal qualifications, advocates of the American way of life in Finland.

"One of these men is Dr. John I. Kolehmainen, professor of political science and integrated courses at Heidelberg College.

"As an outstanding American scholar, Dr. Kolehmainen has devoted an important part of his research work to Finland and Finnish culture. The varying phases of the Finnish immigration and settlement in America have found in him a persevering and able historian whose publications have received wide recognition in Finland.

"As Fulbright exchange professor in Finland, Dr. Kolehmainen was known as an excellent lecturer. His educational work as well as his labor in furthering the good relations between Finland and the United States are greatly appreciated in both countries.

"In recognition of his distinguished services for Finland, the President of the Republic of Finland has granted to Dr. Kolehmainen the decoration of the Order of the Finnish Lion, First Class."

## Improvement and Development of the Philadelphia Port Area

EXTENSION OF REMARKS
OF
### HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum prepared by the Joint Executive Committee for the Improvement and Development of the Philadelphia Port Area concerning appropriations for Delaware River Waterway projects for fiscal year 1960.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

ANALYSIS OF THE BUREAU OF THE BUDGET RECOMMENDATIONS FOR DELAWARE RIVER WATERWAY APPROPRIATIONS, CIVIL WORKS, FISCAL YEAR 1960

At the regular meeting of the joint executive committee on January 21, 1959, Col. William F. Powers, Jr., Philadelphia district engineer, U.S. Army Corps of Engineers, reviewed the status of waterway projects in this area and discussed the appropriations recommended by the Bureau of the Budget for continuing progress during fiscal year 1960 (July 1, 1959, to June 30, 1960). The discussion covered the work performed over the current fiscal year, anticipated progress during the coming fiscal year, and goals for the future. In the interest of unanimity of thought and action with regard to appearances before the congressional Appropriations Committees to request civil works funds for fiscal year 1960, we are relating what we believe to be the salient features in the programing of the projects under consideration.

DELAWARE RIVER NAVIGATION PROJECT, PHILADELPHIA TO TRENTON

Based upon valuable experience gained this fiscal year in the initial rock removal from the 40-foot channel, the Corps of Engineers has revised the total cost of the project downward from the previous figure of $110.8 million to $96 million. This reevaluation of the difficulties and expense of rock removal—and the subsequent reduction in total cost of the project—is significant and is very encouraging to port interests. We interpret the change to mean that greater annual progress can be realized with the same number of dollars, and, therefore, the completion date will be advanced effectively by about 1 full year. Colonel Powers estimates the project will be completed to Newbold Island by the summer of 1963 and all the way to Trenton by the summer of 1964 providing, of course, that capability sums are forthcoming each year.

A capability sum may be defined as the amount of new money which can be spent in any given fiscal year in addition to any carryover from the previous fiscal year. Whereas $15 million represents a capability sum for fiscal year 1960, the $13.5 million recommended by the Bureau of the Budget is considered a reasonable sum for the work programed this year under the revised estimate of total cost. It will permit desirable progress in an efficient manner. Additional

monies would result in having additional pieces of dredging equipment on the river, and this could result in hazards to shipping. Further, addditional contract awards may not be properly economic because, with the limited specialized equipment which is available, the corps may not be able to obtain the same favorable price structure which now prevails. We understand that an additional $1.5 million would be spent for additional dredging of soft materials, but this would not hasten the ultimate completion of the project as the rock removal effectively sets the completion date for the project, and this work is proceeding at a maximum economic pace.

The reconstruction of the railroad bridge at Delair is scheduled for completion in the fall of 1960. There will be $4.5 million spent on the Delair Bridge in fiscal year 1960—this is the maximum which can be spent because the contractor is working at maximum speed in conjunction with procurement of materials. The remaining $9 million, out of the $13.5 million for fiscal year 1960, will be directed to rock removal and dredging activities.

We believe the schedule is realistic. Together with the $28 million previously appropriated, the $13.5 million for fiscal year 1960 will permit a 43 percent completion of the full project (based on $96 million total cost). Whereas, we had been hoping originally for $16 to $20 million for fiscal year 1960, the greater sums were premised on a different set of conditions than now exist. We shall support the recommended sum of $13.5 million as being practical, economical, and sufficient to maintain steady progress.

DELAWARE RIVER WATER RESOURCES SURVEY

The sum recommended by the Bureau of the Budget is $330,000. This is the amount requested by the district engineer; it will permit the completion of the survey late in calendar year 1959 or early in calendar year 1960. The joint executive committee has promoted actively this 5-year survey since its inception. We look forward to the content and recommendations as far-reaching steps in all phases of planning for the effective control of Delaware Valley water resources.

DELAWARE RIVER ANCHORAGES

Under the present policy of not permitting any new starts, there are no funds recommended by the Bureau of the Budget for the $24,447,000 anchorage improvement program authorized by Congress during calendar year 1958. The Corps of Engineers has noted that the improvement, while justified on the economics of delays, groundings, and collisions, is "principally warranted for the safety and convenience of navigation by the intangible benefits accruing to the project due to the elimination of hazards to life and property in the Delaware River." We are anxious to commence these needed improvements and, therefore, plan to press next year (fiscal 1961) for a substantial appropriation to initiate the authorized anchorage improvements.

CHESAPEAKE & DELAWARE CANAL—SUMMIT BRIDGE

Work on the Summit Bridge, a sorely needed improvement, should be completed in the fall of 1959. The sum of $3,090,000 recommended by the Bureau of the Budget is satisfactory for the purpose at hand. It is hoped that subsequent years will witness dredging appropriations for the authorized enlargement of the canal. In the meantime, the district engineer is employing maintenance funds to hold a reasonably satisfactory condition in canal width and depth.

OPERATION AND MAINTENANCE FUNDS

The budget recommendations for funds for the operation and maintenance of navigation projects are not broken down by district or by project. These funds always have been shown in a total for all projects across the Nation. The fiscal year 1960 recommendation shows $54,600,000 for channels and harbors and $23,650,000 for locks, dams, and canals. We are confident the corps will be able to meet our local operation and maintenance requirements out of these recommended sums.

## Preserving Our Wilderness

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article by William E. Bohn from the March 16, 1959, New Leader entitled "Preserving Our Wilderness" be printed in the Appendix of the RECORD.

In this article, Mr. Bohn reports on the National Wilderness Preservation Act, S. 1123, which I introduced on behalf of myself and several Senate colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESERVING OUR WILDERNESS

(By William E. Bohn)

Uncle Sam is by far the greatest real estate owner in this country. I am told that the National Park Service manages about 25 million acres. And that includes only the main set of parks, monuments, memorials, and historical sites. Beyond these, and separate from them, are the national forests, the fish and wildlife reserves, and the vast areas controlled by the Bureau of Indian Affairs. These various sorts of holdings are under the management of different boards—some of them connected with the Department of Agriculture, and some with the Department of the Interior.

There is nothing wrong with all this. As far as I know, these pieces of property are all managed conscientiously according to the principles laid down by Congress. But they all contain wild and unspoiled stretches of virgin wilderness.

Last week I quoted some paragraphs from letters written by one of my favorite authors, Joseph Wood Krutch. He was lamenting to all the world the fact that in our national parks and forests precious remnants of wilderness are in danger. The ontramping millions, he complained, are treading down dainty plants, scaring away timid animals and, in general, with their improved highways, automobiles, and airplanes, putting an end to the conditions which have furnished the quiet and meditative nature lover an opportunity to escape from steel and cement smog.

Well, 15 U.S. Senators have had the same idea. Perhaps they want to preserve a few spots where they can escape from the voters and the journalists and think of something besides ballots and budgets. The 15 wilderness-loving Senators, led by HUBERT HUMPHREY (Democrat of Minnesota), have introduced what is known as the wilderness bill. It seems to me a measure aimed at definitely civilizing objectives.

The wilderness spots which are to be designated and protected will not be placed under the authority of any new commission. In general, they are to be under the eye of an authoritative but inexpensive Council made up of the Secretaries of Interior and Agriculture, a Smithsonian Institution representative and three citizens appointed by the President with the help of the Senate. The members are to receive no pay—only expenses when actually in service.

The Council, which has an initial appropriation of only $100,000, is expected to report annually to Congress. When Senator HUMPHREY introduced the bill, he made a great point of the fact that it provides for no new administrative body to mess things up and demand additional appropriations. The bodies which are now administering these beauty spots will go on administering them. The only change will be that when the bill is passed, they will manage them according to new rules. And the Council will do nothing except to see that the rules are being enforced and report on how the whole project is working out.

And what are these rules? They sound as if they had been designed precisely to rejoice the heart of my mob-fearing friend, Krutch. There are to be "no permanent roads, no use of motor vehicles, motorized equipment, motorboats or aircraft, and no structures or installations, including temporary roads, in excess of the minimum required for administration."

No roads. If you enter here you will travel on your own feet, in a canoe, or on a horse. There will be no restaurants, hotels, or shops heaped with postcards or souvenirs. You will have to tote with you whatever you need. That is what I did when I was a boy in the blessed woods of Canada. And we never suffered for lack of anything. As long as there were fish, we could eat. As long as we had a blanket, we could sleep warm. There were, thank God, no motels.

My readers will have guessed that this elaborate and well-considered bill did not spring full-grown from the fertile brain of the active senior Senator from Minnesota. He and other men now supporting it have been busy with it since 1955. The first bill dealing with the subject was introduced in 1957. Since then, well-advertised hearings have been held in Washington and at strategic points in the West. Criticisms have been made, and some of them have been adopted. The bill has been revised again and again to make sure that it will not injure any honest and legitimate business interests.

In the course of these 2 years an encouraging amount of support has been assembled behind it. Senator HUMPHREY'S address introducing the new bill, shored up by all the materials on the subject which he introduced into the CONGRESSIONAL RECORD, constituted quite an event. The wilderness bill starts under favorable auspices. Some of its liveliest enemies disappeared in last November's Republican cataclysm. On the contrary, a number of good friends are found among the freshmen Congressmen. My guess is that it will pass at this session of Congress.

## Forty Years of Service

EXTENSION OF REMARKS
OF
## HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. WILLIAMS of New Jersey. Mr. President, throughout the Nation, our citizens stop to salute the American Legion on its 40th anniversary. I think it is fitting that we take time out to recall the significant contributions this

veterans organization has made to the American way of life—not only in the interest of veterans but, in the many, many civic works in which it has been involved.

I should like to add my own personal congratulations to the American Legion on 40 years of outstanding accomplishment and my hope and confidence that it will continue in its true dedication to our beloved country. To commemorate this milestone in a special way, I ask unanimous consent that the editorial from the Paterson (N.J.) Morning Call of Saturday, March 14, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FORTY YEARS OF SERVICE

The American Legion, largest veteran organization in all history, celebrates the 40th annniversary of its birth tomorrow through Tuesday. It is a signal observance. It marks the completion of 40 years of service by the American Legion to its communities, its States, and the Nation.

The 17,000 posts of the American Legion and their 14,000 auxiliary units, have a right to be proud of their accomplishments during the past four decades. The American scene and the world have undergone profound changes since the American Legion was founded at the historic caucus of delegates from the first AEF in Paris, France, March 15 to 17, 1919. The American Legion has changed too, but only in its dimensions.

It is today a three-war organization. It has not changed in its patriotic character, in its ideals, in its objectives and in its integrity. Keeping America always American is still its continuing goal. It is still true to the original purposes set forth so vividly in 1919 in the preambable to its constitution.

The good impact on the American scene of the American Legion is immeasurable. It has been an important factor in the defense of our free institutions, in keeping love of country at a high premium, in raising the popular level of education, in the great increase of home ownership, in the modern care of the disabled and physically handicapped and in the Nation's preparedness against aggression.

Thousands of American communities are better places in which to live and raise children because of the civic works of 17,000 posts. We salute our local American Legion posts and wish them many happy returns as this great organization starts on its fifth decade of service to God and country.

On its 1959 anniversary. The American Legion here and everywhere rates a 40-gun salute.

---

## Speech by Congressman Carl Albert, Democratic Whip, Third District, Oklahoma, at Grover Cleveland Democratic Club, Bethlehem, Pa., March 17, 1959

---

EXTENSION OF REMARKS

OF

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. McCORMACK. Mr. Speaker, on the evening of March 17, 1959, at Bethlehem, Pa., in the district represented by our outstanding and distinguished colleague from Pennsylvania [Mr. WALTER], the Grover Cleveland Democratic Club held a banquet at which the distinguished Democratic whip, the gentleman from Oklahoma, made a truly great address.

In my extension of remarks I include the address made by our friend, the gentleman from Oklahoma [Mr. ALBERT].

SPEECH BY CONGRESSMAN CARL ALBERT, DEMOCRATIC WHIP, THIRD DISTRICT, OKLAHOMA, AT GROVER CLEVELAND DEMOCRATIC CLUB, BETHLEHEM, PA., MARCH 17, 1959

Ladies and gentlemen, I am honored to be here tonight.

I am honored to be a part of this meeting in a great Democratic community in a great Democratic State.

I am happy because we are meeting on the feast day of St. Patrick, the great patron saint of Ireland. No segment of our population has contributed more to the spirit and vitality and life of our country, or more to the leadership of the Democratic Party, than the sons of St. Patrick.

I am happy to be here, too, because this is a great club honoring the name of Grover Cleveland, and meeting on the eve of his birthday.

I am happy to be here because this is the congressional district of my distinguished colleague, your great Congressman FRANCIS WALTER.

You people of Pennsylvania's 15th District know as well as his colleagues in the Congress the quality of this man who has spent 26 years in your service.

You have recognized the mettle of a man who spotlighted the Communist Party as an international conspiracy designed to overthrow democratic government.

You have recognized the compassion of a man who fought for quota free entrance of alien wives, husbands, and children of United States citizens.

You know the intellectual stature of a man who fused into a single statute the 200 existing laws dealing with immigration.

You know the tolerance of a man whose determination broke down the final barriers of discrimination against admission of Asiatics to the United States.

As chairman of the great Committee on Un-American Activities, and ranking Democrat of the powerful Committee on the Judiciary, your Congressman is one of the great leaders in the House of Representatives.

Author of the Administrative Procedures Act of 1946, the Internal Security Act of 1950, and the Immigration and Nationality Act of 1952, he has given this country some of its most monumental landmarks of statutory law.

Big enough and strong enough to hold any position in the Congress, or in any other branch of the Government, your Congressman is not only an outstanding legislator, he is one of the great Americans of our time.

We meet on the eve of the birthday of one of our greatest Presidents, Grover Cleveland, author of modern American democracy. Cleveland applied Jeffersonian principles to new problems. It was he who bridged the gap between the agrarian democracy of Jefferson and Jackson and the industrial democracy of Wilson, Roosevelt, and Truman. His policies are current policies. His influence transcends his time and is manifest in the dominant position of the Democratic Party in the statecraft of this country today.

The success of a political party in the final analysis depends upon the extent to which it serves the interests of the people. That means you and you and you and your families.

The 86th Congress has the largest Democratic majority of any Congress in more than 20 years because the 85th Congress wrote the finest legislative record for you and you and you than any Congress in more than 20 years.

The 85th Congress has been heralded editorially across the country as a do-something Congress, and indeed it was.

It passed the first Department of Defense reorganization bill in more than 10 years.

It admitted a new State to the Union for the first time in more than 40 years.

It passed the first civil rights bill since reconstruction days.

It created a new science agency and a new space agency.

It passed the first general aid-to-education bill in all history.

It passed a new social security bill, a new atomic energy bill, a new public works bill.

It appropriated more money for national defense than any Congress since the Korean war and more money for public roads and highways than any Congress in history.

Another page in this record of constructive service for you and you and you is being written in the 86th Congress. The job is underway. The Hawaiian statehood bill has already passed. The 50th star will be added to Old Glory before the 49th star is an official part of the American flag.

A new and far-reaching airport bill may well become law by Easter.

A new gigantic omnibus housing bill will be sent to President Eisenhower in a matter of weeks if not, indeed, of days.

In the 86th Congress we are going to extend unemployment benefits.

We are going to enact an area redevelopment bill.

We are going to pass a labor reform bill and not a labor persecution bill such as Republican spokesmen are demanding.

We are going to pass a new school bill.

We are going to pass a new civil rights bill.

We are going to provide adequate funds for both the development and the defense of our country.

These things and many more we are going to do in the 86th Congress, and we are going to do them in spite of the Eisenhower administration and the Republican leadership in Congress.

Ladies and gentlemen, while the 86th Congress is thus engaged in a constructive program on behalf of the American people, what is the Republican Party offering? What is the Eisenhower administration doing? Let's look at the facts:

On the home front the administration has been blind to the problems of unemployment and to the growing crises which now exist in many depressed areas. With nearly 5 million unemployed, and with over 400,000 jobless workers facing the loss of their unemployment benefits by April 1, this administration has not even attempted to offer a solution.

The gray specter of hunger and deprivation persists in many States. What has President Eisenhower done about it? He vetoed the area redevelopment bill by a pocket veto in September 1958. Although the depression has deepened in many areas in almost every State in the Union, his administration has not offered one single recommendation to cope with this economic blight. In many communities people are out of work. Their needs are not satisfied by the administration's claim that we are on a curve of rising prosperity. These words smack of Hoover days. They remind us of the days when prosperity was just around the corner. They bespeak a callousness to the welfare of human beings, American men, women, and children, unbecoming to the role of any administration charged with the responsibility of governing this great Republic.

This lack of leadership pervades every facet of the Eisenhower administration. It enfeebles our military posture. It cripples our diplomatic leadership. When President Truman was in the White House he met the Communist threat with vigor and imagination on every front. Not one important new idea has been added in over 6 years of the Eisenhower administration.

Herein lies our great problem, our principal difficulty. Our trouble at home and abroad is not with our scientists or military leaders. Our trouble is at the summit. It is the lack of effective leadership at the top management level of the Government.

The experts tell us that defensewise we are in mortal danger. Yet defense since World War II has cost us over $441 billion. Our strength or lack of it cannot be measured in terms of dollars spent. The only realistic way to measure our defense is in terms of the power of our potential enemy. During the last three or 4 years warnings have been sounded by scientists, military men, and congressional investigating committees that we were falling behind Russia in the race for ballistic missiles. These warnings failed to jolt the White House or the Secretary of Defense into action.

In 1952 the combined military strength of the United States was greater than that of any other nation. Today we are winning the race for second place. On every single day during the Truman administration the lead time of American arms over Russia was maintained on the side of our own safety. Every day since the Eisenhower administration took over, Russia has been closing the gap.

The Roosevelt and Truman administrations developed the A bomb, the H bomb, the atomic cannon, the jetplane, sonar, radar, and proximity fuses. They developed guided missiles and atomic submarines. They made outstanding advances in landing craft and in aircraft carriers.

In 1952 the United States was the undisputed leader of the world in scientific knowledge. Today we find ourselves wearing an international dunce cap, while the rest of the world concludes that our short-sighted policies have almost given the game to the Kremlin.

The mounting crisis in Berlin reemphasizes the importance of our military preparedness or the lack of it. We agree with President Eisenhower that this country must stand firm and united in this crisis. We insist, however, that our firmness must be predicated upon strength and not upon weakness. In the Berlin exchanges, Khruschchev has displayed a cool confidence and single mindedness which did not characterize his past dealings. It may be that he has mistaken debate for division. We make this unmistakably clear to Mr. Khrushchev that Democrats in Congress will cooperate with the President in resisting Kremlin ultimatums anywhere in the world. Where we differ from this administration is in our conviction that firmness should be supported by preparedness.

Our position is the position of the Senate Armed Services Committee which has recommended that we put more emphasis on the missile program and on increasing the strength of the Strategic Air Command by adding more B–52's, B–58's, and tanker planes. Our position is the position of our military leaders who believe that our Army, Navy, and Marine Corps should not be reduced. Our position is that an ounce of prevention is worth a pound of confidence to the Western Powers in their discussions on Berlin and in other clashes between the free world and the Kremlin.

Ladies and gentlemen, meeting in these perilous times as we do tonight on the eve of the birthday of a great American President of another day, we cannot help but be reminded that the age-old differences between the two major political parties still exist. The same differences still distinguish the followers of Jefferson on the one side and of Hamilton on the other. It is the never-ending struggle between action and reaction—between government devoted to the few and government dedicated to the many. Our party since its foundation has been the party which, in each succeeding generation, has adopted the principle of positive action on behalf of the American people. It was the Democratic Party in the time of Thomas Jefferson that gave us our Bill of Rights. The Hamiltonians opposed the Bill of Rights. Had it not been for Thomas Jefferson you would have had no habeas corpus or trial by jury. You would have had no right to freedom of speech or to freedom of the press. You would have had no right to petition Congress, no right to religious freedom.

It was the Democratic Party in the time of Andrew Jackson that rescued control of the Government from the banking interests and gave it back to the people to whom it belonged.

Let me say to the members of this great Grover Cleveland Democratic Club that it was the Democratic Party in the time of Grover Cleveland that gave us our first anti-trust laws, the forerunners of the great social and economic reforms of the generations that were to follow.

It was the Democratic Party in the time of Woodrow Wilson that carried this country through World War I and with the League of Nations gave us the chance to avoid World War II.

It was the Democratic Party in the time of Roosevelt and Truman that brought this country out of the deepest, darkest depression in history, strong enough to win World War II. From soup lines to production lines, from relief rolls to pay rolls, from closed banks to guaranteed deposits, was the indisputable record of the Roosevelt-Truman administration.

This country needs Democrats in public office throughout the land. This country needs a Democratic President in 1960. This is the answer to Republican ineptitude. The Democratic Party and the Democratic Party alone can supply the leadership, the formula, and the program that will make this country strong and will keep this country free, prosperous, and at peace.

## He Wants To Pay 1 Percent of the Debt Each Year

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, an editorial published by the Cleveland Plain Dealer on March 18, 1959.

HE WANTS TO PAY 1 PERCENT OF THE DEBT EACH YEAR

We all know persons who have borrowed money under terms that, in retrospect, seemed pretty steep. By the time the debt was cleared up, the borrower may have found that his interest payments and other charges amounted to 50 percent of the loan, even 100 percent or more—that is, he had to pay back half again as much as he had borrowed, or twice as much.

But few individuals, even Congressmen, are weighing the consequences of the weight of the interest bills which Uncle Sam is having to pay. That interest bill in the administration budget for the coming fiscal year is set at $8.1 billion, or more than 10 percent of the $77-billion spending proposed. That means 10 percent of all the withholding and other Federal taxes you pay, 10 percent of the U.S. taxes paid by corporations in which you may own stock, 10 percent of all the taxes paid by companies whose products you buy, all those 10 percents just go to defray that whopping interest bill.

Uncle Sam, true, doesn't have to pay the interest rate that an individual does to get a loan. But his interest rates have been going up, nevertheless.

And the amazing fact is that Uncle Sam, if his nephews in Congress and elsewhere don't correct their fiscal practices, is going to have to pay nearly a trillion dollars (that's $1,000 billion) in interest alone in the next 100 years—and still have on his shoulders the whole national debt of $283 billion, or whatever it will have grown to.

One Congressman who is worried about this arithmetic is Representative JIM WRIGHT of Texas who has introduced a House Concurrent Resolution (No. 79) laying down the principle that the Nation should pay off, besides the interest, 1 percent of the total present national debt of $283 billion each year for the next 100. Here's what he says the consequences will be:

"In 100 years we could completely retire the debt by paying $495 billion in interest and $283 billion of principal, or a total of $778 billion. But if we pay nothing on the debt itself, the interest alone for 100 years will be $980 billion, and we will still owe the debt of $283 billion, or a total of $1.263 trillion."

WRIGHT's proposal makes so much sense that a lot of people ought to be writing their Congressmen telling them to pay some attention to it rather than to seeing how they can run up an extra deficit of 2, 3, or 4 billion in 1959–60 fiscal year.

A late New Dealer once uttered a statement to the effect of "What's a few lousy millions?" One day soon a Congressman is going to say: "What's a few lousy billions?" unless the people demand more financial responsibility.

## One-Hundredth Anniversary of Founding of Guttenberg, N.J.

EXTENSION OF REMARKS
OF
### HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. CASE of New Jersey. Mr. President, the community of Guttenberg, N.J., is marking its 100th anniversary this year. This is a record of which the community, Hudson County, and the State of New Jersey are very proud. I therefore ask unanimous consent to have printed in the RECORD a proclamation by Mayor Herman G. Klein.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION BY MAYOR OF THE TOWN OF GUTTENBERG, N.J., REGARDING CENTENNIAL CELEBRATION OF GUTTENBERG, N.J.

Know all men by these presents that—

Whereas the town of Guttenberg in the county of Hudson and State of New Jersey was incorporated by official act of the New Jersey Legislature as an incorporated town in 1859; and

Whereas the said town of Guttenberg has been in continuous existence since 1859 so that appropriate centennial observances are fitting and proper in this year of 1959; and

Whereas it is the unanimous desire of the people of the town of Guttenberg to commemorate this 100th anniversary of the founding of the town by appropriate events and observances; and

Whereas the people of the town of Guttenberg have lived and prospered through this century under the blessings of our American liberties which inspired our centennial slogan, "A century of progress and freedom through democracy," and have earned the affection and respect of our neighbors and fellow citizens and desires to express their friendship and announce the centennial observance; and

Whereas appropriate plans are progressing under the leadership of the Guttenberg Centennial Committee to make the centennial celebration a memorable one and to invite thereto various friends and representatives from the Federal, State, and local governments:

Now, therefore, as mayor of the town of Guttenberg, N.J., I do hereby proclaim, by virtue of the authority vested in me, that the official Guttenberg Centennial Observance will be held on May 3—May 17, 1959, and all official departments and agencies of the town of Guttenberg are authorized to participate and cooperate in such observance, with the fervent hope that, under God, the people and the town of Guttenberg will continue to develop and prosper in the coming years and centuries.

HERMAN G. KLEIN,
*Mayor, Town of Guttenberg, in the County of Hudson, N.J.*

## New Jersey Job Emergency Declared

EXTENSION OF REMARKS
OF
## HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. WILLIAMS of New Jersey. Mr. President, the unemployment situation which is receiving wide attention across the Nation has not left my own State of New Jersey unscathed. This fact has been clearly pointed out by Governor Meyner, who has declared that a real emergency exists. In connection with our thinking along this line, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Christian Science Monitor of March 6, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW JERSEY JOB EMERGENCY DECLARED

(By Harry C. Kenney)

TRENTON, N.J.—New Jersey is no longer hiding from the disturbing fact that it has a high level of unemployment and the time has come for broad State action and possibly for increased Federal aid.

This situation has been jolted into the open by Gov. Robert B. Meyner, who declared that a real emergency exists in the State. During 1958, when New Jersey, like so many other States, was hard hit by the recession, there was a heavy drain on moneys devoted to unemployment benefits.

And now the Governor is moving in the direction of urging the Federal Government to establish a nationwide standardized unemployment benefits program. The limitation of benefits and the restricted time elements are causing jobless-aid chaos.

PROBLEMS LURK

According to the State's department of labor and industry, there were 208,000 unemployed at the end of February. This is 8.8 percent of the total labor force. When a State or the Nation has a 5-percent unemployment figure, the red flag goes up. The present national figure for unemployment is hovering around 6 percent.

Actually, New Jersey's unemployment was worse in January when 221,600, or 9.3 percent, were unemployed. While this fact would normally indicate recovery, officials say this is not presently the case. There are too many economic, industrial, and tax problems existing in the State to be optimistic, spokesmen for the office of the State commissioner of labor and industry say.

One of the reasons for the immediate emergency is the heavy unemployment benefits, including temporary unemployment compensation. For instance:

| | Total unemployed | Percent of labor force |
|---|---|---|
| December 1958 | 188,300 | 7.9 |
| January 1959 | 221,600 | 9.3 |
| February 1959 | 208,200 | 8.8 |
| THE PREVIOUS YEAR | | |
| December 1957 | 152,000 | 6.5 |
| January 1958 | 206,950 | 8.7 |
| February 1958 | 210,900 | 8.9 |

New Jersey paid out $100 million in unemployment benefits in 1956, $126 million in 1957, and $200 million in 1958.

The problems of unemployment compensation tend to raise a number of broad economic and political issues, such as desirable industrial balance. This industrial balance within the State has been jolted by various types of corporate taxes.

An inquiry into various New Jersey and private industrial organizations as to the size and number of companies that have left the State came to no clearly defined conclusions. This information still needs to be gathered.

There are indications that some industrial executives shudder when they think of certain prolabor bills now before the legislature. Some officials are apprehensive that other industrial firms may leave the State.

SEASONAL FACTOR WEIGHED

Officials agree there is great need in New Jersey for sharper consideration of interstate competition for industry and the maintenance of purchasing power during economic downswings. Another necessity: A closer examination of means to stimulate employment opportunities in line with a proper goal of proper industrial, economic, political, and employment balance.

New Jersey's Economic Watchdog Committee is a hopeful organization. It reports that unemployment always rises in January because business and industry inevitably let down after the rush of the Christmas season, and worsening winter weather progressively retards construction, seashore, agriculture, and other outdoor employment.

This year the December–January seasonal rise in idleness—33,000—was of normal proportions. Even in the highly prosperous years of 1956 and 1957 there were unemployment increases of 33,000 and 36,000, respectively, at this time of year.

But then the committee points out that every labor market area had more unemployed in January than in December, forcing the percentage of the State's labor out-of-work up from 7.9 percent to 9.3 percent. And this is critical, it says.

## Hon. Robert A. Everett Complimented for Aid in Obion-Forked Deer Project

EXTENSION OF REMARKS
OF
## HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. DAVIS of Tennessee. Mr. Speaker, my colleague, ROBERT A. EVERETT, who is now in his second term of service, is proving one of the finest Members of Congress. It has been my pleasure to know him through many years of service to his State and country.

He has been devoted to the affairs of his district for a very long time.

Serious damage has resulted from floods on the Obion and Forked Deer Rivers. Painstakingly, he has convinced the Corps of Engineers of the importance of corrective measures, and has now been successful in seeking legislation in this session of the Tennessee Legislature, which will permit the State to become a major participant in this needed project.

Recently, the Commercial Appeal, influential and widely circulated newspaper in the Midsouth, paid him a compliment in an editorial which I am including in my remarks.

OBION-FORKED DEER PROJECT

Legislation which will permit the State to become a major participant in the Obion-Forked Deer flood control and drainage project has been introduced in the general assembly. It seems to us to be a sensible way to break an impasse which has existed since the project was authorized 11 years ago.

Until the impasse is overcome the economic progress of a vast West Tennessee area is going to be retarded, highways and communities will continue to be exposed to blighting overflows and project estimates and actual costs will continue to rise. Had the work been undertaken when Congress authorized the project, completion costs would probably have been in the neighborhood of $3 million. A fourteen-to-fifteen-million-dollar cost estimate is not reasonable now. It is a costly example of the folly of footdragging in the public works field.

The Federal Government will bear the major portion of the cost and supervise construction through the Corps of Engineers, but the State, or some other agency, must first guarantee rights-of-way and adequate maintenance after the project is completed. A way to do this is provided in the pending general assembly bill. Responsibility would be assigned to the Department of Highways and Public Works.

That this sorely needed Obion-Forked Deer improvement plan is being moved from dead center after a decade of time-wasting and futile argument is due chiefly to the efforts of Representative ROBERT A. EVERETT, Demo-

crat of Tennessee, and his determination to get the work started. West Tennessee is indebted to him for it. The project is of as much importance to Memphis and Shelby County as it is to the immediate project area. That is the light in which the Shelby delegation should consider the pending bill and give it support.

## Disillusion With the So-Called Farm Program of Secretary Benson

EXTENSION OF REMARKS
OF
### HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter dated March 12, 1959, from Mr. Noel Cover, of Cozad, Nebr., which is further evidence of the growing disillusion with the so-called farm program of Secretary Benson.

COZAD, NEBR., *March 12, 1959.*
Hon. WAYNE L. HAYS,
*Washington, D.C.*

DEAR CONGRESSMAN: I am Noel Cover, Dawson County, Cozad, Nebr. I have been one of the big meat producers of the country. Have bred, raised, grown, fed, and marketed large numbers of cattle, hogs, and sheep running into millions of head. Never bought on order nor sold on commission.

In these operations would feed over a million bushels of corn and thousands of tons of alfalfa hay each year. Buying 80 percent more than I produced.

In the thirties bought hundreds of thousands bushels of good sound corn for 8 to 15 cents a bushel. Also thousands of tons of alfalfa hay at $2 to $5 per ton, also other feeds on same price level.

While I buy many times more corn than I produce, I would rather pay $1.60 bushel for corn to feed than any price less than $1.60. In doing so I am not being a philanthropist.

Dawson County stands in the first 100 agriculture counties in the United States. There is more irrigation in Dawson County than any county in the State.

Farm sales are many, many times greater this winter and spring than at any time in the past. Farm tenants are throwing in the sponge.

I have some choice irrigated farms that I have been unable to rent, not even a prospect since September. There has always been more renters than farms.

I am a Republican. Have never complied with the farm program. Even though the farm program was set by the Democrats it was the greatest thing, not only for the agriculture, but for all the people. Until President Eisenhower and Secretary Benson took over.

Secretary Benson started at once to destroy the farm program. His answer to the agriculture problem was farmers cooperative.

Shipping millions of bushels of corn and wheat on the open market. He puts forth every effort to injure, damage, and destroy the farm program.

Having enough wheat in the bins now to carry us a year, and 300 million bushels over—without a crop this year—is a wonderful position to be in, especially at this time.

Even though the farm population is down to 15 million we are dependent upon agriculture for our very existence and the most important segment in our economy where new wealth comes from.

If there was 90 percent to 100 percent parity on cotton, wheat, and corn, set to run until Congress could make any changes, giving the Secretary of Agriculture limited power and directions in disposing of the surplus. This would be an answer.

If the agriculture program was put to where it was when President Eisenhower and Secretary Benson took over, even if it cost $15 billion a year, every dollar would go into channels of commerce and taxes. It would not cause inflation, it would be prosperity.

I am from the grassroots—with agriculture experience second to none—successful to a degree. If there is any possibility I can do agriculture any good in appearing before committees or hearings, I will be glad to do so at my own expense. I want no job nor publicity.

Secretary Benson and his agriculture program and the 5 million unemployed is what put the Democrats in the saddle.

Thanking you, I am,
Yours truly,

NOEL COVER.

## Montgomery County Supervisors Vigorously Protest TVA Turbine Contract Award Abroad

EXTENSION OF REMARKS
OF
### HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. STRATTON. Mr. Speaker, my mail continues to include official protests from citizens and governmental groups within the 32d Congressional District of New York against the action of the TVA in awarding a steam turbine contract to a British firm rather than to those American firms which are located in areas of severe unemployment.

Whether this contract would have gone to the General Electric Co. in the 32d Congressional District of New York or to the Westinghouse Co. in Pennsylvania, as some have suggested, the principle is the same. If this present trend toward the purchasing of these heavy electrical machines abroad continues, as has been the case with the TVA and the city of Los Angeles, there will surely be economic disaster in both manufacturing areas. The people of my district are deeply concerned, and this concern is well shown in the following resolution adopted unanimously by the board of supervisors of the County of Montgomery in the Empire State of New York:

RESOLUTION PROTESTING AWARDING A CONTRACT FOR VITAL MACHINERY TO A FOREIGN POWER BY THE TENNESSEE VALLEY AUTHORITY

Whereas the United States has three manufacturers of large electrical apparatus with service facilities, and in the event of national emergency can be depended upon to restore damaged equipment in our country's defense; and

Whereas American tax money is being used to put Americans out of work by purchasing foreign equipment for a public utility; and

Whereas American bids to build this equipment were high as contrasted to the foreign bids, one factor influencing the difference in bids was the difference in wages here and abroad; and

Whereas several thousand residents from Montgomery County work in Schenectady for the General Electric Co., the low domestic bidder for this equipment: Now, therefore be it and it hereby is

*Resolved*, That the Montgomery County Board of Supervisors urge United States Government officials to do everything possible to have this contract awarded to a United States manufacturer; and it is further

*Resolved*, That a copy of this resolution be sent to the Honorable Leon Hoegh, Chief of the Office of Civil and Defense Mobilization; Hon. Herbert Vogel, chairman of the Tennessee Valley Authority; Congressman SAMUEL STRATTON; Senator JACOB K. JAVITS, and Senator KENNETH B. KEATING.

## Carleton Putnam Writes Attorney General

EXTENSION OF REMARKS
OF
### HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. HUDDLESTON. Mr. Speaker, on January 17, 1959, I inserted in the CONGRESSIONAL RECORD a copy of a letter which Mr. Carleton Putnam, of Washington, D.C., had written to President Eisenhower on October 13 of last year. This letter stated in a very forceful manner the South's postion in the segregation-integration controversy. The letter has been well received all over the country.

Last Monday, March 16, 1959, Mr. Putnam sent a letter to the Attorney General of the United States, Hon. William P. Rogers, stating in detail strong arguments supporting the case for the South in the maintenance of its time-honored traditions and customs of segregation.

Mr. Putnam, a member of the famous New England Putnam family, is a native of New York City, a graduate of Princeton and Columbia, and founder and president of Chicago and Southern Airlines, 1943–48. He is presently on the board of directors of Delta Airlines. In addition to being an outstanding business executive, Mr. Putnam is also a writer of note. He recently published a widely praised biography of President Theodore Roosevelt.

Because of the critical importance of the subject which Mr. Putnam discusses in his letter to the Attorney General, I am privileged to insert the letter herewith in the CONGRESSIONAL RECORD, under leave heretofore granted.

WASHINGTON, D.C., *March 16, 1959.*
The Honorable WILLIAM P. ROGERS,
*Attorney General of the United States,*
*Department of Justice,*
*Washington, D.C.*

MY DEAR ATTORNEY GENERAL: Following my correspondence with your Department in December, I have had a chance to review your briefs in the school desegregation cases and also to scan, as carefully as time permitted, the nine relevant volumes of the Supreme Court's records and briefs. I hesitate to impose further upon your kindness, but my survey has left one question in my mind upon which the record does not appear to touch, and which you may be able to answer.

I turn to you for the reason that, as a nonadversary party to these proceedings, I understand you to have represented the people of the United States. Since a majority of the population of the South are obviously against integration, and since the Gallup poll for September 24, 1958, indicates that 58 percent of the white population of the North would not put their children in schools where more than half the enrollment is Negro, it becomes a close question whether the decision of the Supreme Court in these cases was not in fact contrary to the wishes of a national majority. While I recognize that this would in no way affect the validity of the decision, it would seem to have placed a peculiar responsibility upon you.

The matter which I find curious is the omission in your briefs of any challenge to the authorities cited by the Court in footnote 11 to their opinion of May 17, 1954. I assume there must have been some indication, in argument or elsewhere, that these authorities were to be used. They appear, in large measure, to form the foundation of the decision. They reflect a point of view rooted in what I may call modern equalitarian anthropology—a school which holds that all races are currently equal in their capacity for culture, and that existing inequalities of status are due solely to inequalities of opportunity. While the briefs for the State of Virginia touch upon the qualifications of some of the individual psychologists who testified in the lower courts, they contain no examination of the underlying anthropological theory. It seems to me that such an examination should have been made. I have a science degree, I have read with some diligence in the field of anthropology and I have discussed the subject with competent anthropologists. It is my considered opinion that two generations of Americans have been victimized by a psuedoscientific hoax in this field, that this hoax is part of an equalitarian propaganda typical of the left-wing overdrift of our times, and that it will not stand an informed judicial test. I do not believe that ever before has science been more warped by a self-serving few to the deception and injury of so many. On this subject there may be disagreement. But it is clear to me the Court should have been invited to examine the question.

Allow me to give my reasons for this opinion. The Court says in footnote 11, "see generally Myrdal, 'An American Dilemma,'" and I start with this book. I need hardly dwell upon the highly socialistic bias of its foreign author, and the startling remarks with which his text is peppered, such as his comment that the American Constitution "is in many respects impractical and ill-suited for modern conditions," that the Constitutional Convention of 1787 "was nearly a plot against the common people" and that in the conflict between liberty and equality in the United States, "equality is slowly winning." A foreign socialist could not, perhaps, have realized that Jefferson's statement "all men are created equal" was a corruption from the Virginia Declaration of Rights, where the original wording read "all men are created equally free," nor that if equality (in any sense other than equality of opportunity and equality before the law) is defeating liberty in the United States, then everything America has stood for is in jeopardy, but certainly it was essential that these matters be called to the Court's attention in evaluating Myrdal's book.

I hasten, however, to the basic hypothesis underlying Myrdal's 1,400 pages. On pages 90–91 he introduces the doctrines of Franz Boas, a foreign-born Columbia University professor who arrived in the United States in 1886, who was himself a member of a racial minority group, and who may be called the father of equalitarian anthropology in America. From these pages forward, Myrdal's dilemma is founded upon the philosophy of Boas and his disciples. Thereafter, one constantly finds in Myradal such sentences as these:

"The last 2 or 3 decades have seen a veritable revolution in scientific thought on the racial characteristics of the Negro. * * * By inventing and applying ingenious specialized research methods, the popular race dogma (that races are not by nature equal in their capacity for culture) is being victoriously pursued into every corner and effectively exposed as fallacious or at least unsubstantiated. * * * It is now becoming difficult for even popular writers to express other views than the ones of racial equalitarianism and still retain intellectual respect."

If you have not already read him, I invite you to a thorough and impartial study of Boas. I am confident you will find his views wholly unconvincing, his doctrines more unsubstantiated than those he attacks, and his approach so saturated with wishful thinking as to be pathetic. In even the most superficial analysis of the subject, Boas should have been challenged and his more obvious errors exposed. Boas, for example, may have been convinced that the average African's improvident indifference to tomorrow is just a healthy optimism, but I dare say the proverbial reasonable man on a jury would think of it less charitably.

If the deceptions of the Boas school were unconscious, they were nevertheless serious. People, for instance, were induced to believe that because early anthropologists put emphasis on brain pan size in their studies of race, and brain pan size was later proved to be an invalid criterion, this automatically made all races equal. No one took the time to point out that not only is brain pan size not a final test of intelligence, but that, even if it were, equal brain size would not prove equal capacity for civilization. The character-intelligence index—the combination of intelligence with all of the qualities that go under the name of character, including especially the willingness to resist rather than to appease evil—forms the only possible index of the capacity for civilization as Western Europeans know it, and there is no test for this index save in observing the native culture in which it results. Such observation does not sustain the doctrine of equality.

Indeed, the entire foundation of the Boas theory rests on sand. It is based on the assumption that present day cultural differences between the Negro and other races are due, not to any natural limitations, but to isolation and historical accident. This theme has been taken up again and again by later anthropologists, such as Kluckhohn, of Harvard, and repeated as established scientific fact. I may illustrate the argument by comparing the condition of the white tribes of northern Europe just before the fall of Rome with the Negro tribes in the Congo. Both were primitive and barbaric, both were isolated from civilization. With the conquest of Rome by the white barbarians, the northern tribes were brought in contact with the ancient Greco-Roman civilization and gradually absorbed its culture. The Negro, on the other hand, lacked such a contact and therefore remained in status quo.

This was Boas' historical accident, and his explanation of the Negro's present level of civilization in Africa. Boas had various additional points and refinements of his thesis, such as the advantage the white barbarians enjoyed in contiguity of habitat and the more moderate differences in modes of manufacture in earlier times, which made it easier for backward people in those days to compete commercially with more advanced cultures than was the case in later centuries when our white civilization invaded Africa, but these arguments hang on the first point. In other words, had the Negroes shown the enterprise and initiative of the white barbarians, the Negroes themselves would have established a contiguity of habitat and had the advantage of more moderate differences in modes of manufacture.

As far as isolation is concerned, it hardly seems necessary to point out that the Alps did not keep the white barbarians out of Italy, and that the Nile Valley was open to the Negroes into Egypt. One observer, recently returned from an intensive tour of Africa and himself apparently a racial equalitarian, nevertheless feels compelled to include these sentences in his report:

"Why, when in China, India, Mesopotamia, and on the Mediterranean coasts and islands, men isolated almost completely from one another, during some 5,000 years independently developed writing and metal tools, invented compasses, built temples and bridges, formulated philosophies, wrote books and poems—why, then, did similar progress not occur in Africa?

"I posed the question to many Africans. Their answer: The desert, the heat, disease, isolation—and always these words: 'For centuries our most vigorous young men were taken off as slaves.'

"The answer falls short. China has a desert; India's climate is as hot and as unhealthy; Mesopotamia indeed is hotter—and was surrounded by deserts. As for the slave trade, why were the Africans not making slaves of the Portuguese and the Arabs?"

This report, prepared by the assistant to the publisher of Time magazine, goes on to seek justification for the equalitarian viewpoint in the modern intelligence test and the modern performance of the exceptional Negro, answers which fall as far short as the others. The field of the intelligence test, like the field of Boas' anthropology, is filled with wishful thinking, with comparisons of the better Negroes and the poorer whites, with studies of mulattoes whose successes are largely proportionate to the admixture of white genes, and with similar avoidance of the essential point, namely, that in matters of race either the average of one must be compared with the average of the other, or the best of one must be compared with the best of the other.

If we are to compare averages, there is probably no better laboratory than the rural area around Chatham, Ontario, Canada. Chatham is a town at the northern end of the pre-Civil War underground railroad where a community of the descendants of escaped slaves has existed for 100 years. The social and economic situation of Negroes and whites in the rural area around Chatham is approximately equal. The schools have always been integrated, yet the tests of Negroes in these rural schools show them, after 100 years, to be as far below the whites in the same schools as the Negroes in the schools of the South are below the whites in the schools of the South. Dr. H. A. Tanser, now superintendent of schools at Chatham, published a study of this matter in 1939. The study is never mentioned by the modern school of equalitarian anthropology, but you will find it in the Library of Congress. Did your Department give it consideration?

In this connection, you are perhaps aware that Dr. Audrey M. Shuey, chairman of the department of psychology at Randolph-Macon Woman's College, published a report in 1958 surveying and summarizing the results of 40 years of intelligence tests involving whites and Negroes. Dr. Shuey took her B.A. at the University of Illinois, her M.A. at Wellesley, and her Ph. D. at Columbia. Her book contains a foreword by Dr. Henry E. Garrett who was formerly president of the American Psychological Association, the Eastern Psychological Association, the New York State Association of Applied Psychology and the Psychosomatic Society. In his foreword, Dr. Garrett says:

"Dr. Shuey finds that at several age levels and under a variety of conditions, Negroes

regularly score below whites. There is, to be sure, an overlapping of scores, a number of Negroes scoring above the white medians. This overlap means that many individual Negroes achieve high scores on the tests. But the mean differences persist. Dr. Shuey concludes that the regularity and consistency of the results strongly imply a racial basis for these differences. I believe that the weight of evidence supports her conclusion."

Dr. Shuey states that "the remarkable consistency of test results * * * all point to the presence of some native differences between Negroes and whites determined by intelligence tests," and she adds the significant comment: "The tendency for the IQ's of colored children to become progressively lower with increase in age has been reported by a number of investigators who tested Negro children * * *. One is confronted with the probability of a continuance during adolescence of what seems to be a widening gap between the races." I recognize that Dr. Shuey's report was not extant at the time of the Brown decision, but a large part of her material was available, and in my opinion should have been submitted to the Court. I repeat that I do not consider the intelligence test decisive, as I believe character to be more important than intelligence, but in answer to those who use the intelligence test to support theories of racial equality, surely Tanser's and Shuey's material belonged in the record.

If, on the other hand, we compare the best with the best, the discrepancies are even clearer. I had occasion to ask Kluckhohn a question with respect to a statement in his "Mirror for Man" at page 126. This statement reads: "It is true that the total richness of Negro civilizations is at least quantitatively less impressive than that of Western or Chinese civilization." I asked Kluckhohn if he would mind defining in what respects he found it qualitatively as impressive. I told him I was curious as to one poem equal to Milton's "Paradise Lost," one history equal to Gibbon's "Decline and Fall," one novel equal to Dickens' "David Copperfield," one playwright equal to Shakespeare, one philosopher equal to Aristotle, one medical discovery equal to Salk's polio vaccine, one military leader equal to Napoleon, one inventor equal to Edison, one physicist equal to Einstein, one pioneer equal to Columbus, one statesman equal to Lincoln, one composer equal to Beethoven, one painter equal to Rembrandt. I have received no reply, but Kluckhohn's at least quantitatively seems to me typical of the deceptive words used by our modern equalitarian anthropology. The Court should not have been left in the dark on this tendency. Although they do not specifically cite Kluckhohn, he is one of the leaders of the modern school on which Myrdal rests his case.

I have found that a favorite method used by Boas and Kluckhohn for throwing dust in the eyes of the public is to create an impression that there is really no such thing as race. Although Kluckhohn begins the third paragraph of the fifth chapter of his "Mirror for Man" with the sentence "There are undoubtedly human races," he nevertheless entitles this chapter "Race: A Modern Myth." His thesis is that culture, not race, is what makes human beings what they are. Yet nowhere is the obvious fact examined that culture is absorbed, refined and advanced in proportion to racial capacity. There are, of course, certain modifying variables, among the chief of which are climate and economic conditions. The white culture of New England differs from the while culture of the Deep South, but not as much as the white culture of southern Florida differs from the black culture of Haiti, where the climate is approximately the same. That is to say, the effect of the variables is clearly less decisive than the fundamental difference in race.

Undoubtedly an individual or group, taken out of the cultural environment of their own race and brought up in that of another, will sometimes absorb some features of the culture of the new environment, but in such instances they become parasites upon the culture of the second race. They are carried up, or carried down, as the case may be, by the overwhelming impact of the environment of the second race. Their own capacity to contribute to, and to sustain, a culture can only be judged by the performance of their own race in its native habitat. And if that capacity is low, then too many of them, too freely integrated, must inevitably in the long run lower the culture of the second race.

There have, not unnaturally, been situations in wihch a race has captured the spark of culture in one habitat but not in another. In the case of the fall of the Roman Empire, the barbarians were, broadly speaking, members of the same race as the conquered. Here we find two branches of the white race, one of which had produced a culture while the other had not, and here the Boas theory of historical accident is tenable. Similarity of tinder permitted passage of the spark. It was still the white race that absorbed, and eventually carried forward, the Roman culture.

The essential question in this whole controversy is whether the Negro, given every conceivable help regardless of cost to the whites, is capable of full adaptation to our white civilization within a matter of a few generations, or whether the record indicates such adaptation cannot be expected save in terms of many hundreds, if not thousands, of years, and that complete integration of these races, especially in the heavy black belts of the South, can result only in a parasitic deterioration of white culture, with or without genocide. I am certain neither you nor the court, nor any significant number of Northerners would knowingly shackle upon their racial brothers in the South against their will a system which would produce either of the latter results. The sin of Cain would pale by comparison.

Yet to my mind it seems obvious that all the facts, and a preponderance of theory, are against Myrdal and his authorities. I would go so far as to say that in the last 50 years anthropology has been drafted to serve the demi-goddess of equalitarianism instead of the goddess of truth, and that the modern school in this field has a stern judgment to face, both at the bar of American public opinion and at the hands of two generations of youth whose thinking has been corrupted by it. One does not build a healthy society on error. One faces the truth, and deals with it as best one can.

I pass now from Myrdal, and the sources upon which his more general assumptions rest, to the remaining authorities cited in footnote 11. All of these deal primarily with the adverse psychological effect of segregation upon Negroes and only secondarily with its alleged adverse effect upon white children. Nowhere is any study cited of a third question, namely, of the quite possible adverse effect of integration upon whites in schools with large percentages of Negroes. Was any such study made and presented to the Court?

The third question was well put by William Polk in his book "Southern Accent": "If the Negro is entitled to lift himself up by enforced association with the white man, why should not the white man be entitled to prevent himself from being pulled down by enforced association with the Negro?" This question seems particularly important in view of the patent partiality of the authorities cited in favor of integration. The majority of these appear either to belong to Negro or other minority groups, or to have prepared their studies under the auspices of such groups. To expect these groups to present impartial reports on the subject of racial discrimination is like expecting a saloonkeeper to prepare an impartial study on prohibition, or a meatpacker to pass an unbiased judgment on the humane slaughter bill. Their point of view is important and deserves consideration. Many of them are brilliant and consecrated men. But to permit them to provide the overwhelming preponderance of the evidence is manifestly not justice. If this is compounded by an absence of any consideration of the damaging effect of integration upon white children, it becomes doubly serious. While the brief for the State of Virginia touches upon the subject, it seems to me that the people of the United States, whom you represented, had a particular interest in seeing it more fully developed. I would appreciate your directing me to such a study, if one was made, and, also, your providing me with some explanation as to why the evidence on damage to the Negro was from such partisan sources.

Any American worthy of the name feels an obligation of kindness and justice toward his fellow man. He is willing to give every individual his chance, whatever his race, but in those circumstances where a race must be dealt with as a race, he realizes that the level of the average must be controlling, and that the relatively minor handicap upon the superior individual of the segregated race, if it be a handicap at all, must be accepted until the average has reached the point where the desire for association is mutual.

This leads me to my final query. I will be frank to say that I was startled at the uncritical manner in which the Supreme Court was allowed to accept one phrase in the language of the lower court, to wit: "A sense of inferiority (produced by segregation) affects the motivation of a child to learn." Did neither you nor counsel for any of the appellees take occasion to point out that if a child is by nature inferior, enforced association with his superiors will increase his realization of his inferiority, while if he is by nature not inferior, any implication of inferiority in segregation, if such there be, will only serve as a spur to greater effort? Throughout history, challenges of this sort, acting upon individuals, groups and races of natural capacity, have proved a whip to achievement, times without number. The point was one of the legal hinges on which the case turned. In fact without it the decision falls apart, for there is no other even remotely arguable excuse why separate facilities cannot be made equal within any possible stretch of the meaning of the 14th amendment. Consequently, I would have thought it imperative that you raise it.

Sincerely yours,

CARLETON PUTNAM.

---

## Waste? Don't Mention It

EXTENSION OF REMARKS

OF

## HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. HAYS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial dated March 19, 1959, from the Miami Herald entitled "Waste? Don't Mention It."

This editorial and the many letters I am receiving indicate that I am not alone in believing that more publicity on our foreign military aid expenditures would be in the public interest.

WASTE? DON'T MENTION IT

Any 1 of the 18,000 spies Life magazine reports in the service of the Soviet Union could, with pencil and paper, a nodding acquaintance with figures, and a copy of the U.S. budget, quickly determine what this country spends on defense by specific categories.

What happens to the billions spent on foreign military aid, however, is a secret. It is a secret from the American people themselves.

These expenditures, country by country, are a mystery for security reasons. Now, no one can object to security if it's buttoned up all four ways. But we are thinking of the security of these tax dollars themselves; specifically, assurance that they are being spent properly.

The mournful evidence suggests that in some areas quite the reverse is true. "A congressional committee," reported our Washington bureau recently, "has found new evidence of stealing and waste in the foreign military assistance program."

The few vague disclosures of a House foreign affairs subcommittee may only scrape the well-paved surface. Without cost or scenes of the crime, they are:

A motor pool in a friendly foreign country equipped with enough U.S.-made truck tires to make 44 available in 1 year for every vehicle.

Apartment houses erected in a nameless client country with material and equipment supplied by the United States for military construction.

Aircraft material diverted from military planes to private planes maintained by certain foreign generals.

The subcommittee ruefully concluded, however, that it couldn't name names. It was informed that this would reflect unfavorably on officials or policies of allied nations and provide the Communists with material which would be used to create dissension among our allies.

Protocol, we'll concede, is peachy. But is the taxpayer to be stolen blind in order to protect the tender sensibilities of allies who, in some instances, let their venality betray their very weakness as allies?

We think not. A great deal is at stake. Here in Florida, for example, postwar foreign aid has cost the taxpayers of this State $1,572,438,400 on a population basis since July 1, 1945.

Not all, or nearly all, of this was wasted. But it represents in money what Florida must raise to operate its State government for the next 4 years.

A little publicity, we think, might take the blush off this unconscionable bloom. We are sympathetic with Representative WAYNE L. HAYS, of the selfsame House subcommittee, who threatens, just for a starter, to disclose what some dictators got.

The irony of it all is that the dictators are threatened militarily by no one save their own people.

---

## Address by John A. McCone, Chairman, Atomic Energy Commission

---

EXTENSION OF REMARKS

OF

## HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. DOOLEY. Mr. Speaker, on March 2 last, John A. McCone, Chairman of the United States Atomic Energy Commission, delivered a speech at the Westinghouse 18th annual science talent search banquet at the Statler Hotel, Washington, D.C., which was not only intensely interesting to the young and mature who were gathered there but was also inspiring to all who heard it.

Mr. Speaker, I ask that I be permitted to include Mr. McCone's remarks in the Appendix of the RECORD.

Mr. McCone envisioned a day when biological research will take over the central problems of agriculture, when techniques of irradiation are developed for ridding the soil of the diseases that plague it, and when eventually cheap and simple techniques of irradiation will greatly diminish the need for costly refrigeration, thus making it possible for vast numbers of people to enjoy good foods.

Mr. McCone's speech gave the intelligent young people who were the award winners of the talent search program a new and broader horizon to look out upon, and his comprehensive pronouncement gave the young winners increased confidence in looking toward the future.

Mr. McCone's remarks follow:

Reflecting on the circumstances that brought you to the Capitol, to be honored for what you have done in competition with your gifted contemporaries, and to be applauded and encouraged by your elders for having chosen science as a career, I was reminded of Max Planck's bitter commentary on the state of science in an earlier day. "New scientific truth," the famous physicist complained, "does not triumph by converting its opponents and making them see the light. It triumphs because its opponents eventually die."

It is no longer thus. Surrounding science today is a prestige brighter than that attaching to any other profession. One distinguished scientist stands foremost among the President's advisers, to counsel him on the vast national programs upon which rest our security and our technical progress. Another is a member of the Atomic Energy Commission, coequal with his colleagues. Other scientists sit in the Pentagon councils of the civilian secretaries and at the elbows of the generals and admirals who together guide our defense programs. Science is penetrating ever more deeply into industry, in all of its more revolutionary manifestations. The voice of the scientist everywhere commands respect and widening authority.

In electing science and engineering as a life pursuit, you have wisely entrusted your fate to a lifting wave. May all good fortune attend you, for your country stands in urgent need of the talents which you embody. I propose, too, to extend my congratulations to Science Service and the Westinghouse Electric Corp. for their wisdom in seeking out and giving a helping hand to boys and girls with your precious talents. In recent years, and especially since the Soviet sputniks, we have heard much about the so-called crisis in the scientific side of our educational system. It is to the everlasting credit of Science Service and Westinghouse that they, in partnership, have for nearly two decades, in this real and constructive way, prepared against the occurrence of such a crisis.

It has been said that youth is much too good to be wasted on the young. That cynicism of middle age may not, however, apply to those endowed with a scientific turn of mind. Whatever else it may be, science, like youth, is venturesome; and while the scientists is expected in the nature of his discipline to be humble in the presence of truth, he is seldom humble in its pursuit. The finest work of many of the world's outstanding theoretical physicists, we are told, was done before they were 30. I am not suggesting that any of you need burn yourselves out so soon, but rather that you have chosen a field where the gifts of youth, its courage and drive, and its imagination—are more swiftly appreciated than may be the case elsewhere.

Give thought to what awaits you. In my youth, the moon in its heavenly firmament represented something that was remote and utterly unapproachable. Now, technicians not much older than yourselves are shooting rockets at it. I was still a boy when, after demonstrations of courage and endurance that seemed at the time to exemplify the farthest reaches of the human spirit, the poles at the opposite ends of the earth were gained by small parties of men, thrusting forward with dogs, sledges, and ponies. Now, your contemporaries and mine are reaching into space, as confidently as if it were hardly farther away than tomorrow. They are pondering the strange signals emanating from the outermost galaxies. They are experimenting with machines which, before long, I am sure, will enable man to touch the stars. Your generation could well be the one that will usher in another of the mighty climaxes in the human experience—the discovery of worlds and systems beyond our own.

The stars beckon. Let us not forget, however, that this tired, old planet that we call the earth will continue to stand in need of constant thoughtful attention. You will not lack here, when your time comes, for opportunities that will put a high premium on audacity and imagination. Our cities and countryside groan under the weight of traffic that may eventually choke our growth, unless our engineers come up with automatic systems for regulating it. Our air is becoming crowded; the task of controlling the future vast flow of air traffic, in the interest of safe and orderly movement, will call for inventions and techniques which now at best are only dimly surmised. Hunger and disease plague many parts of the world. Too much of mankind is condemned to dull, dispirited toil. To improve the lot of many by banishing hunger, easing pain, and mitigating toil, while broadening man's store of knowledge—here lie opportunities and, it seems to me, duties that must hold your minds and hearts for the rest of your days.

I should like to tell you about some of the things that the great Federal Commission, with which it is my honor to be associated, is attempting to do about these vast human needs. While the development of nuclear weapons for the defense of the Nation is the principal responsibility of the Atomic Energy Commission, it is by no means our only interest. Under our charter from Congress, and at the direction of President Eisenhower, we are also charged with finding and encouraging peaceful uses for the atom. The Government, no less than the universities and industry, recognizes the importance of basic research. The scientists associated with the Atomic Energy Commission are not bound only to projects aimed at some immediate and wholly practical end. On the contrary, the Commission sponsors many hundreds of research projects in both the physical and life sciences, and in collaboration both with industry and the universities. Our research programs in the physical sciences range across physics, chemistry, and metallurgy, and inevitably engage us in that most fundamental of scientific studies—the structure and behavior of matter. Under these programs the Commission has sponsored the construction of several large particle accelerators—for example, the Cosmotron at Brookhaven and the Bevatron at the University of California's E. O. Lawrence Laboratory at Berkeley. Previously unknown nuclear particles are being produced in considerable variety by these

machines; they are to be thought of precisely as tools for exploring more deeply into the mystery of matter. A still more powerful machine is being built at Brookhaven which will accelerate particles to energies of perhaps 30 billion electron volts. That is five times better than the existing Bevatron can do. The world's fastest runner could not sprint around the half-mile circumference of this machine in much less than 2 minutes. A football field could be laid out inside with room to spare.

In a field as broad and new as nuclear energy, the line between basic and applied research is of necessity often a dim and wandering line. For example, in the course of seeking a more efficient reactor fuel element—in itself a utilitarian goal—we stand a good chance of coming up with a new finding in the fundamental properties of matter.

I emphasize this agreeable coexistence of applied and basic research under the Atomic Energy Commission's roof for the reason that some of you may, as I would hope, be attracted to this field. The research projects which we sponsor at many universities make use of graduate students as research assistants. The Atomic Energy Commission also offers certain specialized training courses at the graduate level, and you may be drawn to them. Beyond that, our laboratories have need for scientists in many disciplines. Let me hasten to add, however, that I am not trying to place a recruiting blank in your hands. You will do well, I am sure, wherever your bent may lead you. My only purpose in advertising the attractions of nuclear science is to suggest the excitements of discovery, the breadth of learning, that it offers to an active scientific mind.

Much has been written about the grievous problems with which the military atom has confronted civilization. Not enough has been said about the enhanced dignity and amelioration which its other implications can and will bring to the lot of mankind. The process of nuclear fission, in addition to making available unprecedented amounts of energy for military purposes, also makes possible, among other things, the production of large quantities of radioactive materials, called isotopes.

Almost every common element has one or more radioactive counterparts. Occasionally some of these may occur freely in nature. More often they can and must be produced by exposing materials to nuclear particles in accelerators or reactors. No doubt some of you have already used small quantities of radioisotopes in your laboratory work. As your scientific education continues you are certain to encounter them again. Radioisotopes are versatile tools. In research they are widely used as tracers for tracking the progress of specific batches of atoms through various processes in living and lifeless material. Through their use we have come to have a much more certain knowledge of many biological processes, such as cellular metabolism and photosynthesis. As did the microscope, the radioisotope has given science a means for peering into the workings of nature that have heretofore been hidden from us.

Some of the basic research sponsored by the Commission in biology and medicine has, for its end, the exploration of means for curing disease and mitigating pain. If men are wise, the benign influence of the atom will eventually dwarf its military implications. One of our tasks is to determine the beneficial effects of nuclear radiation on living things. Our studies here are taking the Commission's scientists and the staffs of the universities associated with us into wholly new fields of inquiry relating to the causes and treatment of cancer and similar diseases; into the effects of radiation on heredity and, of course, the protection of our own workers, as well as the public, from the hazards of radiation.

We shall presently put into operation at the Brookhaven National Laboratory on Long Island a medical research reactor, in association with a 48-bed research hospital. Patients whose afflictions have defied the conventional resources of medicine will be exposed, under careful controls, to beams of radiation from ports in the reactor. All this, I grant, is in the early stages, yet already we sense that the products of fission, once they are better understood, will give the medical profession a new means of abating man's agony of pain.

These same products promise to be no less useful in helping to banish the age-old spectre of hunger. Our biological research is taking us ever deeper into the central problems of agriculture. Techniques of irradiation are developed for ridding the soil of the diseases that plague it; for improving fertilizers and further increasing the productivity of the land; and also for the longer preservation of its products. The time may not be far off when comparatively cheap and simple techniques of irradiation will greatly diminish the need for the costly processes of refrigeration and thus benefit vast populations in remote areas.

The Commission is also deeply engaged in the business of finding new ways of reducing the misery of toil. That will come about, in due course, as our scientists and engineers together with their counterparts in other countries, develop reactors for converting the great energy of the atom into industrial power at an economical cost.

The dramatic discoveries that were set in train by the construction of the first atomic pile in 1942 have paralleled your own brief lives, your own introduction to science. You will know, without my reminding you, that a working reactor can be designed according in any one of literally hundreds of ways; that it can be fueled with uranium 235, or uranium 233, or plutonium; that its fuel may come in a solid state or as an aqueous slurry or as a metal liquid compound; and that a wide variety of materials, from water to highly complex organic fluids, can be used for carrying off the heat of the reactor. It is this very plenitude of possibilities that currently somewhat confounds us. Somewhere among them are certain combinations and permutations that will be more efficient, and, therefore, more economical than the rest. For these, our physicists, chemists, metallurgists, and engineers are always searching.

In our country, for example, the search for an economical power reactor is concentrated, for the time being, on what might be described as six fundamental concepts. All six are being carried through the research and development stage by the Commission, in collaboration with private industry and public power interests. Once we learn what we need to know about them, the choice will be further narrowed to the few types that prove to be most efficient, and around these, no doubt, the national power program will develop. At this stage, however, with ample sources of relatively cheap energy, the American approach to nuclear power is chiefly along the path of finding the best scientific solution. In Europe, by contrast, where the cost of energy is rising as the existing sources of fuel begin to diminish, or else have become vulnerable to political action, the economic logic is forcing an earlier commitment to large relatively inefficient plants. Dramatic developments, then, are in the making—developments that will test the ingenuity and imagination of your generation.

As you must also know, the Atomic Energy Commission is also sponsoring basic research into practicable methods for the controlled release of energy from fusion—an enterprise which we call "Project Sherwood." The known methods all employ the principle of heating a thin gas to about the temperature of the sun and holding the gas in position by electromagnetic fields. It is a bold concept and a risky and fantastically tricky one, and it would be a rash man who claimed that a demonstration of its practicality, at least in an economic sense, was imminent. Yet, we must thrust toward this prospect with all possible diligence—the volume of energy waiting to be released by the discovery of controlled fusion is so great as to make all the other means available to us seem insignificant by comparison. If we succeed in tapping this source of energy, our civilization may never again have cause to worry about the supply of energy-producing fuels.

Distant as this possibility may be, it nevertheless is there—a challenge to engage the imagination. Achievement of this goal could conceivably transform the lot of modern man quite as dramatically as the discovery of fire and the wheel enriched the lot of primitive man. Meanwhile as we search for this solution, you and I have much to learn about putting to peaceful and creative work those forces of the atom which we now control.

The AEC's Plowshare program is another first step in that direction. Our scientists are convinced that nuclear explosions will be safely utilized before long for blasting out harbors in places where nature failed to provide a harbor; for breaking open mountains laden with otherwise inaccessible minerals; for shattering deep deposits of shale and releasing the oil locked up in them; and even for generating heat energy that can be transformed into electricity. All this, to be sure, is hardly more than a gleam in the scientific eye; the logic nevertheless is plain. The need exists, and if anything in this world is certain, it is that the idea embodied in Plowshare will one day draw a straight and fruitful furrow across an earth that craves energy to liberate man from toil and physical frustration.

I wish all of you well. You start your education in the scientific disciplines with the advantage of unusual endowments of the mind and spirit. May I, as one who was trained as an engineer in a less exacting era, suggest that you do not overlook the other equally rich disciplines with which the interests of science intermingle. To be a specialist and know just about everything about one segment of the physical universe may make for a successful career; it is scarcely enough, however, to make for a successful life.

The 18th century venerated the encyclopedic man as the finest expression of civilization—the man equally at home in philosophy, the sciences, art, and politics. That ideal has all but disappeared, except in specimens that have become exceedingly uncommon—men, say on the order of Winston Churchill, whose grounding in the sciences was intuitive, and of the late Albert Einstein, whose grasp of the humanities was spacious.

The everexpanding regions of knowledge make it impossible for even the most learned mind to grasp more than a fraction of what is significant. At the same time, the pressure for specialization tends to make a specialist hermetic and, perhaps, too well satisfied within the bleak limitations of his specialty. The life of the fully developed man, the truly cultured man and woman, is characterized by an articulation of knowledge linking the physical sciences with the humanities and the social sciences.

I leave with you Dr. Conant's definition of the meaning of an education:

"Our purpose is to cultivate in the largest number of our future citizens an appreciation both of the responsibilities and the benefits which come to them because they are American and free."

## The United West

EXTENSION OF REMARKS
OF
## HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. LINDSAY. Mr. Speaker, on Wednesday, March 18, 1959, the New York Times published an excellent editorial on the subject of the President's Berlin speech. I have taken the liberty of including the editorial in the Appendix of the RECORD as it points up the importance of the speech in setting the stage for Prime Minister Macmillan's visit.

The editorial follows:

THE UNITED WEST

President Eisenhower's excellent speech of Monday night has won such a warm welcome at home and abroad as to demonstrate anew the basic solidarity of the Western World. The speech is being hailed both for its clear warning to the Soviets that the West is determined to stand fast in Berlin and for its renewed declaration of Western willingness to negotiate "at any time and under any circumstances," even at the summit level, as the better alternative to war.

At home, where it was supplemented by Senator FULBRIGHT'S equally able speech, the President's address is being endorsed by spokesmen of both parties. Abroad, the British welcome the speech as a good preparation for Prime Minister Macmillan's visit to Washington because it shows the difference between negotiations and appeasement. The Germans, especially the West Berliners, take new confidence from it. The French emphasize their solidarity with NATO, and even statesmen as far apart as Prime Minister Nehru and Japanese Foreign Minister Fujiyama see new hope in it.

It is clear that if Premier Khrushchev's tactics were intended to drive wedges between the Western allies and between their governments and their people they have failed. The Kremlin can no longer have any illusions on that score.

President Eisenhower has put the Soviets on notice on two points particularly which the Western World will have to keep in mind. One is that the American Government has no illusions about the continued Soviet drive for world domination, in which Berlin is merely a steppingstone toward further conquests. We are therefore determined, together with our allies, to defend free Berlin not only for the sake of its free people but also to preserve the alliances on which our own security and that of the West depends.

The second point is that the American Government will not negotiate under a time limit, or limited agenda, or any other unreasonable terms dictated by the Soviets. It will attend a summit meeting willingly, but only if a foreign ministers' meeting opens up the way of "meaningful," "sincere" and "serious" negotiations, with the promise of worthwhile results. Whether the way for such action is so opened is up to the Soviet leaders.

If the President's speech fell short in any respect it was in the lack of a positive political program to oppose the Soviet program. But while he excluded a "flexibility" that undermines our alliances and security he did declare himself ready not only to consider any new ideas but also to "present others." In this lies the promise that a positive program will begin to emerge after Mr. Macmillan's visit.

Meanwhile, Congress could well take positive action to back up the President in this crucial time by supporting the mutual security program and by a specific resolution placing itself and the people of this Nation behind the President's stand on Berlin.

## Land Promoters on the Public Domain

EXTENSION OF REMARKS
OF
## HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. ASPINALL. Mr. Speaker, may I draw the attention of my colleagues to the following timely statement and warning on land promoters appearing in the January issue of Our Public Lands, a publication of the Bureau of Land Management, Department of the Interior.

A serious situation exists today in California and some other States from the entrance of unethical speculators and promoters into the public land locating business. The perils of dealing with a public land locator were pretty well known 50 years ago, but in the upsurge of demand for public lands today people tend to be unsuspecting. Some promoters—not the ethical ones—prey on the natural desire of people to acquire a public land tract and their inexperience in public land matters. Advertising widely, and issuing vague promises, promoters have induced tens of thousands of people to pay exorbitant fees for professionally inadequate services in making out applications that have little or no chance of success.

Actions taken by better business bureaus and State officials, in cooperation with Federal departments, are helping to remedy this problem. The Nevada Legislature in 1957 brought public land locating within the State real estate code. However, the only certain way for an individual to escape entanglements with unethical promoters is to refuse to do business with them in the first place.

The statement follows:

WHAT ABOUT LAND LOCATORS?

Every day scores of people ask the Bureau of Land Management about so-called land locators and filing services.

Land locators and filing services are people or businessmen who perform various services for public land applicants for a fee. None of these people or businesses is licensed or regulated by the Federal Government. Land locators often perform such jobs as examining the status of lands on the public land records, inspecting the character of public lands on the ground, filling out application blanks, or preparing supplementary information that may be required with an application for public lands.

The Government does not require anyone to hire a land locator or a filing service. All that is necessary is that the applicant comply with the laws and regulations and submit a proper application.

Whether a person wishes to hire a land locator or filing service to assist him in finding a suitable tract of vacant public land, and in preparing an application, is strictly a matter of choice for the individual.

The Bureau of Land Management neither encourages or discourages the use of such services, and BLM cannot furnish the names or addresses of any people or firms doing this kind of work. However, anyone who is thinking about hiring a land locator or filing service should make absolutely sure he is dealing with a reputable organization. Above all, anyone who employs a land locator should find out exactly what services the locator will do in exchange for his fee—sometimes people have paid exorbitant sums for the doing of something which they could have done themselves at a nominal cost.

The regulations usually require that an applicant be personally acquainted with the land sought. If a locator prepares an application for your signature without first taking you to the land, and identifying it from survey markers, you should hesitate to sign the application.

All applications received by the Bureau of Land Management are considered on their own merits. No one would receive any kind of special treatment or consideration simply because he had filed his application through a land locator. All BLM information, data, records, maps, and other materials which are available to land locators and filing services, are also available to anyone who is interested in filing an application. Land locators receive no special or inside information that is not available to anyone else.

Though some land locators are completely honest businessmen who perform services for the public, some other land locators and filing services have engaged in land promotional schemes that, while staying just within the letter of the law, border on unethical or fraudulent practices. When in doubt, an applicant should contact the local better business bureau or real estate regulatory agency and obtain their opinion.

In general, most locator services complete their contract with an applicant when he receives the official receipt from the Land Office.

Some people have mistakenly thought that this receipt meant their application had been approved. The Land Office receipt is not an approval of the application or a permit to occupy or use the land. The receipt is only an acknowledgment that the application and service fees have been received by BLM and are now on file. The receipt in no way implies that an application will eventually be approved.

In the real estate business realtors do not usually earn their fee until the final sale has been completed. Up until that time, a person only makes a deposit of earnest money to show his good faith. If the deal later fails, through no fault of the prospective buyer, the realtor will return the money deposited. People doing business with land locators or filing services would do well to obtain similar agreements. This would mean that a person would not lose his money if his application is later denied. Such arrangements, of course, would have to be worked out directly with the locator or filing service.

Anyone who is planning on filing an application with the Bureau of Land Management, should, of course, fully inform himself about what it is necessary for him to do. He should also find out how much the Government will charge for filing the application, and also how much the land or resources would cost if he dealt directly with the Government. In general, the service fee for filing an application with BLM is $10.

As far as filling out an application is concerned, BLM employees will be happy to assist anyone by answering questions or furnishing information, either in person or by mail.

Only if people are fully informed about their rights and about the requirements of the law and the regulations can the public be sure their interests are fully protected—and only in that way can the Bureau of Land Management effectively perform its public service responsibility.

## Pennsylvania Badly Needs Enactment of Sound Distressed-Areas Legislation as Embodied in H.R. 3466 and S. 722

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following area redevelopment factsheet compiled by the Area Employment Expansion Committee with headquarters in New York City. This particular report deals exclusively with the distressed economic areas of the State of Pennsylvania.

AREA EMPLOYMENT EXPANSION COMMITTEE,
*New York, N.Y.*

AREA-DEVELOPMENT FACTSHEET NO. 53—PENNSYLVANIA

Pennsylvania ranks among the first of the States troubled with problems of urban distressed areas. Six major labor markets and 11 smaller labor markets meet the requirements for assistance in removing distress under the formula of S. 722. Under the administration bill, S. 1064, four major labor markets and two smaller would be eligible. Under the Senate committee bill, S. 722, four major labor markets and five smaller labor market areas would be eligible for assistance.

Of the seven labor markets which now have substantial labor surpluses but are not eligible under S. 722, six will be entitled to benefits later in 1959, and one in July 1960 if unemployment continues at present levels. As for S. 1061, in addition to the six labor market areas currently eligible, three labor markets will become eligible in 1960, six in 1961, and four in 1962. Under S. 722, in addition to the nine currently eligible, six will meet the qualification in 1960, and four in levels (table I).

In November 1958, the total unemployed in the State were 452,000, of whom 155,500 were in the distressed labor markets (under S. 722) and 312,700 were in the substanial labor surplus areas. Less than 10 percent of the Pennsylvania labor force is in labor markets with unemployment rates under 6 percent.

The total number of jobs which would have to be created in the currently distressed labor markets (under S. 722) to reduce unemployment below the 6-percent level would be 56,474 (table II).

In table III, we report for each area separately the unemployment rates for distressed areas qualifying under S. 722.

In table IV, we report for each area separately the unemployment rates for other areas of substantial labor surplus.

In table V, we report the annual averages of unemployment rates for the years 1955, 1956, 1957, and 1958 for areas of substantial labor surplus.

Pennsylvania has made persistent efforts to help the individual communities to remedy their structural unemployment. Local development agencies have applied themselves assiduously to this task. Several have been given awards for their efforts. Pennsylvania has been a State which has striven arduously to remedy the conditions. But the best local efforts have not been sufficient. The problems have grown in size and scope. These areas need a Federal program to provide them with technical assistance, to guide them in their planning, to help them with grants for public facilities and loans for public facilities and industrial and commercial structures.

The problems of Pennsylvania's distressed communities are largely those of communities which are undergoing vast structural changes as new industries have appeared and displaced older ones. The coal mining industry has lost out to oil and to other areas with more accessible coal; railroad repair shops have been closed as diesels have displaced steam engines, textile mills have been shut as the silk industry has given way to synthetics; apparel shops have migrated as cheaper labor markets lured away the employers; the demand for railroad transportation has been curtailed by the growth in the use of the automobile and the airplane.

The distressed areas must be redesigned in order to prepare them to receive and attract new industries and employments. Such an effort requires new public facilities, and the retraining of workers, and the upgrading of communities. This task can be undertaken and successfully completed with the aid of the Area Redevelopment Act.

TABLE I.—*Pennsylvania—Areas of "substantial labor surplus," March 1959, by status of current eligibility and earliest date of future eligibility under S. 1064, S. 722, and committee S. 722*

| Labor market areas | Status of current eligibility | | | Earliest date of future eligibility | | |
|---|---|---|---|---|---|---|
| | S. 1064 | S. 722 | Committee S. 722 | S. 1064 (before 1963)[1] | S. 722 | Committee S. 722 (before 1962)[2] |
| A. Major: | | | | | | |
| Allentown-Bethlehem-Easton | | | | | July 1959 | |
| Altoona | X | X | X | | | |
| Erie | | X | | 1961 | | 1960 |
| Harrisburg | | | | | July 1960 | |
| Johnstown | X | X | X | | | |
| Philadelphia | | | | | July 1959 | |

## Connecticut's Stake in Area Redevelopment Legislation

EXTENSION OF REMARKS
OF
## HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. BOWLES. Mr. Speaker, there is a growing interest in Connecticut over the area redevelopment legislation now under consideration in the House Banking and Currency Committee.

This morning the Connecticut General Assembly's Joint Committee on State Development held public hearings on a resolution relating to the legislation. I prepared the following statement for that hearing. It deals with the general aspects of area redevelopment legislation, the situation in Connecticut, and how our State would benefit from the proposed legislation.

This statement expands the testimony I gave to Subcommittee No. 3 of the House Banking and Currency Committee yesterday and includes up-to-date statistics on Connecticut unemployment.

STATEMENT BY CHESTER BOWLES ON AREA REDEVELOPMENT LEGISLATION TO CONNECTICUT JOINT COMMITTEE ON STATE DEVELOPMENT IN HARTFORD, MARCH 20, 1959

I am very glad that the Joint Committee on State Development is undertaking a study of area redevelopment legislation at a time when hearings are being held in Washington with widespread interest in the legislation developing here in Connecticut.

Because of its great importance to us in Connecticut, I shall go into the legislation in some detail.

I shall describe what I believe are the broad merits of my bill, H.R. 3450, what the situation is here in Connecticut and how it would benefit from the legislation. I shall also take up some of the questions and objections that have been raised concerning the legislation.

A FEDERAL RESPONSIBILITY

The extent of our recovery from last year's recession is a debatable point. For the nearly 5 million people still unemployed, the recovery has been very slight, indeed.

This bring us back to one of the main pieces of legislation passed since World War II—the Employment Act of 1946. This legislation recognized the responsibility of the Federal Government to help assure maximum full employment.

This new area redevelopment legislation—which Senator PAUL DOUGLAS introduced in the Senate and which I and others introduced in the House—recognizes our responsibility to alleviate unemployment of a per-

sistent and chronic nature wherever it exists.

The President, too, has given verbal support to this responsibility in his economic reports to the last three Congresses. The administration bills that have been offered to Congress have accepted the principle, though the effort to make the principle an actuality is a very limited one.

Very simply the motivation of this legislation springs from a natural instinct to help eliminate innocent suffering.

In my mind, there is a close analogy between the reasons for extending Federal aid to communities stricken by the sudden disaster of a flood or tornado and the reasons for extending aid to communities stricken by a more gradual disaster—whether it be the exhaustion of a coal mine that had previously been a primary source of employment, or the closing of a railroad line or the transfer of a textile mill hundreds of miles away.

In both situations, the men and women in these communities are faced with suffering and hardship through no fault of their own.

In eastern Connecticut and in other parts of the State, many people have lost their jobs because a textile mill closed down.

These are people who have worked for many years, who have developed very high skills. They have sunk deep roots into their communities. Their children are in school, their homes are paid for, their friends and relatives live nearby.

Yet all of a sudden they find themselves out of work. And they wonder what happened to the opportunity and bright future they had dreamed about.

Sometimes you hear the statement that in time these problems will work themselves out, that the people will sooner or later move elsewhere and find work.

I reject that philosophy. I think we have moved far beyond the harsh laws of economics reflected in statements of this sort. Such an answer to our problems would not only inflict great hardship on the individuals involved and uproot their lives, but it would also foster a costly and totally unnecessary wasting of human and material resources that have been built up over the years. It would be a waste of the potential and skills of the people, and it would be a waste of the schools, stores, hospitals, banks, office buildings, homes and churches.

THE ECONOMIC ADVANTAGES

When you look at the economic side of this situation, the reasons for area redevelopment legislation become even more compelling.

With the threat to our security from the Soviet Union growing more critical and with the needs for schools, roads, hospitals in this country becoming increasingly great, we cannot afford the continued wasting of our vital human and material resources.

By attacking this problem of chronic unemployment head on wherever it exists, we can greatly increase our national productivity and job opportunities.

At the same time, by putting our idle plant and human capacity to work, we can greatly increase the tax revenue needed to keep our economy on an even keel. Consider how much revenue we are losing by allowing 10 percent of our plant capacity and 6 percent of our human capacity to lie idle.

By putting these wasted resources to work, we can also cut down on the amounts that the Federal, State and local governments now have to spend in providing unemployment compensation and other relief measures.

CONNECTICUT CONDITIONS

Now let me briefly sketch the situation here in Connecticut.

This is, of course, a highly industrialized State with one of the most progressive administrations in the country. Under the dynamic and farsighted leadership of Gov. Abraham A. Ribicoff, we have made tremendous strides in improving our living and working conditions which, in turn, have attracted many new industries to the State.

Our roadbuilding, slum clearance, law enforcement, and unemployment compensation programs are among the most progressive in the country, and the citizens of Connecticut can be justly proud of their accomplishments.

Yet, like many other States, we have problems that require Federal assistance to bolster our vigorous State and local efforts.

One of the most pressing of these problems is that of alleviating the chronic unemployment that has been caused by our hard-pressed textile and related industries.

At present, the three areas having the most serious difficulties are those of Danielson, Norwich, and Bristol, including the surrounding communities. Danielson, which is in my own district, has been the hardest hit of all for the longest period of time.

In 1955 the population of the Danielson area—which includes Putnam, Brooklyn, Canterbury, Eastford, Killingly, Plainfield, Pomfret, Sterling, Thompson, and Woodstock—was a little more than 47,000. The textile industry provided more than 40 percent of the total manufacturing employment of 11,460.

Since 1955, however, the area has been practically denuded of this vital industry with the closing of more than 18 textile plants.

As a result, the per capita income has dropped in this area to the lowest in the State and this has caused a decline in business generally throughout the area. Fewer new homes are being built and fewer cars are being bought. Unemployment, as of this last January, was twice as high as the national average.

The people of Norwich, many of whom I know very well, have had similar though less severe difficulties.

In 1954 the textile industry accounted for more than half of the manufacturing employment in that area—which includes Bozrah, Colchester, Franklin, Griswold, Lisbon, Preston, Sprague, and Voluntown.

In the last 10 years, the textile employment declined from 6,500 to 2,200. Here too the total unemployment is nearly twice the national average.

Bristol has been hard hit by the decline in the nonelectrical machinery, brass, instruments, and clock industries. By last January its unemployment had risen to almost three times the national average, with 16.7 of the labor force out of work.

Other areas are also suffering similar difficulties. The Thompsonville area, for instance, lost nearly 1,000 jobs with the closing of the wool, yarn, and velvet carpet mills of the Bigelow-Sanford Carpet Co.

BENEFIT TO CONNECTICUT

Now how would this area redevelopment legislation help us?

There has been some talk that Connecticut cities and towns would benefit very little from the legislation.

This depends on which bill is passed.

Under the administration bill, only two areas—Danielson and Bristol—would qualify.

However, under my own bill, which is similar to the one introduced by Senator DOUGLAS, Connecticut would be eligible for much greater assistance.

If this bill is passed and signed, more than half of those now unemployed—48,400 people—would be included in the cities and towns that would be eligible for assistance by this July unless there is a marked upturn in employment between now and then.

Looking at it another way, Connecticut is made up of 18 labor market areas. By July 14 of them would be eligible for assistance.

Right now, according to the Connecticut Development Commission, 55 Connecticut cities and towns are eligible under my bill. These communities are included in 8 labor market areas designated by the Department of Labor as: Ansonia, Bridgeport, Bristol, Danielson, Meriden, New Britain, Norwich, and Torrington.

Unless employment improves by July, 78 more communities will have been added. These are the communities surrounding the labor market areas designated as Danbury, Middletown, New Haven, Thompsonville, Waterbury, and Willimantic.

From this standpoint, Connecticut's stake in the program makes the legislation a matter of vital State interest.

PROVISIONS OF THE BILL

Briefly, this is what the legislation would provide:

Loans of $100 million for the construction and expansion of factories and other industrial projects in the eligible urban areas.

Loans of another $100 million to communities for the construction of public facilities. This would help these communities with land acquisition and the development of such facilities as access roads and sewer and industrial water supply systems to make the communities more attractive to new industries.

Loans of $100 million for the development of rural areas.

An additional $75 million in grants for the construction of public facilities.

Grants of $4.5 million for technical assistance to help communities and businessmen plan for coordinated development and growth.

Finally, it would provide $10 million in subsistence payments for 13 weeks to those undergoing vocational retraining.

At this point, I would like to call attention to a provision which I have also introduced and which I believe is of the utmost importance in speeding the development and revitalization of our hard-pressed areas.

This is a provision which would give tax relief to those manufacturers in the eligible areas who are willing to invest their own capital in expanding their facilities.

It would allow them to amortize the cost of expanding and constructing new facilities over a period of 5 years rather than over the useful life of the building, which may run to 40 or 50 years.

This rapid tax amortization provision is similar to the incentive now available to defense industries.

I have talked with a number of industrial leaders from my district and all of them have told me that of all the suggested methods of help, tax incentives would be the most effective.

Such a provision, it seems to me, would greatly encourage the investment of private capital. It would give the manufacturers greater flexibility. I believe we would get much quicker results and, in the long run, we would be more than compensated by steadily increasing tax revenues. Therefore, I plan to press for the inclusion of this provision in the final bill as hard as I can.

These, then, are the main provisions, and they are substantially greater than those provided by the administration bill.

At the same time, three quarters of the money that would be expended under the provisions of my bill are in the form of loans. These loans would be fully repaid over a period of 30 years with interest.

In other words, the bill is not a dole; it is an investment in the future.

It would go a long way toward helping these communities to help themselves to a brighter future in an economy that is constantly expanding with a population that is increasing by nearly 3 million a year.

QUESTIONS ABOUT THE BILL

This brings me to some of the fears and questions that have been raised concerning this legislation.

Some people have expressed a belief that aid to one community will only hurt some other community.

I think this is a baseless fear. It seems to me that we should be worrying whether these people who have been capriciously thrown out of work will be able to fully share in the expanding opportunities that lie ahead.

They have worked hard, and so have the local and State governments, to adapt to changing economic conditions. Area redevelopment legislation would help them realize their full potential, which might otherwise go to waste.

Second, it has also been said that many of our local communities which would be eligible for help are not now prepared to participate in the program under the formula stipulating that the State and local governments must contribute a share to any loan that is made.

This is, of course, no reason to oppose the legislation. Certainly our Connecticut communities are just as well prepared to take advantage of the program as the communities in any other State. What we should be doing is making plans to get prepared, rather than spending our time fretting about the difficulty.

Third, there is a suspicion that Connecticut might not get as much aid as the other States, so that any Federal assistance would work to our disadvantage.

I covered this point earlier with the fact that 14 of our 18 labor market areas would probably be eligible for assistance by July. You couldn't ask for much more. It is obvious that Connecticut would be as eligible for as much aid for urban industrial development as any other Northern State, and far more than any Southern State.

Finally we come to an argument that apparently has caused some confusion here in Connecticut.

ANTIPIRACY PROVISION

This has to do with the so-called antipirating provision of the legislation. Very simply, it is argued that if we pass this bill, other States, particularly those in the South, will use the Federal assistance to steal industry away from Connecticut.

I must say here that this is a completely irrelevant concern.

In the first place, all the proposed area redevelopment bills, including my own, contain antipirating provisions which would prohibit the use of Federal funds to assist industries in relocating when such assistance would result in a detriment to the original area by increasing unemployment.

Now there have been some semantic arguments over exactly how this provision should be worded. Many of the proponents of the bill are worried that some of the amendments that have been proposed would invite a lawsuit each and every time someone makes an application for a loan. If this happened, the whole program might be wrecked.

But the worry that the bill would allow other States to steal industry from Connecticut is groundless on the face of it.

Of course, there are going to be a certain number of transfers of industry from one State to another. There always have been in this competitive world of ours, and there probably always will be.

But the allocation of funds under this area redevelopment program is not going to encourage industries to leave New England or Connecticut one bit. On the contrary, the bill can only work to our advantage.

In the first place, our State has more to offer than any other I can think of. We have progressive and friendly State and local governments. We have many cities with excellent facilities, many beautiful communities to live in, and an abundance of every kind of skilled labor. For these reasons alone, there is every reason to face the future with confidence.

The provisions of the area redevelopment bill would only enhance the prospects of a bright future for us in Connecticut.

The whole purpose of the bill is to help us restore and revitalize industrial and public facilities in certain handicapped communities, to make them once more attractive places in which to live and work.

By so doing, we will encourage, not discourage, the location of new industries in Connecticut. By improving our community conditions, the bill would also provide an incentive for our existing industries to stay and expand their operations.

Looking at it from another angle, I mentioned before that $100 million would be available for the development of urban areas. Another $100 million would be available for the development of rural areas.

Now almost all the eligible urban areas are located in the northern States, and I have already pointed out that Connecticut would participate as fully as any other northern State. Only a very few eligible urban areas are located in the southern States.

On the other hand, most of the eligible rural areas are located in the South, with only a few in the North. So that the South, of course, would receive most of the $100 million for rural development, to enable them to form farm cooperatives, or develop timber resources, or limestone quarries, or what have you.

The important fact, however, is that almost all of the funds for industrial development would go to the northern States.

With this being so, how can anyone say that the area redevelopment program would help the South in an effort to steal industry away from Connecticut? It just isn't so.

I hope this clears up some of the misunderstandings and questions that may have arisen over area redevelopment.

The legislation is perfectly sound in its conception, generous and sympathetic in its motivation, and fair in its application.

Last year the legislation received broad bipartisan support in Congress and from our Connecticut Representatives. It would be deeply unfortunate if such support should be lost through political division.

Connecticut has too much to gain from this legislation to let this happen.

Following is a list of the Connecticut cities and towns which are, or may be, eligible for area redevelopment assistance, and three tables showing the unemployment in the major labor market areas:

The labor market areas now eligible, according to the Connecticut Development Commission, are: Ansonia, Bridgeport, Bristol, Danielson, Meriden, New Britain, Norwich, and Torrington.

These areas include the following surrounding communities:

Shelton, Derby, Oxford, and Seymour in the Ansonia area; Easton, Fairfield, Monroe, Stratford, and Trumbull in the Bridgeport area; Plymouth in the Bristol area; Brooklyn, Canterbury, Eastford, Killingly, Plainfield, Pomfret, Putnam, Sterling, Thompson, and Woodstock in the Danielson area; Southington and Wallingford in the Meriden area; Berlin and Plainville in the New Britain area; Colchester, Franklin, Griswold, Lisbon, Preston, Sprague, and Voluntown in the Norwich area; and Burlington, Hartland, Barkamsted, Canaan, Colebrook, Cornwall, Goshen, Harwinton, Litchfield, Morris, New Hartford, Norfolk, North Canaan, Salisbury, Sharon, and Winchester in the Torrington area.

The following areas will have become eligible by next July if unemployment does not improve: Danbury, Middletown, New Haven, Thompsonville, Waterbury, and Willimantic.

These areas include the following surrounding communities:

Bethel, Brookfield, New Fairfield, Newtown, Redding, Ridgefield, Sherman, Bridgewater, Kent, New Milford, Roxbury, Warren, and Washington in the Danbury area; Chester, Clinton, Cromwell, Deep River, Durham, East Haddam, East Hampton, Essex, Haddam, Killingworth, Middlefield, Old Saybrook, Portland, Westbrook, and Marlborough in the Middletown area.

Bethany, Branford, East Haven, Guilford, Hamden, Madison, North Branford, North Haven, Orange, West Haven and Woodbridge in the New Haven area; East Windsor, Enfield, Suffield, Windsor Locks, Ellington, Somers, Stafford, Tolland, Union, Vernon, and Willington in the Thompsonville area; Bethlehem, Thomaston, Watertown, Woodbury, Beacon Falls, Chesire, Middlebury, Naugatuck, Prospect, Southbury and Wolcott, in the Waterbury area; and Lebanon, Andover, Columbia, Coventry, Hebron, Mansfield, Ashford, Chaplin, Hampton, Scotland, and Windham in the Willimantic area.

TABLE I.—*Connecticut.—Ratio of unemployment to the labor force in distressed areas* [1] *1957–59*

| Labor market area | January | February | March | April | May | June | July | August | September | October | November | December | Annual average |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Smaller: | | | | | | | | | | | | | |
| Bristol: | | | | | | | | | | | | | |
| 1957 | 7.6 | 6.5 | 6.5 | 6.8 | 5.9 | 5.9 | 7.9 | 7.2 | 6.6 | 8.1 | 9.5 | 11.3 | 7.5 |
| 1958 | 17.1 | 16.7 | 18.0 | 21.8 | 20.9 | 23.4 | 27.8 | 19.0 | 17.9 | 16.5 | 14.5 | 13.1 | 18.9 |
| 1959 | 16.7 | | | | | | | | | | | | |
| Danielson: | | | | | | | | | | | | | |
| 1957 | 7.7 | 7.1 | 6.5 | 6.7 | 6.0 | 6.5 | 10.7 | 8.9 | 7.8 | 9.2 | 11.8 | 12.4 | 8.4 |

## Farmer Needs a Road to Progress

EXTENSION OF REMARKS

OF

## HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. YARBOROUGH. Mr. President, in the settling of our Nation, our forefathers often faced a dead-end road. However, this did not stop them from going forward. Where the road stopped, they pushed forward unafraid and by their hard work carved a new road out of the wilderness.

Today, legislation affecting American agriculture needs the same type of pioneers. A recent editorial in the St. Louis Post-Dispatch says American farm policy has come to a dead end. The end has come in an impenetrable forest of policies of the Eisenhower-Benson guidance which have done nothing but drive the family sized farmer off his land.

Yet, as the late Theodore Roosevelt expressed it, "It is not the critic that counts." We cannot merely criticize the Eisenhower-Benson farm policy mess; we must act.

Even as we deliberate here, the situation on the farm worsens. And having been brought up on an East Texas farm myself, I know from experience what this means. Secretary Benson is still cutting at the price support levels. More and more people may be forced off the small farms, and into cities which cannot provide jobs for them.

The challenge is for us to come up as quickly as possible with a farm program which will not only bring the farmer out of the difficulties in which he has been placed during this administration, but will assure him of a fair share of the food dollar in the future.

Mr. President, I highly commend to the attention of the Congress the editorial I mentioned earlier, and ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the St. Louis Post-Dispatch of January 26-February 1 under the heading "Dead End on the Farm."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEAD END ON THE FARM

Nothing emphasizes the dead end to which American farm policy has come so strikingly as President Eisenhower's message on the subject. Mr. Eisenhower demonstrates beyond doubt the bankruptcy of the present program, based upon price supports and a vain attempt to limit production by acreage controls. But there he stops. He has no new or better program to suggest as an alternative. He merely proposes to tinker with the parity formula and other regulations so that the existing program might not cost so much.

There are two basic errors in this approach. One is the wishful thought that if we can just keep whittling the price support pro-

gram down each year, eventually the Government can get out of farm policy altogether and leave agriculture to the joys of "free" supply and demand. This has always been the philosophy of Secretary Benson and it is the most gossamer moonshine on all counts.

Economically it would be unjust as well as impractical to require agriculture alone to operate in a free market while big business administered its prices and big labor bargained its wages. From the standpoint of the long-term national welfare, it would be unwise to cut agriculture adrift; the national economy cannot permanently prosper with the farm economy permanently depressed.

Politically, also, any hope of substituting no farm program for the present farm program is unrealistic: agriculture's power, though shrinking, is still big enough to forestall complete abandonment of national concern for farm income and welfare.

The second false premise of the Eisenhower-Benson approach is the belief, reiterated year after year, that by just reducing the level of price support bit by bit the surpluses of unwanted farm products can be eliminated. Mr. Benson has been picking at the price support levels for 6 years now, and today's surpluses are bigger than they ever were. Is it not clear that marginal reductions in the guaranteed price do not significantly reduce production, but on the contrary add an incentive to produce more in order to offset the lower price level? The enormous gains in farm productivity have far outstripped any restraints on production imposed by lowering the support levels, and can be expected to continue to do so.

But if price supports don't work, as the President rightly says, the practical remedy is not merely to whittle them down but to devise a farm program that will work. Admittedly this is not easy. But there is no question that the Democrats face a great opportunity for the display of a creative statesmanship which the Eisenhower administration has been unable to muster.

The difficulty is that if the Democrats do devise a new program they will be tempted merely to superimpose it upon the present program. That is the way of politics. We believe there must be a strenuous effort to construct a substitute, not merely a supplemental, farm policy. If production payments are adopted for one crop, then price supports should be abolished for that crop. There can be no thought of increasing a subsidy which now amounts to 40 percent of net farm income. If anything the total subsidy must be cut, and at the same time made more effective.

Two basic principles, it seems to us, should underlie a new farm policy: first, the wise use of our farm productivity to relieve hunger abroad and to raise living standards at home; second, the dedication of government effort to the support of farm income rather than prices. In the first case, we must be careful not to injure other food producing countries or disrupt the regular channels of trade; in the second, we must guard against unlimited subsidy and interference with the steady increase of farm productivity. These problems need not be insoluble if agreement can be reached on the broad principles.

## A Defense of the Farm Program

EXTENSION OF REMARKS

OF

### HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. MANSFIELD. Mr. President, in the St. Louis Post-Dispatch for the 14th of March of this year there appeared a news story entitled "A Defense of the Farm Program," by Lauren K. Soth, of the Des Moines Register and Tribune, which covers in part an address which he made in Minneapolis.

I think it is important to call this article to the attention of the Senate, not only because of the esteem and prestige in which Mr. Soth is held in the Midwest, but because—and this is personal—he is going to occupy the chair in journalism at the University of Montana at Missoula very shortly.

In defense of the farm aid program, Mr. Soth points out the cost to the public in the form of taxes. The Department of Agriculture budget is one of the largest nondefense items in the Federal budget—in recent years it has amounted to from 5 to 7 billion dollars a year. This huge sum often is labeled as a farm subsidy, and despite attempts by some farm leaders to put the facts straight, the myth still lives on.

The greater part of the budget goes for general services which are of benefit to the entire population, not to just farm people. These services inclu'e scientific research, education, grading of farm and food products, market reporting, the Forest Service, soil conservation work, and a great many other activities. The budget also includes such things as the rural electric cooperative loans, which are being repaid on schedule and can hardly be lumped off as a subsidy.

According to the Department of Agriculture's calculation, the cost of programs for stabilization of farm prices and income never amounted to as much as $1 billion a year until 1955. In 1955 it amounted to $1.4 billion; in 1956, $1.9 billion; and in 1957, $3.3 billion. The 1958 figure may be still higher, but it will be a long way from the $7 billion often labeled as farm subsidy.

Even these Department of Agriculture figures on cost of farm income supports are somewhat misleading. The $3.3 billion for 1957 include more than $600 million loss to the Commodity Credit Corporation from sales of farm commodities to foreign countries. There is a question whether this loss should be called farm subsidy or foreign aid. The Commodity Credit Corporation also lost $171 million in 1957 from the sale or donation of farm products in this country, including distribution in the school lunch program. Is this general welfare program all to be charged as subsidy to farmers?

The American consumer has done very well under the farm programs. The proportion of his income spent for food has declined steadily. It is true that people buy more packaging, more precooking and other services with their food. But they spend relatively less for the food itself than they did before the farm programs began.

The average income of farm people, including money value of house rent and food and fuel consumed on the farm, was about half the average income of city people in the midthirties. Farm income per person today is about half of nonfarm income per person. So farm people are no better off compared with the rest of the population than they were in the midthirties.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD this article from the St. Louis Post-Dispatch, which was originally given by Lauren K. Soth, of the Des Moines Register and Tribune in an address in Minneapolis, Minn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DEFENSE OF THE FARM PROGRAM—IOWA EDITOR SAYS POLICY HAS FED NATION, LOWERED FOOD COSTS WITHOUT UNDUE SUBSIDY

(By Lauren K. Soth, of the Des Moines Register and Tribune, in a Minneapolis address)

Our kind of farm problem, overproduction, is a serious one for farmers, to be sure. But from the general public point of view, it is not a problem at all; it is a mark of magnificent achievement. The American people have no worries about being short of food. Agriculture is not a limiting factor on economic growth in this country. Yet many Americans seem to have the idea that farming is a horribly inefficient industry, heavily subsidized and mismanaged by the Government.

First, let's look at the cost to the public in the form of taxes. The Department of Agriculture budget is one of the largest nondefense items in the Federal budget, in recent years it has amounted to from $5 to $7 billion a year. This huge sum often is labeled as a farm subsidy, and despite attempts by some farm leaders to put the facts straight, the myth still lives on.

The greater part of the budget goes for general services which are of benefit to the entire population, not just to farm people. These services include scientific research, education, grading of farm and food products, market reporting, the Forest Service, soil-conservation work, and a great many other activities. The budget also includes such things as the rural electric cooperative loans, which are being repaid on schedule and can hardly be lumped off as a subsidy.

In the last 25 years the Federal Government has been trying to protect agriculture against the effects of its own abundance, by price supports, direct payments for making acreage adjustments, putting land into soil conserving uses, and so on. How much have these subsidies amounted to? According to the Department of Agriculture's calculation, the cost of programs for stabilization of farm prices and income never amounted to as much as $1 billion a year until 1955. In 1955 it amounted to $1.4 billion; in 1956, $1.9 billion; and in 1957, $3.3 billion. The 1958 figure may be still higher, but it will be a long way from the $7 billion often labeled as farm subsidy.

Even these Department of Agriculture figures on cost of farm income supports are somewhat misleading. The $3.3 billion for 1957 include more than $600 million loss to the Commodity Credit Corporation from sales of farm commodities to foreign countries. There is a question whether this loss should be called farm subsidy or foreign aid. The Commodity Credit Corporation also lost $171 million in 1957 from the sale or donation of farm products in this country, including distribution in the school lunch program. Is this general welfare program all to be charged as subsidy to farmers?

The reason why price supports cost the Government so much money is that farm production controls have not worked. The drive to improve farm technology, spurred by Federal and State research and educational programs, has been a far more powerful force. Or, to say this the other way around: If farm production controls were effective, market prices of farm products would be above the support levels. So the cost of farm income supports would not ap-

pear in the Federal budget. Instead it would appear in the price of food, and the public would pay all of it in the food bill instead of partly in the tax bill. That's the way tariff subsidies are paid, of course they don't loom up in the Federal budget.

One more point should be mentioned. A sizable proportion of the cost of farm programs consists of payments to private warehousemen, exporters, and other handlers of grain, dairy products and cotton. No one should assume that all the money for farm programs goes to farmers.

The American consumer has done very well under the farm programs. The proportion of his income spent for food has declined steadily. It's true that people buy more packaging, more precooking and other services with their food. But they spend relatively less for the food itself than they did before the farm programs began.

The average income of farm people, including money value of house rent and food and fuel consumed on the farm, was about half the average income of city people in the midthirties. Farm income per person today is about half of nonfarm income per person. So farm people are no better off compared with the rest of the population than they were in the midthirties.

Far be it from me to defend all the farm acreage-allotments, price-support and other programs. Many of them have been ill conceived. The price supports on a few basic crops have been a clumsy way of trying to protect farm income in a period of overabundance. Acreage controls haven't worked well and have led to some distortions in production. We need to be looking for better ways of stabilizing farm income.

But a good case could be made, I think, that the net effect of acreage changes under the allotments, plus incentive for better land use through conservation programs, plus the reduction of uncertainty through price supports, have advanced the overall efficiency of agriculture, increased total output and lowered food costs to consumers.

## Hawaiian Statehood—Self-Determination at Work

EXTENSION OF REMARKS
OF
### HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. KEATING. Mr. President, the admission of Hawaii as the 50th State demonstrates to the world that America continues to adhere to the important concept of self-determination. In an editorial on March 16, the Rochester (N.Y.) Democrat and Chronicle underscores the value of Hawaiian statehood as an object lesson to the world which the United States would do well to disseminate far and wide abroad.

I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAWAII BOLSTERS U.S. PRESTIGE

The obvious joy with which Hawaii is welcoming statehood does far more than bolster the prestige of the United States. It is a comforting development at a time when the tides of nationalism are running badly in the opposite direction.

When our country acquired Alaska, the Philippines, and Hawaii, there were charges that we wished to become an imperial power. In recent years the Communist propagandists have kept this myth alive.

We have denied the accusation and have backed our sincerity with deeds. The Philippines have become an independent Republic. That was what the Filipinos wanted. Alaska has become a State. The Alaskans asked for it. Now the Hawaiians will shortly become the 50th State. It was their wish. Could there be any better evidence of self-determination at work?

Even more heartening is Hawaii's object lesson to the world. As a number of examples in Asia and Africa have taught us, the eagerness of many countries for independence and freedom pathetically exceeds their readiness to assume the attending responsibilities. The obvious happiness of the Hawaiians testifies against an ill-advised nationalism, to a choice freely made and to the good intention of the United States to share its strength with this newest of States.

Let us hope our Government makes the most of this unexcelled opportunity for American propaganda.

## Proposed Youth Conservation Corps

EXTENSION OF REMARKS
OF
### HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Here's an Idea That Could Help East Kentucky," from the Courier-Journal of Louisville, Ky., of February 25, 1959.

The editorial praises our colleague, the distinguished senior Senator from Minnesota [Mr. HUMPHREY] for developing and introducing his bill to create a Youth Conservation Corps.

The editorial points out that while providing employment and educational opportunities for 150,000 young men, it would also give great aid in the protection, preservation, and improvement of our natural resources. It says that if the matter is handled with good judgment, its cost must be regarded as an investment rather than as a simple expenditure.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HERE'S AN IDEA THAT COULD HELP EAST KENTUCKY

In considering projects which might bring help to the distressed areas of eastern Kentucky, a proposal by Senator HUBERT HUMPHREY, of Minnesota, should be put high on the list. His proposal is known as the youth conservation corps bill.

In brief, what he proposes is creation of a 150,000-man organization made up of youths between 16 and 22 who would work in the Federal and State forests and parks and on other publicly owned lands.

Purpose of the corps would be twofold. First, it would provide a work force which would narrow the gap between what needs to be done to protect, preserve, and improve our natural resources. Secondly, it would provide employment and educational opportunities for these youths.

Both these objectives are badly needed in eastern Kentucky. Private landholders working in cooperation with Government agencies have been doing an excellent job in recent years in that area to get trees planted and to protect the steep slopes against washing. In the Cumberland National Forest and in the State park and forest areas other projects have been carried out.

But the potential for improvement and development of natural resources, especially trees and recreation areas, still remains tremendous. As Robert F. Collins, supervisor of the Cumberland forest, has pointed out in the past, recreational facilities in that area alone could attract 2 million to 4 million visitors a year if they were developed properly. At present there are practically no facilities of this sort in that area. In addition, there are serious problems resulting from strip-mining operations.

We know, too, that a greater percentage of the forest area of Kentucky is occupied by various species of oaks than any other type of forest. This is a valuable asset. But this resource is being threatened seriously by the dread oak wilt disease. Unless it is controlled, there is a danger that oaks will disappear as the chestnut did.

These are just a few of the projects that need immediate attention. Foresters and conservationists could expand the list manyfold.

The creation of such a Youth Conservation Corps would cost money. The proposal is to pay the youths $78 a month, provide food, clothing, medical care, transportation and education.

But the possibilities for return on such an outlay are so obvious that the cost, whatever it might be, must be regarded as an investment rather than as a simple expenditure.

## The Unemployed

EXTENSION OF REMARKS
OF
### HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. PROXMIRE. Mr. President, the Congress is on the verge of taking action for or against several measures which would do something about unemployment. I have seen no more eloquently expressed reason for congressional action than an editorial that was published in the New York Times of yesterday.

I ask unanimous consent that the editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE UNEMPLOYED

The complex human reality behind t[he] unemployment statistics was spelled out soberingly in these pages a day or two ago. The picture painted has nothing in common with the ancient stereotype of the unemployed as the shiftless and the lazy.

The former Rhodes scholar who can speak six languages, the West Virginia coal miner with 8 children who has not had work since December 1957, the 22-year-old steelworker who hitch-hiked back to Pennsylvania from California in 5 days when mistakenly he was told he had been recalled to work, these and many more like them want to work but cannot find jobs. For the individuals affected there is not only economic distress, but also loss of self-respect and a growing alienation

from our otherwise prosperous society. For the Nation as a whole the millions of unemployed represent an enormous loss every day their energies, their talents, and their knowledge go unused.

The basic answer to the unemployment problem, of course, must be the revival of demand for goods and services to a level high enough to provide employment for the majority of the almost 5 million persons out of work. Whether such a revival will take place this year when Government and Federal Reserve policy are centered primarily upon efforts to restrain inflation is a hotly debated issue. But it is clear that if the present relatively high level of unemployment—high in relation to postwar experience though far below that of the 1930's—continues for long there will be powerful pressure for Government action to assure jobs for all who want them, regardless of the consequences for the price level.

But, beyond the basic issue of resumed economic growth, attention also needs to be directed at the special problems of important groups of the unemployed. Should special economic stimuli be applied to specially depressed areas, or should efforts be made to retrain surplus workers, say in the coalfields or in Detroit, and to help them move to other areas where expanding output provides new opportunities? What can be done for the elderly unemployed—say those over 35 or 40—who are turned away time and again on the ground they are too old? These and related prolbems need serious thought and not-too-long-delayed action. The unemployed are our fellow Americans and their desire to work is a legitimate desire and one which our society must satisfy.

## Radio Anniversary in California

EXTENSION OF REMARKS

OF

### HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. KUCHEL. Mr. President, a fascinating new chapter in the romantic history of radio broadcasting is being written in my State of California.

Recent research has established that the first regular transmission of programs of news and entertainment by radio occurred from a pioneer station in San Jose, Calif. Previously, the historians of broadcasting had agreed that this activity and characteristic American enterprise, which has become an invaluable medium of mass communication in every civilized country, had its beginnings in the early twenties at station KDKA, in Pittsburgh, Pa.

Out of tattered pages and personal memories have come facts which establish the claim of station KCBS, the San Francisco outlet of the Columbia Broadcasting System network, that its direct predecessor, station KQW, in San Jose, first started sending its programs over the airwaves in January 1909.

The year 1959 is, therefore, the golden anniversary of broadcasting. This is truly a historic occasion, which is being appropriately celebrated with ceremonies in California. The observance will be climaxed on April 3 by placing a plaque on the American Trust Bank Building, in San Jose, the site of what a half century ago was the home of Herrold Station, San Jose.

Painstaking research to verify the claim of this station to the title of the world's first broadcast transmitter was done by Gordon B. Greb, assistant professor of journalism and advertising, at San Jose State College. A gripping narrative of his digging into the past is the lead article in the winter edition of the Journal of Broadcasting, published at my own alma mater, the University of Southern California.

Because of the significance of this discovery, I ask unanimous consent to have printed in the Appendix of the RECORD a news story summarizing his findings, as published in the San Francisco Chronicle on February 15, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAN JOSE SLATES RADIO ANNIVERSARY

The golden anniversary of broadcasting will be celebrated in April at San Jose, site of pioneer radio station KQW.

A plaque will be placed on the American Trust Co. Building in downtown San Jose where in January 1909, Charles D. Herrold first started broadcasting music and news over a 15-watt transmitter audible to crystal set owners within a 15-mile radius of the town.

Known simply as Herrold Station, San Jose in the days before call letters were assigned by the Federal Communications Commission, the station later became KQW, and remained so until 1949, when it was bought out by KCBS.

Herrold died in Hayward in 1948.

The San Jose station's claim to first place in broadcasting was recognized by Dr. Lee de Forest in a speech at the World's Fair on Treasure Island in 1940. Dr. de Forest had used the station's regular music schedule at the Panama Pacific International Exposition here in 1915 to demonstrate his receiving set. Herrold broadcast 6 to 8 hours a day at that time.

(Most authorities have overlooked Herrold's pioneer broadcasting, usually naming station KDKA, of Pittsburgh, Pa., as the first broadcaster in 1920.)

Herrold's broadcasts incorporated the basic elements of radio: He borrowed records from a San Jose music store, in return for advertising plugs over the air; his news reports were taken from the headlines of the San Jose Mercury; and he even had the world's first female disc jockey—his wife, now Mrs. Sybil M. True, of San Jose.

The civic celebration in San Jose, planned for the first week in April, is sparked by Gordon Greb, journalism professor at San Jose State College, who has spent considerable time digging up proof of Herrold's pioneer broadcasting activities.

NEW "FIRST" CLAIMS KCBS PREDECESSOR BEGAN IN 1909—GREB

Another claim to the honor of the "first" broadcasting station was entered Sunday (February 15) on behalf of KCBS, San Francisco, in an article in the current issue of the Journal of Broadcasting, Technical Journal of Broadcast Educators. KCBS now is owned and operated by CBS, Inc.

Writing in the University of Southern California publication, Gordon E. Greb states, "Notwithstanding the many claims to 'first broadcasting' * * * there is considerable evidence supporting a California station's claim as being the granddaddy of them all because of its 50th birthday this year."

To support his thesis, Mr. Greb utilizes personal papers of the station's founder, Charles David Herrold; conversations with his contemporaries, and a speech by radio pioneer, Dr. Lee de Forest.

According to Mr. Greb, Mr. Herrold opened his radio school in San Jose's Garden City Bank Building January 1, 1909. "From the first, broadcasts were a part of my routine," Professor Herrold wrote in a letter to Lee de Forest in 1940. "In spite of continual changes in apparatus there was always music of some sort coming from my station."

These first broadcasts were more than 3 years before Congress enacted the Radio Act of 1912. The radio law then required licenses and call letters from voice transmitters. Prior to this time, Mr. Herrold's operators simply announced, "This is San Jose calling" and went into their news and music.

The article states that early in experimental stages, the call FN was used. Experimental land licenses 6XE and 6XF preceded the call SJN which was first used in 1913. And, in 1921, when licenses were first issued under the classification of broadcasting, the San Jose station became KQW. Later it moved to San Francisco and in 1949 the call letters were changed to KCBS.

In 1948, Mr. Herrold, who was a classmate of Herbert Hoover at Stanford University, died at the age of 72.

Ray Newby, Mr. Herrold's assistant and an instructor in his school, when interviewed recently by Mr. Greb, stated the station early in its operation went on a prearranged schedule so "we would have listeners that could report to us." At first the schedule was a half-hour every Wednesday evening on which news, records, and voice were broadcast for a half-hour and sometimes longer if the microphones and everything didn't get too hot. Later, the station went on a daily schedule.

Mr. Greb writes that Mrs. Sybil M. True, Mr. Herrold's first wife, told him the station aired records borrowed from a local store, directed to teenage amateur set operators. She said "They would run down the next day to be sure to buy the one they had heard on the radio. We would ask them to come in, and sign their names. And, unintentionally laying claim to radio's first giveaway program, she added. "And we would give a prize away each week."

The Panama Pacific Exposition in San Francisco in 1915 gave Mr. Herrold an opportunity to demonstrate his arc system of broadcasting, a system which operated on the same principles that cause streetlamp arcs to hum and sing. Mr. Herrold's programs were picked up by receivers at a Government booth at the World's Fair, and when Dr. De Forest found his tube-transmitter would not work, he tuned in Mr. Herrold's San Jose station to demonstrate his own receiving set.

To conclude substantiation of his claim, Mr. Greb cites a 1940 incident at the San Francisco World's Fair. Dr. de Forest, in an address to the Veteran Wireless Operators Association on Lee de Forest Day, said, "Very appropriately, the rebirth of my earliest broadcasting began here on the Pacific coast when * * * station KQW at San Jose maintained regular transmissions. * * * That station KQW (now KCBS), can rightfully claim to be the oldest broadcasting station of the entire world * * *."

Another honor will be bestowed on Mr. Herrold on April 3, 1959, at the site of his old spark transmitter, when the San Jose State College undergraduate chapter of Sigma Delta Chi, professional journalistic fraternity, places a historic marker on the Garden City Bank Building, stating that it was here that the "World's first regular broadcasting station" had its beginning.

## Biographical Sketch of Milan D. Smith, Leader of Mormon Church in Washington, D. C., and in Oregon

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. NEUBERGER. Mr. President, an excellent biographical sketch appeared in the Washington Post and Times Herald of October 25, 1958, regarding Milan D. Smith, leader of the Morman Stake, in the District of Columbia, and formerly an outstanding foodpacker and civic leader in my home State, at Pendleton, Oreg.

Milan D. Smith originally came to Washington as an assistant to Secretary of Agriculture Ezra Taft Benson, and he is known throughout the Nation as a noted religious and spiritual leader.

I ask unanimous consent that the article about Milan D. Smith, entitled "Head of District Mormons Is Also Top Businessman," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEAD OF DISTRICT MORMONS IS ALSO TOP BUSINESSMAN

(By Kenneth Dole)

When the Salt Lake Mormon Tabernacle Choir, one of the great choirs of the world, comes here next week, three former presidents of the Washington Stake and the current president will be on hand to greet it.

They are:

Ezra Taft Benson, 1940–44.

Edgar B. Brossard, 1944–48.

J. Willard Marriott, 1948–57.

Milan D. Smith, 1957– ——.

Benson is Secretary of Agriculture; Brossard, Chairman of the Tariff Commission; Marriott, founder and president of Hot Shoppes, Inc.

Smith, a man of middle height with wavy brown hair and a dark lens covering an eye blinded in an accident, has gone far and fast in 39 years in government, civic life, industry, and the Church of Jesus Christ of Latter-day Saints.

His manner is precise and self-contained, giving an impression of an efficiently functioning mechanism and hardly hinting, except in courtesy, that his leading motivation is religious. Except when he is in the West directing his business, he spends 40 to 50 percent of his time on church affairs. As President of the Stake, he is both administrator and high priest.

Mr. Smith was born in Clearfield, Utah, son of the owner of a canning company. His grandfather, a native of Corby, Lincolnshire, England, was converted to Mormonism and came to Utah in the 1860's. His mother is a sister of a former Governor of Utah, Henry Blood.

Because of the ancestral loyalty inherent in Mormonism, Mr. Smith this summer made a pilgrimage to Corby. He photographed the churches and baptismal fonts where his grandfather and great-grandparents were baptized and undertook a brief genealogical investigation. The ancestors whose names he learned will receive Mormon baptism and and be sealed in Mormon marriage in proxy temple rites.

Elder Smith first developed the speaking skill his work demands in high school, where he was a debater and school officer. After 2 years at the University of Utah (1937–39), where he specialized in business administration, he came east as a missionary.

Working out of New York, he sowed some "seeds of interest" and baptized several persons. On an errand to Washington—the shadow of a coming event—he was concerned in the creation of the Washington Stake: he turned over to Elder Benson and other Stake officials the records of missionary activity here. In 1940 there were 2,000 Mormons in the Washington-Baltimore area; since then the number has swelled to 6,300.

This has been partly due to Mormon obedience to the commandment to "multiply and replenish the earth." Mr. Smith, with nine children, has set an example. He was married in 1941 to Jessica Udall, daughter of a notable Arizona Mormon family, a year and a half after meeting her in missionary work. Their children are:

Milan D., Jr., 16; Melanie, 15; Charlotte, 14; Gregory Udall, 12; Kathleen, 11; Nicholas Albert, 10; Michael, 7; Gordon Harold, 6, and Lisa Ellen, 4.

Taking his wife to Pendleton, Oreg., he rapidly carved out a career in business, church, and civic life. With $30,000 as a borrowing base, he obtained enough bank credit to buy a $150,000 freezing tunnel. Concentrating on frozen peas ("We pride ourselves on the speed we get peas from field to freezer," 2–3 hours), and corn, he has become a leading independent frozen food processor. He also has plants in Milton-Freewater, Oreg., and Lewiston, Idaho.

A year after settling in Pendleton, he was ordained a bishop—at 23 the youngest in Mormonism at the time. At 31, he became the youngest Stake president. He retained his presidency until he came to Washington 3 years ago as Benson's executive assistant.

## Texas Senate Resolution on Foreign Aid

EXTENSION OF REMARKS
OF
### HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. YARBOROUGH. Mr. President, the secretary of the State Senate of Texas has transmitted to me a certified copy of a resolution adopted by that body on March 12, 1959, petitioning the Congress of the United States to eliminate grave and wasteful expenses in the foreign aid program.

I ask unanimous consent that the resolution be printed in the Appendix of today's RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

"SENATE RESOLUTION 191

"Whereas we are aware of the enormous sums of money required for this year's Federal budget; and

"Whereas we have become acutely aware of the problems involved in financing operations of the State of Texas and our local communities; and

"Whereas we hereby petition our National Congress to do all within their power to eliminate the grave and wasteful expenses that have been brought to our attention in the foreign aid program: Now, therefore, be it

"*Resolved*, That we hereby send copies of this resolution to the National Congress petitioning their attention to this matter.

"BEN RAMSEY,
"*President of the Senate.*"

I hereby certify that the above resolution was adopted by the senate on March 12, 1959.

[SEAL] CHARLES SCHNABEL,
*Secretary of the Senate.*

## Is the Pentagon Sacrosanct?

EXTENSION OF REMARKS
OF
### HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. BURDICK. Mr. Speaker, when acting upon appropriations for national defense, it might be well for us as Members of Congress to consider the matters raised in the following article which appeared in the New York Times on Sunday, March 16, 1959, titled "Pentagon's 'Loss' 7½ Billion in 1958":

PENTAGON'S "LOSS" 7½ BILLION IN 1958—CANCELLATION OF PROGRAMS AND DISPOSAL OF SURPLUS GOODS THE MAJOR ITEMS

WASHINGTON, March 14.—The Department of Defense, which spends a huge share of the Nation's budget, wrote the equivalent of at least $7,500 million off its books last year.

A billion of that was spent for goods the military did not need and could not use. And, though brandnew, the stuff was ultimately sold for about 8 cents on the dollar.

Most of the $7,500 million "loss" was spent on weapons and equipment that the services considered as either obsolete or wornout, and therefore useless.

For example, a "technical change" prompted the Air Force to dispose of 1,500 flight helmets for which it paid $550 apiece. Private dealers in war surplus sold them for $75 each.

About $1,500 million represented aircraft and missile programs that the military, principally the Air Force and Navy, officially abandoned as miscalculations.

SIX BILLION SEEN THIS YEAR

Further, if past experience is a reliable guide, the Pentagon will write off $6 billion worth of goods this year as "surplus."

The buying and selling of surplus military goods, incidentally, has become a $750 million a year enterprise for private industry.

Such sums aren't piddling even against the background of the administration's proposed $41 billion defense budget, now before Congress.

The question is not about whether the $41 billion is too much, but whether it's too little.

Representative GEORGE MAHON, Democrat, of Texas, and chairman of the House Subcommittee on Defense Appropriations, believes it is too little. "We can't afford to be caught short," he said.

At the same time, he noted that the military "make a lot of mistakes, tremendous mistakes, but they are largely mistakes in judgment."

CONGRESS SEEKS ANSWER

Congress has been struggling for years with the question of whether the taxpayer is getting his money's worth out of the Defense Department. The lawmakers also have been trying to persuade the military to use more businesslike procedures. It has been like pouring water on a duck's back.

The Mahon subcommittee reports that none of the services has an adequate inven-

tory system and thus has no precise idea of what it owns. Some instances were found where inventory information was 12 months out of date.

One result is that nobody knows whether the property held by the services is worth $50 billion or $60 billion.

The cost ascertainment method of the services on negotiated contracts leaves something to be desired.

Last year the military spent $23 billion on procurement and 84 percent went into negotiated contracts made without competitive bidding.

Negotiated contracts usually are on a cost-plus-fixed-fee basis and, supposedly, the manufacturer has to explain and justify his costs.

As for the abandoned programs:

Over the last 12 months the Air Force decided that the future belonged to ballistic missiles and abandoned the Navaho program, into which it has pumped $750 million. The Navaho was a jet missile.

The Air Force also abandoned its air-to-air missile program known as the Rascal, which cost $374 million. It dropped the diversionary missile program called the Goose project after spending $70 million.

The Navy gave up on the jet-type anti-aircraft missile, the Regulus, after spending $78 million. The Navy also abandoned its seaplane experiment, into which it had poured close to $200 million.

The $7,250 million written off by the department does not include the money spent by the various services duplicating each other's work.

One illustration of this: the Army spent $700 million developing the 1,500-mile-range missile, the Jupiter, before turning it over to the Air Force, which in turn has spent as much or more developing a similar missile, the Thor.

## Freedom Begins Right at Home

EXTENSION OF REMARKS
OF
**HON. WILLIAM L. SPRINGER**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. SPRINGER. Mr. Speaker, many of us in the House have introduced bills to give self-government in some form to the people of the District of Columbia. There has been newspaper comment, including editorials, all over the country about such a bill. I append herewith the following editorial from the Bloomington Pantagraph of Saturday, March 7, entitled "Freedom Begins Right at Home":

FREEDOM BEGINS RIGHT AT HOME

While we talk of freedom and self-determination in this country Congress has repeatedly refused to grant the basic right to vote to a large sector of our population. That is the District of Columbia.

A District home rule bill was passed last year by the Senate by the one-sided vote of 61 to 22, but it was bottled up in the House.

In the meantime the people of the District have no vote on any issue. Yet they pay $170 million in local taxes levied upon them by Congress. They have no say as to how their money is spent.

Whatever the national emergency, be it the Berlin crisis or sending troops to Lebanon, 31 Members of the House and Senate who constitute the District "city council" must take time to deal with the purely local issues of a big city. They were not elected by the people of the District and they are not responsible to these people.

This inefficient and undemocratic practice should be ended by granting to the people of the District of Columbia the home rule they seek and deserve. A new home rule bill has been introduced. The Senate looks favorably upon the bill. It stands just a bare chance of getting by the District Committee and onto the House floor. If this happens, the chances of passage are good.

None of us is entirely free as long as Congress denies freedom to people of an entire area in which the National Capital is located.

## Congratulations to the Post Office Department and Our Good Postal Employees

EXTENSION OF REMARKS
OF
**HON. JAMES G. FULTON**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. FULTON. Mr. Speaker, the American people send and receive two-thirds of the world's mail.

This astonishing volume now totals 61 billion pieces of mail plus a billion parcels a year.

As the Nation grows and its economy expands, the number of pieces of mail per person per year, now averaging 350, is expected to double to 700 within the next 25 years.

The major bottleneck to better and faster mail service is the time now required to sort and distribute mail in the large gateway post offices of the United States.

In most post offices mail is still sorted and distributed by costly tedious hand methods and procedures that have not changed much since Ben Franklin's day.

Until recently little or no effort was made to speed the sorting and distribution of mail in post offices by machines and methods commonly used by American industry.

The Washington, D.C. Post Office—now the world's most mechanized post office—is the latest answer to an ever-increasing problem of moving an increasing volume of mail efficiently and rapidly through a big city post office.

Major features of the first of the country's big post offices to have all possible automation and mechanization installed are:

First. A mile-long conveyor system to move 5 million pieces of mail daily in and out for more than 650 planes and trains every day and for many trucks.

Second. Five miles of "Mail-Flo" conveyor belts to move mail swiftly between mail sorting areas on the post office workroom floor.

Third. Semiautomatic letter sorting equipment to sort up to 18,000 letters an hour.

Fourth. Semiautomatic parcel post sorting equipment to handle up to 14,400 parcels an hour to 32 destinations.

Fifth. A postal laboratory for continuous development of even more advanced "postal machines of tomorrow."

These include even faster letter sorters; machines to "cull" mail—separate according to types—at high speeds; machines to "ready" addresses on letters; others to cancel and to sort letters even faster.

The modernization work in Washington, D.C., Post Office will provide mechanization experience to convert other post offices, and will be a testing ground for postal machines of tomorrow.

Under leave to extend my remarks, I include the following article from the National Rural Letter Carrier:

THE WORLD'S MOST MECHANIZED POST OFFICE IN WASHINGTON, D.C.

President Eisenhower pushed a button at the White House at 10:45 a.m., March 3d and placed the world's most mechanized post office in official operation in the Nation's Capital.

At the same time, in dedication ceremonies in the newly-modernized Washington City Post Office itself, Postmaster General Arthur E. Summerfield declared the 1914 building, which has had a complete interior face lifting, has now become a "postal showcase" that has far-reaching significance for the entire Nation.

In addition to speedier mail handling, many other improvements have been provided, Mr. Summerfield observed.

In the new "around-the-clock" lobby, he noted, open bank-type service counters greet the mailer. Nearby, machines sell stamps and postal cards, and make change. New fluorescent lighting improves efficiency, and the building will be air conditioned, with modernistic coloring. And, already, there are escalators to upper stories.

"The introduction of mechanized mail handling devices here in the modernized Washington, D.C. Post Office opens a new era in the postal service, fully as important as the start of railroad service for mail in 1831, or the inauguration of regular air mail service in 1918," Mr. Summerfield said.

Declaring the Washington, D.C. office will "produce benefits for the entire Nation," he said it will provide experience in moving the mails continuously, with minimum interruptions, in making better use of work space and in planning for the future.

The world's most mechanized post office each day will handle mail that each day arrives and departs on about 250 planes at National Airport, and will handle mail from 46 inbound and 42 outbound trains, along with other surface transportation.

Mr. Summerfield noted also the official start of the world's most mechanized post office marks the end of an era of old-fashioned post offices with methods that "have not changed much since Ben Franklin's day." These old-fashioned offices have been the "major bottlenecks to better, faster mail service," he observed.

"That is why," he explained, "this Washington, D.C., post office, with its promise of better mail service, is so important. That is why the developments that will take place here, in this working postal laboratory, have great significance for every American."

The ceremony was attended by Members of Congress and many notables. In addition to Mr. Summerfield, others who spoke included Washington, D.C., Postmaster Carlton G. Beall; Washington Postal Regional Director Malcolm R. Clarke; Victor O. Schinnerer, president, Washington, D.C., Board of Trade, and Robert E. McLaughlin, President, District of Columbia Board of Commissioners.

## European Peace Settlement

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum by the Assembly of Captive European Nations concerning the problem of a European peace settlement. The memorandum is dated February 17, 1959:

MEMORANDUM CONCERNING THE PROBLEM OF A EUROPEAN PEACE SETTLEMENT

With its ultimatum on West Berlin, dated November 27, 1958, the Soviet Union flung a new challenge at the West. Yet this Soviet diplomatic offensive, sustained by thinly disguised threats voiced by responsible statesmen of the Soviet Union at the 21st Congress of the Communist Party, has at the same time provided the West with an opening for new efforts to establish a just and lasting peace after the holocaust of World War II.

In the present political situation, Berlin has become a transcendental issue. At stake is not the fate of a city or of a country, or even of a continent, but the whole future of freedom. And, as Dr. Charles Malik, President of the 13th General Assembly of the United Nations, rightly observed on January 31, 1959, "freedom is more fundamental than peace. Peace is breached when freedom is violated".

Mindful of the opportunities the Berlin crisis presents for an attempt to extend the area of freedom and thus improve the outlook for peace, the Assembly of Captive European Nations, the free voice of the Soviet-subjugated peoples of Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania, respectfully submits its views concerning the vital necessity of seeking at this time a settlement of all the European problems deriving from World War II, including the question of the freedom and independence of the nations of Central and Eastern Europe.

I

Any overall western peace plan for Europe must provide for an equitable settlement of the political problems stemming from World War II, namely, the problem of Germany and that of Central and Eastern Europe. These problems constitute the major cause of the present international tension and of the armaments race. By their very nature, they are interconnected and indivisible.

It is generally admitted that the issue of Berlin cannot be isolated from that of the reunification of Germany. By the same token the problem of Germany cannot be isolated from that of Central and Eastern Europe. Any overall European peace settlement which would deal only with the first of these problems would soon aver itself unrealistic and would inevitably be doomed to failure.

II

The Kremlin's peace program for Europe is contained in its proposed draft of a peace treaty with Germany. This document is a mere compilation of previous Soviet proposals which the Western Powers had rejected as entirely unacceptable. It is characteristic of the persistence with which the Soviet Union seeks to impose her will upon Europe and to extend her rule over the whole continent. The very enumeration of the potential parties to such a treaty is indicative of these Soviet intentions.

All the nations represented in the Assembly of Captive European Nations were involved in one way or another in World War II, which was unleashed by the Hitler-Stalin conspiracy. They are vitally interested in peace negotiations with Germany and are entitled to participate in such negotiations. But they have an indisputable right to insist that such participation should be open only to freely elected governments.

In proposing that the Soviet-imposed Communist regimes in Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Rumania, and East Germany be included among the signatories of a peace treaty with Germany, the Soviet Union aims at endowing with international respectability the puppet regimes it has foisted upon the formerly free and independent countries of Central and Eastern Europe. It seeks to induce the Western Powers to act in disregard of the pledge contained in the Potomac Declaration (June 23, 1954) "not to be party to an agreement or treaty which would confirm or prolong the unwilling subordination of formerly sovereign states, now in bondage."

The list of formerly sovereign states now in bondage comprises, it must be stressed, not only the nations enumerated in the Soviet proposal, but also Estonia, Latvia, and Lithuania, which were forcibly incorporated into the Soviet Union proper during World War II.

The position of the Western Powers remains that a sine qua non of any peace negotiations with Germany is its reunification by free elections, and that peace negotiations could be conducted and a peace treaty concluded only with the government of a united Germany—deriving its mandate from free elections. This position is unchallengeable, both legally and politically, and as a matter both of justice and of political realism it should be applied to all the captive nations of Central and Eastern Europe.

III

Western statesmen have rightly emphasized in some of their recent public pronouncements: (1) That the Berlin issue is merely part of the problem of German reunification; and (2) that, in turn, the problem of the reunification of Germany is part of the broader problem of Europe and can only be solved in the framework of an overall European settlement.

Yet, in the concrete plans or proposals that are being advanced in the West, the requirements of a European settlement are narrowed down to self-determination for Germany and to comprehensive security arrangements. The latter are obviously designed as means to induce the Soviet Union to soften her stand on the reunification of Germany.

The issue of the captive nations, in terms of their right to self-determination, is entirely absent from these plans. The nations of Central and Eastern Europe appear only as potential participants in a European security system. In the Soviet proposals this patricipation would assume a collective form. The security pact would be concluded between what the Soviets call the Warsaw Treaty Powers and the NATO Powers. The western proposals provide for the participation of only some of the captive countries. Whether accomplished in one way or another, such participation would signify not only the international legalization and factual consolidation of Soviet conquests in Central and Eastern Europe, but also a Western commitment to protect the Soviet hold over the captive nations, against their will and in spite of their efforts at self-liberation. It would demoralize the forces of resistance in the captive nations which have constituted through the past years one of the most effective deterrents to further Soviet adventures in Europe. It would, moreover, generate a false sense of security in the West. The net effect would be to weaken the already inadequate defenses of Western Europe.

IV

As a further means of inducing the Soviet Union to agree to the reunification of Germany, various plans of an overwhelmingly military and technical nature have been put forward in the West. These provide for such measures as military disengagement by means of demilitarized or denuclearized zones in Central Europe, a symmetric withdrawal of Soviet and Western armed forces, or a thinning out of foreign forces in Germany.

All these plans are predicated on the highly questionable assumption that the negative Soviet policy on Germany is motivated by considerations of security, and not by plans of further expansion. The consequences of their adoption would be detrimental to the security of Western Europe.

It stands to reason that the deterrent effect of the American nuclear power of retaliation and of the resistance of the peoples of Eastern Europe has been in the postwar years, and still is today, the mainstay of Western European security. According to competent military opinion, the effectiveness of the first of these factors is, however, being gradually impaired by the growth of Soviet nuclear striking capacity, by what is commonly and often prematurely called the nuclear stalemate. The vital problem with which the West is confronted is, therefore, that of endowing Western Europe with a defense system less dependent on nuclear retaliation, a security system that makes the defense of Western Europe possible at a lesser cost than an all-out nuclear war. This obviously requires the building up of an adequate counter-weight to Soviet conventional forces. It also requires more depth than is today available to carry out successfully a strategy of defense.

The weakness of all disengagement plans is that they fail to meet these requirements. They all imply a further contraction both of the sources of European military power and of the geographical area on which such power is to be based. The result can only be a growing imbalance that would place an increasingly large part of Europe in the shadow of Soviet military power.

It should also be noted that, like the proposed European security system, any disengagement agreement would be essentially of a non-self-enforcing nature. Constant alertness and unswerving willingness to employ force would be required to ensure its observance. And, since the disengagement schemes would inevitably bring about a weakening of local means of defense, the burden of enforcement would necessarily fall upon the United States. The paradoxical result would then be that the scope of American commitments would have to be enlarged at the very time when the approaching nuclear stalemate portends an increasing tendency to envisage nuclear retaliation only as a means to deter the enemy from a surprise nuclear attack and, conversely, an increasing reluctance to consider it as a necessary response to aggression on the part of a superior land power.

It is submitted that the proposed military and technical measures are no substitute for political solutions. Some of them might be considered as additional safeguards of a sound political settlement but the political solutions, based on respect for the right to self-determination of all European nations, must come first if such settlement is to be lasting.

The problem of Europe is a political problem. And the first answer to this problem

is free elections in the countries in which nations have been forcibly deprived of their rights.

V

The record proves that the Soviet rulers are only interested in a European settlement on their own terms. This means, of course, a settlement which, on the one hand, would give formal sanction to their past conquests and, on the other hand, would undermine the foundations of the free part of Europe to such an extent that a Communist political conquest will only be a matter of time.

Every sign of Western hesitation, every call for more flexibility, every proposal which, in effect, would weaken the power of resistance of the West or is calculated to bring the Western position closer to the Soviet terms—far from generating more reasonableness only strengthens the conviction of the Soviet rulers that their own inflexibility is paying handsome dividends. Such attitudes and moves confirm indeed the Kremlin in its belief that an unyielding position on the substance of the European issue, combined with tireless agitations for "peace" and "negotiations," will compel the West to pass from one concession to another until the acceptance of the Soviet terms, in a facesaving formulation, will appear the least dangerous course.

The practical result of Western peace plans which, in return for some form of German reunification, would sacrifice the rest of Central and Eastern Europe and, at the same time, cripple the defenses of Western Europe—would be to sow confusion and distrust in the free world, and to weaken, both in the free and the captive part of Europe, the will to stand up to Soviet Communist expansion and domination.

VI

The firmness the Western Powers have shown on the Berlin issue is apt to lead to a turning point in the contest between the forces of freedom and those of Communist slavery. A clear political victory on the Berlin issue would provide the Western Powers with a most favorable psychological moment for a new approach to the problem of peacemaking in Europe.

Discarding some of the theories on which negotiations with the Soviet Union were conducted in the past seems to be the first requirement of a new approach. It has now been proved that the Soviet Union is only interested in a settlement on its own terms which would be tantamount to a Western surrender. It has further been demonstrated that the only practical result of Western proposals designed to meet half-way the Soviet terms is to whittle down the determination of the free and the resistance of the enslaved. The West should therefore no longer adjust its plans and proposals to what appears as realistic and reasonably acceptable to the Soviet Union. The practice of entering negotiations with minimal positions, often at the expense of principles, has been tried. It has failed and should be abandoned.

The positive aspects of a new approach would consist of the proclamation of a forthright, inspiring and comprehensive Western plan for a just and lasting European settlement, to be followed by persistent efforts to put it into practice. Such a plan would reaffirm the right of all European nations to independence and freedom, and would indicate procedures to restore these rights to nations which had been deprived of them.

In the Atlantic Charter, the Declaration of the United Nations, the Declaration on Liberated Europe, in the United Nations Charter, in the Universal Declaration and the European Convention of Human Rights—the Western Powers already possess the legal and political foundations of a just European order. For greater impact the principles could be solemnly reaffirmed in the form of a charter of the rights, duties, and aims of the peoples of Europe. The principle that the will of the people, as expressed in periodical free elections, is the only legitimate basis of government—would become the law of Europe. And as a further guarantee of the observance of the principles of self-determination a European electoral code could lay down the conditions in which elections must be held to qualify as free.

The proposed plan of a European settlement would have to deal specifically with the application of these principles to divided Germany and to the captive nations of Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania. It would have to provide both for the reunification of Germany in freedom and for the restoration of freedom and independence to the captive nations through free and unfettered elections under international supervision, after the withdrawal of Soviet armed forces and agents from their territories. Lastly, it would have to contain both safeguards against attempts from the outside to obstruct the process of European integration and provisions for an effective mutual security system which would afford equal help and protection to all concerned.

The successful promotion of a European settlement along these lines puts great demands upon the Western Powers. It requires from them a consistent, firm and coordinated policy and a great effort both in diplomacy and in political warfare. It enjoins them never to permit Soviet military power to remain without an adequate counterweight. It impels them to keep in mind all the objectives of the plan and never sacrifice one in order to achieve another.

But the successful promotion of the proposed plan promises as an early reward, to strengthen the moral position of the Western Powers and to restore confidence in their steadfastness. It promises as the next reward, to bolster the resistance of the captive peoples and to set in motion political pressures that could create the conditions in which the Soviets would feel compelled to yield. And as the crowning reward, it promises to establish European peace on a solid basis and thus chase away the dire alternatives of war or step by step surrender.

## National Congress of American Indians

EXTENSION OF REMARKS
OF
### HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. BURDICK. Mr. Speaker, I am pleased to call the attention of my colleagues to remarks made by the Honorable Joseph R. Garry, president of the National Congress of American Indians, on March 19, 1959, at the Sheraton Park Hotel in Washington, D.C.:

ADDRESS BY THE HONORABLE JOSEPH R. GARRY, PRESIDENT OF NCAI, MARCH 19, 1959, WASHINGTON, D.C.

Mr. Toastmaster, honorable Members of Congress, Mr. Commissioner, guests, friends, and my fellow American Indian tribesmen, it is with deep pride and gratitude that I am privileged—as president of the American Indians' only national all-Indian organization—to honor the U.S. Congress, the officials of our Federal Government, on behalf of our membership.

We are especially gratified this evening to see such a large attendance from Capitol Hill.

By taking time out from your heavy schedule to meet with us tonight reflects your appreciation for our faith in you.

This is the third year in a row we have met here to pay our respects to the Nation's lawmakers. In the 15 years of our history as a national Indian organization, we have repeatedly paid tribute to Congress. The turnout tonight is one of the largest we have enjoyed. I know I speak for all of our members when I say we are glad to have you with us. You are our first line of defense. We have confidence in you. We have brought our problems to you many, many times in the years past, and you may be sure that we will continue to do so.

While we may seem to be in disagreement with certain policies of the Government, and while we come to you time and again for one measure after another, you can be sure we appreciate what you do accomplish for us. You are our representatives in our unique relationship with the Federal Government. Our purposes in NCAI are constructive purposes. We have always contributed to American society. We want to develop our resources, improve our conditions, and maintain the values and beauty in our culture, not only because we are proud of them but also for all America to enjoy.

And we want the BIA to work with us in the great tasks ahead. We want it to continue and to do a better and better job as partners with us in improving our communities and contributing to the total society in which we live.

The constructive and friendly nature of our organization, therefore, makes it distasteful to deal in negative attacks. However, we take this opportunity to set the record straight. We want the entire Nation—even the whole world—to know that the real American Indians deplore the tactics which were used in this Capital today by the misguided group which staged a demonstration at the White House.

We are pleased that Voice of America people are here to meet the official Indian leadership.

We fear that uninformed persons received a wrong impression from that demonstration and the statements made by the persons who purported to speak in behalf of the American Indians.

I want to make it unmistakably clear that we deplore the publicity stunt of appealing to foreign nations for settlement of American Indian affairs.

We strongly endorse the United Nations. We look upon it as a major contributor to preserving peace in the world. We give it our full support.

But we do not regard the United Nations—and we are sure the U.N. does not so regard itself—as an appropriate forum for deciding our American Indian questions.

The American Indian is an American citizen. He is an American in the fullest sense of the word.

In fact, I venture to say that Indians have a love of this great land of ours unexcelled by any other Americans.

There is frequent reference to our record of voluntary enlistments, war bond purchases, and Congressional Medals of Honor as the highest per capita of any group in America.

We are enormously proud of that record. We refuse to have it besmirched by outsiders who attempt to use our people for their own selfish purposes.

It was a disappointment to us that any Indian people became involved in this regrettable spectacle. We are confident they have been misguided, and even victimized.

I am informed that the Bureau of Indian Affairs received a telegram today. Over the signatures on it was this line:

"Signed by the duly elected chiefs."

The wire said the group which disgraced itself here today is a self-appointed faction which does not represent the St. Regis Mohawk Tribe of New York. The wire said the leaders of the group are not members of the tribe, that they secured signatures to their petition on the false grounds that it was a school census, and that due to publicity they received today, "the widespread harm they are doing reflects on innocent people and we bitterly oppose such tactics."

I want to make it crystal clear that the general does not speak, as he claims to speak, for the Indian people in America. On the contrary, he is doing them a great disservice by casting a cloud on their unswerving patriotism.

The National Congress of American Indians repudiates his astonishing lack of responsibility. We deplore, as our brothers everywhere deplore, such harmful actions. Our organization has achieved magnificent accomplishments by working with and through the branches of our Federal Government.

We have won these gains, not by rabble rousing, but by legislation—with the help of you, the Members of the U.S. Congress; by negotiation—with help from you, who are officials of the executive branch of the Government—and by orderly court procedures, with the help of you who are our attorneys and officers of the courts, the judicial branch.

This is our own Government.

Through our treaties, we enjoy a unique relationship with our Government. We cherish every opportunity to preserve the special responsibilities which our country has assumed for us under these treaties.

We have only one obligation of loyalty that is greater than that to our country. That loyalty is to our Creator. As to our earthly citizenship we who are American Indians are the first Americans. Any man who raises his hand against this country raises it against us. Let there be no doubt whatsoever that we reject him.

## Keenotes

EXTENSION OF REMARKS

OF

### HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD I include copy of my newsletter for this week:

KEENOTES

(By Representative ELIZABETH KEE)

What is it like to dine on surplus agricultural commodities—the sole source of food supply for about 300,000 unfortunate West Virginians?

Members of the West Virginia congressional delegation found out at its weekly delegation breakfast in the Vandenburg Room of the Capitol recently. The meal was prepared exclusively from the food items which are now available to recipients of surplus commodities.

Each breakfast consisted of 1¾ ounces of flour, three-quarters ounce of meal, two-thirds ounce of powdered milk, one-third ounce butter and one-third ounce of rice. But the breakfast served to each of the two Senators and six Members of the House was equivalent to a one-meal ration for an entire family up to three persons.

As I ate the breakfast I could not help but think of the thousands of families who have nothing more to look forward to each day than the skimpy meal which can be prepared with available commodities. And I was further reminded of how tragic it must be for a family of three to have to make an entire meal from the amount which I was eating for breakfast.

The diet of surplus commodities is wholly inadequate, especially for growing children. It provides only 26 percent of the needed calories, 36 percent of the necessary protein, and 46 percent of the necessary calcium.

Yet, many families have to depend entirely upon the commodities made available to them from Government warehouses. They do not have the means to supplement them in any way.

Members of the delegation hoped, by dining on the surplus commodities, to dramatize the plight of so many of our people. It is a part of our campaign to convince leaders in the executive branch of our Government and in the Congress of the need to start a coordinated program to provide both immediate and long-range help to West Virginia.

We have hammered away at this one thing ever since Congress reconvened. We are working as a team to bring flood control and other public works projects to the State to create desperately needed jobs. We are demanding that other commodities be added to the list which is now available to our unfortunate families. And more importantly, we want an economic redevelopment program under which West Virginia can attract new industries and businesses to provide permanent jobs for our people.

It is tragic that with warehouses literally bulging with surplus commodities of all kinds a more adequate diet cannot be provided to people who are unable to find employment. This is not a problem confined to West Virginia. Other States, in all sections of the country, are also suffering from substantial and persistent unemployment.

In West Virginia able-bodied men simply cannot find work. At the end of January 67,928 active applications for employment were on file. Regular State unemployment benefits had been exhausted by 47,432 of our people, and 19,468 unemployed had exhausted benefits under the temporary extension program. Thousands of others have joined them in the last 3 months.

People should not be permitted to go hungry in this land of plenty. I am more convinced than ever now that people who must live on the skimpy diet surplus foods provide are hungry citizens. And I am afraid that their children will carry through life the effects of the insufficient diet they are now forced to eat.

## Our Country's Scientific Manpower Shortage

EXTENSION OF REMARKS

OF

### HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mrs. BLITCH. Mr. Speaker, in view of the recent controversies concerning our country's scientific manpower shortage, I wish to submit for my colleagues careful inspection a most interesting speech on this subject by Mr. William A. Douglass before the Scientific Manpower Commission, here in Washington on February 5, 1959. I believe Mr. Douglass' views on this subject will be of interest to all Members of Congress, Government officials concerned with scientific manpower and leaders of industry. It should be of particular interest to those who are members of the House and Senate Armed Services, Government Operations, and Post Office and Civil Service Committees—and, especially, to those who are members of the special House Armed Services Subcommittee recently named to study all phases of defense manpower utilization.

Mr. Douglass is president of Careers, Inc., which publishes the trade magazine Career: For the Experienced Engineer and Scientist and operates the National Manpower Register, as a national clearinghouse for information on scientific and engineering openings and personnel. He has written a number of articles for general circulation magazines on his specialty, scientific manpower. He has spoken before many scientific groups and has appeared both on radio and TV as a manpower expert.

The speech follows:

A SPEECH BY WILLIAM A. DOUGLASS, PRESIDENT OF CAREERS, INC., BEFORE THE COMMISSIONERS OF THE SCIENTIFIC MANPOWER COMMISSION, FEBRUARY 5, 1959

We are all familiar with Aesop's fable of the shepherd boy who cried wolf. He cried wolf so often that when the wolf did in reality appear among the flock, nobody paid any attention.

I wonder if those of us concerned with the Nation's scientific and engineering personnel have cried our nuclear era counterpart of wolf to the point that no one any longer pays any attention. Our wolf is, of course, the claimed shortage of scientific manpower, and the dangers that deficiency holds for us as free people.

If only to be heard, I am going to suggest today that this scientific manpower shortage is not as great as we perhaps believe, and that an immediate improvement of this situation can be found in the better placement of existing manpower. It is an anachronism of our age that it is still so difficult to get the right man and the right job together.

I would not suggest for a moment that here lies the entire answer, for obviously placement does not affect the education and training of scientists, the numbers entering the field, and so on. At this level the danger signals are indeed great. Education Commissioner Lawrence Derthick, figuring that the need for scientists and engineers in this age of technology increases about 20 times as fast as the general population increases, has claimed a shortage of 9,000 engineers a year for our country over the next 10 years. Dr. Ray C. Maul, of the National Education Association, has revealed a quality shortage, too. His statistics show a steady deterioration in the academic achievement of newly employed teachers. And Dr. James Killian, Jr., using figures which I presume were supplied by Dr. Armsby, poses more problems for the future with his statement that after 7 years of rising enrollments, the number of college freshmen entering engineering courses this year dropped 11 percent. This was in the face, by the way, of an overall rise in enrollments for all courses of 7 percent.

The question of effective placement of manpower is an area in which I and my associates at Careers, Inc., work every day. It is an area in which American business spends some $2 billion a year. But, I'm getting ahead of my story. Placement is

only part of the picture, important as it is.

I would like, today, to consider first the role of education and then the engineer and scientist himself.

First, I think, we must admit that we have a problem and that we are going to have to effectuate programs not with the idea of some quick solution but with the idea of some consistent solution.

No one likes problems. I was told recently that people are tired of hearing about manpower shortages. I just hope that such ostrich opinions do not prevail. A basic ingredient of our capitalistic system is the ability of private enterprise to recognize and meet its needs. If we are to successfully meet the challenge of these times, we must not wait until the crisis has reached a point of no return. The need for realistic, consistent, and far thinking action has become our mandate for survival.

How can we improve our scientific manpower situation? Well, now, gentlemen, I can tell you this. It is very quick and easy to say, "What can we do about it?" But there is no quick, easy, newspaper headline answer. Economists Keezer and Chartener of McGraw-Hill hit the nail on the head sometime ago when they called for concerted efforts on the part of business, Government, and education at several stages. In an able, enlightening presentation before the American Management Association, they indicated that we must attack also with patience. The war front ranges from the improvement of grammar school arithmetic to getting more money for the exploration of the upper reaches of nuclear physics.

Let's begin with education. I once ran into a publication called Adventures Ahead. It seems to me this title might well be the guide rule of all education in the sciences. This means for teachers—and those who educate teachers—a willingness to change, a willingness to dramatize in modern ways, a willingness to participate both in school and out of school in activities which will bring home to young people and their parents the adventures ahead in science, not how hard it is to learn arithmetic. This calls for educational leadership which thinks young, leadership, which is able to sell its programs to Government, industry, and the people.

I was present when Dr. Maul told the American Association for the Advancement of Science of the steady deterioration in the academic quality of newly employed teachers. A questioner at the time asked Dr. Maul if leadership was not, after all, a more important quality for teachers than advanced degrees. The question is picayune. The field of education needs men with both leadership and the highest level of academic excellence. I see no valid reason why the greatest and wealthiest Nation in the world should have to face any long-term acceptance of mediocrity. It's about time we learn on which side our bread is buttered. Deterioration of education means deterioration of everything we stand for.

Now, let's talk individuals—individual scientists and individual engineers—the prime concern of my being here with you today. Engineers or scientists are truly professional persons. If we are to derive the maximum benefits of their labors, and further encourage youth to join in their labors, we must be fair with them in this regard. What are the roots of professionalism? I submit that the answer lies in two big S's—status and security. Status denotes position and recognition. Security means peace of mind. The possession of both allows for the highest level of professional motivation.

Let's dwell on these for a moment.

Dignity and integrity, without which there can be no status, are amongst the inherent desires of all engineers and scientists. As professional men, their motivation lies ideally along the same lines as that of educators, doctors, government career men, and the like. And just like these people, engineers and scientists cannot thrive under managements which push them around like so many production personnel.

John Flynn of the College of Industrial Technology at Boston University expressed my sentiments well in a paper before the American Management Association, in which he stated that while industry is willing to spend time and money to attract needed engineers, it tends to neglect the fact that successful employment of engineering talent is dependent on what happens to the man when he goes on the job. Mr. Flynn suggests that more attention be given to the professional motivation of the engineer on the job.

We must welcome and encourage those recruiting efforts which emphasize the development of scientific and engineering careers along professional lines. We must make sure that these programs do not live or die in direct correlation to the successes and failures of Soviet sputniks and luniks.

It is gratifying to see our Federal Government take the lead in a sound recruitment policy. Mr. N. J. Oganovic of the Civil Service Commission told some of us the other day about their recruiting emphasis on such things as the integrity of scientific research, the challenging problems being tackled daily by Government facilities, the growing use of noncollege graduate technical assistants to aid graduate and advance degree engineers in their work, and the exceptional facilities and working conditions available to those who want to learn more.

You perhaps have noted that I have skirted the subject of money so far. I submit that employers who use money in the form of sky-rocketing starting salaries and endless fringe benefits in order to lure men into a profession are doing that profession no good. They are trying to "buy off" a problem instead of thinking it through. It seems ridiculous to me that engineers and scientists should be literally bought out of college at levels far, far higher than any other form of professional personnel. Any employer who intimates to a young engineer that he can both have professional status and the income of an entrepreneur has not only grossly misled that young person, but is already asking for future personnel trouble.

Security is a more difficult subject. Intellectuality thrives on security and therefore scientists and engineers being of the academic world also thrive on it. The great majority of our country's engineers and scientists work directly or indirectly for the Government. That is, they work within the armed services, or as civilian employees of the Government, or for private companies working on defense contracts. The amount of Government expenditure on their particular activity depends on such outside forces as world events, the politics of budget planning, and the ability of their employer to stay up to date, well organized, and with a good backlog of orders. Frictional unemployment—the giving in to change—is an unfortunate but necessary aspect of the capitalistic system. Private enterprise thrives on mobility. It is dynamic.

Employment changes are, therefore, constant.

If the mobility of private enterprise and the security of engineers and scientists are to be made compatible with each other, we must facilitate switches from unneeded to needed forms of employment with the greatest ease possible. On this subject, gentlemen, I would like to say a word about the efforts of my organization.

Ten years ago my college classmates and I needed employment ourselves. Korean war shortages brought every day a host of companies to our campus. The multiplicity of opportunity was itself confusing. This may at first seem a bit paradoxical to those of you who had to look for your first jobs in harder times, but job offers and beautiful women have one similarity. It is easier to choose from a choice of one than of many.

Our answer to this situation, as undergraduates, was to publish page-long comparative profiles of every company coming to our campus before it came there. In this way we hoped to eliminate some needless blind alleys and facilitate our concentration on those employers with real appeal to us. The idea was evidently a good one. It was the beginning of Careers, Inc. More than 1 million copies of our annually revised publication have now been distributed without cost to college seniors.

Employers pay the entire cost of our work, so over the years we have become most responsive to the nature of their needs also. Last year we began distributing a new publication specifically for experienced engineers and scientists. Some 60 leading companies now support this project on annual contracts. Their needs are released quarterly in the form of a publication and at 6-week intervals in the form of a newsletter. Through the magnificent cooperation of people at the National Science Foundation, we have been able to adapt their thousand-digit code of technical proficiences into the daily service of getting men and jobs together. One hundred and twenty-five thousand copies of this new publication have already been distributed.

We, therefore, feel that the work of our organization both recognizes the essential mobility of private enterprise and the best interests of those who need authoritative job information.

To conclude, we have challenged the immediate presence of a scientific manpower shortage in this country because of the gross inequities in placement of available personnel which myself and my staff discover daily in our travels, our surveys, and our mailbox.

We have further asked for recognition of the long-term shortages which do indeed face us and which can be avoided only by inspired and consistent action on the part of our educators and our employers.

Can all this be done? Are we naive to talk this way in a country where the academically excellent are often tabbed "eggheads"?

Let's inspect the competition. The Russians in 50 years have taken a largely illiterate population and developed an education system that rivals ours. How insurmountable the task must have seemed in the beginning. They are, furthermore, from all reports, far advanced in the creation of a society where scients and engineers at all levels enjoy national recognition.

Recognition in this country will mean so much more. Our secret weapon is that free society communism can never offer. Without this freedom their recognition of scientists and engineers becomes a mockery.

I hope our leaders—leaders in government, business, education, labor, the press—will once and for all recognize the long-term nature of this serious problem. Its very magnitude presents a great opportunity for a long-needed "new look" in the American way of life—the emergence of the scientist as the equal partner of the entrepreneur.

## Record of Future Farmers of America

EXTENSION OF REMARKS

OF

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. WILEY. Mr. President, we recognize that today the Nation faces the

challenge of creating an improved farm program.

Despite the high costs of the current program, surpluses continue to pile up, and the American farmer still is not receiving a proportionate share of the national income.

Unfortunately, the continuation of this situation dims the outlook for farming and greatly reduces the opportunity—as well as the prospects for success—for youth interested in making agriculture a career.

According to surveys, about 65 percent of the young people now growing up on America's farms will have to look outside of farming for a career.

Today, however, I want to pay tribute to the membership of a fine program who—despite the problems and challenges in agriculture—are training themselves for careers in agriculture—that is the Future Farmers of America.

In Wisconsin, for example, membership in our 283 FFA chapters totals more than 14,000.

Under the constructive leadership of our State and local officers and leaders, these chapters are engaging in a wide variety of constructive programs for the development of skill, training and education in farming, as well as training and experience in personal development and citizenship.

Currently, plans are being made for a State convention of our Wisconsin FFA for June 8–11 at Green Lake, Wis. The goal is to make the convention itself a success, as well as include efforts to expand and improve the State FFA programs.

We recall, of course, that the FFA proram is an outgrowth of the overall vocational education program first established in 1917 by the enactment of the National Vocational Education—Smith-Hughes—Act.

As I have stressed previously in the Senate, I believe that the strengthening of this overall vocational training program—as well as the expansion of FFA work—is vital to the future of agriculture in the United States.

To give my colleagues the benefit of the size, scope, and activity of our constructive FFA programs in Wisconsin—to emphasize the need for improving and expanding constructive efforts in this field—I ask unanimous consent to have excerpts from the 1957–58 annual report of the Wisconsin Association of Future Farmers of America printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WISCONSIN ASSOCIATION OF FUTURE FARMERS OF AMERICA

A. ORGANIZATION

*Size and scope*

1. Total number chartered active local chapters, 283.

2. Total active membership in chartered chapters, 14,022.

3. Total number eligible departments of vocational agriculture without FFA chapters, 2.

B. MEMBERSHIP DISTRIBUTION AND STATUS

*Present distribution of active membership, by degrees*

1. Total number of active members now holding green hand degree, 5,499.

2. Total number of active members now holding chapter farmer degree, 8,245.

3. Total number of active members now holding State farmer degree, 242.

4. Total number of active members now holding American farmer degree, 36.

5. Total active membership, 14,022.

6. Total number of honorary chapter farmers elected during the year, 107.

7. Total number of honorary State farmers elected during the year, 10.

C. PARTICIPATION IN THE NATIONAL PROGRAM OF WORK

*I. Supervised farming*

1. Number of members who have a comprehensive farming program in operation, 13,594.

2. Number of members who received FFA Foundation Medals for outstanding achievement on a local level in: Farm mechanics, 283; dairy farming, 283; farm safety, 283; soil and water management, 283; farm electrification, 283; chapter star farmer, 283.

3. Number of chapters that conducted activities specifically designed to improve livestock production of FFA members, 214.

4. Number of chapters engaged in organized activities designed to promote livestock loss prevention, 132.

5. Number of chapters that conducted activities specifically designed to improve crop production of FFA members, 232.

6. Number of chapters that sponsored activities specifically designed to improve the keeping of farm records and accounts, 203.

7. Number of chapters that sponsored activities specifically designed to provide proper training in farm mechanics, 194.

8. Number of chapters that sponsored activities that helped FFA members build or improve home farm shops, 161.

9. Number of chapters that conducted tours of FFA members farming programs, 132.

*II. Cooperation*

1. Number of members who were provided experience in local chapter: (a) Livestock cooperative activities (i.e., pig chain), 2,332; (b) crop cooperative activities (i.e., buying seed corn), 4,066.

2. Number of chapters that provided cooperative activities that involved group planning, group financing, and group participation, 226.

*III. Community service*

1. Number of members completing home beautification or improvement projects, 3,262.

2. Number of chapters completing school beautification projects, 133.

3. Number of chapters that conducted a safety campaign, 125.

4. Does State association have a safety program in operation? Yes.

5. Number of chapters engaging in organized conservation work (with soils, water, trees, protection of wildlife, prevention of forest fires, vital materials, etc.), 220.

*IV. Leadership*

1. Number of members who participated in a public speaking contest, 4,163.

2. Number of chapters that held a public speaking contest, 156.

3. Number of chapters using accepted form of parliamentary procedure in conducting chapter meetings, 238.

4. Number of chapters participating in a parliamentary procedure contest, above the chapter level, 0.

5. Number of chapters having revised, written, continuing program of work, 229.

6. Does the State association have a revised, written, continuing program of work? Yes.

7. If the State association provided leadership training schools or conferences for local chapter officers and members please indicate. Yes. Total member participation, 1,842; total number of chapters participating, 205.

8. Total number of chapters within the State visited by State boy officers during the past year, 86.

*V. Earnings and savings*

1. Number of chapters that prepared a budget, 186.

2. Number of chapters that earned enough money to finance chapter activities, 236.

*VI. Conduct of meetings*

1. Number of members who have access to the latest revised official manual, 10,916.

2. Number of chapters using official chapter secretary's book, 219.

3. Number of chapters using official chapter treasurer's book, 210.

4. Number of chapters possessing full meeting equipment as listed in the manual, 233.

5. Does the State association possess full meeting equipment as listed in the Manual? Yes.

6. Number of chapters using the official opening and closing ceremonies for regular meetings, 224.

7. Number of chapters using official degree ceremonies, 201.

8. Number of chapters holding regular meetings at least once per month during school term, 218.

9. If the State association held a convention, please indicate: Delegate attendance, 402. Total attendance, 9,000. Number of chapters represented at this convention, 201. Did State association officers use official opening and closing ceremonies? Yes. Did State association officers use official State farmer degree ceremony? Yes.

*VII. Scholarship*

1. Number of chapters that conducted activities specifically designed to stimulate members to improve their scholarship, 208.

2. Number of chapters having libraries with 5 or more different FFA books, 220.

*VIII. Recreation*

1. Number of chapters that provided supervised recreation for its members, 210.

2. Did State association have a State camp in operation during the year? Yes. Name and location of camp: Jag Lake Camp, Vilas County. Length of camping period: Each group 4 days. Number of members attending State camp, 150. Number of chapters represented, eight.

3. Number of chapters conducting an educational tour (i.e., group attendance at livestock show, tour of packing plant, experiment farm, etc.), 219.

4. Number of chapters conducting an organized society activity (i.e., FFA-FHA party), 188.

*IX. Public relations*

1. Number of chapters preparing publicity material regularly, 194.

2. Did the State association put out a State paper, periodical, or news letter? Yes.

3. Number of chapters that have participated in one or more radio programs, 54.

4. Number of radio programs arranged by the State association, 26. Number of radio stations used, two.

5. Number of chapters that have participated in 1 or more TV programs, 27.

6. Number of TV programs arranged by the State association, seven. Number of television stations used, three.

7. Number of members showing livestock at fairs, 3,027.

8. Number of members showing crop products at fairs, 2,089.

9. Number of chapters preparing educational or promotional exhibits for public display (including open house), 177.

10. Number of chapters presenting one or more programs to a civic club or other organizations, 96.

11. Number of chapters presenting high school assembly programs, 57.

12. Number of chapters conducting a parent-son banquet, 163.

13. Did the State association conduct a good-will tour of State officers to promote the FFA program in the State? Yes.

D. PARTICIPATION IN STATE AND NATIONAL ACTIVITIES

1. Number of chapters submitting applications for 1 or more candidates for the State farmer degree, 141.

2. Number of chapters nominating candidates for the American farmer degree, 25.

3. Number of chapters submitting applications for the following FFA foundation awards: Farm mechanics, 8; farm electrification, 5; dairy farming, 12; farm safety, 35; soil and water management, 7.

4. Percentage of State membership subscribing to the National Future Farmer magazine, ?

5. Number of chapters participating in the FFA calendar service, 49.

6. Number of chapters participating in the purchasing of supplies from the Future Farmer Supply Service, 235.

7. Number of members participating in judging contests sponsored or supervised by the State association, 1,309.

8. Number of chapters that participated in National FFA Week, 210.

9. If the State association planned and participated in National FFA Week please indicate. Association provided suggested materials to chapters.

10. Number of members attending last National FFA convention, 102.

11. Number of chapters having members attend the National FFA convention, 30.

E. FFA COLLEGIATE CHAPTERS

1. Number of collegiate chapters, 3. Total membership: River Falls, 194; University, 44.

## Congratulations to the Allentown Morning Call, Allentown, Pa.

EXTENSION OF REMARKS
OF
### HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. WALTER. Mr. Speaker, at a time, in our history and the affairs of the world when it was never more important that the American people be well informed, it is regrettable that the number of daily newspapers in the United States has been declining.

As the result of high costs of production and newsprint, as well as competition for the advertisers' dollar from other media of communication, many newspapers have ceased publication or been merged with others, in spite of the country's increasing population.

In view of this situation, Mr. Speaker, it is particularly heartening to note a landmark in the history of the Morning Call and Evening Chronicle, of Allentown, Pa.

The Call-Chronicle newspapers have just passed a mark of 100,000 in their daily net paid circulation—a position achieved by less than 10 percent of all daily newspapers in the Nation, either individually or in combination.

This puts Allentown with Philadelphia, Pittsburgh, and Harrisburg as the only communities in Pennsylvania, with newspapers that reach more than 100,000 homes.

The paper is subscribed to by thousands in the Lehigh Valley. We have many common interests in the welfare of the entire Lehigh Valley and I am happy to congratulate the management of the Call-Chronicle upon its achievement.

May it continue to prosper and serve the people of this area for many long years to come.

## The Larger Meaning of Hawaiian Statehood

EXTENSION OF REMARKS
OF
### HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. KEATING. Mr. President, a splendid editorial in the Rochester (N.Y.) Times-Union recently pointed up the larger meaning of the enactment of the Hawaiian statehood bill. The addition of this 50th State to the Union gives eloquent testimonial to the continuing vitality of the American credo of equality for all men, regardless of race, creed, or national origin.

The moral of Hawaiian statehood will not be lost on the peoples of the Pacific area, who are today seeking new means for progress and development. Hawaii as a State shows these emerging peoples that America continues to hold high the banner of freedom—freedom for all men who are willing to work and fight to earn it.

I ask unanimous consent to have the excellent Times-Union editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rochester Times-Union, Mar. 16, 1959]

FIFTIETH STAR COMPLETES CYCLE, ONE FLAG FOR ALL RACES

The 50th star in the flag has a special meaning. It will stand for the State of Hawaii which is no greater or no less than any of the 49 States, all being exactly equal in rights and privileges within the Union.

SINGLE ORIGIN

But in a significant way the 50th star completes a cycle. The United States sprang from English colonies planted on the eastern seaboard. They were homogeneous in blood and in political and cultural background. The framework of our institutions was built around the Anglo-Saxon tradition.

As the Nation expanded westward it absorbed Spanish colonies in the Southwest—one of them antedating Plymouth Rock—and French settlements, partly composed of exiles from Acadia. Immigration brought all the races of northern Europe at first and later all those of southern Europe. Africans were brought unwillingly and in time became full citizens.

The flag covered them all. But Asians were rare, usually unwelcome, and commonly became citizens only in the second generation by right of birth within the United States. Yet they dug the tunnels and ran the steel rails over and through the high Sierras that tied the country together.

The sons of once unwelcome Asian settlers, American citizens, fought in the Second World War with a combat record unequaled by any other American unit.

The 50th star is a sharp break with this tradition of limited opportunity for Asians. Its special luster is that it spectacularly affirms our national belief that a form of government built on Anglo-Saxon rights and duties, and under which so many races have become free men, is applicable also to people who look west for their origins instead of east.

The varied races of Hawaii have been Americans as citizens of the Territory. As citizens of the State of Hawaii, the Polynesians, Japanese, Chinese, Filipinos, Portuguese, and mixed bloods become self-governing people whose privileges and immunities under the Constitution may not be abridged.

So at last the flag that began with 13 stars representing a homogeneous people becomes well-nigh universal, not territorially, but sheltering under its folds individuals from all the races of men who dwell upon all the face of the earth, with equal standing for all.

FULL SCOPE

There is far more significance in this than in the creation of a State by simply running survey lines. It gives the flaming testaments of freedom of the American Revolution their full scope and meaning.

## New Jersey Soldiers Sit on "World's Powder Keg"

EXTENSION OF REMARKS
OF
### HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. WILLIAMS of New Jersey. Mr. President, we have become accustomed, perhaps, to thinking of the Berlin crisis in terms of diplomatic meetings, high-level policy, and negotiations among nations. I should like to submit an article to remind us of the American man in uniform who are stationed in Berlin. The wallet card the men carry tells what they are doing there:

To show the Berliners, your allies, and the the Communists, the best soldiers in our Army.

To protect U.S. lives and property.

To help the West Berlin police to keep law and order.

To fight like hell, if necessary, for U.S. rights and a free Berlin.

This story deals only with men from New Jersey. They, and the soldiers who represent other States, are closest to the fighting we hope and pray will never come.

I ask unanimous consent to have an article from the Newark Sunday News of March 8, 1959, inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW JERSEY SOLDIERS SIT ON "WORLD'S POWDER KEG"

(By Stuart H. Loory)

If, within the next 2 years, fighting breaks out between Western and Communist troops in the divided city of Berlin, a small tough sergeant from Asbury Park, N.J., will be in the forefront as the leader of a U.S. Army machine-gun squad.

Sfc. Joseph L. Daudier, 34, the New Jerseyan, can be expected to make the most of the battle for two reasons: Fighting is his job and he relishes a job well done; he has much at stake, since his wife and four sons live with him in this enclave of freedom 110 miles behind the Iron Curtain.

As residents of West Berlin, the Daudiers live in the world's most dangerous powder keg. For a few weeks last fall it appeared that the keg might suddenly go up in a world-shaking explosion. But as Russian policy twisted into a less immediately dangerous line, Daudier and the rest of the GIs began to call the Russian statements "just a bluff."

"I do not think the Russians are ready for war," Daudier said.

Nevertheless, Daudier and his men work hard at maintaining bayonet-sharp combat skills. They train within gunshot of the boundary line between West Berlin and the Soviet Zone of Germany. One American rifle range is no farther away from the border than the length of a football field. Curiously, though, the close proximity of a potential enemy has little effect on the troops.

Training here is a game, although certainly a deadly serious one, in which men killed or wounded (theoretically) become points in a squad's score much the same way a football team wins points for scoring touchdowns.

After training, the GIs take part in the civilian life of deceivingly gay West Berlin. For Daudier, the hours between afternoon dismissal and 5:30 a.m. reveille are devoted to a family life no different from the one he might lead in Asbury Park.

The family lives in a comfortable seven-room apartment in a handsomely landscaped garden-type development for married military personnel. From the Army commissary supermarket in which Mrs. Daudier, the former Clementine Virgilio, of Asbury Park, shops for groceries, to the modern brick and glass building in which the children attend school, the military community resembles a New Jersey residential suburb.

For the unmarried enlisted men, after-hour activity includes promenades on the Kurfurstendamm, the 2-mile-long boulevard that is West Berlin's answer to both Fifth Avenue and Broadway, or a stop in one of the hundreds of bars or a movie (American films are shown in English in the five theaters on the base and in German in the plush, brandnew downtown cinemas).

Perhaps one of the things that keeps the crisis so psychologically remote from Daudier and his men is the fact that they can, if they choose, lead a completely normal American life right down to frozen TV dinners and soft drinks (imported from the United States) in a land where hot wurst and Pilsener beer are standards.

Despite the fact that the men live in a city where the loose nerve endings of East and West rub perilously, where Russian and American troops brush elbows in crowded subways, where world war III could have its beginning, the troops here worry not about a great issue of our time in which they, more than any Americans, are involved. They worry, instead, about the small things in life.

Pvt. Ernest R. Williams, 19, of 672 Springfield Avenue, Newark, a rifleman in the 2d Battle Group, arrived in Berlin from Fort Dix, where he recently completed his basic training. "I haven't been reading about the situation here," Williams said, "and I'm not worried about it." His concern was whether the noncommissioned officers in his company would be "RA (for Regular Army) all the way." If they were, Williams knew he would be in for a strictly disciplined tour of duty.

Pfc. Henry T. Cohen, 19, of 109 Hudson Street, Hoboken, is an expert senior rifleman in the 2d Battle Group. Unlike most of his comrades, he said he had been "following the situation pretty carefully" and added with the optimism that is so noticeable here that the crisis "is just another thing that's going to work itself out."

The big concern for Cohen, a former high-scoring center on the St. Peter's Prep basketball team in Jersey City, was how he could fulfill his military obligations and still play a good game of basketball on the post team. "It's just too much for a guy to train and play ball both," he said.

Despite their concern over such things as basketball and the nature of a squad leader, the men still have a mission that is monumental. Defined by the Army, their task is:

"To protect U.S. lives and property."

"To help West Berlin police to keep law and order."

These two roles stem from the status of the troops here as the last occupational forces from World War II still in Europe. Since there is no civil turbulence to speak of in West Berlin, the occupational duties present no problem. In fact, GI's say "technically, we are an occupational Army," stressing the word technically.

As U.S. Government employees in the West Berlin showcase of democracy, the troops perform a third part of the mission:

"To show the Berliners, your allies and the Communists the best soldiers in our Army."

The ticklish part of the mission is point four:

"To fight like hell, if necessary for U.S. rights and a free Berlin."

It is toward possible fulfillment of this last role that the soldiers work with a seriousness and a pace that belie their calm. Berlin command headquarters says there has been no increase in training for the men since the beginning of the crisis last November.

But Daudier has noticed a new emphasis in the training. "Lately," he said, "we've been getting more training in combat in cities. We've been going through the course once a week since the fall." Previously, he said, training in close-in street fighting was given only sporadically.

This type of training, in view of the fact that West Berlin is a heavily settled area of 2,150,000 people, is among the most important through which Daudier leads his squad. But the men are also trained in open-area combat that would be important if they had to defend the road, rail, and canal links that run through Communist territory from West Germany to West Berlin.

Exercises, from small squad tests up to full-dress battle group maneuvers and sometimes even joint American-British-French maneuvers are held in the Grunewald, a large park and woods stretching from downtown Berlin south into the wealthy suburban residential areas. In the spring and summer the troops must share the park with young German lovers and picnicking families.

Through these woods Daudier and his men crept on a recent winter morning. The sky was gray and the wet cold was penetrating. A freezing rain made the matted leaves under foot crunchy. Atop a knoll, an "enemy" machinegun nest held a commanding position over the woods.

Daudier and his squad, divided into two teams of five men each, edged toward the nest to destroy it. Three hundred yards from their target, they were fired upon by blank ammunition from the guns.

The sergeant directed one of the teams to return the fire and then led the other on a flanking movement. Over a walkie-talkie he called for a two-minute concentration of mortar fire on the nest. During the barrage he prepared his five men for an assault on the enemy. Ten seconds before the assault all 10 squad members laid down a rifle barrage. Then, with fixed bayonets, Daudier and his men charged.

They took one wounded "prisoner" and "killed" one man in the skirmish. Eight of the "enemy" escaped. Daudier immediately ordered his men to dig in for a counterattack. It came and the squad held.

Suddenly the reality of the situation was broken when an officer yelled: "That's all."

Umpires went to work tallying up the score. Daudier had theoretically lost two of his men—one wounded and one killed. The squad had withstood the counterattack, had taken a prisoner and had captured important documents. Its score was the highest in the company, beating an 88 percent that had been the previous high. Daudier and his men had performed a good day's work.

That evening, Daudier sat in his living room talking with his wife and playing with his four boys, Richard, 10; Frank, 8; Joseph, 7, and Michael, 3. The conversation ran to whether the family should go to the movies, what they would have for dinner, how expensive or inexpensive things were in Berlin compared to home and what Daudier would do after he retired from the Army 6 years hence.

There was no talk of the sergeant's day except in reply to a visitor's questions, and then the replies were as brief as possible, indicating this was not a fit conversation for the family hearth.

The feeling that there will never be an attack predominates. Air Force Sgt. Thaddeus Kochanski, 28, or 154 Tonnelle Avenue, Jersey City, is a flight engineer stationed at Templehof Air Base, the West Berlin terminal of the 1948–49 airlift. If there ever was another airlift, he would probably be pressed into service on the "raisin bombers," as the Berliners dubbed the planes that kept them alive and free 10 years ago.

Round-faced and jovial, Kochanski smiled at a questioner and said, "So they're worried about us back home, are they? Well, I guess I better write and let them know I'm fine and that there isn't anybody coming over to kidnap us."

---

## Endorsement of the President's Budget Plan for Economy

EXTENSION OF REMARKS

OF

## HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. LANGEN. Mr. Speaker, I have received a letter from Mr. Martin K. Saethre, Pelican Rapids, Minn., enclosing a petition signed by himself and 145 others regarding the President's budget program.

The petition follows:

*To Whom It May Concern:*

We, the citizens and taxpayers in Otter Tail County, State of Minnesota, do hereby

wholeheartedly endorse President Eisenhower's budget plan for economy.

The views expressed in this petition are further substantiated by a volume of letters received from other individuals throughout my district.

## Still the Gap

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of Wednesday, March 18, 1959:

STILL THE GAP

President Eisenhower said nothing in his radio-television address Monday evening that is likely to dispel the grave doubts about the administration's deliberate decision to accept a period of marked inferiority to Russia in long-range missiles. His confident reassurances that American bomber striking power will bridge the gap in first-generation missile strength are disputed by many military experts who believe that production of the Atlas ICBM ought to be increased. Unless it is, this country faces the prospect of a Russian lead of at least three to one in long-range missile strength by 1961 or 1962.

If Soviet claims concerning the accuracy of their missiles are correct, America's intermediate-range missile bases in Britain and Europe and its bomber bases at home and overseas would be exposed to the threat of obliteration in a sudden Soviet strike. These bases are not "hardened," and there is no system to detect or to destroy incoming enemy ballistic missiles. Even with the maximum warning which later systems may provide, bomber and intermediate-range missile bases would have little chance to escape destruction.

The intercontinental-range Atlas, to be sure, is not wholly invulnerable. But the most advanced models can be protected against all but direct hits until shortly before actual launching. They are to be guided entirely by an inertial system, independent of ground controls which might be wiped out. Untried and cumbersome as the Atlas is, it may still give us the best chance of deterring an attack or of surviving an attack and penetrating enemy defenses during the early 1960's.

Perhaps it is a safe bet that as of now American bombers still constitute a solid deterrent to Soviet attack. Perhaps it is a reasonable speculation that 5 to 10 years hence advanced missiles like Polaris and Minuteman, coupled with improved warning and air defense systems, will make any enemy attack in that period unthinkable—although the budget for some advanced weapons development still seems inadequate. But in the early 1960's, the period for which procurement funds voted today will tell the story, the Soviet Union may well find itself in a position to risk all on a war. If at that time it should come to believe that American deterrent power would never be weaker, and should the internal Soviet power struggle produce a reckless or imprudent leader, the United States could face an impossible situation in which the only alternatives would be submission or annihilation.

If the cost of avoiding this risk were $50 billion or $100 billion, it might be reasonable to contemplate the disadvantages of diverting so much of our resources and to take the gamble. But the cost of maintaining something like parity in first-generation ICBM's, the most fearsome weapon man has yet contrived, is not $50 billion. It is, perhaps, a tenth of that sum. In a $500 billion economy, the cost is clearly bearable. Measured against the potential weakening of our diplomatic position, against the unthinkable consequences of war or surrender, the price of parity in long-range missiles looks like very cheap insurance, indeed. So far, the administration has failed to show why this price should not be paid. We think it should, and that this Congress ought to bend every effort to make such a policy effective.

## Attorney Charles H. McGlue Tells of Irish Fight for Freedom and Liberty

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very learned and informative article written by Attorney Charles H. McGlue, a prominent attorney in Boston, Mass.

There is no doubt in my mind that Attorney McGlue has spent a great deal of time and effort in research in preparing material for this excellent statement on the Irish fight for freedom and liberty.

The writer is not only known for his interesting newspaper writings but no doubt is the one man in the Commonwealth of Massachusetts who has more knowledge and is better advised on the primary and election laws in the Commonwealth of Massachusetts. I know that the Members of Congress will find this article most illuminating.

The article follows:

MCGLUE TELLS OF IRISH FIGHT FOR FREEDOM AND LIBERTY

(Charles H. McGlue, well known political figure in Massachusetts, tells of the battles for Liberty and Freedom by the Irish people in the following St. Patrick's Day article, "Irish Freedom Trail.")

My good friend over the years, the Honorable James A. Farley, of New York, once said that Patrick of Tara, saint and apostle of Ireland, by force of the very qualities of his saintliness, had made himself for 1,500 years the ruler of the hearts of the Irish people, and that it was no accident that the Irish people in turn should develop an unrivaled genius in the art of free government.

Let that thought set my theme and let us go along with the words of that great musical composer, the Dublin-born Irishman Victor Herbert. "It's a great-great day for the Irish, tonight," and so in memory, we will be with the ghosts of the galloping Gaels who fought their way, through six continents in order that all people everywhere might enjoy freedom from oppression and liberty to enjoy life as their Creator intended.

IRISH IMMORTALS

The pages of Ireland's fight for freedom has been illuminated by such names as Rory O'Moore in 1576, and Roger O'Moore in 1641; in 1778, Henry Grattan; the valaint Wolfe Tone in 1798; in 1803, the martyr Robert Emmett, and then came the great leader Daniel O'Connell, who secured Catholic emancipation for the people of Ireland; John Mitchell in 1848; James Stevens in 1865; the great parliamentarian Charles Stewart Parnell in 1881; and in 1916, the Easter Sunday martyrs Sheehy Skeffington, Thomas McDonough, Patrick Pearce, James Connelly, and Sir Roger Casement.

Very few are the countries on whose rolls of honor do not appear the names of Irish heroes and fighters for freedom. Although the Irish missionaries of religion and learning carried the torch of civilization and culture to all parts of Europe during the Dark Ages, following the fall of the Roman Empire, very little publicity has been given to the role of the Irish in the history of other nations.

IRISH FLEUR-DE-LYS

From 1692 to 1792, there was an Irish brigade in the French Army and over 500,000 Irishmen died in the service of France during that time. When King Louis XVIII dissolved the brigade in 1792, so as not to offend his English allies, he presented each regiment with a farewell banner, embroidered with an Irish harp, surrounded with shamrocks and fleur-de-Lys, and the motto inscribed thereon, "Semper et Ubique Fidelis" (always and everywhere faithful) a rare tribute.

During Napoleon's first empire, Henry Clarke, Duc de Feltre, and an Irishman, was the minister of war. Later, Marshall McMahon, a member of a famous Irish family, became the President of the French Republic, and to complete the French-Irish history, let it be stated that at Waterloo, it was an Irishman, the Iron Duke of Wellington, who defeated Napoleon and his armies.

SPANISH SHAMROCKS

Hibernia and Iberia have always been kin to each other ever since the reign of King Milesius, as well as the time when the Spanish Armada was sunk in the 16th century, and many Spaniards found the welcome mat awaiting them in Galway and the Aran Isles.

Not so well known, however, is the fact that Richard Wall, an Irishman, as Prime Minister of Spain under both King Ferdinand VI and King Charles III.

MIXED BOUQUETS

The Irish, however, were always good mixers and they appeared in many countries and in many causes. Naples was the base of an Irish brigade. The Austrian Army had hundreds of Irish recruits, many of whom reached the highest rank. Count Taafe, a member of a very distinguished Sligo family, played a very important role in Austro-Hungarian politics. In the olden days of the Russian Czars, Peter Lacy of Limerick became a brigadier general in the army of Peter the Great and later was made governor of Livonia.

LATIN AMERICAN GAELS

In the civil as well as in the military life of the 20 Latin American Republics which lie to the south of our continent, the Irish have played a very prominent and important role. When the Latin American wars of liberation got underway early in the 19th century, the two great Latin military leaders were Simon Bolivar and Joe San Martin.

CHILE AND O'HIGGINS

Gen. San Martin's right-hand man was Bernardo O'Higgins, son of Ambrosio O'Higgins, born in County Meath, Ireland, and the last viceroy to Chile and Peru by appointment of the King of Spain. In the chief square of Santiago, capital of Chile, stands a statue of Bernardo O'Higgins, the liberator of Chile. The second brigade of O'Higgins was led by General MacKenna, another fighting - for - freedom Irishman. General O'Higgins' good right arm in political mat-

ters was another Celt by the name of John McNamara. In October of 1814, a movement for the complete independence of Chile from Spain was headed by the same Bernardo O'Higgins. He joined forces with Gen. Sam Martin and they routed the Spanish Royal Army near Chababuco. A cabildo abierto was held at Santiago and San Martin was elected governor of the country. The Wars of the Liberation were still unfinished. San Martin declined the honor and asked that it be given to O'Higgins, one of his chief officers in the liberating army. General O'Higgins was made supreme director of Chile in 1818.

ARGENTINA AND ADMIRAL BROWN OF COUNTY MAYO

Cross the high Andes from Chile and you come upon the fair country of Argentina. The freedom trail there was followed by many Celts. Admiral Brown, born in County Mayo, Ireland, has often been called the savior of Argentina. The Gaels, Brown, Fleming, Gahan, Haggerty, Morris, and Shannon, greatly contributed to the liberation of Argentina. The Irish people have always been affiliated with the life and the times of the Republica de Argentina. There are many Irish societies in Buenos Aires and Rosario, and you may be sure that St. Patrick's Day is properly celebrated in the Argentines.

COLOMBO AND O'LEARY

In the struggles for independence of Colombia, Gen. Simon Bolivar was aided by many Irishmen. One of them was the son of the great Irish patriot and fighter for Irish freedom, Daniel O'Connell. Daniel O'Connell's wife presented a tricolor to these Irish expeditionnaires. Another interesting fact about Colombia's fight for freedom is that General Bolivar's own aide-de-camp was Daniel F. O'Leary. In the capitol at Bogota, a historical painting of him hangs there for all Colombians to remember the debt they owe to the spirit of the Irish.

PERU AND O'CONNOR

One of the great national heroes of Peru in its struggle for independence was a Colonel O'Connor, who more than a hundred years ago found his way up into the highest part of the Andes and did his part in bringing freedom to the white man and the Indian in that section of Latin America.

MEXICO AND O'DONOJU

Our last stop in Latin America on the Gaelic Freedom Trail will be Mexico. The very last viceroy to Mexico from Spain was named Juan O'Donoju (here we would call it John O'Donohue). Viceroy O'Donoju arrived in Mexico from Spain in 1821 but was intercepted at Cordova by Agustin de Iturbide, a leader of the Mexican revoluntionary forces. O'Donoju's signing of the treaty of peace paved the way for Iturbide's triumphant entry into Mexico City as liberator of Mexico on Sept. 27, 1821.

AMERICAN FREEDOM TRAIL

Space does not permit me at this time to extoll the great Irish leaders who contributed so much to the development of Australia and Canada, but the leaders in the crusade for freedom and liberty in these United States of America must be given proper recognition.

The birth of our Republic was sparked by the fiery utterance of a very distinguished Irishman, when as a member of the Virginia House of Burgesses, Patrick Henry said: "As for me, give me liberty or give me death."

It was Capt. John Sullivan whose daring capture of Fort William and Mary in December of 1774, provided the arms and ammunition which compelled the British to evacuate Boston on March 17, 1776, and also gave the Colonial troops the wherewithal to put up armed resistance at Bunker Hill on June 17, 1775.

AMERICAN REVOLUTION

Don't forget that it was Michael O'Brien and his six sons, of Machais, Maine, who captured an English convoy, and for this act of gallantry, the Continental Congress ordered the first ship of the American Navy be christened Liberty, under command of Jack O'Brien, and the second ship be called Hibernia and captained by his brother, Jerry O'Brien. Remember also that the first commodore of the American Navy was John Barry.

Keep in mind that Gen. George Washington, father of our country and commander in chief of the Continental Army, placed General John Sullivan in command of the Continental forces at Dorchester Heights on the eve of St. Patrick's Day in 1776, and gave the password for that memorable occasion as "St. Patrick". Such prominent figures in the siege of Boston as Morgan, Knox, Stark, and Moylan were of Irish ancestry or birth.

Let it not be forgotten that the secretary of the first Continental Congress was an Irishman named Charles Thompson; that 10 of the signers of the Declaration of Independence were of Irish blood, including John Hancock, of Massachusetts, and Charles Carroll, of Maryland; that at the Battle of Lexington and Concord, 142 of the Minute Men were of Irish extraction; that 228 of those who fought the British at Bunker Hill had Irish blood in their veins.

Also keep in mind that the White House at Washington was designed by William Hogan; that the present site of our Government in the District of Columbia was originally the farm of Daniel Carroll, brother of Charles Carroll, of Carrollton; that the Irishman Crawford designed the Statue of Liberty which surmounts the National Capitol; that an Army engineer named Casey was the designer of the magnificent Library of Congress building.

So, it can truthfully be said that in the planning stages, as well as in the fighting areas, and later in constructive beginnings of our American Republic, men of Irish blood and Irish ancestry, gave every assistance in furthering the cause of liberty and freedom.

AMERICAN HISTORY

In every war since the founding of our Republic, wherever the freedom of men was at stake, whether it be the War of 1812, Mexican War, Civil War, Spanish-American War, World War I, or World War II, the fighting Irish were always in there on the side of the oppressed. It was Gen. Andrew Jackson, later President, who drove the British out of New Orleans. A distinguished line of Irish heroes followed the pattern of Jackson through the generations until in the recent World War II we became familiar with such outstanding Irish fighters as Rear Adm. Daniel J. Callaghan, Comdr. John J. Shea, Capt. Richard E. Fleming, Lt. "Butch" O'Hare, Flight Comdr. Paddy Finucane, Capt. Mike Moran, Capt. Colin Kelly, Sgt. Charley Kelly, Lt. Col. Thomas Lynch, Chaplain Arthur C. Lenaghan, 12th chaplain of Irish extraction to die in action, as well as thousands of other Irish fighters for freedom. It sure is a grand and glorious record of courage, loyalty, and devotion to freedom.

ERIN GO BRAGH

So, be proud of your Irish blood and ancestry. You have a high mission to perform. Do honor to your Gaelic heritage and lineage in your every endeavor. Let me conclude this article with a few lines sent to me recently by the Columban Fathers of Milton, Mass., entitled "An Irish Wish":

"May the road rise to meet you; may the wind be ever at your back; may the good Lord ever keep you in the hollow of His hand; may your heart be as warm as your hearthstone; and when you come to die, may the wail of the poor be the only sorrow you'll leave behind.

"May God bless you."

---

## Pentagon Stresses Total Cost of Missile Warning Project

EXTENSION OF REMARKS
OF
## HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. ALLEN. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD an article, "Pentagon Stresses Total Cost of Missile Warning Project," by Allen M. Smythe, which appeared in the March 15 issue of the New York Sunday Herald Tribune. The author, who has specialized on military procurement subjects, brings out the efforts of President Eisenhower to hold down unnecessary defense spending and balance the budget.

The article follows:

PENTAGON STRESSES TOTAL COST OF MISSILE WARNING PROJECT

(By Allen M. Smythe)

President Eisenhower's efforts to have a balanced budget and hold down defense spending have produced new and revealing fiscal reports on military procurement. A reluctant Pentagon is now giving out figures on weapon systems based on total expenditures rather than latest—and lowest—production costs.

Defense Secretary Neil M. McElroy and members of his general staff have supported the White House viewpoint in closed congressional hearings and more recently in public statements.

The present effort to have Congress add $700 million to the 1960 fiscal year budget so that the Army can put into production the top priority Nike-Zeus anti-missile missile brought a quick response from Mr. McElroy, who said the project could cost the taxpayers a total of $7,500 million to $10 billion. He advised further evaluation.

Pentagon officials say supplementary projects might make the total $13 billion for anti-missile defense. The bulk of the project would be handled by electronic firms. Present warning lines would not be adaptable to handle the new system.

The congressional effort to close the missile gap with the Soviet Union by doubling the production of Atlas and Titan intercontinental missiles would add several billions to their present programed estimate of $7 billion. The President has indicated he would not spend the appropriation if voted by Congress.

Mr. McElroy would wait for the development of the solid propellent Minuteman ICBM. Adm. Arleigh A. Burke, Chief of Naval Operations, in a recent speech said we now have the power to destroy the Soviet Union several times over. The top Navy Chief maintains our deterrent power is sufficient now.

Administration officials point out that 4 or 5 years ago the Nation became emotional

about—and Congress voted huge sums for—early warning systems and bomber defense because of reports of the building of thousands of Soviet long-range aircraft. Soviet propaganda and flights over May Day parades and Moscow proclaimed the four-engined Bison as another Russian scientific achievement.

Pentagon officials estimate we have a capital investment of $23 billion in our early warning and defense systems against enemy aircraft. These include the DEW, Mid-Canada, Pinetree, and SAGE systems. If maintenance, aircraft, missiles, and other supplementary costs are included the total expenditures would approach $60 billion.

The Army has spent over $6 billion for city protection by the Nike-Ajax missile, which uses conventional warheads. It is being replaced by the Nike-Hercules, using atomic warheads and on which more than $2 billion has already been spent. Several more billions will be spent before these two point defense weapons lose their contractual momentum.

Defense technical experts now believe the Bison bomber to be an inferior weapon and say that less than 150 have been built. The cost to Russia is reported to be very small. Premier Khrushchev recently stated that bombers are obsolete and is now stressing Soviet successes in ballistic missiles.

## The Mutual Security Program

EXTENSION OF REMARKS
OF
## HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Friday, March 20, 1959*

Mr. KEATING. Mr. President, Congress will soon be facing one of its really crucial tests when it comes to grips with the Mutual Security bill. Each year, as this program is considered, its short-sighted critics attempt to distort its objectives and achievements. Extreme charges are leveled which tend to befog the fact that the mutual security program is an absolute essential to maintaining the strength of the free world and that without it, our defense budget would have to be increased by untold billions.

Roscoe Drummond, the able and astute columnist of the New York Herald Tribune, this morning etched sharply the great issues at stake in the forthcoming congressional debate on mutual security legislation. He underscores adroitly the fact that nothing could be more costly or more dangerous to our national security, than serious slashes in the mutual security program. He urges particular care be exercised in the light of recent developments which spotlight again the Communist military threat to the United States. Particularly for those who have been screaming about America's defense posture, Mr. Drummond's reasoned words bear close study.

I hope every Member of Congress will take a few minutes to read this column. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHALL UNITED STATES GO IT ALONE—DECISION IS BELIEVED NEAR

(By Roscoe Drummond)

WASHINGTON.—It is time to get ready for the most significant debate and the most fateful decision which will be taken at this session of Congress.

The debate is whether to seek survival by helping our allies do what they cannot entirely do themselves, or to turn into a fortress America and try to do it all alone.

The decision is whether to approve the President's minimum mutual security program of $4 billion or to hack it to pieces in order to spend it some other way.

The opponents of the mutual security appropriation are counting on you to be adequately gullible, uninterested and misinformed so that it can be slashed with impunity.

The unanimous conclusion of the Draper Committee, a panel of distinguished and knowledgeable Americans who have earned the right to be heard, is that nothing could be more wasteful and so imperil the national interest than to enfeeble the mutual security program so that it can't do the job.

I am not suggesting that the President's military and economic aid request should slide through Congress without being questioned and without being argued. There should be debate, very earnest debate. It seems to me that the debate is coming at a good time and under circumstances which will enlist the largest public interest.

It comes at a time when the Communist military threat is greater than ever before and when, because of events in Berlin and Iraq, the Communist threat is more visible than ever before.

The debate comes at a time when we must either rescue the mutual security program from being gradually choked to death by inadequate funds or given the resources equal to the need.

It comes at a time when the Democratic leaders of this Democratically controlled Congress—who almost unanimously say they want to put more into our defenses—can show whether they really mean it. The mutual security appropriation puts the issue squarely and fairly before the Administration's defense critics. If they want stronger defense, as they avow they do, they must either support the President's mutual security appropriation or be prepared to spend at least three times as much as they cut from it in order to get the same military result.

Let us not forget that the mutual security program brings into being many times as much military strength as the United States pays for and—despite some admitted waste, despite some bad administration—is the economizer's way of getting the greatest security for the free world at the least cost.

At stake is not whether a half billion or a billion dollars will be struck from Mr. Eisenhower's request. For several years now Congress has so cut back and truncated the mutual security program that it can neither be planned well at home or used to best advantage by our allies.

At stake is not a little trimming here, a small cut there; at stake is the basic decision whether the United States is going to seek survival in isolation or in a common effort with our allies. On this point the Draper Committee says:

"The choice our country faces is very real and near at hand. In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, we may be gradually choking this vital feature of our national security policy to death.

"What we do this year is an important step in one direction or the other. By forthright and affirmative action we can set the example expected of us. The penalty for failure to do so can well be the beginning of the end of the free world coalition."

Those in Congress who are willing to bring about this result are counting on you not to care.

## Labor in the Old Bay State

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very informative and interesting article written by J. William Belanger, president, Massachusetts State Labor Council, entitled "Labor in the Old Bay State." Mr. Belanger has been an active, sincere, and conscientious labor leader for a good many years; and he has always maintained the respect and admiration not only of those in the labor movement but representatives of management have always considered Mr. Belanger as a fair, reasonable, able, and capable person in handling the affairs of labor.

The article follows:

LABOR IN THE OLD BAY STATE

(By J. William Belanger, president, Massachusetts State Labor Council)

The Massachusetts State Labor Council, AFL–CIO, came into being last December when 1,500 delegates from the former State federation of labor and the former State CIO council convened in Boston and adopted a constitution for the new organization.

The trade unionists who shaped the Massachusetts labor merger were men of long experience, men who had one objective—to combine the best qualities of their respective organizations to create a new Massachusetts State Labor Council that would be second to none in its potential for efficient service.

The State labor council is the official voice of some 600,000 trade unionists. It is an organization which will be able to carry out, to the satisfaction of the membership of its affiliated local unions, the functions for which it was set up.

Four executive officers and thirty-one vice presidents comprise the elected personnel of the Massachusetts State Labor Council. They are charged with the responsibility of administering the affairs of the council between conventions and of carrying out, through its newly formed departments, implementation of the organization's programs.

Four departments have been established. They were set up to operate in the fields of legislation, political action, education and research, and public relations. The creation of the departments stemmed from a desire among our affiliated unions to build an organization equipped to give the best possible service.

The delegates who brought the State labor council into being were fully aware of the urgent need for stronger bonds of unity in the American trade union movement. The greater challenges of today demand of working people not only more strength but more determination and a more consistent efficiency than was required even at the height of labor's long struggle for recognition.

We can and must organize the vast army of unorganized workers which remains as a constant drag on our economic and social progress. In Massachusetts more than 1 million workers, mostly of the white-collar cate-

gory, are still outside the ranks of organized labor. It is our duty to convince these unorganized workers that they are endangering their own security and also that of every union member by failing to enter the organized labor family.

The Massachusetts State Labor Council has the task of urging, encouraging, and assisting our affiliated unions to conduct intensive drives to organize all workers who are eligible for membership in unions, whether craft, industrial, service or professional.

The oft-repeated admonition that we must be ready to face greater challenges cannot be shrugged off. Let the cynics have priority in warning the world that mankind is too scattered politically, economically, emotionally, and spiritually to adjust itself readily to the incredibly rapid changes being wrought by 20th century science and technology. We in the labor movement must lead the way toward adjustment, which can be achieved only through unity of purpose as well as unity in practice.

Much will have to be done through legislation. The State labor council has adopted a broad legislative program. The legislative department was instructed at our first meeting to integrate AFL and CIO bills which had been filed prior to the merger by the two former organizations in order to meet the deadline for filing.

The liberal sweep in last November's elections accentuated the prolabor complexion of our legislature. But our program is not a narrow one. It is a program designed to bring about needed changes and improvements in our laws to benefit everyone. Bay State labor expects to make substantial gains.

Among the bills in which labor is directly interested are proposals for the improvement of the minimum wage, unemployment insurance and workmen's compensation laws and for the betterment of the economic status of teachers and other public employees. These advances are necessary if we are to eliminate the lag in purchasing power which contributes to a high rate of unemployment and to the continued existence of depressed areas in Massachusetts.

The State labor council is fighting to get economic relief through our Employment Security Act for wage earners who are forced to stay out on strike more than 6 weeks. We are also pressing efforts to win unemployment compensation for workers idled by sickness and for setting up a State workmen's compensation fund.

Other bills in which Bay State labor is interested call for the abolition of industrial homework, amendment of anti-injunction laws and uniformity in the rules of arbitration.

The major legislative battle shaping up for labor revolves around the administration's request for more taxes to meet an unprecedented budget. While labor recognizes the need for more revenue to maintain and improve vital services provided by the State, unionists find themselves in disagreement with a friendly administration on the issue of a sales tax.

The State labor council was unanimous in a vote to oppose imposition of a sales tax in any form and to support no changes in the tax structure which are not based on ability to pay.

The battle over the sales tax may well prove a test not only of the strength of the Massachusetts AFL–CIO but also of labor's ability to maintain its integrity and remain united while resolving a highly controversial issue. Legislators friendly to labor are found on both sides of this issue.

The State labor council supported the withholding system for collecting the State income tax which was recently enacted into law. We are urging the legislature to take the first step for the eventual enactment of a graduated income tax. We shall not oppose any reasonable tax proposal, but we must fight any attempt to impose taxes that bear too heavily on the low-income groups.

A series of legislative conferences in all sections of the State has been planned. Through such conferences we intend to keep our membership thoroughly informed at the grassroots level.

A department to carry on political education effectively 12 months a year has been established. Political education committees are being set up in the affiliated local unions to keep the members informed and active. We intend to conduct comprehensive campaigns to register all eligible voters in our plants and districts.

The Department of Education and Research is reaching the next generation of workers with a scholarship program in which all high school students in Massachusetts are invited to compete. We plan to broaden the scope of this program so that more of our young people may have an opportunity to learn about and better understand the labor movement.

The department of public relations is charged with the responsibility of keeping our membership and the general public informed on the policies and objectives of the State labor council.

Our first statewide conference after merger attracted more than 350 delegates from all sections of the State. The conference was called for the purpose of instructing local union officers regarding the requirements of the Federal and State laws on health, welfare, and pension plans.

Work in the community service field is being expanded to every community. We recognize our responsibility to help people who face difficult problems.

Massachusetts trade unionists are fully aware that there will be many obstacles to overcome in the years ahead. Many unsolved problems have harassed wage earners for years. Unemployment that continues to rise, distressed areas that create economic imbalance—these are only a few of the serious Bay State problems that must be tackled and solved.

Labor is ready to work with business and Government in any effort to marshal energies and resources for the launching of programs designed to cure chronic economic ills. Labor expects employers to assume some responsibility for keeping the wheels of industry humming at top speed, and labor expects that the Government, at the Federal and State levels, will regard the existence of areas of instability and unemployment as a real threat to the whole economy.

The Massachusetts AFL–CIO will not abdicate its responsibility, but it will not accept the role of a narrow pressure group. The problems we face as a labor organization are problems that affect the entire community. The State labor council will face up to its moral and social obligations in relation to local communities and to Massachusetts, and it expects other groups to do likewise.

The merged State body is working closely with affiliated local unions and city centrals. The activities of labor in Massachusetts are being consolidated. This makes for utilization of the full strength acquired through merger and benefits everyone.

We have created a bigger and stronger organization with faith and confidence. We are ready not only to erase the fears that have haunted Massachusetts toilers for many years but to confront our enemies and work in complete unity for the implementation of programs designed to achieve a better life for all of our people.

## The Problem of Continued Railroad Passenger Service in the United States

---

EXTENSION OF REMARKS
OF

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. NEUBERGER. Mr. President, one of the genuine problems of our era is to keep railroad passenger service in operation. We want this service continued under private enterprise. We realize that abandonment of passenger accommodations would place an intolerable burden on public roads, highways, parking facilities, and city streets.

An informative article on this whole question appeared in the December 20, 1958, issue of the Nation by Fred J. Cook, under the title "Railroads Versus the Commuter." While I do not subscribe to all of Mr. Cook's detailed views, I agree with his general conclusion that the public will be sattled with far higher costs for highway construction if railroad passenger trains are allowed to expire. People must travel somehow, and our population continually expands. If travelers are forced off of privately maintained railroad rights-of-way and onto public highways, the public inevitably must foot the expense.

Mr. Cook has stressed several instances in which improved railroad service, faster schedules, more frequent trains, and more modern rolling stock and other equipment resulted in attracting more passengers to the rails. These examples are related to the problems which have been studied by Members of the Congress, especially by the distinguished junior Senator from Florida [Mr. SMATHERS], whose subcommittee in 1958 did so thorough job in probing the financial plight of many railroads.

I ask unanimous consent that the article from the December 20 issue of the Nation on railroads and passenger service be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAILROADS VERSUS THE COMMUTER

(By Fred J. Cook)

For 15 years to my knowledge, the 5:30 commuter to the New Jersey shore had left New York at 5:30. It does so no longer. From midtown Manhattan, one night recently, I hurried downtown to catch the 5:30 ferry at Liberty Street. I hustled through the gate at 5:29½ and breathed the commuter's sigh of satisfaction at having beaten time again. In Jersey City, my satisfaction evaporated. A glance at the train departure board showed that the 5:30's time had been shoved back 10 minutes; a check of the new timetable showed that some extra stops had been added. The ride home from the day's work, already long, promised to be even longer.

This is an experience that is being repeated almost daily in the lives of America's 500,000 railroad commuters. In the age of jet air travel, when London is only some 6 hours

from New York, the American commuter is worse off today than he was a half-century ago. And the future looks even gloomier.

Item: The commuter pays more and gets less. My own experience is typical. In 1944, a monthly commutation ticket to New York, good any day of the week, cost me less than $18. Today, for a 5-day ticket (not good on weekends), I pay $32.40—and I'll soon pay around $40 when the mechanics of the latest fare increase have been ironed out. Some minimal improvements have been made, but for each improvement there has been a retrogression. Diesel locomotives have replaced the old steam engines, and indisputably they give a smoother, more comfortable ride. But this has been offset by the increasing roughness of the roadbed, the elimination of some trains and the piling of new stops on the schedules of others.

Item: Skimpy maintenance adds to commuter discomfort. In a massive economy effort, railroads have slashed jobs and maintenance. For the past 5 years, it has been estimated, layoffs have proceeded at the rate of 5,800 a month nationally. Essential safety standards are maintained, but there maintenance generally ends. The result is that many commuting trains tend increasingly to resemble Balkan cattle cars. On one major line servicing New York, it is not exactly a novelty to find cars in which the lights do not function or with no heat in zero weather. On the New York, New Haven & Hartford, which admits it has cut out the frills in maintenance, commuters complain of the increasingly jolty roadbed and long delays in repairing broken windows. On the Jersey Central—that's my line—commuters often sit drenched as in a steam bath. Conductors explain that it is impossible to regulate the heat. "These coaches are 40 years old," one conductor explained recently. "The seats of the valves are all worn out. They're turned off tight, but they're all shot. The steam comes right on through."

Item: Doubling or tripling commuter fares and cutting costs do not solve the railroad's problems; indeed, there is some highly credible evidence that these twin approaches only increase them by stimulating competition. For example, in one Chicago suburb last year, plans were announced for a chartered bus running nonstop, with individual reclining foam-rubber seats, windows with draw curtains, television, two electric razors, hot coffee, and orange juice for morning bracers. The price of this plush 20th century commuting was roughly comparable to the charge on the outclassed local railroad. In some of the New York suburbs, less fancy chartered buses make commuter runs more swiftly than the trains, and car pools sometimes represent a pennywise saving. Neither method, actually, should compete with the railroads. Unless you are on an absolutely regular-hour schedule, you can be in trouble if you miss the chartered bus. Travel by car is subject to the maddening frustrations and delays of city traffic. And neither method of travel compares in comfort and reliability with train service at its best. Yet the decade from 1946 to 1956, the decade that saw the greatest expansion of suburbia in America's history, witnessed these alternate and intrinsically less satisfactory means of travel slashing into the business that should go to the railroads. In this period, rail commuting travel dropped from 340 million to 247 million yearly.

Item: The inevitable result is crisis. Railroads throughout the Nation insist (their figures, it must be pointed out, have to be evaluated with considerable skepticism) that they lost a staggering $723.5 million in passenger operations during 1957, with commuting service the principal budget-breaker. Losses are expected to be even greater for 1958. The railroads contend tht the inevitable result of this continuing trend is bankruptcy, and they are now mounting a campaign of ultimatums; let us drop commuting service, even perhaps all passenger service, or subsidize us to the tune of millions, they are telling harassed local, State, and Federal Governments. Spearhead of the new campaign is George Alpert, president of the New Haven, who caused consternation in Massachusetts last July when he abruptly announced cancellation of rail service on the Old Colony division, servicing the suburbs south of Boston. By this drastic step, he wrung a $900,000 subsidy from Boston and suburban municipalities. And now, using the same tactic, he is threatening to abandon commuter service to New York unless the city and three suburban counties in New York and Connecticut grant his line a $1.9 million annual subsidy.

This is little more than a bare outline of an infinitely complex public problem. Abandonment of commuter service by the railroads would create traffic and parking chaos. The Wall Street Journal recently estimated that if New York's 208,000 daily rail commuters all drove to work, 20 percent of all Manhattan south of 60th Street would have to be converted into one huge parking lot. Chicago would need 375 miles of city streets for parking. And this, remember, would be the situation now; the future would be worse. Population in the Nation is expected to grow another 40 to 50 million by 1975; the peripheries of cities are expanding at a rate of a million acres a year; the near suburbs are becoming choked and the more distant countryside of farm and field is being turned constantly into new commuting suburbias. Abandonment of rail service in the face of these well-defined trends would confront us with the preposterous necessity of leveling cities to park cars for workers who would then have no cities in which to work.

Obviously, rail passenger and commuter service must be maintained, but the question is, How?

There seem to be only two choices: public ownership or subsidy. Cedric A. Major, president of the Lehigh Valley Railroad, startled the brotherhood of railroad executives December 1 when he announced that his line would apply to the Interstate Commerce Commission to abandon all passenger service. He startled the fraternity even more, however, when he conceded in a press interview that Government operation of the passenger lines, following the practice now in effect in most of Europe, may turn out to be the only solution. Since Government in business is anathema to the overwhelming majority of businessmen, Major stands virtually alone in this opinion. Most of his fellow rail executives want to temporize still further or hope, like Alpert, to cash in on subsidies.

The propaganda for subsidies necessitates an examination of the validity of the railroads' position. The railroads, let it be said at once, have a case. One of the strongest angles of this case is the tax situation. This is a legacy from the days when railroads were virtually the only means of travel and waxed so rich that they represented a veritable gold mine for local taxing authorities. Now they are hurting financially; but a tax, once imposed, is hardly ever reduced. The New York Central, which owns New York's huge Grand Central Terminal used by it and the New Haven, last year paid New York City alone $16 million in taxes, making it the city's third largest taxpayer. New Jersey railroads this year paid local communities some $12 million—and warned they won't be able to pay it again. The New Jersey tax was so stiff, in fact, that the Pennsylvania Railroad actually paid out more in taxes than it earned in the State.

The railroads contend—and almost every student of the problem agrees—that the onerous taxes imposed upon them are crushingly discriminatory. They point out that literally billions of dollars in public funds have been poured out on throughways, tunnels, and bridges—facilities for which trucks and buses pay little more than token taxes, but which enable them to undercut the railroads. Airports and airlines are likewise the beneficiaries of whopping public subsidies. Only the railroads are compelled to pay their full way and to shoulder back-breaking taxes.

All of this is true, but government, like the railroads, is caught in a financial snarl. If New York and three suburban counties, for example, grant the New Haven a subsidy by cutting some $1.9 million off its tax bill, the money is going to have to come out of the pockets of the average taxpayer, whose back is already no less overburdened with taxes than is the railroad's. Many rail executives themselves feel that it would be unfair to impose this burden on the overtaxed citizen who does not use the railroads, but they can see no other solution.

On the surface, then, it might seem that the railroads are entitled to subsidies and inevitably must get them; but judgment in such a complicated jungle as this should not be formed on surface indications. Primarily, the public and its official representatives should decide just how much of the railroad's anguished bleat is fact and how much is propaganda. Commuters protesting the unceasing fare increases have long contended that the railroads gimmick their accounting procedures, loading an unfair proportion of costs on passenger service as compared to freight.

The railroads' estimate of a $723.5 million loss on passenger service in 1957 is based on a formula approved by the ICC. This Federal regulatory agency, however, has long been suspected of being too closely in cahoots with the lines it is supposed to regulate, and recently it has even placed its official imprimatur on the railroads' own cries of doom. Many independent rail experts hold a sounder formula than the ICC's would water down the staggering passenger loss to no more than $100 million; and some believe that the railroads actually continued to make money on passenger service until just a few years ago.

A specific example of the kind of financial hot air that occasionally balloons railroad statements of fantastic losses was furnished last spring when the New York Public Service Commission turned a spotlight on the New Haven. In December 1957, Alpert, the line's president, had said the road was losing $15 million annually on its passenger operations. On another occasion, the loss was put at $12 million. Still a third figure was given by Alpert in January 1958, testifying before a Senate subcommittee: he said the New Haven was losing $8 million annually on commuter service. Subsequently, New Haven official spokesmen corrected the figure to $7.7 million. Yet even the $7.7 million "loss" was arrived at only by ignoring some impressive millions in income. For example the New Haven had collected $2.6 million from the sale of 186 pieces of property in 1957, but this little item was omitted in arriving at the loss figure because it wouldn't be proper accounting procedure to regard it as revenue. Under some prodding from the PSC, it turned out that these millions had some equally unacknowledged company. The New Haven admitted that it had collected $2 million in rentals from four major New York hotels and some apartment houses built on its property; but this, said the railroad, was nonoperating revenue and therefore it would be obviously unfair to consider it in calculating profit and loss from passenger operations. The fact remains that a loss figure that had started out at $15 million had been steadily watered down until only $3.1 million was left. What other less obvious items might be turned up in a minute analysis of the New Haven's ledgers, no one knows; but it would seem the public

ought to know—and know definitely—before it agrees to tax itself another $1.9 million annually for the New Haven's benefit.

If one needs further proof of the necessity for extreme caution in assessing railroad figures, one has only to consider disclosures made this fall on a petition by the New York Central Railroad to abandon its station at Philipse Manor, a growing commuting area in rich Westchester County north of New York. The railroad tried to show that the station was a financial drag by listing, among other expenses, $3,710 for local real estate taxes; but at a public hearing it developed that this was a bloated figure. Taxes on the station itself were just $900; the $3,710 figure was arrived at by adding taxes on 9.323 acres of choice real estate belonging to the railroad.

Even more embarrassing for the Central was the way its carefully compiled figure on Philipse Manor commuter travel boomeranged. In a day-by-day compilation, the Central attempted to prove that one train was boarded by just 30 persons, another by 20, another by a mere 4. Unfortunately for the railroad, the day for which the traffic was listed was May 30, Decoration Day, a holiday when the trains that the Central had said carried this little handful of commuters weren't even running. The same tactical error was repeated by the Central when it listed traffic for July 4. This double blooper suggested to some unkind souls that the entire schedule had been faked; but the Central angrily said not so, some minor stupid clerk had just become confused copying off the figures.

In any event, the crudity of some of these financial distortions seem reminiscent of the days when railroads bought up entire State legislatures and rode roughshod over public opinion. Obviously, some basic changes are needed in this attitude before the railroads are permitted to tap the public till for subsidies.

What is basically needed is a full, Kefauver-type investigation to peel away the layers of phoniness from the railroad financial maze and to get at some basic truths. Even beyond this, railroad executives must be willing to make some radical changes in their thinking before heavy subsidies could conceivably be justified.

Granting the tax situation is inequitable, granting that commuter service is a drain because the roads must pay idle train crews for the lay-over time that separates night and morning rush hours, the basic flaw in the railroad picture is the frozen mentality of most railroad executives. Rail passenger service simply cannot continue to exist if the railroads insist on committing suicide by raising fares to the point where they are no longer competitive with buses and airlines.

As Robert E. Bedingfield pointed out in the New York Times, "The business of the Pennsylvania and the Central has shrunk each time fares have been raised." And the Journal of Commerce, expressing the view that further hikes in commuter fares might be necessary, acknowledged the danger that this might only make a bad situation worse. "With each fare increase, traffic by rail dwindles and more spills out onto the highways," the Journal conceded sadly.

It seems obvious that what is needed, before subsidies, before anything else, is some daring and imagination on the part of railroad executives. There are some encouraging signs that an approach designed to make rail service faster, cheaper, more competitive, may woo back lost business and even in time restore profits.

The Missouri Pacific this year slashed fares, offered cut-rate sleeping accommodations, improved service and served low-cost meals to coach passengers on its streamliner, the Colorado Eagle. The Wall Street Journal, reporting on this experiment at the end of July, noted: "Mopac is pulling passengers from competing railroads, buses and even airlines in this mid-America area." With reference to the railroad's reduction of round-trip coach fare, first-class fare and Pullman charges on its Houston-to-Brownsville run in May, the Journal said: "In the first month passenger revenues jumped around 20 percent above a year earlier. And the gains are continuing.

A similar experiment is now being attempted on commuter lines serving Philadelphia—so far with a similar result. Philadelphia appropriated $160,000 on the promise of the Pennsylvania and the Reading to step up commuter and off-hour service to the northern residential suburbs. The Philadelphia city fathers explained that they did not regard the $160,000 as an actual subsidy, but merely as an underwriting of increased operational costs to see if improved rail service would take some of the clutter of cars off city highways. If this could be done, the pressure for ever larger highways, ever more bridges and tunnels, ever increasing parking facilities would be eased, and a subsidy to the railroads, even from the taxpayers' standpoint, would justify itself.

The New York Herald Tribune reported last month on the Philadelphia experiment at the end of the first month of a 6-month test period. The Pennsylvania had increased the number of trains on its Chestnut Hill run by 33 percent to 36 daily; service was stepped up to every 15 minutes in rush hours, every half hour in off hours. The Reading boosted the number of its trains from 33 to 36 daily. Saturday service on both lines was almost doubled, and cheaper fares were tied in with busline transfers. The result: In the fourth week of operation, the Pennsylvania carried 4,133 more passengers than it had in the test week of October 6, before the plan went into effect, a gain of 14.8 percent; and the Reading picked up 2,422 passengers in the same week, an improvement of 7.6 percent over its test week in May. For the entire 4 weeks, the Pennsylvania gained 11,128 additional riders; the Reading 7,099. The effect on city traffic already was observable; 600 fewer automobiles a day were coming into the city from the suburbs.

Philadelphia hopefully assessed the advantages of the plan this way: Cheaper fares mean a saving, for the individual commuter, of 90 cents a day over automobile operation (including parking fees, insurance, and fuel costs), or a total of $100 in the 6 months of the test period. This saving to the individual driver is projected into a much greater saving to the city. It means, Philadelphia estimates, that about $1 million annually can be saved on the cost of maintaining existing roads and providing police protection. And this is apart from the merry-go-round cost of building ever more and wider highways.

The Mopac and Philadelphia plans, if they continue to grow and fulfill their promise, offer this hopeful ray of light in an otherwise grim picture; the railroads could recoup their losses, regain lost business; they could receive the tax relief to which they are entitled (and this could be given without cost, perhaps even at an ultimate saving, to the taxpayer); and lastly, the commuter and the shopper could be given some of the 20th-century creature comforts and service to which they are entitled.

But all of this can happen only if railroad management exhibits the kind of vision that will bring rail travel in line with the realities of the 20th century. Subsidies are not justified and should not be given merely to allow a bad situation to continue to deteriorate. Even with subsidies, a continuation of present trends on most lines would mean steadily dwindling traffic, steadily declining revenues, and the ultimate inevitability of Government operation. If this should happen, the railroads should not be permitted to shuck off on Government the unprofitable passenger business that they have helped to run into the ground while retaining the freight haulage on which they may still make a profit. For the public's welfare, if Government operation has to come, it should embrace both passengers and freight.

Since the railroads obviously do not wish to be put completely out of business, they should be induced to accept the alternative of sensible, forward-looking cooperation. Let's find out what is the real truth behind the maze of propaganda figures that paint a horrible specter of colossal railroad losses. Let's find out what the railroads intend to offer in the way of more modern and complete service before we embark on a round of ever-increasing subsidies. And let's make sure that the railroads do offer what they should offer—the kind of service that will lure back the riders they should logically have and that will reduce the ever-mounting expenses of superhighways, traffic policing, and parking. Only such a policy can insure the continued existence of the railroads as a private enterprise, operated with benefit to all.

## Imitation of the United States by Nations of the World

EXTENSION OF REMARKS

OF

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Friday, March 20, 1959*

Mr. WILEY. Mr. President, the East-West struggle of freedom versus slavery has resulted in a great deal of critical self-analysis in the United States.

We recognize, of course, that we have shortcomings. To correct these, we need, from time to time, to put ourselves under the analytical microscope.

At the same time, however, we realize that overemphasis on weakness, without a proportionate recognition of our strengths, might well result in pessimism, low morale, and, in the extreme, defeatism.

That is why it is particularly heartening to read reports that our policies, programs, and way of life also are making progress and creating constructive impressions on the world.

The March 23 edition of the fine publication U.S. News & World Report contained a refreshing article entitled "Is the World Going American?" The article outlines a wide variety of ways in which nations around the world, even inside the Iron Curtain, are "going American" in their activities. To give my colleagues the benefit of examples in which our way of life is being emulated around the world, I ask unanimous consent to have excerpts of the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS THE WORLD "GOING AMERICAN"?—HOW UNITED STATES IS BEING IMITATED ABROAD

Something like a modern revolution—a switch to the American way of doing

things—is stirring the world. The daily lives of millions of people in one nation after another are being changed.

This is happening at a time when Communists—both Chinese and Soviet—are driving hard to sell their system. In day-to-day affairs, close to peoples' lives, Reds are having scant success.

Regional editors for U.S. News & World Report, stationed abroad, now find that American ways of buying and selling, American habits in eating and dressing are being widely accepted and imitated. The same is not true of Soviet manners and customs. Even in countries where the Communist vote is high—such as France and Italy—the very people who vote Communist are showing a preference for the American mode of living.

Everywhere people are demanding—and getting—more of the things that have given Americans the highest standard of living in the world. As a result, vast, untapped markets are opening up. American ways of reaching these markets are being adopted.

Installment buying, almost unknown to consumers in Europe and Asia a short time ago, is becoming commonplace. Assembly-line production in country after country is being geared up to meet the rising demands, set free by credit buying, for goods that will make life easier and pleasanter: home appliances, automobiles, radio and television sets. Shopping has become simpler through supermarkets, self-service stores and mail-order firms, as merchants compete for their share of the boom.

You see signs everywhere that nations abroad are moving into a period of growth not unlike that which spread through the United States with the birth of the motor age early in the century. And the tempo of change is increasing.

BRITAIN: U.S. STYLE GOODS ON U.S. STYLE CREDIT

The speed with which Britain is becoming Americanized surprises many Americans and annoys some Britons.

Basically, the big changes in the British way of life in the past decade hinge on two ideas, common in United States: self-service shopping and liberalized consumer financing.

* * * * *

FRANCE: READY-TO-WEAR DRESSES, PACKAGED FOODS

The "American revolution" is taking place in the stronghold of French tradition, the French home. Labor-saving devices, mostly French made but based on American ideas, are replacing hand drudgery.

Production and sales of such items as refrigerators, washing machines, electric coffee grinders, mixers and blenders, vacuum cleaners, floor waxers and electric blankets—all rarities in France before World War II—are booming. In 1957, for the first time in French history, more dresses were sold off the rack than were handmade for French women. And the ready-to-wear trend is continuing to spread.

Shopping customs are changing, too. About 2,500 stores in France, mostly groceries, have converted to self-service. And the American supermarket idea is slowly catching on. Hand in hand with this development has come the increase in use of packaged foods and the decrease in time-consuming marketing trips in which a dozen or more shops had to be visited before the components of a meal were assembled.

* * * * *

Along with these great changes in the way the French spend the working days have come equally great changes in the way they spend leisure hours. French factories, using the latest automation devices and assembly-line techniques, are turning out a million cars a year. And Frenchmen are buying them at a great rate—many of them through a French version of the installment plan. One French family in three now owns an automobile—the highest ratio in continental Europe. Roads and city streets are crowded with French motorists on the move for business or pleasure. Motels are beginning to appear. So are American-style shopping centers in city suburbs. Superhighways are planned.

WEST GERMANY: STREAMLINED KITCHENS, SHOPPING CARTS

Perhaps the most American thing about West Germany is a sense of bustle and urgency in the cities. People are busy and they act as though they enjoy it. This is a marked contrast to the sullen, driven attitude with which the people in Communist East Germany plod about their daily tasks.

A good place to get this sense of busyness is in one of the many big department stores that have sprung up in West Germany since the end of World War II.

In arrangement of shopping area and in variety of merchandise and services offered, these stores closely follow the American pattern. The household-goods and kitchen departments feature vacuum cleaners, washing machines, pressure cookers, electric dishwashers, mixers, grills and food freezers. Completely streamlined kitchens, modeled after American types, are on sale. So are barbecue grills. Plastic coverings for floors and furniture are available.

*Milk bars, "pop" records*

One of the most modern of the department stores, opened recently in Duisburg in the Ruhr, has a supermarket offering 2,300 prepacked food items, 100 types of frozen food. Its shopping carts have baby seats. Elsewhere in the store are restaurants. There is a milk bar and, conveniently near, a teenage shop where U.S.-style clothes and American records are fast-moving items.

Germany's excellent system of express highways is being expanded, and along these roads U.S.-type gas stations and motels are beginning to spring up. Even at small inns off the beaten track, the tourist is likely to find American-type bars dispensing cocktails.

Also off the beaten track, the visitor to a German farm—14 percent of the West German population is engaged in agriculture—is likely to find it as mechanized as its American counterpart. This is particularly true of the large dairy farms, representing a great change from prewar days. Mechanization of dairy farms has led to another American phenomenon: West Germany periodically has a worrisome surplus of milk and milk products.

ITALY: SUPERHIGHWAYS ALONGSIDE ROMAN ROADS

In Italy, it is in cities and industrial areas that U.S. influence is most evident, even though, in many cases, these are the same places where Communists are politically strong.

Life is changing, becoming more American, for young and old alike. Women are enjoying increased freedom. More of them are taking jobs in commerce and industry, fewer are hiring out as maids, cooks, and seamstresses. They drive cars, wear slacks, smoke in public—all things that would have been strange 10 years ago. Family arranged marriages are not so common as they used to be, and the American custom of dating is being accepted. The first drive-in movie has just started outside of Rome. It is a success, and more are planned around other urban centers.

* * * * *

On Italian farms, Americanization appears in improved seeds, stock and poultry strains, better irrigation and sanitation. The small size of farms, coupled with an abundance of labor, makes U.S.-style mechanization impractical at this time.

ALL EUROPE: NEW IDEAS, IMPORTED FROM THE UNITED STATES

The export of American ways is not confined to a few countries of Western Europe. Each nation shares in some degree.

In Spain, for instance, American ideas are just beginning to gain acceptance. There's a supermarket operating in Barcelona. Cafeterias have sprung up in Madrid and are doing well. A school in techniques of industrial and commercial management, based on American patterns, was started with American help in Madrid a year ago. And an agricultural extension service, similar to those conducted by States in the United States, has been operating in Spain for the past 3 years.

In Belgium and The Netherlands, subsidiaries of U.S. firms, including pharmaceutical firms, tire manufacturers, makers of office equipment, have set up factories combining America's latest automation techniques with locally developed ideas. The result: U.S.-type assembly lines.

Switzerland, a traditional banking center, has adopted the idea of mutual funds for small investors, as have financial organizations in Britain, Germany, Italy, France, and Sweden. Switzerland, too, is one of the centers for organizations carrying on market research in the American manner.

*"Honor" for "honour"*

Adoption of American ways of doing things has meant some adoption of American ways of saying things. American business English is taught in Norway, for example. And young Norwegian students are not marked wrong, as they used to be, if they write honor instead of honour, favor instead of favour, tire instead of tyre. To Norwegians, whose ties with Britain go far back in history, this represents as great a change as the fact that their children wear blue jeans and their wives shop at self-service stores.

* * * * *

JAPAN: TOLL ROADS, BLUE JEANS, AND POTATO CHIPS

Nowhere in the Orient have American ideas been more enthusiastically adopted than in Japan. Sparked by the introduction of installment buying, one out of three Japanese bought something on credit last year. Total sales of consumer goods on credit last year came to more than a billion dollars. Television sets accounted for a lot of that. Next came automobiles, refrigerators, radios, and sewing machines.

* * * * *

AFRICA: PARKING METERS, SKYSCRAPERS, U.S.A. LABELS

There are traffic jams and parking meters now in Nairobi, capital of Kenya in East Africa, where Mau Mau terrorists raged only 2 years ago. Americans are popular. One nationalist leader, who seeks independence from Britain for the natives, has said: "Africans like the personal attitudes of Americans—they find Americans easy to get along with."

Johannesburg, in the Union of South Africa—with its skyscrapers, miles of modern apartment buildings and industrial suburbs—looks more like an American city than any community in Europe or elsewhere in Africa.

Johannesburg department stores remind the visiting shopper of stores in Detroit and Chicago. Stocks are big, many items of merchandise are labeled "Made in U.S.A."

Helicopters, using American crop-dusting techniques, spread DDT to destroy the malaria-bearing mosquitoes that are one of the scourges of Leopoldville, capital of the Belgian Congo. The city, gateway to the African jungle, boasts 15-story buildings, supermarkets, and air conditioning.

American teams of farm experts and public-health workers have taught peoples of the East new ways of making life easier, crops better. More important, they have persuaded many officials to adopt the U.S. practice of rolling up their sleeves and going to work when there's a job to be done.

LATIN AMERICA: U.S. MUSIC, GOODS, AND WORKING HOURS

In the Western Hemisphere, Soviet agents are at present concentrating their subversive drives on the countries of Latin America, including the islands of the Caribbean. Large "have not" populations in these lands would seem to furnish good ground for Communist propaganda and infiltration. But here, as in the rest of the free world it's the American influence which is creating a real revolution in the daily lives of people.

This resolution is most apparent in the large cities—capitals and seaports. Here you see many signs of American ideas at work, American ways being copied. American-style clothing is worn by men and women. American cars crowd the streets, looking for a spot by an American parking meter.

* * * * *

RED EMPIRE: A MARXIST RUSH TO IMITATE LIFE IN UNITED STATES

In the Soviet Union and its satellites, people are being offered the hope of some day owning some of the things that make life pleasant in the free world: radios, household appliances, automobiles. This hope comes from an American commercial idea—installment buying—which is catching on behind the Iron Curtain.

Time buying was introduced in Communist countries last autumn, spread quickly. On March 3, the Reds said qualified buyers in the Soviet Union could now get watches, radios, cameras for 20 percent down, with 6 months to pay.

To students of marxism, this represents a complete somersault in thinking. Marxists talk a great deal about the elimination of the debtor class, but, through installment buying, the Marxist masters of the Soviet world are creating a debtor class. And the people are jumping at the chance to buy on time.

In lesser ways, too, Iron Curtain countries are copying the United States when they can. American jazz is popular. Many youngsters imitate costumes popular 10 years ago in the United States—the zoot suit for instance. They have their own versions of American dancing, which they call boogie woogie.

You get an idea of the lure of America from a recent incident in a little border village in Poland. It was rumored there that visas to the United States could be had free from the American Embassy. Almost 1,500 villagers trooped to Warsaw to try to leave for the United States.

THE AMERICAN WAY: WAVE OF THE FUTURE?

Most United States spokesmen who carry on the fight of ideas against Communists agree that the success of the American revolution abroad represents a victory in the cold war. But the victory may have its price, they warn.

George V. Allen, the career diplomat who heads U.S. Information Agency, has this to say:

"People may feel their way of life is being insidiously undermined by what they regard as irresistible encroachments by America on their way of doing things. We are not consciously pushing this Americanism as an instrument of the cold war. It's just happening.

"But," Mr. Allen goes on, "to the extent that the so-called American cult does represent the real attitude and progress of the United States, I welcome it, because I like America to be regarded as 'the wave of the future.'"

And the wave seems to be gathering force and speed.

## That All May Learn To Survive and Stay Free—Junior Colleges: One Answer to Higher Education for All

EXTENSION OF REMARKS
OF
## HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. DIXON. Mr. Speaker, the American Association of Junior Colleges held its 39th annual convention last week in Long Beach, Calif. Representatives from colleges all over the Nation were present at this convention to discuss how to realize the ideal of providing higher education for all and the best methods for accomplishing this.

Junior colleges, registering with the office of education, have grown from 10 in 1920 to 667 today. One out of every four college students is enrolled in a junior college, with the total junior college student body at over a million students.

Considering the practical, economical and varied education the junior college is able to provide, it is easy to understand the reason for this unprecedented growth and why this type of college will be one of our major solutions to providing higher education for the flood of students which will soon converge upon the colleges.

The dream of the ages has been to establish a society of cultural achievement and economic abundance with individual liberty. Our Western civilization has nearly succeeded in converting this dream into a reality, but only through a series of bold revolutions and hard-won victories over ignorance and autocracy.

WESTERN CIVILIZATION IS IN PERIL

Now western civilization, so worth saving, faces by far its most perilous challenge—that of communism. We have been able to withstand the Dunkirks and Pearl Harbors of the past, but whether we can withstand disciplined men in a far superior geopolitical position who are armed with the best tools and weapons tyrants have had in the history of the world, will depend on our ability to learn to survive.

In the national monument area near Vernal, Utah, archeologists dig up the fossil remains of the dinosaur. His tragic story is that he was unable to adjust to a new set of conditions and a new environment. He did not learn to survive. He became extinct in spite of an advantage he had in the structure of his central nervous system. The curator at the monument told me years ago that the dinosaur had a brain in his cranium and one at the base of his spinal column, so when an idea missed his first brain he had a saving afterthought.

Many pessimists say that western civilization, like the dinosaur, is in the Mesozoic Saurian era of man and that centuries from now whatever is left of civilization may be picking over our remains and pondering our downfall.

This is not hard to imagine in light of Communist accomplishments to date and Khrushchev's dramatic threat to the West that, "We will bury you." Since this has been the cry of Communist doctrine for more than a century, it would be a grave error not to take this threat to western civilization seriously.

THE IDEOLOGICAL CHALLENGE

The lethargy and indifference on the part of many leads me to think there is altogether too much truth in the challenge that one of the Red leaders threw at us, when he said:

In Christianity you of the Western World have a far better and nobler philosophy than we have in atheistic communism, but we will prevail nonetheless for wherever there is a Communist there is a dedicated ambassador of communism. Western civilization lacks both this vitality and dedication.

With this missionary-like zeal, backed by military force, the Communists have made great strides.

Dr. Daryl Chase, president of Utah State University, recently asked an alumni group:

What will historians record as the most important world development in the next 50 years? Will it be man's mastering the weather or perhaps learning to reap prodigious quantities of food from the sea?

Neither—

Was his answer.

It will be whether freemen continue to be free. In only 40 years Communists have taken control of 1 billion of the earth's people. There has never been anything like it.

THE MILITARY CHALLENGE

While Western civilization is in peril, I do not believe we are in imminent danger of a military attack. Our power of mass retaliation is still far too great for that. But we cannot shut our eyes to the Russian military crash program designed to surpass the United States in atomic power or to the fact that they have surpassed us in the thrusting power of their jet engines and are apparently ahead of us in intercontinental ballistic missiles and intermediate range ballistic missiles.

THE CHALLENGE OF ECONOMIC WARFARE

I believe, too, that the Reds still think they can bring us to our knees through other means, such as destroying capitalism and free enterprise through an economic war.

I observed their efforts in this regard first hand a month ago when I went to the Far East as a representative of the House Agriculture Committee at a conference of U.S. agricultural attachés at New Delhi, India.

Most Far East countries secured their independence at one sudden blow within the last 15 years without the century and a half of preparation that America had before we obtained independence. Though they fear communism, they detest even more the colonial nations which kept them in bondage and suspect the motives of western countries. They haven't the widespread literacy, education, technical training, and the capital to step up their productivity and living standards, but their people are demanding these high living standards. So they

are restive and the countries are in turmoil.

The Communists exploit this great unrest by promising pie in the sky if the people will accept their political belief. I saw evidence of this wherever I went.

I saw countries in the Soviet orbit dumping products into the Far East markets at prices much lower than we can produce them in the United States just to strangle our trade—determined to capture our markets at any cost.

I saw Russians trading arms to eastern countries. These arms are followed by thousands of Russian technicians who in turn believe in the Soviet doctrine as strongly as men of the Western World believe in their way of life.

I saw evidence that Russia had provided India with 500 trained steel technicians, when at the same time we had promised 700 but could furnish only 100.

I saw American private industry virtually at a standstill in the Orient, whereas it used to be expanding. Soviets will step in where our firms fear to tread. They will risk heavy economic loss for strategic political gains, whereas our private industry cannot take such losses. If the Reds are selling at a loss, all they need do is to make their people, virtually in servitude already, work longer hours, accept less food and fewer of the necessities of life. They can cut the costs of production in ways that our private industry could not and would not do.

I saw Red China playing with Hong Kong as a cat toys with a mouse. Red China is the source of nearly all Hong Kong wood for fuel. China cut off the source completely without warning. In desperation Hong Kong business people ordered shipments of wood from Borneo and other places. Upon the arrival of this wood, the Red Chinese flooded the market at prices so low that it bankrupted many of the Hong Kong merchants who had come to the rescue of their people.

I saw Chinese textile workers slaving 12 hours a day, 7 days a week, every day of the year except two holidays for Chinese new year's, in textile mills every bit as modern and mechanized as the best we have in America and for a smaller weekly wage than we pay for a single day. At the same time our labor leaders are calling for a 35-hour week and vastly higher minimum wage laws.

EDUCATIONAL CHALLENGE

We are far ahead of Russia educationally. However, her program is moving ahead at a faster rate than ours, especially with respect to producing exactly the sort of trained men her rulers want for achieving scientific and technological supremacy.

Rickover says our educational perils are as follows:

First. Russia has virtually wiped out illiteracy in 20 years. Twenty years ago her educational system was in ruins and at the time of the revolution 70 percent of the country was illiterate.

Second. Russia puts a larger percentage of her smaller income into education than does America. We spend 3.5 percent, while Russia spends 6 percent.

Third. The European high school graduate has learned more fundamentals and the teacher spends too much time helping dullards and neglecting the capable.

than most of our college graduates. An hour at school means an hour of uninterrupted serious work; here there are assemblies, errands, play, short school year.

Fourth. Russia has made the rewards of scholarship so attractive that her children are working their heads off to keep up with an extraordinary tough curriculum—often at the cost of their health.

Fifth. Russia has few substandard teachers. Their standards are high. Their load is heavy. Their honors and pay are high. In America the beginning salary of the college teacher is the same as a factory worker. In Russia it is eight times as great. In America a full college professor averages twice as much as the beginning teacher. In Russia a successful professor can be paid 15 times as much as a beginner.)

Sixth. In America the major share of research has gone into making life pleasant and comfortable and increasing the material well-being of the individual. In Russia research goes into physics, chemistry, astronomy, and missiles. Chemists are diverted from research to cure diseases to studies which can improve metals.

Seventh. In America we discourage young men from scholarly pursuits by calling scholars "egg heads, "long hairs," and "little men with the beards." In Russia scholars are the best paid and most revered men in the community.

I could go on at great length on the Communist challenge, pointing out for instance the fact that in the 40 years since the revolution Russian production has doubled 22 times, but I am sure the facts presented prove that the peril to western civilization is real.

WE CAN LEARN TO SURVIVE AND STAY FREE

As Shakespeare says, "We are living, we are walking in an age of awful time. But to be living is sublime." In facing the Communist threat we must not lose our heads. We must learn to live with the danger and overcome it.

Our situation calls to my mind a conversation between two Negroe in a Nashville, Tenn., barbershop during World War II when I was teaching at Peabody College. One of them said, "We sho am in a crisis." The other replied, "This ain't no crisis, it's only a crissis."

"Well, what's the difference?" asked the first.

"Here's the difference," said the second. "A crisis is when yo' all loses yo' heads—a crissis is when yo' all puts yo' heads togedder."

In the last great war our armed services had to teach men how to live in new circumstances and under extreme conditions. Aviators had to be taught how to live if shot down at sea. Soldiers had to be taught survival techniques in the jungle, in Alaska and in the Arctic.

We can take to heart some of the survival instructions given to our boys in desperate situations in World War II. I recently gleaned a few cryptic statements from these little survival pamphlets:

First. Read this booklet—it may save your life.

Second. Size up the situation and plan your course of action. Avoid panic and use your head.

Third. If they can do it, you can too.

Fourth. Take inventory yourself, don't let George do it. It is you who may be cold and hungry.

They learned to survive, and I have the unshaken conviction that Western civilization can learn to survive if we are willing to pay the price. The desperation of the Japanese threat in World War II forced industrial and military miracles; the Russian threat might well stimulate miracles, too.

SLOWNESS OF DEMOCRATIC ACTION

In sizing up the situation and planning our course of action in America we face the anomaly where the slowness of democratic action is possibly a hazard to freedom in time of stress and crisis. Yet, at the same time, this slowness is a protection to our freedom.

One of our great historians has said:

A totalitarian state is like a full-rigged ship which moves with great speed majestically out of the harbor, but if it hits a rock it sinks. Democracy is like a raft. It doesn't move so fast, but neither does it sink. But—darn it—your feet are always wet.

For instance, America's public schools are in the hands of local school boards where the State has slight control and Federal help is mistrusted. When I was in the schools, there were some States that had from 1,000 to 3,000 school districts and almost as many school board members as teachers. It is almost impossible to get through these thousands of boards and administrators anything like a national policy to meet an emergency.

Admiral Rickover says that Russia does not have this problem of ponderous slow-moving action.

One man can institute a crash program for his government—

He said—

and force the immediate support of the schools, the public and the scientists. The cost in time and money of congressional government is eliminated * * *. Authoritarian control and the low standard of living make the running of the civilian sector simple and cheap. There is no need for attractive stores, service industries, advertising—no chain of service stations, garages, auto dealers—only a few cars for the elite.

Such a government presents a real challenge to a free people who nurture the individual not alone for the contribution he may make to the national welfare but for the realization of his own potentialities and desires as well.

Since a free society cannot commandeer action, our fate rests on how well we can educate the people to act of their own accord. All groups must work together in informing citizens of the gravity of the Communist threat to Western civilization, in inspiring them with a sense of common purpose and in influencing them to subordinate individual desires temporarily to the welfare of the Nation.

CULT OF EASINESS

It has been frequently stated in recent months that some of our most discerning critics are uneasy about current aspirations and values of Americans.

The president of Notre Dame has said:

I think we have a kind of cult of easiness today. There is an easy way to cook a meal; there is an easy woy to drive a car; there is an easy way to get a vacation; there is an easy way to pay your bills; there is an easy way to save your soul.

Recently the editor of Life magazine stated:

Leaders in the United States are worried about Americans—undereducated, overentertained, tossing uneasily in sophisticated vulgarity.

He infers that we have forms of a free society but maybe the spirit is dying and wonders if a nation that consumes more drink and tranquilizers than any nation in history and a nation glued to television is not simply at a disadvantage before the iron pioneers of the new collective society.

The Reds cannot stay glued to radio or television, because they must work 12 hours a day. Even if they could stay glued to these instruments, they would have blasted in their ears over the radio and television the importance of the 7-year program, winning the war for scientific and economic supremacy and crushing capitalism.

How does this cult of easiness handicap the schools? Principal Edwin Anderson of the Prosser, Washington, High School recently made a survey after a lot of parents had complained because of the failing marks their children were getting.

His findings—an educational mixture too rich with gasoline. Of seniors with A and B grades, only 11 percent owned cars or had the use of them regularly. Among C grade seniors 33 percent had cars, and 62 percent of the C-minus to failing seniors were motorized. Cars owned by juniors with A and B grades, none; with C grades, 31 percent; and with C-minus to failing grades, 39 percent. The University of Virginia faculty is grounding 77 percent of last year's car-owning students.

This cult of easiness, combined with the small group consciousness of the segments of our economic society and the greedy habits of individuals and groups whose major question too frequently is what can they get out of our country instead of what can they give constitutes a serious threat. This must be altered if we are to survive and stay free.

BETTER TO LIGHT A CANDLE

Secretary Flemming of Health, Education, and Welfare tells about leaving their children with a babysitter. When they arrived home, the babysitter appeared disturbed because the power had gone off, leaving the place in darkness and frightening the smaller children.

One small boy came downstairs and screamed:

There is too much dark here.

The older children, however, scurried about looking for candles and flashlights. The old Chinese proverb says:

It is better to light a candle than to curse in the darkness.

The Psalmist said:

I will lift my eyes unto the hills from whence cometh my help. My help cometh from the Lord who made heaven and earth.

The Lord has not failed this Nation. Neither will he ever fail it if we look to him. And how does the Lord give us help? It is through Christian education and Christian living which made men free and will keep men free. I have unbounded faith that the candle of Christion education definitely will dispel the gloom caused by the perils which threaten our free society.

For this reason in this crisis it is to the teachers, more than any group, that we look to light the candle of the Lord to help us learn to survive. It is in the classrooms, home, and churches that the future of the world is largely going to be determined.

This is why we must look our times and our school system searchingly in the face. This is why we must reexamine our objectives, our methods, and our facilities in light of the crucial role teachers are called upon to play.

Let us define specifically what the objectives of education in a democratic society should be. A statement which appeared in the May 1957 issue of the Junior College Journal defines it very beautifuly, I believe:

It is to teach the people to understand. It is to teach the people the real meaning of freedom, for it is a complex concept to master, not a simple one. It is to equip the people to govern themselves, for govern they must. It is to charge them, at least at the college level where the most significant learning must occur, with a meaningful acquaintance with the history of our civilization, with the nature of free government under law, and with a general knowledge sufficiently broad to induce them to discharge intelligently their responsibilities as free citizens.

People ask me the question:

"Why should we pay taxes to support public education?"

The answer is, briefly, to develop an enlightened citizenry. American schools do not give this aim sufficient priority to make it stand out in letters of gold before the public.

I recall a reliable study in which more than 6,000 high school graduates were asked the question:

What does America mean to you?

The vast majority defined America in terms of its blessings and what they get from the country. Only a very few defined it in terms of what they should give in return. This notion of all getting and little giving to our country is so prevalent even among adults that it imperils our society. It all goes to show that every class period should in some way contribute to a deeper love for our country and a greater willingness to sacrifice to keep it free.

EQUAL EDUCATIONAL OPPORTUNITY

Fortunately for America our concept of equality of educational opportunity is a far cry from the program of European universities which are essentially concerned with preparing youth for the learned professions and whose student bodies are a highly select group. The selection begins toward the close of the elementary school at which time not more than 20 percent of any age group is privileged to attend the pre-university schools and thence to college and the selection is often influenced by the class system. The remaining 80 percent, except for a comparatively few, go to work and complete their full-time education at age 14.

As a result only one out of very five or six European boys and girls attends college, whereas one out of approximately every three American boys and girls attends college.

Dr. James Conant in his splendid book, "The American High School Today," points out the tremendous waste in undeveloped talent in Germany, France, Italy and Switzerland as a result of the selective character of their student population. This is a waste which America cannot afford. In fact we cannot afford the waste of our own present system in which fully one half of the top 25 percent of our high school graduates never attend college.

Equality has come to mean in America not only political equality but equality of educational opportunity as far as the individual can profit from such opportunity.

The story is told about Lincoln stopping on a crowded street to pick up a beetle that was on its back and struggling to get on its feet. When he was chided by his companion for causing such a scene on a crowded street, he said, "I wanted to give that beetle the same opportunity as all other beetles."

This great emancipator not only detested African slavery, but the far commoner bondage—that of ignorance. That same Abe Lincoln during the Civil War in 1862, when the Union defeats were pressing the North, signed the Morrill Act (which Buchanan had vetoed because the Nation could not afford more colleges and because the land grant colleges would compete with the liberal arts colleges) and founded the land grant college for the liberal and practical education of the industrial (as distinguished from the professional) classes.

Dr. John A. Widstoe, former president of Utah State University and the University of Utah, said:

For the first time in the history of the world the common man, to which class we all belong, was given access to the great heritage of learning of the ages, and for the first time an attempt was made to lift the common, necessary pursuits of life to a professional dignity.

The American junior community college program and philosophy conforms very closely to the program and philosophy of the land grant colleges—namely the liberal and practical education of the common man and constitutes the second great legal step in that direction.

THE JUNIOR COLLEGE MEETS THE CHALLENGE

People all over the Nation agree that the junior colleges are destined to grow rapidly both in number and in size. Predictions are that by 1970 they will enroll more than half of the Nation's total freshmen class—even last year they absorbed one out of every four students who entered higher education. In 1920 there were only 10 junior colleges and in 1929, 129. Today there are 667 junior colleges with an enrollment of more than a million students.

The Truman Commission said that the junior college should absorb the bulk of the increased college enrollment during the next decade. At the time the Commission was accused of being starry-eyed and visionary, when it predicted that by 1960 there would be 2.9 million students. It now appears that by 1960 enrollments will exceed 4 million.

The church-supported junior colleges, bless them, are carrying a great share of the load and are doing a most effective job in developing enlightened citizens and furthering Christian education. They, too, are growing.

While in Honolulu recently I visited the $3 million junior college under construction by the Church of Jesus Christ of Latter-day Saints. I was so taken up with the beauty of this institution and the vision of its sponsors that I wrote their commissioner, my former student president, Ernest Wilkinson, for the present enrollment and expenditures of the church's junior colleges and the projected expenditures and enrollment.

At the present time the Mormon church has 1,275 students enrolled in two junior colleges and is spending $991,000. Commissioner Wilkinson estimates that the proposed Ricks College in Idaho, the proposed junior college in Salt Lake City and four junior colleges in areas of large church population will enroll 30,000 students by 1975. He says within the next 5 years the church will probably spend $10 million on the construction of junior colleges and by the year 1975 will likely have spent $30 million on junior colleges.

As a result of their surveys, authorities give five chief reasons why 50 percent of the top 25 percent of the high school graduates never attend college. These reasons are: first, lack of finances; second, lack of motivation; third, distance from college; fourth, ineligibility for matriculation; and, fifth, the nature of the college program.

THE JUNIOR COLLEGE MAKES HIGHER EDUCATION FINANCIALLY AVAILABLE

The present distribution of family income reveals sobering inequalities. Seventy percent of the families of the United States have an income of $5,000 or less and 15 percent have a total income of under $2,000 which you will admit barely covers necessities. How many of their children, I ask you, can they send away to college these days on such a salary?

A U.S. Office of Education study shows that trends in tuition charges and fees increased 89 percent in public colleges and 83 percent in private institutions between 1940 and 1957. For example, tuition costs at Yale have jumped from $645 to $1,250 a year and total cost per student went from $1,557 to $2,300 per year. At Harvard tuition jumped from $400 in 1945 to $1,000 in 1959, with total costs $940 to $2,300 per year. Columbia tuition in 1945 was $380—in 1959, $974, with total costs increased from $1,090 to $2,084.

Student costs are much less in the junior college. W. Hugh Stickler made one of the most reliable studies of student costs, in which he included tuition, fees, room rent, board, books, supplies, clothing, transportation, and miscellaneous expenditures. His results are as follows: Public senior college, $1,304 per year; public junior college, $1,062; private senior college, $1,531; and private junior college, $735.

In other words it costs the student about $242 more per year to attend a public senior college than to attend a public junior college and $800 more per year to attend a private senior college than to attend a private junior college.

Further evidence that the community college makes college available to more people is produced by Coleman Griffiths in his book, "The Junior College of Illinois."

He found that only 19.7 percent of high school graduates went on to college when there was no junior college in their community as against 53.5 percent when the junior college was present. In the latter case also 46.7 percent of the graduates of lower income status families were found to be attending the junior college.

Strayer found that nearly four times as many children of families in the lower income bracket attended college where there was an institution at home as attended when they were required to go away to attend college. By attending college at home the student is also able to find part-time work with his friends and neighbors and combine education and work.

I believe that it costs the public or the church much less money to build and operate a junior college than a senior institution. A considerable portion of the expense of the senior institution is spent in research. The junior college does not have this expense. Again the senior institutions must spend huge sums to build dormitories and dining halls. These on the contrary are not necessary in most junior colleges because the students come from a nearby area and live at home. Journalist Louis Cassel cites Government studies which reveal costs of $6,000 per student for necessary buildings in a senior institution while comparable buildings costs in the community college are $3,000.

TRANSITION FROM HIGH SCHOOL TO JUNIOR COLLEGES MORE EASY

Students do not experience the strangeness and homesickness when they live at home and go to a local institution that they suffer in entering a huge institution away from home.

THE JUNIOR COLLEGE CATERS TO A WIDELY DIVERSIFIED STUDENT POPULATION

It requires an IQ of approximately 115 to get a "C" grade in the professional courses of the senior institutions of the United States. Approximately two thirds of the American college youth have not IQ's that high. That is one reason why one half of the students are eliminated from the universities by the end of the sophomore year.

The Truman Commission found that at least 32 percent of our population has the ability to complete an advanced, liberal or specialized professional education. And, after spending thousands of dollars to calibrate the Army test scores of 10 million servicemen into college aptitude indexes, the Commission said further:

At least 49 percent of our population has the mental ability to complete 14 years of schooling (the junior college program) with a flexible curriculum of general and vocational studies that should lead either to gainful employment or further study at a more advanced level.

The junior colleges, therefore, offer educational opportunity to about 17 percent more American youth than even our senior institutions.

If the colleges are to educate the great body of our country's youth, they must provide programs for the development of other abilities than those involved in academic aptitude and they cannot continue to concentrate on students with one type of intelligence to the neglect of youth with other talents.

Special artistic ability, creative genius, mechanical skills and abilities not measured by our verbal tests represent valuable abilities not fully recognized by the traditional university. This is another cause of our large student mortality. The technical curriculum of the junior college on the other hand is designed especially for the semiprofessions and the highly skilled occupations. American industry and our defense plants are crying for these people. We can use five semiprofessional engineers for every graduate engineer.

THE JUNIOR COLLEGE HAS WORKED MIRACLES IN ADULT EDUCATION

The junior college goes into all of the homes that do all of the work of the community and with its diversified program and practical bent teaches the parents, as well as the youth, to do that work better and to live more happily in those homes.

THE JUNIOR COLLEGE HELPS PROVIDE THE WILL TO LEARN

Psychologist Flemming says, "Show me a boy's IQ and I will tell you roughly what he might be able to do. But show me what he wants to do and I'll tell you what he will do." In order that all may learn to survive and stay free we must develop in them the will to learn.

The will to learn is influenced to a considerable extent by family tradition, but family tradition is changing rapidly. Families are finding out now that it requires education beyond the high school to understand the front pages of the newspaper, to understand our international relations, our new hopes, our new fears, our new political developments, and even to get a job.

NEW HELP IS COMING FROM THE FEDERAL GOVERNMENT

Education has always been of uppermost importance in achieving political and moral objectives in western civilization, but never have we looked upon it quite as we do now in terms of our very survival. So it is not strange that these crucial times have resulted in the Federal Government taking more of an interest in the Nation's schools and playing an increasingly important role.

One good example that the Federal Government has recognized that education, as well as missiles, is essential to our national security was the enactment last session of Public Law 85-864, the National Defense Education Act, authorizing something over $1 billion in Federal aid. In its 10 titles it touches every level of education, public and private, from the elementary school through the graduate programs.

The success of the college student loan plan, which we substituted for a scholarship program, has surprised even educators. Before, many college loan funds had gone begging. In the first 4 months after the bill was passed, 1,230 colleges and universities applied for participation asking for $62 million. Congress had appropriated $6 million to get the program started this year.

Of the 1,227 institutions which have received college loan funds, 224 have been junior colleges, technical institutions or normal schools offering 2, but less than 4, years of work beyond the 12th grade. According to the Office of Education, they have received $354,883.

In addition to the $6 million for the student loan section of the bill $20,350,000 was provided for science, mathematics, and foreign language, $800,000 for national defense fellowships, $7,400,000 for guidance, counseling, and testing, $800,000 for advanced training in foreign areas and languages, $500,000 for educational media research, $3,750,000 for grants to States for area vocational programs and $400,000 for grants to States for statistical services.

Supplemental appropriation requests for $75,300,000 for the National Defense Education Act are now pending before Congress.

Other areas in which the Federal Government is participating or is expecting to participate are school construction, aid to rural libraries, providing surplus commodities—such as tools for technical training—to the schools and Public Law 480 which makes foreign currencies available for such things as the financing of chairs in America studies in foreign universities, exchange of persons, workshops presented by American leaders abroad and assistance to American schools abroad.

Some suggested ways in which we might speed up our educational efforts and at the same time develop more enlightened citizens are:

First. Decide now to have a far superior school system and declare our willingness to pay the price. The sacrifice would be small in proportion to the returns. For example, the automobile industry spends $1½ billion every year to bring in its new models with different colored paint and styling so the American people will be enticed to spend 10 percent of their entire income for cars. If the money saved by bringing out a new model every second year, instead of every year, were given the public colleges and universities, it would increase their income by three-fourths.

Second. Reorganize and streamline the present slow moving, ponderous school system. The further consolidation of small, inefficient, expensive school districts would be a good beginning. Encourage American education to join together to form large research institutes and coordinate their research efforts. Also, State coordinated programs of higher education which will save money, help prevent wasteful competition, and keep higher education better aware of its aims should be encouraged.

I hope that Congress will soon pass H.R. 5467, which I have introduced, to stimulate State action to meet burgeoning needs in higher education by appropriating $2½ million to the States to enable them to survey present facilities and make plans for future higher education needs.

Third. Speed up the educational process by lengthening the school year on all levels—as they do in Europe—by using school buildings where necessary for more than one school shift—as they do in Russia—and by inviting gifted teenagers and the unemployed to college adult evening classes.

Fourth. Make the program tougher for the gifted students. While we cannot educate young people by merely scowling at them, I think Rousseau's advice to young Emile is still good advice today. He said:

Think like a philosopher and work like a peasant.

Fifth. Either improve the present school situation by eliminating some of the more enjoyable and time-consuming offerings in favor of the more demanding mental disciplines or establish institutes which will challenge the gifted.

Sixth. Provide better counseling and guidance on both levels of the secondary school and at the university to screen out and give special encouragement to the diligent and the superior student.

Seventh. Reverse the present trend where teachers and counselors spend an unwarranted amount of their time and the State's money polishing cobblestones and dimming diamonds.

Eighth. Take greater advantage of the ability of the junior college to provide a general and practical education at home for all youth at considerable less expense to the student and the public. Our times demand even more 2-year technically qualified graduates than graduates of the professional schools.

Ninth. Establish more private, industrial and State fellowships, jobs, loans, awards and incentives to attract gifted youth to college and keep them longer in college. If the former are not adequate, Federal help may also be necessary.

Tenth. Exalt the role of the outstanding teacher by according him greater social prestige, better salary and tax deduction on money spent for professional improvement. It took a terrific struggle to get this deduction, but even that encouragement will help to transform many a teacher's attitude.

I have injected in my remarks the element of fear. I have done this to make the challenge more urgent and more purposeful. Extrinsic motivation, such as fear, punishment or rewards, is usually not as abiding as intrinsic motivation which springs from a love of the cause itself. One should act not because he is afraid not to or feels he ought to, but because he wants to.

Western civilization is definitely in peril. Our greatest defense is Christian education. But this system of education has many weaknesses and there is some room for fear that we cannot learn to survive in time to avert disaster. But people adjust to fear very readily. The fear of sputnik was partly displaced by the fear of the recession and the loss of jobs and now by the fear of a conflagration over East Germany. So we cannot place too much reliance upon fear alone causing us to enlist in a crusade to eliminate the weaknesses of our system in order that all might learn what they should learn.

Our school system is not a second rate affair. It is by all odds the best system known anywhere or at any time. The great reason is easy to be found. It is thousands of dedicated people who have made it their first love and the center of their lives.

They didn't teach—

Says Secretary Arthur Flemming—

to become wealthy but for the love of their neighbor and their country. We can be indicted for penalizing our teachers for their loyalty.

Secretary Flemming says further that the great commandment, "Love thy neighbor as thyself," does not mean that we like him or that we even agree with him in all instances. It does mean that we love him enough to help him realize his greatest possibilities.

Jesus of Nazareth was confronted with terrible trials and sorrows; yet he triumphed over far greater obstacles than we ever dream of. He said:

My soul is troubled and what shall I say? Father deliver me from this hour—but for this cause come I unto this hour.

He forgot himself in His great dedication to the cause of His Father.

And a vision appeared unto Paul in the night. There stood a man of Macedonia and praying him saying: "Come over into Macedonia and help us.

That is what Western civilization and its youth are saying to educators today.

## The State of Mind That Makes America Great

EXTENSION OF REMARKS
OF
### HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to insert the sermon given by Rabbi Richard E. Singer, of the Lakeside Congregation for Reform Judaism, at the interdenominational community Thanksgiving service held at the Highland Park Presbyterian Church, Highland Park, Ill., on November 27, 1957. Following its nomination by the pastor of the Presbyterian Church, Dr. William A. Young, this sermon by Rabbi Singer was recently awarded the Freedoms Foundation award. Those who have been privileged to read this sermon, with its strong exposition of the history and future of a free country, can readily

understand why the Freedoms Foundation gave the award:

THE STATE OF MIND THAT MAKES AMERICA GREAT

(Sermon by Richard E. Singer, Rabbi, Lakeside Congregation for Reform Judaism, at the Community Thanksgiving Service, Highland Park Presbyterian Church, November 27, 1957)

We come together for our community Thanksgiving worship grateful for the abundance of this good land in which we live. Its fields and forests, its lakes and sparkling streams, its great cities and rolling plains, its snowcapped mountains and warm ocean-washed sands, are loved by us, for this is home.

When we are far away we remember home with deeper feeling. We know that we are without something of ourselves.

And yet, the material blessings for which we give thanks, the richness of this land, the bounty of its harvests, the fullness and goodness of the lives we live, is not the power that makes the eye of the traveler returning home blur with happiness at the sight of the symbols of America.

For many nations have known and know abundance. Many peoples taste the ripe and sweet savoured fruits of the good earth and know the emotion of well-being and satisfaction.

But abundance is not America. And its material richness did not make this Nation what it is.

We need not search far for the thoughts and goals that have created the character of our Nation. They run through our history, a mighty stream, nourishing succeeding generations of our countrymen. As children we learned about this spiritual quality of America when we went to school. And sometimes we do well to remind ourselves of lessons grown hazy with time, faded, perhaps, by the unfortunate corrosions of maturity's cynicism.

We think now of the first Thanksgiving and the Pilgrims.

The Pilgrim fathers are well known not only because they led the Puritan vanguard to New England but through the moving history of their adventures and sufferings written by their leader, Governor Bradford.

They were a small group, humble people, leftwing Puritans of East Anglia. There the modest religious meetings they attended were so hampered by their neighbors that they left for Leyden, Holland, in 1609, and formed an English Congregational Church. After 10 years of exile they decided to move to America.

Sir Edwin Sandys recognized the quality of these people, even though he did not share their religous faith, and arranged for a grant from the Virginia Company then active in encouraging emigration. A group of English merchants financed the trip. After long delays the *Mayflower* set sail in the worst weather of the year and after a rough passage anchored on November 11, 1620, in the harbor of Cape Cod, outside the Virginia jurisdiction. And with an instinct for self-government that anticipated the future the Pilgrims signed a compact to be governed by the will of the majority until permanent provision should be made for the colony.

The situation of the group of settlers was grim, almost desperate. They had arrived at a harbor enclosed by barren sand dunes at the beginning of a New England winter. Their food supplies were limited. Governor Bradford described their position vividly:

"For summer being done, all things stand upon them with a weatherbeaten face; and the whole country, full of woods and thickets, represented a wild and savage hue. If they looked behind them, there was the mighty ocean which they had passed, and was now as a main bar and gulf to separate them from all the civil parts of the world. * * * What could now sustain them but the spirit of God and his grace? May not and ought not the children of these fathers rightly say: 'Our fathers * * * came over this great ocean and were ready to perish in this wilderness; but they cried unto the Lord, and he heard their voice, and looked upon their adversities. Let them, therefore, praise the Lord, because he is good, and His mercies endure forever.' "

There never was a group of settlers so ill-fitted by experience and equipment to cope with the wilderness. Peasants, city workers, petty bourgeoisie, they did not know what they faced. And yet, none came through so magnificently.

For, as Bradford put it: "They knew they were pilgrims, and looked not much on those things. * * * It is not with us as with other men, whom small things can discourage, or small discontentments cause to wish themselves at home again."

One bit of luck they did have. They found some deserted fields ready for plowing at the harbor already named Plymouth by Capt. John Smith. And they were joined by Squanto, the Indian, who acted as a sort of scoutmaster. He taught them how to catch fish and grow corn.

But half the company died the first winter.

In November of 1621 it was a small group that met to celebrate the first Thanksgiving feast. The ship *Fortune* had arrived with provisions. They had reaped a fair harvest. There was a large number of wild turkeys and considerable venison. So, the Pilgrims, in the words of their Governor, "* * * exercised (their) arms, amongst other recreations; many of the Indians coming amongst us, and among the rest their greatest king, Massasoit, with some 90 men, whom for 3 days we entertained and feasted."

The entertainment was expensive. With more mouths to feed short rations were again routine. For the first several years of existence the colony ran neck and neck with famine. But the people never lost heart. They did not consider giving up and going home. These simple folk were exalted to the stature of statesmen and prophets in their narrow sphere, because they ardently believed, and so they greatly dared; and they firmly endured.

They set forth in acts as in words the kind of stouthearted idealism that we Americans admire. And this is why Plymouth has become a symbol. And this is why Thanksgiving is so beloved.

And Governor Bradford wrote: "Thus out of small beginnings greater things have been produced by his hand that made all things of nothing; and as one small candle may light a thousand, so the light here kindled hath shown unto many, yea in some sort, to our whole Nation."

If courage, stark and determined, formed the beginnings of this Nation, courage growing out of desires for personal freedoms impelled the next great American achievement.

In 1775 the idea of independence from Britain was not acceptable to many Members of the Continental Congress and to a large number of the American people. The two Continental Congresses which had been convened had as their purpose the repeal of the Coercive Acts and the restoration of imperial relations. Thus both war and independence would have been averted. As late as the autumn of 1775 the legislatures of North Carolina, Pennsylvania, New Jersey, New York, and Maryland were on record against independence. Public opinion was not ready for any drastic action.

At the same time it was understood that the colonies could not forever remain half in and half out of the Empire, professing allegiance while refusing obedience. Moderates persuaded themselves that they were not fighting the king or the mother country, but the "unprincipled hirelings of a venal ministry." They referred to the enemy as the "ministerial," not the British Army. They hoped for a political crisis in England that would place their friends in power. As late as January 1776, the king's health was toasted nightly in the officers' mess presided over by General Washington.

But no compromise came from England and on the 22d of December 1775, in an action not known in the colonies until weeks later, all trade and all relations with the Thirteen Colonies was interdicted by Parliament.

And the next month Thomas Paine's pamphlet, "Common Sense," was published.

This book was to the American Revolution what "Uncle Tom's Cabin" was to the Civil War. It swept aside dialectic and sentiment. Paine stated the case for independence in crisp, vigorous language that appealed to the ordinary American. He presented in popular form the natural rights philosophy that was to be embodied in the Declaration of Independence. Paine stated: "Society in every state is a blessing, but Government, even in its best state, is but a necessary evil; in its worst an intolerable one."

Paine attacked the monarchy, the British Constitution, and the Empire. He stated that monarchy itself is an absurd form of government. One honest man, he said, is "worth all the crowned ruffians that ever lived." George III was the "Royal Brute of Great Britain—the worst of monarchs."

These were sweet words to democratic ears. How absurd it was that a continent should be governed by an island. Such an unnatural connection merely subjected the colonies to exploitation and involved them in every European war.

Paine presented the alternatives: continued submission to a tyrannous king, an outworn government, and a vicious economic system; or liberty and happiness as a self-sufficient, independent republic. He lumped the loyalists together and denounced them as "interested men who are not to be trusted, weak men who cannot see, and a certain set of moderate men who think better of the European world than it deserves." He wrote these eloquent words:

"O! ye that loved mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is overrun with oppression. Freedom hath been hunted round the globe. Asia and Africa have long expelled her. Europe regards her as a stranger and England hath given her warning to depart. Receive the fugitive and prepare in time an asylum for mankind."

The influence of this amazing pamphlet can hardly be exaggerated. Within a few months almost every American had read it or had it read to him. It rallied the undecided and the wavering. It was a trumpet call to the radicals.

John Adams said joyously: "Every post and every day rolls in upon us independence like a torrent."

The Declaration of Independence was inevitable.

The political philosophy of the Declaration is set forth in its familiar second paragraph:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain unalienable rights, that amongst these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute a new government, laying

its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

The nature of this ideal government, motivated by man's desire for freedom and liberty, was created by social compact, by agreement among men. Originally, so Locke and Jefferson held, men lived equal in a state of nature. When necessity required some form of control, they got together and set up a government by popular consent. It is the function and purpose of government to protect men in their life, liberty, and property. Jefferson substituted for the term "property" the phrase "pursuit of happiness", an illuminating stroke on the part of this social philosopher who all through his life placed human rights first. If government fails to perform these functions "it is the right of the people to alter or abolish it altogether, and to institute new government"—as the Americans were doing. To the troublesome charge that such popular power would lead to anarchy Jefferson replied: "All experience hath shown that mankind are more disposed to suffer which evils are sufferable, than to right them by abolishing the forms to which they are accustomed."

Most of the great liberal reform movements of the 19th century—abolition, universal suffrage, labor laws, popular education; most of the nationalist freedom movements in Ireland, Finland, Italy, Germany in 1848, Czechoslovakia—based their philosophy on the Declaration. Its doctrines are timeless. The beauty of its phrasing and its sure appeal to the innermost desire of man for liberty make it immortal.

But America could not know only intoxicating success and the accomplishment of visions and the joys of opening up a continent. There is agony in growth as well as in birth. And the Civil War tried our Nation, tested its ideals, burned it in fire so that it might show its true measure of devotion to principle.

And out of American courage, and love of liberty, and the willingness to fight for the idea of freedom there came another quality into the spirit of this Nation, a quality represented at a little courthouse, that has become part of American folklore.

On April 9, 1865, Sheridan closed the only avenue of escape westward for Lee's tired army. Whether he could have cut his way through to the mountains and continued guerrilla warfare is uncertain. At any rate, Lee wrote: "It is our duty to live, for what will become of the women and children of the South, if we are not here to support and protect them?"

And so General Lee ordered a white flag to be displayed and requested an interview with his opponent. It was granted.

Lee appeared in the new full dress uniform with jewel-studded sword that he had saved in the retreat. Grant was in his favorite private's blouse, unbuttoned, and without a sword, his feelings sad and depressed at the downfall of a foe who had fought so long and valiantly.

There were formal greetings. There was small talk of other days in the old army. And then Grant wrote the terms of surrender in his own hand, officers and men paroled, arms and materiel surrendered, not to include the officers' sidearms and "Let all the men," he wrote, "who claim to own a horse or mule take the animals home with them to work their farms.

"This will do much toward conciliating our people."

The conference was over. Lee paused for a moment in the doorway, looked out over a field blossoming with the Stars and Stripes. Slowly, three times, he struck his fist into the palm of his gauntleted hand. And then he mounted his horse, Traveler, and was gone.

A sound of cheering spread among the Union lines.

Grant ordered it to cease. He said: "The war is over; the rebels are our countrymen again."

And his words were repeated by Lincoln who said:

"With malice toward none; with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Thus ended the second inaugural and began a new chapter in our history.

The will to endure, the firm faith, the surpassing goal of freedom was joined by the ideals of understanding and compassion and love.

And here we are today with the memory of the centuries washing over us—aware of the ideas and dreams and visions and sacred principles that have made our Nation what it is.

We tell ourselves that we know what has been. But we wonder what can be, what will be in this new world when wars are battles of technologies and the spirit of man has grown weary.

For we live in times when security is man's greatest goal, in times when man's fear overcomes his beliefs, his daring, his very endurance.

We fear the technologies. We fear the threats—economic and social—of conflicting ideologies. We fear that we may lose all this we know and love. We fear the whirling satellites in the skies and we fear the competitive educational systems that prepare the children of our enemies.

We fear—and yet we need not fear.

We need not fear because we have something here in our land that should be saved. We have something that must be saved if a world of men is to know the basic promise of its humanness.

Our faults, we acknowledge, are many and glaring. Indeed, it is the very recognition of our faults that so affects our self-confidence and our daring. We have permitted ourselves to be bowed beneath the very emotional weight of our knowledge of imperfection. Nevertheless, though we have often failed, though we have failed to be what we might be, we have something to offer to the world now, and to the future, something precious, something life-giving, something creative and inspiring.

This that we have and which our traditions so revere, is freedom—freedom touched by human understanding and compassion, freedom motivated by great dreams and stark courage. We have freedom, and we believe that to repudiate freedom even for the supposed comforts of security is to abandon western civilization.

The founders of this Republic held this faith so firmly that its guarantee was imbedded in the very first amendment to the Constitution: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

We have known, since the days of the Second World War, and we know today, challenges to our freedom. The energy-sapping sickly cloud of conformity shrouds too much of what we do. Our young people are fearful of being different. As adults we seek for concensus of opinion. We are fearful of the unusual, of the comment causing. As a Nation we are turning into followers of Russian initiative—the Soviets set the stage for competition; they produce a challenge—we, as Johnny-come-latelys try to find the answer. We have lost the spiritual initiative of our liberty-loving background. For there was a day when America so greatly believed that it dared to do the impossible, and because it dared, it did, and because it was willing to do, willing to try, because it would not be deterred even by the knowledge of possible failure, our Nation endured.

What we face today is not our battle alone. We realize that our way of life and the way of all of western civilization is challenged. If we go down, it all goes down. And we can go down unless we recognize what it is that we have to fight for, and then have the courage to fight—even the kind of courage that surpasses balanced budgets and waste-free economies. What makes all this worth saving is the ingredient of freedom, this magnificent state of mind that has made our Nation so great and so filled with promise.

Soon after the departure of the ship *Fortune* in January of 1622, the grand sachem of the Narragansett Indians, Canonicus by name, sent a messenger to the Pilgrims. The messenger bore a great bundle of arrows, tied about with a huge snakeskin. Squanto interpreted the message and told his friends that it was a threat and a challenge.

In reply, after taking counsel with the others, Governor Bradford answered: "That if they would rather have war than peace they might begin when they would; they, the Pilgrims, had done them no wrong, nor did they fear them nor would they be unprepared."

And by still another messenger he sent back the snakeskin filled with bullets. And we are told that the blustering Canonicus refused to receive this messenger; he sent him away, and at the same time the Narragansetts ceased their warlike noises.

This Republic was not established by cowards. Cowards will not preserve it.

We have a vision of liberty that the world has respected and loved and dreamed to achieve. But freedom is a hard-won thing, and the winning never ends. Each generation must prove itself worthy of the heritage of its fathers.

Our fathers never lost heart. They created all this we know and love because they ardently believed in what they did. And so they greatly dared. They greatly dared. And because they believed and because they dared, they firmly endured.

Can we do less than they?

Amen.

---

## United States Stands Firm

EXTENSION OF REMARKS

OF

## HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Tuesday, March 17, issue of the State Journal, published in Lansing, Mich. I believe the writer has very well captured the spirit of a united and determined American people who agree wholeheartedly with their President that we cannot knuckle under to Russia's outrageous demands in Berlin. The editorial follows:

UNITED STATES STANDS FIRM

The American people Monday night heard President Eisenhower state the reasons the United States and its free world allies must stand firm in support of their right to re-

main in West Berlin and to have free access to that city.

At the same time, the Soviet Government received notice of this country's determination to resist the Kremlin's efforts to force the Western Powers out of West Berlin where they have a right to be under agreements to which the Soviet Union was a party.

Mr. Eisenhower placed responsibility for the Berlin crisis squarely where it belongs—on the Soviet Government which seeks by unilateral action to change the status of West Berlin in a way that would be a grave threat to the freedom of 2 million residents of the city.

The President also made it clear that if the Soviet demands resulted in war the responsibility would be that of Russia, and Russia alone.

Mr. Eisenhower evidenced confidence in the ability of this country and its allies to defend themselves against the possible use of Communist force in support of the Russian demands.

In reply to congressional critics who have contended he is more interested in a balanced budget than in a strong Military Establishment to the jeopardy of national defense, the President said such assertions are simply not true.

He told his nationwide audience that he is sure of one thing—"that we have the courage and capacity to meet the stern realities of the present and the future."

While Mr. Eisenhower expressed firmness and confidence there was no hint in his speech of the truculence that marks most of the utterances of Soviet Premier Khrushchev.

The President said that "we will not retreat 1 inch, from our duty" and "shall continue to exercise our right of peaceful passage to and from West Berlin" but that this country is also "ready to participate fully in every sincere effort at negotiation that will respect the existing rights of all and their opportunity to live in peace."

He suported the pledge of readiness to negotiate by offering Premier Khrushchev a summit conference this summer if a preliminary foreign ministers' meeting indicates that a meeting of the heads of government will serve a worthwhile purpose.

In calling for firmness against the Soviet demands, the President said war would become more likely "if we gave way and encouraged a rule of terrorism rather than a rule of law and order."

The President emphasized the fact that the United States does not seek to dominate anyone and is not interested in material gain but that this country's position is based solely on principle and justice.

Mr. Eisenhower has made a firm statement of America's position to the rest of the free world and to Russia. It should remove any doubts at the Kremlin as to the United States determination and ability to defend its rights in West Berlin. By so doing it should give serious pause to any Soviet leaders who may be thinking of resorting to military power in an effort to enforce their wholly unwarranted demands.

## Firm, but Ready for the Summit

EXTENSION OF REMARKS

OF

### HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to an excellent editorial appearing in the March 18, 1959, edition of the San Francisco Chronicle, entitled, "Firm, but Ready for the Summit."

FIRM, BUT READY FOR THE SUMMIT

President Eisenhower's statement on the Berlin crisis was clear and firm yet not inflexible. It was just what the confused situation called for, and it presented the President in a strong and forceful light that is all the more reassuring in the absence of Secretary of State Dulles.

"The risk of war is minimized if we stand firm," the President said. History underlines such a statement. If anyone in the West had stood firm in 1936, it might never have been necessary to fight what Churchill has called the "unnecessary war" of 1939–45. So firmness within our rights is our No. 1 position.

What comes after firmness in sticking up for our rights? This is the area of negotiation about which the President spoke. He did not say what would be negotiated. But he did say very clearly to Premier Khrushchev that if the Soviet Union keeps on talking in the improved tone of its last note, March 2, the move toward negotiations can continue right up to the summit. "We would never negotiate under a dictated time limit or agenda," he said, but he went on to promise that if developments at the Foreign Ministers' conference, already agreed to by Khrushchev, should "justify a summer meeting at the summit" he would go.

This was the chief point he had to communicate to the Soviets. Some observers believe the President was reacting to the word brought from Moscow by Prime Minister Macmillan, who apparently concluded that there is not much point in negotiating with any Russian except Khrushchev. Since Khrushchev wants a summit conference (not the least of his purposes being to bolster his own standing in the eyes of 200 million Russians, 600 million Chinese and 100 million satellites), a summit conference there will be.

The firmness of intent to stick by our rights in Berlin is not an issue in Congress or among a majority of people in the country. What is at issue is the adequacy of America's military defense. On this the professional soldier spoke with square-jawed certainty. His denial, as "simply not true," that the country's defense is being subordinated to balance the budget, that it is inadequate, or that more manpower is essential leaves the admirals and generals and Senators in an awkward debating stance. Meanwhile, the public will undoubtedly continue to trust the judgment of Eisenhower as against that of his critics.

## Retirement of Federal Civil Service Employees

EXTENSION OF REMARKS

OF

### HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. HOLTZMAN. Mr. Speaker, I am introducing today in the House of Representatives a bill which will provide for retirement for Federal civil service employees after 30 years of service, regardless of age.

Much consideration has been given during the past few years to a liberalization of retirement benefits. However, at the present time an employee must have reached the age of 60 before he can qualify for a full retirement annuity after 30 years of service.

In checking into the situation we find that many employees started their Government careers immediately after completion of their schooling, and would thus actually be eligible for retirement after 30 years' service before they reach the age of 60. Of course, under the present law, they can retire between the ages of 55 and 60 after 30 years' service, but on a reduced annuity. In this day and age, with increased living costs, it is neither practical nor possible to attempt to live comfortably and securely on such an annuity.

In addition, statistics show that the percentage of older citizens is steadily growing, and that within a period of 20 years we will have over 20 million Americans over the age of 65. Another factor to be given serious attention when studying this problem is the increasing labor force in this country. With more young people and women becoming available on the labor market, our industries cannot absorb all these potential workers without the necessity for some adjustments. We hear many suggestions urging early retirement, and our older workers are encouraged to retire from private industry as quickly as possible to make way for the younger employees. The Federal Government could take the lead in setting such an example by permitting retirement of its employees after 30 years' service.

May I urge my colleagues to give this matter serious consideration, with a view toward enacting such legislation in the very near future.

## Amendments to Federal Airport Act

SPEECH

OF

### HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 1011) to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes.

Mr. COFFIN. Mr. Chairman, I rise in support of H.R. 1011. This legislation, as reported by the committee, represents a sound investment in the economic development of our Nation. It is directed toward the whole Nation, taking into account the needs of large cities with airports designed to handle continental and international aircraft in the jet age, and small communities providing needed air service in areas remote from urban centers.

I have received five telegrams from town officials in five counties in my district, a telegram from the Governor of the State of Maine, and a telegram from the executive secretary of the Maine Mu-

nicipal Association in support of this legislation. In fact, several officials preferred the Senate bill, with recommendations for the full $100 million annual authorization.

One month ago, Scott K. Higgins, director of the Maine Aeronautics Commission, advised us that the minimum amount to meet rockbottom rural State needs would be a $65 million authorization.

Recent studies indicate that 50 airports are needed for general and commercial aviation needs in the State of Maine. Thirty-nine of these airports are in existence and 11 new fields should be constructed. The total estimated cost is $9,928,400.

The bill which is before us today falls within the President's budgetary proposals. In fact, as reported by the committee, it is $2 million less than the President's proposal for fiscal year 1960.

We have then a bill which will provide for a basic and much-needed program to maintain, modernize, and improve airport facilities in all areas of our country. We can do this within the most conservative estimates of our fiscal requirements. If we do take this necessary step we will be making an investment in improved and safer transportation along the airways of the United States. I urge adoption of H.R. 1011 at least at the minimum level recommended by the House Committee on Interstate and Foreign Commerce.

## Five Billion Dollars More for Defense Urged by Gen. Maxwell Taylor

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Marquis Childs which appeared in the Washington Post and Times Herald on Wednesday, March 18, 1959:

URGE $5 BILLION MORE FOR DEFENSE

(By Marquis Childs)

Thanks to the Pentagon censor and the inevitable restraints imposed by the Berlin crisis, the current inquiry into our defenses is unlikely to bring into focus the real nature of the dispute over our preparedness or lack of it.

Put in the simplest possible terms the question posed is: Have our conventional forces been so cut back for reasons of economy that our capacity for limited war has been reduced dangerously close to zero and our entire reliance placed on nuclear retaliation? In other words, is the choice between suicide and surrender?

Gen. Maxwell Taylor, Chief of Staff of the Army, believes that the defense budget must be $45 billion a year for 5 years if the Army is to overcome the grave deficiencies of recent years.

This is $5 billion more than is in the President's defense budget for 1960. In General Taylor's view it would enable the Army to carry out a minimum modernization.

Some of this he spelled out in his testimony before the Johnson Preparedness Subcommittee. But the basic contention he put on the record in a speech last December. He said that 70 percent of the equipment of the Army was of World War II or Korean war vintage or older.

As a result, he told an audience in Pasadena, Calif., the Army needs second-generation missiles, light atomic weapons, improved conventional weapons, many new types of air and ground vehicles, and improved and newly designed electronic communications equipment. It is vital also to plan the contingent use of air and sea lift for limited war. In short, the Army is equipped with the weapons of the last war to fight a new war on the ground. In contrast, the Russians have pushed modernization very far in their 175 ground divisions.

Of the four members of the Joint Chiefs of Staff, General Taylor is the only one due to retire, after two terms as Chief of Staff. The others as continuing members of the Eisenhower team have a demand on their loyalty.

When he retires at the end of June General Taylor intends to take his case to the public. He will argue first in a series of magazine articles and then in a book that "massive retaliation" is a strategic trap into which the United States has fallen.

The odds would seem to be against his success. The power of the aircraft industry is very great and if the Eisenhower economy wall is to be breached, with or without the President's consent, it would seem likely the additional money would go into missiles or aircraft.

Yet, General Taylor's effort should not be entirely discounted. His predecessor as Chief of Staff, Gen. Matthew Ridgway, more than any single individual blocked those who were bent on an atomic strike when the French had dug themselves into the futile jungle post of Dienbienphu in the Indochina war. The country's debt to him on his one score alone is great.

General Ridgway also made the case for a modernized Army of reasonable strength. While he was not reappointed to a second term as Chief of Staff he had had a wide and respectful hearing.

Before he retires, at the end of his second term, General Taylor will go to Europe for a lengthy meeting of NATO military planners. About mid-May he will be in Berlin. Ostensibly this will be for a formal farewell to the American troops stationed there.

In fact it will be a morale booster for the garrison. From 1949 to 1951 General Taylor was commander of the American contingent in Berlin and he has a deep attachment to the city. When this spare, handsome soldier inspects the troops in battle formation with the deadline of May 27 only a few days away, it will be a moment of high emotion.

What is coming out of the current preparedness hearings should leave Moscow in no doubt—this country will not retreat from Berlin no matter how grim the choice. But a choice between suicide and a border province in Iran or the China offshore islands is something quite different.

It is the case for readiness to meet the limited challenge that General Taylor wants to carry to the court of public opinion.

## Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
### HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. METCALF. Mr. Speaker, Arthur S. Flemming, Secretary of Health, Education, and Welfare, proposes to build 75,000 classrooms by the simple device of altering State constitutions, State debt-limitation statutes, and basic State tax principles. Secretary Flemming has been so successful in his crusade to doctor the laws of the States that he has been given an honorary doctor of laws degree by Georgetown University.

Dr. Flemming, in the process of doctoring the laws under his new franchise, could help the medical doctors of the Nation solve the Nation's health problems and stave off the awful specter of socialized medicine at the same time he is building classrooms. Simple extension of Dr. Flemming's formula would have the States that are rewriting their constitutions or their statutes in order to build classrooms also incorporate a provision that all germs, viruses, bacteria, and Ezra Taft Benson are persona non grata in those States.

## Soviet Trade

EXTENSION OF REMARKS
OF
### HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an article appearing in the March 15, 1959, Washington Post and Times Herald on the subject of trade with the Soviets.

There are many pressing questions involved in this area. Should we trade with the Soviets? Is it safe and desirable? Who should establish United States trade control policies? How should our trade-control program be administered?

This article contains a discussion touching on these problems and I believe it will be of interest to all Members of Congress:

COMMERCE'S "NO" BARS PIPE ORDER—DEPARTMENTS AT ODDS OVER TRADE WITH SOVIET

(By Carroll Kilpatrick)

The question of whether it is safe or desirable to trade with Russia is still being debated in the U.S. Government. It also is a question the Government is constantly debating with its principal allies, which are more eager to trade with the Communist bloc than Washington.

The State Department favors somewhat more liberal rules governing trade with the Communists than the Defense and Commerce Departments. It was the latter two which prevailed this week in a decision to deny a license for the export of $2.5 million worth of steel pipe to the Soviet Union.

The importance of the decision is not that Russia is denied access to the pipe, which would be sufficient to build a pipeline of less than 45 miles, but that it again shows that this country has not, after nearly 15 years of postwar debate, been able to make up its mind as to the precise policy which should be followed.

ACTION RECONSIDERED

Twice the Commerce Department, without consulting the State Department, turned down an application for a license to export 26-inch steel pipe to Russia. After the visit here early this year of Soviet Deputy Premier Anastas I. Mikoyan, the Commerce Depart-

ment decided to reconsider its decision and to seek the advice of other departments.

But despite some uncertainty by the State Department, the decision was finally made to deny the license.

When Mikoyan was here, he and C. Douglas Dillon, Under Secretary of State for Economic Affairs, had a heated argument over American restrictions against trade with the Communist bloc, and Dillon said afterward that Mikoyan really was not very serious about wanting to improve trade relations.

Dillon said he invited Mikoyan to begin trading. The reapplication for the license for steel pipe was one result of the invitation, and now it has been turned down.

It has been reported that the Soviets recently placed orders for 85,000 tons of steel pipe valued at $19 million in West Germany. The question thus arises as to why this country should refuse to do business with Moscow if the same order can be filled elsewhere.

The Commerce Department explanation is that there is a difference in the kind of pipe purchased in Germany and the kind sought here. West Germany is supplying 24-inch pipe; the Russians wanted to buy 28-inch pipe here. The Department thinks that Russia will have a hard time finding the 28-inch pipe outside the United States, but whether this is true or not remains to be seen.

Under Commerce regulations, pipe that is 24 inches or less in outside diameter is not on the positive list, but larger pipe is.

What this means is that there is a presumption for denial of an application for an export license if the item is on the positive list and a presumption for granting an application if the item is not on the list.

Export licenses must be obtained for practically everything exported to Soviet bloc countries, whether the item is on the positive list or not.

Moscow no doubt will denounce the decision on the steel pipe and attempt to make propaganda capital out of it.

Most officials here would reply that Moscow's chief interest is not in normal trade but in sporadic trade, the purchase of steel pipe today, of a chemical factory tomorrow, of some new technical development the next day, all designed to further Russia's industrial expansion with the least possible commitment to the establishment of continuous trade patterns.

The differences in the administration are between those, on the one hand, who believe that there should be virtually no trade with Russia, because any trade helps its industrial expansion, and between those who believe that the best way to bring about more normal political relations is to coax Russia to become more dependent upon foreign trade.

## Draft Admiral Rickover?

EXTENSION OF REMARKS
OF
### HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. FULTON. Mr. Speaker, my answer to the urgent need of prompt action to rush development of nuclear powered space craft is to draft Admiral Rickover at once. Put him in charge of a program to convert nuclear engines for use in space vehicles and watch our U.S. progress skyrocket.

Let us face it, we cannot run a space vehicle for any time or with effective power for any appreciable time once we get it up in space.

My congratulations to the forward looking editorial staff of the Twin City Sentinel of Winston-Salem, N.C., for their editorial of March 17, 1959, captioned "New Assignment for Rickover." This editorial points out in remarkably clear terms the need for a man of Admiral Rickover's stature and accomplishment to develop nuclear powered space craft.

As I think the problem is one that should be brought to the attention of the American people, I am submitting this answer in the CONGRESSIONAL RECORD to the letter of March 18, 1959, of Robert F. Campbell, associate editor of the Twin City Sentinel, and I also include this thought-provoking editorial:

WINSTON-SALEM JOURNAL,
TWIN CITY SENTINEL,
*Winston-Salem, N.C., March 18, 1959.*

Hon. JAMES G. FULTON,
*House Office Building,*
*Washington, D.C.*

DEAR SIR: You may be interested in reading the enclosed clipping of an editorial which appeared in the Twin City Sentinel of March 17.

We would be delighted to receive from you, preferably for publication, any comment you might wish to make about the editorial or the subject with which it deals.

Sincerely yours,

ROBERT F. CAMPBELL,
*Associate Editor.*

NEW ASSIGNMENT FOR RICKOVER?

The proposal by Representative JAMES G. FULTON, of Pennsylvania, that Rear Adm. Hyman G. Rickover be drafted to rush development of nuclear-powered space craft calls attention to a critical problem in the advancement of space flight.

Progress in designing and building powerful rockets to lift vehicles into space has been rapid. Only a little slower has been the development of controls to guide a rocket's thrust and to hold a vehicle steady in its course.

But once that short surge of rocket energy is spent lifting a vehicle into its desired path, very little power is left in the vehicle itself—either for sustained propulsion or for the vehicle's internal needs. The Pioneer IV, for example, was given a mighty boost into a solar orbit. But it could carry only enough power supply to operate its tiny radio transmitter for 60 hours. Several satellites are still coasting around the earth, silent and essentially useless because their meager energy supplies are exhausted.

For space vehicles to stay in business doing jobs that require more than trickles of electricity, some real progress must be made in developing power sources for them. Conventional sources appear hopeless. An electric generator would require a fuel-burning engine to turn it, and fuel would have too much weight to lift. As our satellites have shown, even the best batteries we have for space applications, those that pack a maximum of punch in the smallest and lightest possible package, fall far short of what will be needed for practical weather observation or communication satellites.

There are two possible answers to this energy problem. One is to convert the energy found in space—the harsh glare of sunlight—into electricity. The other is for vehicles to carry a nuclear power supply with them. For some purposes solar energy may be the answer, but the light of the sun, even in outer space, is not sufficiently concentrated to be easily gathered in amounts to produce high-volume power. In short, the sun could be used for watts, but not for kilowatts.

This leaves nuclear energy as the only presently known source of plentiful power for use in space. The trick is to devise a nuclear plant that is small, light and sturdy enough for space applications and that has a high energy output. At the present, our best nuclear power sources are still very heavy or very weak. In fact, according to the Rand Corp.'s "Space Handbook," we are probably farther away from a spaceworthy nuclear power plant than any other technological requirement of interplanetary flight.

If this need is to be met quickly, bold and imaginative research and development work is required. And that brings us back to Admiral Rickover. He is the man who pushed atomic submarines to success against many heavy obstacles—both technical and political. If given the chance with his hands not tied by administrative redtape in the complicated jumble of space agencies, Admiral Rickover might well earn the title of the father of nuclear spaceships.

## The Flight Safety Foundation

EXTENSION OF REMARKS
OF
### HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. DORN of South Carolina. Mr. Speaker, the election of Ansel E. Talbert to the vice presidency of the Flight Safety Foundation is very pleasing to the people of South Carolina as well as his many friends in the great city of New York and throughout the country. Colonel Talbert's uncle, for many years, represented South Carolina in the U.S. Congress with honor and distinction. Mr. Speaker, as you know Adm. John H. Cassady, retired, is the president of this great organization. Admiral Cassady is loved and admired by the Members of this Congress. I am happy to report to you that Colonel Talbert will assist him in his great work.

Mr. Speaker, the following article about Colonel Talbert and the Flight Safety Foundation will be of interest to the entire country:

FOR SAFER FLYING

A brief notice appeared in the February View concerning the election of Mr. Ansel E. Talbert of The Manor to the vice presidency of the Flight Safety Foundation, Inc. Every prospective airplane passenger can find significance in Mr. Talbert's new assignment after the tragic accident last month in the waters off La Guardia Field. For this nonprofit organization is concerned with the promotion of safety in all forms of flight, including space operations and conventional flying. Its 10 regular publications and reports which Mr. Talbert will edit, are distributed to military and aviation personnel at flight bases and aeronautical centers, both in this country and abroad for the use of private and business fliers, airline pilots and mechanics. They are also available to all others interested in aviation safety.

This foundation was organized by Laurence and Winthrop Rockefeller and it is still largely aided financially by the former as well as by aircraft and missiles industries and associated services. One of its execu-

tives is Mr. Harper Woodward, Mr. Rockefeller's chief legal and aviation adviser. It is headed by Adm. John H. Cassady, USN, retired, former Commander in Chief of U.S. Naval Forces, Eastern Atlantic and Mediterranean, and it is directed by Jerome Lederer, international authority on the safety aspects of jet-powered transports.

Mr. Talbert is exceptionally well-equipped for his new duties because of his aviation experience and journalistic background. During World War II, he served as air intelligence officer and as assistant military attaché in the American Embassy, London, and as Chief of Liaison and Special Reports in the Eighth Air Force Intelligence, England, under Lt. Gen. James H. Doolittle. Later, he was a member of the U.S. Strategic Bombing Survey, Europe and the Far East. In the course of his military services, he rose from the rank of private to that of lieutenant colonel. For several years, Mr. Talbert was military editor and columnist for the New York Herald Tribune and its News Services. He is also the first newspaperman to have flown over both the North and South Poles.

In 1957, Mr. Talbert received the Strebig Trophy of the Aviation Writers Association of North America for the year's outstanding writing on aviation by a newspaperman. He has been awarded the Legion of Honor by the French Republic, with the rank of Chevalier for "outstanding contributions * * * to friendship and communication between France and the United States."

## Pennsylvania's Public Libraries: What We Have and What We Need

EXTENSION OF REMARKS
OF

### HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SUMMARY OF RECOMMENDATIONS OF THE PENNSYLVANIA LIBRARY SURVEY—A STUDY OF LIBRARY SERVICE IN PENNSYLVANIA WITH A PROPOSAL FOR A STATEWIDE PLAN OF PUBLIC LIBRARY DEVELOPMENT

(By Dr. Lowell A. Martin, dean, Graduate School of Library Service, Rutgers University, with the assistance of an advisory committee appointed by the Pennsylvania Library Association)

INTRODUCTION

Public Library Service should be the basic foundation for knowledge, human understanding and constructive entertainment in the community. Beyond the high school and the university, the library is society's most effective weapon for continuing education.

Today, however, 2,161,526 Pennsylvanians lack local public library service.

Even those 5,771,527 citizens of the Commonwealth who have some library service actually are using facilities that are antiquated and grossly inadequate for meeting their subject and information needs.

An estimated 7,400,000 Pennsylvanians lack reasonable access to the specialized research materials they want and need.

A series of recommendations contained in the recently-completed Pennsylvania Library Survey are aimed at correcting these and related deficiencies in library services.

A summary of those recommendations is given in this article. For those who wish to study the complete, 2-volume survey report, copies may be found in each public library in Pennsylvania after January 1, 1959.

*Background of the survey*

A comprehensive study of Pennsylvania's public libraries was begun in October, 1957. It was financed by funds from the Federal Government.

Dr. Lowell Martin, Dean of the Graduate School of Library Service at Rutgres University was director of the study and Miss Grace Estes, formerly librarian of the Osterhout Library in Wilkes-Barre served as assistant director. Mr. David Palmer, formerly with the Enoch Pratt Free Library in Baltimore, was executive secretary.

Reports of progress were made periodically during the year to an advisory committee of the Pennsylvania Library Association. These conferences, held in Harrisburg, also gave the study staff the benefit of valuable advice from committee members.

The report of the study has been approved by the Pennsylvania Library Association and by the Governor's Commission on Public Library Development, headed by Mr. Albert M. Greenfield, Philadelphia financier.

*Plan for development*

A plan for statewide library development has been drawn from the general survey.

It recommends basic minimum standards of library service which are not being met at present by a great number of libraries. These standards deal with: matters of accessibility; the number and quality of library staff; minimum resources of books and materials; minimum service and the number of hours libraries are open each week; and minimum financial support which will assure service which meets present-day needs in Pennsylvania.

There are many recommendations in the report. Essentially, they call for a coordinated library system to provide a service which is useful to every person and every phase of activity in the State.

Cost of this service, compared with total governmental expenditures, is relatively small. The total is $24 million annually—slightly over 1 percent of public expenditures in Pennsylvania.

At present about $9 million is being spent in Pennsylvania for public library service. The State contributes about 1 percent. It is proposed that the State carry slightly more than 25 percent of total expenditures for library service.

The per capita public library expenditure in Pennsylvania now is 83 cents—among the lowest spent by any State in the Union. The report recommends that this be raised to about $2. This figure is well below the $2.60 to $3.41 per capita recommended in the national standards of the American Library Association. Yet even at this lower cost Pennsylvania can have a good minimum level of service because there are a number of built-in economies in the proposed plan.

*Proposed organization of library service*

Major recommendations contained in the report are these:

Establishment of 27 district systems providing complete library service and their coordination by the State library.

Maintenance of three distinct levels of library service:

1. Local service to be provided by the 367 public libraries now in existence.

2. Stronger specialized services would be provided through the 27 district library centers.

3. Special resource service would be given through four very large libraries in strategic locations.

Formation of libraries would be encouraged in unserved areas by the State library, its staff and other local and district libraries.

The plan attempts to build upon strength now available. Only minimum reorganization of the present structure of libraries in Pennsylvania is involved.

Each library would maintain its own independence and identity. However, there would be close cooperation between local libraries in combination with a district center to form 27 true systems. The State library would serve as the coordinating agency for the statewide plan.

Major advantages of the plan are these:

Local day-to-day service would be available to every resident of the State within 15 to 20 minutes of his home.

A library with broad subject content and professional staff would be within an hour's distance of each resident.

A research library would be located within 1 day's round trip of every resident, allowing some time to consult materials.

The most important element in the proposed plan is the designation of 27 district library centers which would open their doors to everyone within their range free of charge. In all but five areas, these units would be built upon existing public libraries which are conveniently located within an hour of all people in their districts.

In five districts college libraries are proposed for district library centers. These are areas in which they are the only agencies of sufficient strength to assume responsibility for central library service. In these areas, the extension function would be directly administered by the State library.

It is proposed that State aid be given the district centers for extending their service areas. Each district library would be required to maintain an extension service to help local libraries to attain minimum standards.

Coordinating local libraries into a cooperative system, it would extend loan of materials, special reference, and professional service to all the libraries in the system in addition to deposits of books. Each system would be encouraged to develop joint selection of books and to experiment with centralized processing of materials.

Supporting these 27 units would be 4 regional resource centers—the Philadelphia free library, the State library, the Pennsylvania State University library, and the Carnegie library of Pittsburgh.

The facilities of these four major centers would be always available to district libraries for specialized material and professional aid. The State library would coordinate the 27 districts and 4 resource centers into a statewide system.

*Proposed financing of libraries*

A combination of increased local and State support of libraries would be used to finance the $24 million needed for the program.

It is proposed that an expanded program of State financial assistance be adopted. Such funds would be used for four related purposes:

To aid libraries in communities which make a reasonable local effort to maintain service.

To aid especially those districts which have the least capacity to help themselves.

To aid libraries selected as district centers.

To aid four major research libraries which stand as specialized collections in regions.

To receive State aid, each level of library service—local, district, and regional—would be required to meet these basic conditions:

1. A minimum local financial effort.

2. Achievement of standards outlined for each service level.

3. Cooperation within library systems.

*State share of local service*

To qualify for State aid under the proposed plan, each local library is obligated to meet a minimum share of its own support. This "local effort" would be equal to ½ mill on market value or $2 per capita, whichever is lower.

The term market value applies to taxable real property in the library's service area. Information on market value in individual districts is supplied each year by the State Tax Equalization Board.

Libraries may secure such information through consultation with the board of school directors, the county school office or school administrators in their own service area. When asking for figures on market value, State Tax Equalization Board figures should be specified.

The sum of money required for local effort may be derived from any source or combination of sources. It may be secured through public funds (tax levies or appropriations from municipalities or school districts) or through private endowments, gifts, etc. As a general, rule, however, the only reliable source of income is tax revenue.

If the library's total income equals the one-half-mill level, it is entitled to $0.25 per capita for the population of its service area. This would eventually require $2,758,000 in State aid.

*State equalization aid*

When the minium local share of library support produces less than $1.25 per capita, it is proposed that additional funds be provided by the State.

This additional equalization aid would be the difference between the amount actually produced by the one-half-mill rate and $1.25 per capita up to a maximum of $0.25 per capita. This feature of the library plan would cost a little over $700,000 per year at 1957 valuation and population levels.

While this is only a fraction of the total to be spent for libraries, it would have a highly desirable strategic effect. It would apply in precisely those places which would lag most if they were not given special assistance.

Since it is the goal of the plan to provide better and more efficient service for all areas of the State, this section of the program offers every community a financial foundation for an indispensable local library as a vital force in the public interest.

*State share of central service*

The 27 central libraries designated in the plan would serve their entire district. Because of this, each would receive additional State aid.

This would amount to $0.25 per capita for the people served in the extended district outside the immediate service area of the library. Again, certain conditions would have to be met.

These conditions pertain to standards rather than fundraising. Each district center would raise no more money than that needed to qualify it for local service aid.

However, each center would be required to meet minimum standards for district libraries. It would open its doors to all residents in the district for circulation and reference service and assume the extension function for the district.

This portion of the program provides the focal point for distribution of services and materials between the State or regional centers and the local community. It would require $1,760,000 per year in State aid.

*State share of regional service*

The proposed plan calls for four regional resource centers. They are already established in strategic geographical locations across the State.

Like the district centers, they would be called upon to open service to people from far beyond their normal boundaries. For this State-level service they should receive additional State aid.

The proposed amount is $100,000 annually for each of the libraries. This amount should be reviewed after 5 years to be sure that it pays a considerable part of the extra costs imposed on these resource centers.

*The 5-year leeway period*

There would be a 5-year "leeway" period for compliance with the conditions of local financial support and meeting of standards required for local and central libraries.

The specific proposal is that full State aid be made available if the locality comes up to one-half of the fair share of local financial support, a sum equal to ¼ mill on market value, or $1 per capita, whichever is lower.

The library would have 5 years in which to bring its local effort up to ½ mill on market value. If it had not achieved this level in the 5-year period, it would no longer be eligible for State aid.

This leeway period is designed to make a definite improvement in library service immediately and to provide an incentive to localities to assume their fair share of library support.

It is recommended that each agency applying for State aid submit to the State library a plan for the use of these funds so that State money would be used wisely and effectively for definite improvement of service.

Approximately $5,700,000 in State aid would be needed each year to carry this program. In addition it is proposed that the State provide a $1 million matching fund to aid communities in construction of library buildings and in making necessary capital improvements.

*Promotion and demonstration of library services*

The survey report asks that $300,000 be appropriated to the State library during each of the first 5 years of the program. It would be used for promotion and demonstration of library service.

Such stimulation where library service is now completely lacking or substandard could take a number of forms. It might be bookmobile service to an area which had none before.

It could be used to provide a professional children's librarian in a district. In cases where a library has concentrated its service on children, a demonstration of information and reference service for adults in the county library system would stimulate interest and increase use of the library.

Such demonstrations would be financed, staffed and materials would be supplied by the State library for a limited period to show aspects of modern library service.

There are several ways in which a community without service may establish its own library facilities and still qualify in the total program.

It may take steps to have a county library established, with service to the locality as part of the county program.

It may contract for service with the district library center or with another existing library of some strength in its own area.

It may start a local library and affiliate with either a county library or a district library center.

Any community organizing a new library would have the assistance and the advice of the extension librarian at its district library center and also the services of the State library extension division.

*Pennsylvania State library*

In regard to the State library, the survey makes the following recommendations:

That the present law regarding the functions of the State library be clarified and strengthened so that this agency may assume its role as coordinator and administrator of the statewide plan envisioned.

That the administrative position of the library within the department of public instruction be strengthened or an alternative placement for it in State government be found.

That the budget for the State library be almost doubled so that it can carry out its necessary functions in a statewide library program.

That it move rapidly toward meeting standards as one of the four regional resource centers called for in the plan. This would involved building up its book collection significantly, hiring specialists in those subject areas for which it takes responsibility, and generally increasing its staff and services.

That it expand its services to Pennsylvania libraries, administer demonstration programs for developing library service in areas where it is weakest and establish a continuous program of study of library problems in the State.

*Personnel*

Without qualified personnel who are devoted to the high standards of their profession no program such as this can be successful. Once the proposed plan begins to have its desired effects in stimulating greater interest in the library and broader use of its services, more trained personnel will be needed.

It is recommended that every effort be made to assist in the education and training of qualified personnel to fill these additional library positions called for by the plan. There should also be a program aimed at raising the level of training of present personnel.

There are several ways in which this may be accomplished. The survey makes these proposals:

1. That the State give financial assistance to at least three graduate library schools in Pennsylvania.

2. That the State make scholarship funds available to encourage and enable more students to enter the library field.

3. That undergraduate colleges provide introductory courses in librarianship to recruit personnel to the field.

4. That inservice training programs be made available and that the State library participate in their development for the education of librarians on the job.

It also seems obvious that some action is needed in the establishment of professional standards. Therefore, the survey recommends that State certification of librarians be established by law providing for three levels of personnel: Library assistants, provisional librarians, and professional librarians.

There is great need for a program which would aid local library trustees in their search for better understanding of library needs and in their desire to implement improved systems within their own communities.

Library trustees occupy an important and powerful position in relation to the proposed program. Many of these men and women feel a need for broader education in the new methods of library service. They want, also, to be able to use their own talents and abilities more forcefully.

At present they have the potential to act in the public good in all communities, but in some they are ineffective.

It is the purpose of the proposed State library plan to coordinate all library functions within the Commonwealth so that they may serve the greatest number of persons in the most efficient manner.

This goal can be accomplished best and most economically through a program which will include all the major recommendations contained in this summary and the full report of the library survey.

CONCLUSION

We have heard much during recent months of the need for renewed interest and greater support for education. Informed and enlightened public support is indispensable to a constantly improving education system.

Certainly no other single element works more conclusively toward broadening and strengthening the mind outside the school

than does the public library. In no other community agency is the course of human aspiration and understanding more firmly conceived.

During recent years in Pennsylvania there has been a tendency toward sloughing off the importance of the library within the community. With public support lagging, library physical plants have deteriorated along with their supplies and resource material.

As a Commonwealth we are spending $750 million each year to educate Pennsylvania children. This sum helps to pave the way for better citizenship, for a greater cultural background and a general elevation of the public welfare.

Yet we have done little or nothing to insure this education we have given our children against the dry rot of stagnation and disuse. The fact is that education is never a completed action of the human mind.

To be genuinely educated, the mind must be constantly invigorated both by new ideas and by a restatement of those which are timeless. After high school and college, Pennsylvania has neglected to preserve its greatest instrument for the encouragement of learning—the library.

There is no greater investment in the search for knowledge than the public library which is well equipped and staffed by qualified personnel. There is no better insurance that the money we have spent to educate our children has been wisely used.

The Pennsylvania Library Survey demonstrates dramatically that there is a need for greater public support of library facilities. This support must come from all levels of Government and from the hundreds of enlightened, civic-minded community organizations for whom the constant improvement of human life is the central goal.

## Fourfold Increase in Funds Is Needed for United States To Retain Ocean Study Lead

---

EXTENSION OF REMARKS

OF

### HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. OLIVER. Mr. Speaker, the United States must begin to face the facts of life. We cannot enjoy security without expending the necessary funds required to insure ourselves against sneak enemy attacks. There are no shortcuts. Oceanic research, perhaps more than any other defense requirement, has been sadly neglected. The Russians have not been sleeping at the switch. They are way out ahead in this field and there is no sign that the Soviets intend to slow down. The following article fully describes the magnitude of the task that our country faces:

SEA BATTLE, 1958: KEY TO SURVIVAL (II)—FOURFOLD INCREASE IN FUNDS IS NEEDED FOR UNITED STATES TO RETAIN OCEAN STUDY LEAD

(By Everett S. Allen)

The United States present level of financial support for the marine sciences is about one-fourth of what is actually needed if this country is to prevent Russia from overtaking and surpassing America in this field. This means it is up to the Government, for the Department of Defense dominates marine science; private funds constitute only about 10 percent of present expenditures.

Whether it should remain Government dominated, in view of its wide-ranging peacetime and wartime applications, is a moot question—maybe Federal funds should just be applied to prime the pump in this much neglected area.

That it is neglected is obvious. Marine science in the United States presently is the concern of only a few hundred persons, led by such dedicated scientists as Dr. Maurice Ewing, director of Columbia University's Lamont Geological Observatory, and Dr. C. O'D. Iselin, director of Woods Hole Oceanographic Institution. Yet it is the basic science of three-fourths of the earth's surface.

RUSSIANS FORGE AHEAD

The Russians now are forging ahead of the United States in oceanography and its closely allied, and equally important, earth science, meteorology.

The Soviet Union may very well be close to an important breakthrough in the frontiers of scientific knowledge in these and related fields.

This is the opinion of Dr. Alan T. Waterman, director of the National Sciences Foundation, the newest U.S. Government agency for the promotion of basic research. In oceanography, Dr. Waterman declared, America is equipped with a few out-of-date vessels and a couple of modified Navy tugs, while the Russians are employing a first-class fleet of oceanographic ships.

To buttress Dr. Waterman's opinion, the Standard-Times interviewed exclusively some of America's top-level scientists engaged in oceanographic work. Included are ranking members of the staffs of the Woods Hole Oceanographic Institution and of the Lamont Geological Observatory at Palisades, N.Y. Personnel of these two organizations constitute nearly one-half of the total U.S. deep-sea oceanographic plant—the only other principal component is the Scripps Institution of Oceanography on the west coast.

REDS WELL-EQUIPPED

Here, in substance, is what the men have to say whose opposite numbers, Soviet marine scientists, are at this moment scattered from the Indian Ocean to the Arctic with more equipment and better ships than can be had in the United States.

Whatever may be said for Russian oceanography, they are beginning it with plenty of facilities. Eight to ten years ago, somebody in the Kremlin said, "Let's do it," and pushed the button that started the present crash program in marine science. Americans do not know how close the Russian Navy is geared to oceanography; maybe to a high degree. The ocean scientists from the Soviet that Americans do know are still engaged in catching up, although their rate of advance is greater than ours.

But the worry is that there is a whole additional crowd of Soviet marine scientists, maybe in the Navy, engaged in the practical application of oceanography—peaceful, or otherwise. This much is certain: 10 years ago, there were no Russian oceanographers in the open ocean; now, they have stopped being provincial and they are scattered to the world's far corners.

Only in the last 3 years have the Russians allowed their oceanographers to come to international meetings. When they get up and talk, it's usually pretty naive stuff, but it is interesting to note that a half-dozen of the younger, obviously capable marine scientists invited to an international meeting at Toronto last fall, did not show up.

FACTS ARE NEEDED

When you compare Russia and the United States in oceanography, you really are talking about expeditions. The person who gets ahead is the person who looks, who gets the opportunity to look; at this point in ocean study, facts are needed more than contemplation.

The United States has three major institutions—Lamont, Woods Hole, and Scripps. Woods Hole has the *Atlantis* and the *Crawford*, for vessels; Scripps has four ships, and Lamont has the three-masted schooner, *Vema*, for deep sea research. That is the total U.S. fleet; the Navy abandoned its deep sea program 3 years ago.

The *Vema* stays at sea 300-plus days a year; that is more than any other American oceanographic vessel does. And bear in mind, with U.S. ships in this field, you are talking about vessels from 300 to 600 tons, with 6 to 10 scientists each, and a cruising range of 3,000 to 6,000 miles.

The Russian effort began in earnest in 1949, with the construction of the *Vitjaz*, a 6,500-ton vessel accommodating 70 scientists, and with a cruising range of 25,000 miles. She stays at sea as many days a year as does the *Vema*. Originally, Soviet oceanographers operated mostly in the Kurile-Kamchatka areas, but now they are going into the Southwest Pacific.

SHIP COMMISSIONED

This year, the Russians commissioned the *Monomosoff*, a 7,500-ton oceanographic ship operated by the Soviet Institute of Oceanography. The Russian icebreakers *Ob* and *Lena*, each of 12,500 tons, carry staffs comparable to the other two ships, and work in arctic and antarctic waters. The Russian also are continuing a new study program in the Indian Ocean, apparently extensive.

Apparently the Russians have no trouble getting money or scientists for oceanography. Their marine scientists appear very well-informed, even though they have been at sea for a year; the Soviet Union has an efficient communication service for keeping them up to date on scientific papers published after they sailed. The United States does not have such a program.

Everybody admits the Russians are going places in oceanography and soon will have a lot of data. The nation with the most data is ahead in this business at this time; later, it will be the nation with the most ideas, but not now, because overall knowledge of the ocean is too scanty.

In Arctic work, the United States is terribly behind the Russians. Our only Arctic station, known as T–3, was established a couple of years ago, and we had one more, set up as part of the International Geophysical Year (IGY) program last year.

ICE PACK STATIONS

The Russians, by contrast, have had as many as 9 or 10 stations drifting in the ice pack, as is T–3, set up on an ice floe. At the international meeting of scientists in Toronto last September, the Russians showed a chart of the places where they had landed on the ice pack with planes and an authoritative American observer said wryly, "It looked like a severe case of freckles," it was so spotted with landing sites.

American landings of this type total only about 25. The Russians have put out a whole stack of publications just on a single Arctic station, as an illustration of the quantity of their effort and, at least since 1936, when they established a North Pole station, they have led America in this area.

Most scientists, although not directly concerned with the military aspects, concede it would be of considerable strategic value for American defense-planners to know as much as possible about the Arctic Ocean. Lack of such knowledge, from which we presently suffer, could be gravely dangerous.

One of the big bottlnecks in oceanography is meteorology. An ocean scientist remarked, "We can predict the sea better than we once could, but weather usually determines

what happens in the sea, and our failure to predict the weather accurately is a scientific scandal."

AN ALARMING PICTURE

Dr. A. V. Astin, Director of the National Bureau of Standards, described a 3-day session of meteorologists in Russia last year as presenting an alarming picture for the free world.

The race in the ocean sciences is essentially between the Big Two, the United States and the U.S.S.R.; this is not to demean the efforts of any of the other free nations, but it takes men and money that smaller and harder-pressed countries just don't have.

## DAV Services in New Jersey

EXTENSION OF REMARKS

OF

## HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. GALLAGHER. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of New Jersey citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations which have State departments and local chapters in New Jersey is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx; DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer N. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time trained national service officers—138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration and in its central office in Washington, D.C., They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV national service officers in New Jersey are Mr. John W. Bill, Mr. Alexander M. Zbylut, and Mr. George Gregor, located at the VA regional office, 20 Washington Place, Newark. The department commander is Mr. David W. Smith, 63 Circle Place, Red Bank, and the department adjutant is Mr. William J. Dodd, War Memorial Building, Trenton. The VA hospitals coming under the jurisdiction of the national service office are a 950-bed general medical hospital at East Orange and a 2,009-bed neurophychiatric hospital at Lyons.

Mr. James F. Patten, 1075 Maurice Avenue, Rahway, is NEC from the second district and Mr. Joseph Burke, 38 East 34th Street, Bayonne, is a past national commander.

During the last fiscal year, the VA paid out $141,671,000 for its veteran program in New Jersey, including disability compensation to its 76,150 service disabled veterans. These Federal expenditures in New Jersey furnish substantial purchasing power in all communities.

Only about 7 percent—4,919—are members of the 67 DAV chapters in New Jersey.

This 7 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of New Jersey veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

| | |
|---|---|
| Claimants contacted (estimated) | 118,057 |
| Claims folders reviewed | 98,381 |
| Appearances before rating boards | 45,752 |
| Compensation increases obtained | 6,538 |
| Service connections obtained | 2,513 |
| Nonservice pensions | 1,252 |
| Death benefits obtained | 276 |
| Total monetary benefits obtained | $3,773,424.18 |

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for New Jersey veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civic service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before pressenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 3 percent—0.036—of such discontinuances and reductions have probably occurred as to disabled veterans in New

Jersey, with a consequent loss of about $840,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in New Jersey to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54.00 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 428 of whom, during the last 8 years, were New Jersey residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of New Jersey.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in New Jersey by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

## To Correct an Inequity

EXTENSION OF REMARKS

OF

### HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 26, 1959*

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith an editorial taken from the current issue of the Saturday Evening Post entitled "The Military Pay Act Does Injustice to Retired Servicemen." My bill, H.R. 2973, is designed to correct the situation presented in the editorial and I feel this is a matter which deserves serious consideration by the Members. The editorial is as follows:

THE MILITARY PAY ACT DOES INJUSTICE TO RETIRED SERVICEMEN

The recommendation by a committee, headed by Ralph J. Cordiner, which was assigned by the Defense Department to investigate service pay, was that pay for naval, military, and air men who have earned their retirement should be geared to the current pay which is received in active service. In other words, if the pay for an admiral or an Army sergeant on active duty is increased 10 percent, his pay after he retires will be increased by 10 percent. Up to this point, this is how service retirement has been handled for many years, and that is how it is treated in the Military Pay Act of 1958, as to those retired after its effective date, June 1, 1958.

However, in the bill passed at the last session of Congress, this relationship between active-duty pay and retired pay is, with certain exceptions, not applied to men already retired. They were given a flat 6 percent increase across the board. This results in all sorts of anomalies, including one mentioned by the Washington Star in which a major general who retired a few months before the bill became law received approximately $1,900 a year less than an officer of equal rank who retired after the effective date.

A difference between military retired pay and civilian retired pay, which stays put no matter what happens to the pay of active workers, is that the retired military man is not really retired at all. He is still subject to the Uniform Code of Military Justice; he is subject to recall in emergency or at the pleasure of the Defense Department. Thus it is logical that his pay on the retired list should be geared to his pay when on active duty. But the central reason is that pay in the armed services is generally less than for the same grade of ability in civilian life, and some added compensation at retirement is fair and just.

It seems to us that restoration by the new Congress of the traditional relationship between the pay of active-service officers and men and the pay of retired military personnel would pay dividends in several respects. In the first place, of course, it would correct an injustice to the officers and enlisted men already retired, who are certainly hit as hard by inflationary prices as will be the men to be retired later. But the change could also have an important effect on the ability of the services to persuade men to make military service a permanent career.

## All Safety Is Relative

EXTENSION OF REMARKS

OF

### HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. DORN of South Carolina. Mr. Speaker, the following editorial carried by the radio and television stations subscribing to Broadcast Editorial Reports caught my attention. This great editorial organization is headed by Mr. William F. Brooks and I commend this excellent editorial to the entire Congress:

ALL SAFETY IS RELATIVE

Airline flying, which is just now seeing the introduction of 600-mile-an-hour jet passenger planes on world air routes, is well

within the normal risks of living today. This is what can be considered a relative measure of safety.

All living is to some degree hazardous, all safety is relative. When a tragic aircraft accident occurs, the public too often is inclined to overlook the ordinary facts of life—that over 48 million passengers were carried by the U.S. airlines last year with a loss of 124 lives; that the one most exposed to whatever hazards modern commercial flying has to offer is the airline pilot who enjoys a piloting life expectancy of about 1,500 hours as a pilot and who today can obtain life insurance at ordinary rates. Your chances of surviving an airline trip are somewhat greater than those for a bus trip of similar length. They are 20 times better than for a trip by private auto.

But, as the Flight Safety Foundation, an independent, nonprofit organization having for its sole purpose the improvement in safety in all forms of flight, points out, statistics can never be used to excuse an accident. Aviation will never be safe enough—even though it may become the safest form of transportation. This is because we in the United States put a high value on human life and never will accept a Russian or statistical point of view.

Right now the new jets are taking up large amounts of the Nation's vanishing airspace, especially at high altitudes. Here, where these aircraft fully utilize their extremely high speeds, airplanes are spaced 10 minutes apart to reduce the possibilities of a midair collision to a statistical fraction.

For jets flying at nearly 600 miles an hour this means 100 miles of clear space ahead and 100 miles behind, on airways 10 miles apart. Each jet now requires a protective cushion of 2,000 square miles of airspace—an area about the size of Delaware—as it speeds along. If it has to wait at altitude before descent, it requires an area about the size of Rhode Island in which to circle. All aircraft flying at high altitude along the airways are under continuous control from the ground with information on their location supplied constantly by radio communications and long-range radar on the ground. Improved radar and related devices in the future will make possible better control in less space.

There is not yet enough of this radar and other electronic aids, because the Nation's air traffic control system is suffering today from aviation development budget cuts made several years ago. At present, however, the situation is improving steadily as more ground radar becomes available, more traffic controllers are trained and more electronic equipment installed through the ample funds finally made available.

A lesson to be remembered in connection with aviation safety improvement is that even unlimited money won't solve everything overnight because it takes time to spend it intelligently and constructively.

## The American Legion

EXTENSION OF REMARKS
OF
### HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. BASS of Tennessee. Mr. Speaker, the American Legion will celebrate its 40th anniversary March 15 to March 17 of this year. In tribute to this outstanding organization, the Clarksville Leaf-Chronicle, an exceptionally fine newspaper published in my district, recently carried an editorial of unusual merit. I would like to call this editorial to the attention of my colleagues in the Congress; and, therefore, under leave to extend my remarks, I offer it for inclusion in the RECORD.

The editorial follows herewith:

THE AMERICAN LEGION

The American Legion, largest veteran organization in all history, celebrates the 40th anniversary of its birth, March 15 to 17, 1959. It is a signal observance. It marks the completion of 40 years of service by the American Legion to its communities, its States and the Nation.

According to Legion historians, the Legion idea was born originally of talks at a convalescent hospital in France between Lt. Col. Theodore Roosevelt, Jr., and a sergeant later killed in action. The March 15–17 meeting was planned by 20 officers gathered February 16 at the Allied Officers Club.

The Legion showed its political power strikingly in 1924 by putting across, over President Coolidge's veto, adjusted compensation for war veterans. This was to help atone for their low military pay compared with the high wartime civilian pay. In 1936 the Legion put across, over President Roosevelt's veto, immediate full payment of the compensation certificates.

These were like 20-year endowment insurance policies, with the face amount not due, in most cases, until 1945. But the typical veteran thought the Government had awarded him this amount (average, around $1,000) in 1924 while refusing to pay it for 20 years.

The 17,000 posts of the American Legion and their 14,000 Auxiliary units, have a right to be proud of their accomplishments during the past 4 decades. The American scene and the world have undergone profound changes since the American Legion was founded. The American Legion has changed too, but only in its dimensions. It is today a three-war organization. It has not changed in its patriotic character, in its ideals, in its objectives and in its integrity. Keeping America always American is still its continuing goal. It is still true to the original purposes set forth so vividly in 1919 in the preamble to its constitution.

The good impact on the American scene of the American Legion is immeasurable. It has been an important factor in the defense of our free institutions, in keeping love of country at a high premium, in raising the popular level of education, in the great increase of home ownership, in the enlightened streamlining of child welfare concepts, in pioneering in the modern care of the disabled and physically handicapped and in the Nation's preparedness against aggression.

Thousands of American communities are better places in which to live and rear children because of the civic works of 17,000 posts. We salute the local American Legion post and wish it many happy returns as this great organization starts on its 5th decade of service to God and country.

## Gangsters Murder While America Sleeps

EXTENSION OF REMARKS
OF
### HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. CRAMER. Mr. Speaker on March 3 I introduced H.R. 5186 to curb national gangsterism and racketeering conspiracies. It creates a new crime to be known as a terroristic offense. The definition of a terroristic offense is—

any offense proscribed by the laws of or the common law as recognized in any state relating to extortion, blackmail, murder, racketeering, narcotics, maiming or assault with intent to inflict great bodily harm and punishable by imprisonment in a penitentiary or by death.

And it becomes a Federal offense when it is perpetuated through the use of interstate commerce or communications.

I feel highly complimented today to report to my fellow Members that a similar bill, S. 1132, has been introduced in the other body by our former associate from New York, Senator KEATING.

The gentleman from Michigan [Mr. BENTLEY], has introduced my bill and joined me in sponsorship of it and I can think of no higher honor. As we all know, no Member of this House, past or present, ever experienced the anguish and torture that Mr. BENTLEY suffered at the hands of terrorists from Puerto Rico who conspired to turn a session of Congress into bloody and murderous chaos. Consequently, I take this occasion to thank our associate from Michigan and to express our gratitude that his recovery from those wounds is complete.

The gentleman from Oregon [Mr. NORBLAD] has also joined in the growing demand that effective legislation to curb national gangsterism be enacted by introducing my bill as H.R. 5796.

He joins with me, I know, in hope that the Judiciary Committee of which I am a member will see fit to hold hearings soon on our bill.

In my own district, on Sunday night of March 8, just a few days after H.R. 5186 was introduced and I discussed its importance before this House, a prominent citizen who had no apparent gangster ties, Bennie Lazzara, was murdered in typical gangland fashion on the front driveway of his own home. So far, the local authorities have failed to report any effective progress in solving the crime; there has been no suspect found to date. This citizen was killed in the presence of his wife as he returned home by a shotgun fired point blank at close range into his face. Immediately the murderer disappeared into the shadows of the night. The following headlines from the Tampa Tribune tell the sordid story:

Police Seek Motive in Ambush Killing of Wealthy Tampa Produce Dealer—Times, March 9.

Check for Underworld Ties—Police Stymied on Motive in Gang-Style Murder of Wealthy Produce Man Here—Tribune, March 10.

Scant Hope Seen in Solving Lazarra Murder Seen—Tribune, March 11.

Killing Arouses Talk of Action by Citizens—Times, March 13.

Police Are Completely Baffled by Lazzara Murder—Tribune, March 13.

Ten Thousand Dollars Put up for Word on Slayer of Lazzara—Tribune, March 21.

We have previously had 19 unsolved gangland type murders in the city of Tampa during the past 28 years which have remained unsolved; which I point-

ed out in my remarks on March 3 when I introduced my bill.

Bad as this terrorism is in my own district, the reign of brutality and conspiracy exists in many other areas of the United States and in many areas on an even broader scale.

Testimony before the McClellan committee of the Senate proves beyond a doubt that gangsterism is also infiltrating certain labor activities. I intend to discuss this national problem at greater detail in future remarks in the House. America must be awakened; Congress must act; national gangster syndicates must be put on the run; and the moral fiber of our Nation must, thus, be strengthened. America has been asleep too long, while gangsters murder and get away with it.

In conclusion, I repeat my regard for the gentlemen from Michigan and Oregon and other Members who have joined us in introducing this bill. What the local press thinks editorially of the situation and the proposed legislation is given in the following editorials from newspapers in my district.

[From the St. Petersburg Independent, Mar. 10, 1959]

A SHOTGUN SUPPORTS CRAMER IN HIS DRIVE AGAINST CRIME

Tampa newspapers have been giving Congressman BILL CRAMER a pretty hard time since he introduced a bill to enable Federal law enforcement agencies to help local police fight organized crime.

In support of his bill, CRAMER gave some crime figures on Tampa, biggest and maybe bloodiest city in his district. With true parochial pride, the press of Tampa came out shouting: "It simply ain't so—at least not now."

CRAMER spent considerable time on the TV Sunday in a forthright approach to the problem of crime and its cure in this and other areas of the Nation.

Early Monday morning Mr. CRAMER's position was emphasized by a shotgun blast which left a Tampa citizen dying in his driveway and the Tampa press stumbling around in the fresh gun smoke to find more adjectives to support their loyal but lame defense of Tampa's record of violence, past and present.

This newest killing, whatever its cause, follows the pattern of crime which has caused Tampa to look like a city which could stand a little help from the kind of bill Representative CRAMER is trying to get enacted. It reminds us, too, that it was only 8 months ago that one Joe Diaz, a bolita racketeer and former sheriff's deputy, bit the dust from shotgun blasts.

We have no bits of moral wisdom to dispatch to the newspapers of our neighboring city and certainly have no intentions of forming a committee of vigilantes to go galloping across Gandy Bridge. We have troubles of our own.

But we might suggest with modesty and neighborly friendliness that the power of the Tampa press could be used as well for a cleanup as for a coverup.

Why hang Congressman CRAMER? If Tampa is too pure to have need of his crime bill, the proposed legislation can't hurt anything.

---

[From the St. Petersburg Times, Mar. 10, 1959]

MATCHING FORCES WITH THE HOODLUMS

Tampa's pious indignation over having its bad crime record cited by Representative BILL CRAMER probably deflated very rapidly yesterday when another citizen fell victim to a ganglike shotgun murder.

True, there has been some improvement in law enforcement across the bay in recent years. But the point made by Mr. CRAMER was valid. No community is immune to crime. Without pride we point to Pinellas' $200,000 robbery last week at Safety Harbor.

Just how tightly organized the syndicate or the Mafia may be—just how much centralized direction and control either of these bodies, or a combination of them with other groups, may exercise, is clouded in mystery. But again this is not important.

What is important is the common knowledge we have of the extent and power of organized racketeering.

The McClellan committee today is uncovering facets to add to the unpretty picture developed by the Kefauver committee a few years ago, and those of other crime investigating bodies.

Some of the stories which have been unfolded in the inquiry into juke box racketeering have been almost unbelievable.

And, as AFL–CIO President George Meany heatedly pointed out recently at Miami, this is a matter of criminal organization, not of labor organizations.

Some of the hoodlums, as Mr. Meany admitted, have taken on the protective coloration of phony unions. In some cases recognized unions, such as Jimmy Hoffa's Teamsters, have cooperated with the phonies, either mistakenly or because some local union officials have been reached.

Again, however, as Meany also points out, wherever there is organized crime, whether it is extortionate operations such as the McClellan committee has been spotlighting, operation of illegal slot machines, gambling houses, prostitution, or vice of any kind, either the law enforcement agencies have been corrupted or else they are powerless against the superior forces of the hoodlums.

This, plus the inescapable conclusion that the criminal organizations do operate on an interstate basis, gives validity to Mr. CRAMER's bill to make terroristic activities—extortion, blackmail, murder, racketeering, maiming and assault—Federal crimes.

The "Feds" certainly are not afraid of the mafia or the syndicate. And, to the best of our knowledge, they are incorruptible.

Law-abiding citizens would rejoice at having the forces of racketeering and hoodlumism matched by equal power on the side of law and justice. If Tampa's being cited as a horrible example can contribute toward that end, our friends across the bay should rejoice.

---

[From the St. Petersburg Evening Independent, Mar. 12, 1959]

PRESS GETS BUSY ON TAMPA CRIME

We are right proud of our journalistic neighbors across the bay.

When crime started to pop right on top of their cries of innocence, they didn't hop behind the fifth amendment. They started doing a little blasting of their own.

Tampa is on the spot, the Tampa press said, and it is time the chief of police, the sheriff, and the State's attorney, start doing something about it.

Tampa, which tried to tell Congressman CRAMER that Tampa law enforcement is on the ball, now has a fine chance to show him just how hot they can make it for hoodlums.

Tampa law-enforcement agencies seemed all too eager to slip this new gang killing into their unsolved murder file and forget about it. But the press is now on them and they may do something about it.

While they are at it, they might dig out some of the old murders and solve them too. That would be a fine way to get back at the critical Mr. CRAMER.

---

[From the Tampa Tribune, Mar. 13, 1959]

TWO MOVES AGAINST MURDER

Bennie Lazzara's ambush murder, the second of its kind here in 8 months, calls for some extraordinary measures on the part of the city of Tampa to prevent this case from joining others in the crowded file marked "unsolved."

Two measures are worth consideration at city hall.

Step 1. The posting of a substantial reward—say, a minimum of $10,000—to be paid for information leading to the arrest of the killer.

Relatives and friends of Lazzara, a produce dealer with no known racket connections, already have offered about $11,000 in reward money. They are to be commended for this step. But their action does not relieve the city of Tampa of the obligation to show its own concern over this crime.

Moreover, because of the traditional reluctance of Latin witnesses to tell what they know or suspect in murders of this character, normal reward offers never have proved very effective in loosening tongues.

The city's reward therefore ought to be offered on the secret witness basis which has been used in Chicago and some other cities. Under this procedure, the tipster is permitted to submit his information anonymously, in writing, accompanied by a code symbol—the torn half of a dollar bill, for example. If the tip breaks the case, the information then can step forward with his code identification and collect the money.

If this sounds like cloak-and-dagger stuff, let us remember that there are cloaks and daggers involved in the 20 unsolved murders of members of the Latin colony in the last 30 years. And none of the usual police methods have produced results.

Step 2. The creation of a permanent assassination squad in the police department to devote full time to investigation of the Lazzara murder and any others of like nature which may occur in the future.

This unit—two picked investigators could staff it—would not be diverted to routine crimes but would stick doggedly to the trail of murderers who leave an underworld trademark.

Uninterrupted hammering on a single case might eventually crack it. And there would certainly be an advantage in having a specially-trained unit move immediately upon the scene when an assassination occurred. A plan of operation which could be put instantly into effect, rather than awaiting the coordination of three different law enforcement agencies, ought to produce better results.

Tampa has some highly competent and experienced law enforcement officers. It's not reasonable to assume that they can be consistently outsmarted by professional killers. The trouble lies, we think, in the fact that the police department, sheriff's office, and State attorney's office have dealt with these murders in the routine way. But they are not routine—they require special handling.

The two measures we have suggested would cost some money. Including an adequate reward and the assignment of two top men to the assassination squad, the cost might run to $20,000 or $25,000. Some at city hall may protest that no money is available.

Well, Mayor Nuccio and the city board of representatives recently scratched up an extra $10,000 for a fancy bandstand at Lowry Park. If they can find money to provide music, they can certainly find money to combat murder. The sweetest music this side of heaven won't be sufficient to quiet the chorus of criticism if Tampa continues to appear helpless against the shotgun assassins.

---

[From the Sarasota News, Mar. 11, 1959]

THE TAMPA GANGLAND

Not so long ago many readers of the News wondered why this newspaper spent the money and time to reproduce Ed Reid's famous book "Mafia."

We did so to renew the facts concerning how crime in this Nation is controlled so skillfully by an organization that is as ruthless as is communism.

Now we have, right on our doorstep, the possibility of another Mafia crime—the shotgun killing in Tampa of Bennie Lazzara—for reasons unknown to police. We are not saying that Lazzara was a member of the Mafia—but that the killing has the earmarks of a Mafia job.

The killing came just at the time that the Tampa Tribune was saying what a clean city Tampa is—because Representative WILLIAM C. CRAMER had said just the opposite on the floor of the U.S. House of Representatives in Washington.

For it was on March 3 that CRAMER very wisely introduced a bill to outlaw national conspiracies perpetrated by gangsters and hoodlums, such as the Mafia, who cross State lines or even use the telephone in their terroristic activities.

CRAMER told the Nation—for it's in the CONGRESSIONAL RECORD: "The city of Tampa in my district has one of the worst crime records in the United States. There are 19 unsolved sawed-off shotgun gang murders credited to gangsterism. Harry J. Anslinger, Commissioner of the Federal Bureau of Narcotics, tells me that Tampa is one of the principal ports of entry for the dope-peddling traffic in the United States. This $2 billion illicit business which ruins our youth and wrecks so many lives is controlled to the point of monopoly by the Mafia."

Now there have been 20 unsolved sawed-off shotgun murders in Tampa.

Important is CRAMER'S statement that some of the killings in Tampa have been identified with what calls the multi-million-dollar bolita racket in Florida.

It is no secret that one of the kingpins in Tampa is Augustine Primo Lazzara. And Benie Lazzara, the night he was slain had been at a party at the home of Augustine's brother, John Lazzara, vice president of the Columbia Bank and a respected citizen of Tampa.

How about the rumbling in Ybor City about a rumor prior to the killing that an Italian was to be murdered?

Yes, Congressman CRAMER'S bill is most timely.

It would allow the Federal Bureau of Investigation to immediately step into the Lazara killing to follow all the angles.

It would permit the FBI to clean up the Mafia in the United States.

And don't kid yourself—if the Mafia exists in Tampa it reaches into Saratoga via the bolita rackets controlled in Tampa by those whose names now crop up in the latest shotgun killing.

We need to write to Congressman WILLIAM CRAMER, House Office Building, Washington, D.C., and urge him to press for immediate action on his bill that will help cripple the Mafia and Jimmy Hoffa and his union gangsters.

## Labor Speaks Out for Freedom

EXTENSION OF REMARKS
OF
**HON. CHARLES O. PORTER**
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. PORTER. Mr. Speaker, the chief groups in the forefront of the fight against dictatorships in Latin America and throughout the world have been the free press and the free labor unions. At the recent meeting in Puerto Rico the executive council of the AFL–CIO made a statement to the Organization of American States making abundantly clear the opposition of its members to tyranny and dictatorship. Under leave to extend my remarks in the RECORD, I include the lead article of the March 1959 issue of the Inter-American Labor Bulletin, whose editor is Serafino Romualdi.

The article follows:

SUSPEND DOMINICAN REPUBLIC, OTHER DICTATORSHIPS, AFL–CIO URGES OAS

The executive council of the AFL–CIO urged the Organization of American States (OAS) "to isolate diplomatically the Dominican Republic, as well as other dictatorships, by suspending their membership until such time as a democratic regime, freely elected by the people, is installed in their place."

The occasion was the first of the periodic thrice a year meeting of the executive council which met the latter part of February in San Juan, P.R., at the special invitation of Governor Luis Muñoz Marin.

Branding the Trujillo dictatorship as not only a blot on the honor of the American family of nations, but a constant threat to the peace of the hemisphere, the executive council urged the U.S. Government to take the lead in the OAS to bring such needed action against the Dominican Republic and the other dictatorships.

The council expressed its satisfaction at the overthrow of the Cuban dictator, Batista, and offered its cooperation to the Cuban labor movement in whatever effort might be required to maintain it free, independent, and democratic. It also called on the Duvalier regime of Haiti to restore political rights and freedom of press and assembly as well as the return of the National Union of Haitian Workers (UNOH) to its legitimate leaders who were illegally deposed by government interference and police intervention.

The full text of the AFL–CIO executive council statement is as follows:

"THE STRUGGLE FOR DEMOCRACY IN THE CARIBBEAN AREA

"The wave of democratic resurgence which has swept from power in the last few years the military dictatorships in Argentina, Peru, Honduras, Colombia, and Venezuela has now reached the Caribbean area with the overthrow of the Batista regime in Cuba. Popular pressure is mounting against Duvalier regime in Haiti, while the democratic forces in the Dominican Republic, encouraged by the recent events and supported by the public opinion of the whole Western Hemisphere are closing their ranks for the final effort to destroy the oldest and most hated dictatorship of the American continent.

"The labor movement of the United States, in line with its traditional opposition to every form of dictatorship, views with satisfaction these developments in the Caribbean area and hopes that they will bring about the establishment of sound democratic regimes, in which the labor movement will have an opportunity to exist and operate in complete independence and freedom, and civil rights will be firmly restored and protected.

"The executive council of the AFL–CIO extends to the Cuban people its best wishes on their efforts to rebuild their country's political structure on the basis of freedom, civic morality and human rights. It also offers its neighborly cooperation to the Cuban labor movement in whatever effort might be required to maintain it truly democratic, free and independent, and solely responsible to the will of its members.

"The situation in Haiti, which since the accession to power of the Duvalier regime in 1957, has steadily deteriorated, is now approaching a climax. Violent upheavals in that country, which has suffered so much in recent years as result of dictatorships and civil strife, can only be avoided by the prompt implementation of President Duvalier's recent pledge to restore political rights and freedom of press and assembly. We demand also the return of the National Union of Haitian Workers (UNOH) to the control of the legitimate leaders who were illegally replaced last year through government interference and police intervention.

"The dictatorship of the Trujillo family in the Dominican Republic has been for several decades a source of friction, conflicts, and threats to peace in the Caribbean area. The oldest of the few remaining dictatorships in the Americas has not only distinguished itself for its brutal suppression of every dissenting view inside the country, but has steadily engaged in conspiracies to overthrow the governments of those American countries that dared to oppose or simply criticize it.

"The collective conscience of the Americas considers the continued existence of the Trujillo tyranny not only a blot on the honor of the American family of nations but a constant threat to the peace of the hemisphere. We therefore urge the Organization of American States (OAS) to isolate diplomatically the Dominican Republic, as well as the other dictatorships, by suspending their membership until such time as a democratic regime, freely elected by the people, is installed in their place. Such action, now widely demanded by the democratic public opinion of Latin America, would be consistent with the charter of the OAS, which declares that its membership consists of representatives of legitimate democratic governments.

"The AFL–CIO supports the Caracas declaration which authorizes collective action by the OAS to protect any American country against the threat of subversion or domination on the part of the international Communist movement. We believe, however, that time has come to take also collective action to restore freedom and human rights in the Dominican Republic as well as in the few other American countries still under the yoke of a military Fascist dictatorship.

"We urge the Government of the United States to take the lead in the OAS to bring about such needed action against the Dominican Republic and other dictatorships. In this way, our country will give to the people of Latin America another demonstration of our sincerity in actively promoting the cause of freedom and human dignity throughout the world."

## The Assault on America's Future

EXTENSION OF REMARKS
OF
**HON. THOMAS M. PELLY**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. PELLY. Mr. Speaker, my attention has been called to the March 16, 1959, issue of the Wall Street Journal.

The indictment by this newspaper of the philosophy of big spending is in line with my own thinking and while I do not question any other Member's actions or motives I do raise the issue as to who is right.

I hold that the overall need of the Government living within its means exceeds in importance the collective benefits of many individual bills which would in-

crease the national debt. Furthermore, let me say I intend to continue supporting moderation in Federal spending because, as I have said before, this Nation cannot afford not to reduce taxes and cut down Federal expenditures.

Mr. Speaker, I oppose the vast assault on America's future as referred to by the following Wall Street Journal editorial:

SALESMEN OF ILLUSION

There is a relentless, almost paralyzing political narcotic in the campaign the spenders, in and out of Congress, are putting on. Consider just a few recent statements:

"The consensus of our meeting is that the high level of unemployment is not likely to get any better so long as the administration worries about inflation and balancing the budget." (Prof. John Galbraith, chairman of the Democratic National Committee's economic council.)

"All this talk about spending ourselves into bankruptcy is sheer nonsense." (Dean Acheson, former Secretary of State.)

"We are being told that if we attempt to meet our urgent needs, we will have a hair-raising inflation as bad as any hair-curling depression * * * we are being bombarded with pieties and slogans that, in effect, are telling us, 'Stagnation is good for you'." (Representative CHESTER BOWLES.)

"The entire case of those who say we cannot afford the things we must have to protect our civilization falls to the ground the moment we discard the myth that America's economy cannot, or must not be allowed to, grow. * * * I am not endorsing inflation. * * * We can grow, if we will overcome our fear of our growth." Gov. G. Mennen Williams.)

"A public policy aimed at promoting maximum employment and production and vigorous expansion of the economy should not be unduly deterred by the possibility of future inflation." Majority opinion, report of the Congressional Joint Economic Committee.)

These samples exhibit a remarkable unity of viewpoint. And that viewpoint is bound to be appealing to many people, for it is telling the people: Come to us, and all your troubles will be over and a whole new life will open up; fear not bankruptcy, for we will take care of everything by the simple expedient—and what could be simpler?—of much more Government spending.

But though the pitch is simple, the execution is skillful. The campaign is carefully compounded of nonexistent equations. Note, for instance: Balancing the budget equals unemployment; the Eisenhower administration equals economic stagnation; financial prudence equals nonsense. Conversely, the spending philosophy equals full employment and economic growth.

These propositions can be refuted; indeed, all history has always been refuting economic charlantanism, often with a vengeance. Take this business of growth. Inflation—and that is what these men are talking about, as some of them do not even bother to conceal—can for awhile cause the appearance of economic growth, just as marihuana can induce a temporary supereuphoria. But inflation's letdown can be fierce and sometimes economically fatal.

What these politicians, then, are really offering—whether they know it or not—is not the good life that can be achieved only by individual initiative and a firm hand on Government spending; they are offering a prospect of future depression. They are not offering full employment but the real danger of future mass unemployment.

Unfortunately, as in so many other aspects of human existence, the illusion is easier to sell than the reality. We are all in the same boat and all men always have been; we all want to believe that life can be easy—that foreign policy solutions exist where none in fact do, that there are shortcuts to prosperity unlimited, that there are pleasant alternatives to the bitter fact of work and the hard truth of human responsibility.

It is on these strong emotional strings that today's spenders play their siren tune. And the fact that the appeal is so deeply emotional is what makes it so hard to combat; it's easy to combat on rational grounds but not on its own chosen ground of sentimentality. The realist is almost always hard put to argue against the romanticist.

Yet, there must still be those who can see that a vast assault, both witting and unwitting, is being made on America's future, and that there is not much time left to start resisting it. There must be those—besides a precious few in public life—who discern the fool's gold in the wares the salesmen of illusion peddle.

But where today are those clear voices of reason?

## Memorandum of Hungarian Committee

EXTENSION OF REMARKS
OF
## HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the memorandum of the Hungarian Committee concerning the Hungarian and other central-eastern European problems in the framework of a European peace settlement. The memorandum follows:

AIDE MEMOIRE OF THE HUNGARIAN COMMITTEE CONCERNING THE HUNGARIAN AND OTHER CENTRAL AND EASTERN EUROPEAN PROBLEMS IN THE FRAMEWORK OF A EUROPEAN PEACE SETTLEMENT, MARCH 10, 1959

The unilateral Soviet move on Berlin has challenged the West to make joint efforts for a comprehensive settlement of the political problems of Germany and Eastern Europe. These problems, constituting the major cause of both the present international tension and the armament race, are by their very nature interconnected and thus indivisible.

The Soviet Union's peace program for Europe is virtually contained in its draft-peace plan for Germany, from which it clearly appears that the Soviet Union seeks to impose her will upon West Germany in order to disintegrate the Atlantic Alliance and to prepare the extension of her rule to the remaining part of the European Continent.

For this preparation Moscow needs the official Western acceptance of the status quo in order to consolidate her satellite empire and to use it as a springboard for further expansion. Therefore, it seeks to induce, by threats, the Western Powers to accept the puppet regimes of the captive countries as equal partners to the German peace treaty and to a European security system.

Since apart from the American nuclear power of retaliation, the deterrent effect of the determination of the captive nations to regain their freedom is the mainstay of Western European security, the Soviet Union is striving by such means to eliminate definitively the captive peoples' hope placed in the solidarity of the West.

Unfortunately, the Western European peace plans that have emerged so far, are strictly limited to the reunification in freedom of Germany in return for which a European security system would be set up embracing all members of the NATO and Warsaw Pacts. Members of both pacts would be united to defend those members of the security system which would be attacked by an aggressor.

Therefore, this security scheme would mean the perpetuation of the enslavement of central and eastern European and the Hungarian people, since under the terms of such a security pact the West would grant not only political guarantees, but even military protection to the Communist satellite regimes, including the Kadar regime in Hungary which was branded by the U.N. General Assembly as placed in power by the Soviet army.

The Hungarian committee refuses to assume that the Western Powers which have fought two world wars for the freedom of mankind, might be induced to seal the enslavement of the Hungarian people who rose so spontaneously as a man against Soviet and Communist domination in 1956.

Therefore, the Hungarian Committee respectfully requests, as the spokesman of the silenced Hungarian people, that the Western Powers raise the Central and Eastern European and first of all the Hungarian problem at the Foreign Ministers and summit conferences as one of the crucial problems which demands a just and durable solution.

It is the most revolting injustice of the century that the Hungarian pople with a record of a thousand years independence, is languishing in the colonial bondage of the Soviet Union, while thanks to the understanding of their civilized foreign rulers, even backward peoples are obtaining nationhood and independence one after another.

Even the preservation of the prestige of the United Nations requires that the Hungarian question be placed on the agenda of any East-West conference, since the Soviet Union which was condemned by the U.N. for her aggression, has provocatively flouted all U.N. resolutions on Hungary.

For all these reasons it would certainly appear as a marked western weakness to negotiate with the Soviet leaders without demanding forcefully the just settlement of the Hungarian question.

No real European peace settlement and security system is conceivable without the solution of the Central Eastern European problem, especially the Hungarian question, as only a truly representative, freely elected Hungarian Government would be a reliable and honest party to any East-West security pact or other agreement. Longing for peace and freedom, the suffering Hungarian people are extremely eager to obtain the status of internationally guaranteed neutrality as it was proclaimed by Premier Imre Nagy in his dramatic appeal, addressed to the Western Powers and to the United Nations on November 1, 1956.

The so-far emerged security and disengagement plans for Central and Eastern Europe are not the substitutes for political solutions, because they are based on both the division of Europe and the enslavement of former free nations which are and will remain the main source of international tension.

Disarmament and disengagement are not the prerequisites, but the very consequences of a comprehensive political settlement.

## Courage in a Free Press

EXTENSION OF REMARKS
OF
## HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following article from the Havana Times of March 7, 1959, reprinted in the Washington Daily News for March 12, 1959:

COURAGE IN THE FACE OF DEMAGOGIC HATE

(EDITOR'S NOTE.—The free world was shocked when Fidel Castro, in his role of revolutionary leader, ordered a retrial of Cuban army fliers after his own revolutionary court had acquitted them, and told the new handpicked court to find them guilty, which it obediently did. What the free world doesn't know is that it also shocked many Cubans, some of whom were supporters of Castro's revolution. Therefore, as an eloquent example of journalistic courage in the face of dangerous demagogic emotions fanned by the very leader of the revolution himself, we reprint below a Cuban article denouncing Castro's action. This article was printed in the Times of Havana, immediately after Castro had nullified the court's original decision, and even before his second court could sentence them. Havana has 17 newspapers. Only three refused the ousted Batista's graft. The Havana Times is one of the three. We believe our readers will salute this newspaper and its columnist for dauntless devotion to justice and free opinion, no matter who is boss.)

(By an old Habanero)

I saw a frightening thing on television yesterday afternoon. The Prime Minister of the Republic of Cuba, Fidel Castro Ruz, in violent harangue (there is no other word), asked the people of this country to disregard the verdict of one of his very own revolutionary tribunals that acquitted a group of 43 flyers of Batista's air force accused of genocide, murder, and assassination.

He stated flatly that in Cuba, today, you are either for or against the revolution. I am not against the revolution, but I reserve the right that that same revolution has granted me to write as I think; and I think that the Prime Minister has made a very great mistake in losing sight of the basic argument that has arisen from the revision of the trial of the acquitted flyers, a revision whose outcome is a fait accompli against the aviators after Dr. Castro's televised talk.

This unfavorable revision is termed justice by Dr. Castro.

Fidel Castro had an opportunity of becoming great yesterday.

If he had merely criticized the decision of the court that acquitted the flyers, and allowed it to stand, without insisting on a revision and demagogically and violently bringing enormous pressure on the decision of the revisory court against the accused, he would have shown himself to be a man who respected the tribunals of his own government and who adapted himself to their decision.

But Dr. Castro, from the very beginning, has always had it in for the flyers and the decision of the court has thrown him into a frantic rage that imposes his will upon the matter.

Reprisal, reprisal, reprisal is the theme that ran through Castro's words. He accused the defending lawyers of pettifogging, he accused them of using the trial, not to state their juridicial position, but to further their political aims.

In an unparalleled attack against the moneyed classes of the country, in an attack on money per se, he accused the defending lawyers of becoming tools of these interests and serving counterrevolutionary groups.

Time and again he gave the impression that all criticism of or opposition to the Government is necessarily against the revolution and against the people.

Forgotten were the scenes in Santiago de Cuba this week when the new prosecutor, no less than Minister of Defense Dr. Augusto Martinez, excoriated Defender D'Acosta, accused him of being a Batista man.

Forgotten was the fact that the court refused to allow Dr. D. Costa the right to defend himself of these charges and allowed a public demonstration to reign unchecked in the courtroom against the hapless defense lawyer.

Violent attacks were launched by Dr. Castro yesterday on both defense lawyers, D'Acosta and Pena Justiz. Dr. Castro called D'Acosta a tool of Batista, and accused him of going to Santiago without permission. A strange thing to say when the revolutionary courts themselves have appointed D'Acosta defender in such prominent trials as that of Sosa Blanco and Morejon.

A strange thing to say when the chief justice who presided at the Sosa Blanco trial warmly praised D'Acosta for doing a job nobody wanted to do.

A strange thing to accuse D'Acosta to being passionate in his defense when D'Acosta only acted in the light of the highest traditions of the legal profession.

To the Prime Minister it does not matter that one of his own tribunals, following the dictates of the laws that govern the land, has acquitted the flyers. The only thing that matters to Dr. Castro is that the decision is diametrically opposite to his opinion, and he has promptly set about to correct such a disgraceful state of affairs.

Dr. Castro does not stop to realize that the fate of the flyers is not the question under debae. Dr. Castro, a lawyer, refuses to see that it is the decision of one of his own tribunals that is the all important bone of the argument.

Dr. Castro refuses to admit that tampering with that decision in an unequivocal way is tampering with the guarantees that the law gives to the "people" to whom he constantly refers.

Dr. Castro will not see that he is imposing his will, and his alone, on the people of Cuba.

To rationalize his position Dr. Castro, with his considerable powers of persuasion, went before the people of this country, and in an enormously long and repetitious talk confused the issue, blew a blinding smokescreen in front of the real crux of the matter, and gave a polititcal tone to a purely juridicial process. We find that the defending lawyers are tools of counterrevolutionaries, that money, and only money, is protecting the flyers; that the bar associations are a party to this frightful plot, and that only rich lawyers are the ones protesting.

Dr. Pena Justiz, an eminence in Cuban law, told the tribunal after the disgraceful scenes that occurred in Santiago that they were paving the way for another Napoleonic strongman. Dr. Castro savagely tore into Pena Justiz with the familiar counterrevolutionary aspersion.

The Prime Minister even took the trouble to instruct the revisionary tribunals (who are trying men twice for the same offense) just how to render a verdict. No death penalties, please. That might bring an explosion of criticism from the entire world. Do not make these men martyrs, he ordered; jail is just the thing for them. We do not even have to guess what the verdict of these men will be. The Prime Minister has spoken. His will be done.

The violation of several cardinal principles of law is not a matter that seems to weigh heavily on the Prime Minister's conscience. Indeed, he tolerantly admitted that this was the only mistake that had been committed so far by a revolutionary tribunal. Let it not happen again, he seemed to say. Justice, yes—but Castro justice only, please.

Dr. Castro, by his action, has denied the people the very rights that he says that he fought for.

Dr. Castro by his action, has demonstrated that he can reverse any decision of a court of the land at will.

Dr. Castro has given due warning that his will is the deciding factor in the government of the land.

Dr. Castro has shown that double jeopardy is an active legal horror in Cuba.

Dr. Castro is serving notice to the whole country, that he, with all his whims and caprices, is the boss.

---

## Sammy Davis, Jr., Receives Mnookin-Brown American Legion Post's Americanism Award for Distinguished Service in Bettering Human Relations

EXTENSION OF REMARKS

OF

### HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. BOLLING. Mr. Speaker, the Mnookin-Brown American Legion Post of Kansas City, Mo., performs a great service to my district and the country as a whole in the presentation of their annual Americanism award for distinguished service in bettering human relations.

In 1948 the Mnookin-Brown American Legion Post No. 468 established its annual memorial scholarship awards to honor those men and women who gave their lives in World War II to preserve the four freedoms and for the purpose of recommemorating the cause for which they died. The awards are made to high school seniors in the Greater Kansas City area who have distinguished themselves in the field of human relations in home, school, and communal life.

As a result of this scholarship program and other human relations work, the Mnookin-Brown Post is one of the most active organizations in Kansas City, having this highly worthwhile project as its driving force. The post is constantly striving toward the establishment of more human relations instruction in the regular school curriculum in Greater Kansas City. It has become known throughout the United States for its work in this field and should be commended therefor.

On March 30, 1959, this post will honor Mr. Sammy Davis, Jr., by presenting to him the coveted 1959 Mnookin-Brown Americanism award for distinguished service in bettering human relations. Mr. Davis will interrupt his film and nightclub commitments to appear in Kansas City and receive this award. All America, as well as the entertainment world, should be deeply proud of Mr. Davis for his tremendous gifts of time and talents to philanthropic, civic, and humanitarian causes. His help has brought comfort and health to countless thousands of adults and children. In the last 4 years alone he has received more than two dozen major public service awards in the field of interfaith understanding and assistance to wounded

veterans, orphans, youth, and the aged. He is recipient of the fight-for-sight award and numerous citations for fighting muscular distrophy, cancer, asthma, and juvenile delinquency. This record speaks for itself and more than indicates Sammy Davis, Jr.'s worthiness to receive the Mnookin-Brown Americanism award for 1959 for distinguished service in bettering human relations.

## Lt. Gen. S. T. Williams, U.S. Army

EXTENSION OF REMARKS
OF
### HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. GEORGE P. MILLER. Mr. Speaker, the Secretary of Defense, the Honorable Neil McElroy, in his recent defense posture statements prepared for this Congress, paid a splendid tribute to the noteworthy progress being made by the Armed Forces of the Republic of Vietnam. The Secretary, while visiting Vietnam, learned that this Nation is determined to remain a free Republic despite what faint hearts consider its precarious location on the edge of the Communist sphere of influence in southeast Asia and despite its exposure to Red military might which could come at any time by direct land routes and over short air and sea distances.

Certainly, the reassuring words of the Secretary were good to hear. I submit that he genuinely meant that Vietnam's Armed Forces were, to some degree, relatively exceptional. In the brief 4 years since the 1955 armistice terminating the French Indochina war and starting from less than nothing—indeed, from the ashes and ruins of the holocaust itself—the Army, Navy, and Air Force of Vietnam have come a long, long way toward fulfillment. To the point, in fact, where Mr. McElroy took special note of their capabilities.

Mr. Speaker, behind this mighty effort and achievement there must have been good counsel and leadership of the highest order of modern military times. For a fact, there was. This land could be saved by sound assistance and advice to its newly created armed forces. The emergency arose and we had the man for the job. On November 15, 1955, a great American and truly outstanding general officer was named Chief of the U.S. Military Assistance Advisory Group for Vietnam. That man was Lt. Gen. Samuel T. Williams, U.S. Army, in whom we can surely take abundant pride.

General Williams went out to far-off Vietnam in 1955 and brought to that war-torn nation his invaluable combat experience, his sagacity for planning, his indomitable spirit and vigor. Side-by-side with the Vietnamese, he organized, he trained, he built, and he stayed with the job and thus has struck a real blow for freedom.

Mr. Speaker, I know whereof I speak about Vietnam perhaps better than most. I had personally seen the situation in Vietnam in 1955. Then in October 1958, it was my great privilege to visit that country again to participate in ceremonies commemorating Vietnam's third anniversary of the proclamation of the constitution of that country. The military took a prideful part in these ceremonies.

I could scarcely believe that so much could have been done so quickly.

But it was there for all to see, a magnificent modern military achievement, a testimonial to the tireless and unpublicized efforts of General Williams.

Mr. Speaker, I would like the House and our colleagues in the Senate to know of General Williams' unselfish and remarkable service in Vietnam. In a larger sense, I would like also for the Congress to note the long and honorable service of this fine officer and gentleman. In these days, we seldom see personal records of such devoted service to one's country. As times goes on, we shall see less and less. While we can, let us note this great soldier's record, a saga of over 40 years with the colors. It was a lifetime spent, and still being spent, all in America's name and in Freedom's name.

This is General Williams' outstanding service:

General Williams was born and raised in Denton, Tex. He attended the First Officers' Training Camp at Leon Springs, Tex., in 1917 and was commissioned a second lieutenant of Infantry with assignment to Company I, 359th Infantry 90th—Texas-Oklahoma—Division. He served with the 359th Infantry in the Toul Sector and in the St. Mihiel and Meuse-Argonne Battles and in the Army of Occupation.

Between 1920 and 1942 General Williams served in various infantry regiments as a company commander and regimental staff officer and graduated from the Infantry School, the Command and General Staff College, and the Army War College.

During World War II, General Williams held assignments as Assistant Chief of Staff, G-4, 95th Infantry Division; regimental commander of the 378th Infantry Regiment, 95th Division; G-3 XXII Corps, C/S XXII Corps; and assistant division commander of the 90th Infantry Division, participating in the Normany landing and five campaigns in Europe. From 1946 until 1950, General Williams commanded the First Military District in Germany, the 26th Infantry Regimental Combat Team, and was Acting C/S and Assistant Division Commander of the First Infantry Division.

Returning to the United States in 1950, General Williams served as Assistant G-3, Office, Chief Army Field Forces, until 1952. He then commanded the 25th—Tropic Lightning—Division in Korea during the last year of that war. During this period he also served as deputy corps commander of the II Republic of Korea Corps of the Republic of Korea Army during the last great Chinese offensive. After the armistice, he was sent to northern Japan to command the XVI Corps and was charged with the defensive plans of that part of Japan north of Tokyo.

In April 1954 General Williams returned to Korea to command the IX U.S. Corps and the V Republic of Korea Corps. During this period he also served as deputy Army commander of the Eighth U.S. Army in addition to his duties as a corps commander. Returning to the United States, he assumed his duties as deputy Army commander of the Fourth Army, Fort Sam Houston, Tex., in January 1955. He assumed command of the Fourth Army on June 17, 1955, and retained that command until named Chief, Military Assistance Advisory Group, Vietnam, on November 15, 1955.

General Williams' decorations include the Distinguished Service Cross, Distinguished Service Medal, the Silver Star with oak leaf cluster, the Soldier's Medal, Bronze Star, Purple Heart with oak leaf cluster, French Legion of Honor, French Croix de Guerre with palm, the Korean Taeguk with silver star, and Ulchi Medal with gold star for his services to the Korean Army during the Kumsong Bulge Battle in July 1953, and other high decorations of our allies.

## Editorial in California Dairyman in Support of Continuance of Special Milk Program for Schoolchildren—It Gives Pertinent Facts

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to include to the attention of your own distinguished self and my colleagues in this great legislative body, what appears to me to be a pertinent editorial in the California Dairyman for March 14, 1959. This very highly respected magazine is printed at 16280 South Paramount Boulevard, Paramount, Calif., which is one of the important and beautiful cities in the great 23d District. The editorial deals with the special milk program for schoolchildren.

Mr. Speaker, I believe you know I have supported that program in the past; I do again. I think it is one of the most worthy, sensible and sound programs of Congress and of the States cooperating.

The said editorial presents factual data and arguments with which I believe every Member of this great legislative body should be familiar, if not already so.

The editorial follows:

DOLLARS NEEDED FOR MILK PROGRAM

In a few weeks the highly successful special milk program for schools may be canceled in California unless united, prompt and active support is given by the dairy industry.

The problem is simple. The program has been so successful that we're running out of money. California's 1958-59 allocation of

funds was $6,781,409. At the current rate of expenditures, California's funds will be exhausted as of May 11, 1959, and as agreements with the schools require 10 days' notice before cancellation, the State Department of Education has advised that unless they have assurance that the funds will be made available, notice of discontinuance of the program will be made as of April 24, 1959. Source of these funds is the Commodity Credit Corporation which has a $75 million annual allocation from Congress for the program for the 3 years 1958 to 1961. According to W. B. Woodburn, manager, California Dairy Industry Advisory Board, the State needs an additional $1,110,680 to finish out this school year. The CDIAB has been the major expediter of the program in California and unanimously has endorsed the program and its continuance.

It takes a great lever to speedily move such a giant as the National Government's Commodity Credit Corporation. Yet, as haste is what is vitally necessary to get these additional funds approved prior to April 24, we feel that the best and strongest lever available is direct requests from all phases of the industry to Congressmen in Washington, D.C. Write a letter or send a wire. Don't minimize the important of action—and don't let the other guy do it, just hope that he will do it too.

Not only does the special milk program in California market a lot of milk, but on a higher plane than just economics, it provides health for every youngster provided milk through the program and nutritionists across the Nation have turned up alarming facts about the inadequate diets of the majority of America's youth.

California's promotion of the program through the California Dairy Industry Advisory Board has resulted in sales in 1957–58 school year of 293 million half-pint equivalents, with approximately 65 percent being in one-third-quart containers. The one-third-quart container innovation was accomplished after considerable work by the CDIAB staff with cooperation of the State board of education.

Ground lost through any cutback or halt in the special milk program in California will be extremely difficult to recover.

Proof that just such industry efforts as outlined here will be effective is borne out by promise of $500,000 of the needed funds as a result of recent endeavor by the CDIAB committee on the special milk program under guidance of Ned Clinton, chairman of Westminster, Calif.

Address California's Senators CLAIR ENGLE and THOMAS H. KUCHEL, Senate Office Building, Washington 25, D.C., and/or your Congressmen at the House Office Building, Washington 25, D.C.

---

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

---

## RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

## LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

## STANDING COMMITTEES OF THE SENATE

*Committee on Aeronautical and Space Sciences*

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

*Committee on Agriculture and Forestry*

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

*Committee on Appropriations*

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

*Committee on Armed Services*

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

*Committee on Banking and Currency*

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

*Committee on the District of Columbia*

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

*Committee on Finance*

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

*Committee on Foreign Relations*

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

*Committee on Government Operations*

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

*Committee on Interior and Insular Affairs*

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

*Committee on Interstate and Foreign Commerce*

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

*Committee on the Judiciary*

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

*Committee on Labor and Public Welfare*

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

*Committee on Post Office and Civil Service*

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

*Committee on Public Works*

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

*Committee on Rules and Administration*

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

## Easter Letter From Representative James C. Wright, Jr.

EXTENSION OF REMARKS

OF

### HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. JOHNSON of Texas. Mr. President, one of the ablest Members of the Texas delegation in Congress is Representative JIM WRIGHT, of Fort Worth. Representative WRIGHT is making a fine record, not only by the farsighted, responsible way in which he is serving his district, but also through the outstanding newsletters which he sends each week to the people he represents. His most recent letter is such a beautiful and inspiring Easter message that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WRIGHT SLANT ON WASHINGTON

EASTER WEEK, 1959

(A report from JIM)

Congress hurries to complete its work for a brief Easter adjournment. Like the long stream of generations before us, we seek throughout the land to review again the events of those 7 days which changed the world and split history into two clearly definable parts. It seems almost a sacrilege to write of other things.

Never before nor since has there been a week so fraught with meaning, so supercharged with drama, so interladen with pathos, and yet so tremendous in triumph as that first Easter week.

The familiar story never grows stale in the telling. Like springtime, it is always new. After 2,000 years it still has the power to arrest our thoughts and even change the pattern of our lives. Yet, but for the one exception, there is nothing unusual about the people who parade through the pages of the Easter story. They were real people, ordinary people, very much like you and me. Perhaps we can even see ourselves in some of them.

There were the crowds—the glad crowds that lined the streets and filled the temple square on that Palm Sunday—and the angry crowds that jostled one another in Pilate's courtyard on Friday. With wild abandon, they cheered the Carpenter of Nazareth as he rode into the city. They threw their clothing in the street and tore the branches from the trees to wave in tribute, and 5 days later some of the same people stood in front of Pilate's palace and shouted "Crucify Him! Crucify Him!"

They were real people all right. Like the people we know. Like the people we are. The public is still said to be fickle. Yesterday's hero is today's villain and tomorrow's forgotten man. Even today, the mob spirit that flamed them into unreasoning condemnation still smoulders about us at times, needing but a sudden breeze to burn afresh and to destroy whatever lies in its path. Like the people of ancient Jerusalem, we are susceptible to mass psychology. Like them, we sometimes find it simple and convenient to find a scapegoat to condemn without comprehending. It is easier than trying to understand. Have you ever been in that crowd? I am afraid that I have, at times.

And there was Judas Iscariot, the zealot, the treasurer of the little band, he who sold the hope of the world for 30 pieces of silver. History has dealt harshly with Judas, for deliberate treachery is a trait we universally condemn. Yet think of Judas for a moment. He wanted to overthrow the Roman invaders by force of arms. At last it became obivous to him that this was not the plan. He saw the powerful forces being arrayed against the Nazarene and his followers. He felt that the movement was doomed * * * a lost cause. The chief of priest and the leaders of his people were determined to destroy it.

How crass was his betrayal and how empty his reward. Yet in all of history practical men have abandoned lost causes, have deserted sinking ships. And this still goes on today.

Pontius Pilate was the procurator, his business to administer the Roman law. He didn't understand the people in this obscure province and didn't particularly care to. He'd rather be back in Rome, but his career had led him here. Little did he realize he was judging history's most famous case, or that by a strange twist of irony it was he himself who was being tried and found wanting.

As the accusers hurled their denunciations and spat out their poison stream of invective, there came to him the clear conviction that if ever in his life he had seen an innocent person, this prisoner who stood before him now with the strange light shining in His eyes was the most innocent of all. Three times Pilate tried to release Him, once to give Him an easy way out. But finally, confronted with the threat of being reported to Ceasar, his will crumpled like a heap of ashes. He took the course of least resistance and tried to wash his hands of the matter, allowing the Christ to be crucified.

Have you ever been cast in the role of Pilate? Have you ever been convinced in your mind that a thing was not right and yet reluctantly assented to it because everyone else seemed so determined? Have you ever known the right decision but found it too hard to make—and let others make it for you? Have you ever tried to wash your hands of a difficult situation by pretending it was not your responsibility—when you knew in your heart that it was? Could there be a lingering touch of Pilate even in you and me?

Not all of the characters of Easter week, of course, were villains. There were the faithful ones. There was Joseph of Arimathea, who provided a tomb for the lifeless body of the Son of God. Speculation has identified this Joseph as a member of the Sanhedrin. A legend has grown up connecting him with the rich young ruler who had been willing to go so far but only so far.

Now, at the last, the fire that burned in him had erupted to the surface. He offered to share his family vault with Him who had no place to lay His head. Is there the spirit of Joseph of Arimathea in us today?

Or of Mary of Magdala, who had been healed of her afflictions? The New Testament refers to her maladies simply as "demons." In our age, when mental illness has become a fad and the psychiatrist's couch the altar of its faith, we find it easy to believe that she had been beset by neuroses and nervous disorders. It matters not at all the nature of her earlier life. What matters is only that she was healed, redeemed, and grateful with a boundless love. What matters is the adoration that brought her to the tomb that Sunday morning.

What matters is the unquestioning faith, as she stood there in the softly breaking dawn, to recognize Him risen, to see the transformation taking place and to feel that transformation in her own soul, and to return at His command with a shout of triumph to tell the glad news of the resurrection. Can you see yourself in Mary Magdalene?

Or in Simon of Cyrene, who bore the cross of Christ up the long, steep pathway to the hill of Golgotha?

Crosses still there are to bear. The hill we climb to a peaceful world where men may beat their swords into plowshares and each may know in his heart the peace of God that passes understanding, is a steep hill. The crosses of selfishness, of avarice, of hatred and revenge, are heavy crosses, and He staggers under their weight. Must He bear them unassisted, or can we see ourselves in Simon of Cyrene who picked up the burden and carried it?

In each of us there dwells the same human nature which motivated them in that Easter week in old Jerusalem. If He who was perfect should come to earth today, He might be crucified again.

Yet, even so, He would live again. And with Him would live the hopes and dreams of a better world which moves, ever so imperceptibly, nearer and nearer to fruition.

## Four Major Problems Face the Nation

EXTENSION OF REMARKS

OF

### HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of my Washington newsletter which has been released today.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

WASHINGTON REPORT

(By Senator HOMER E. CAPEHART)

In my opinion, four major problems face this Nation.

In these columns, on the floor of the U.S. Senate, in public addresses and a series of weekly radio broadcasts, it will be my pur-

pose to analyze, discuss and present suggested solutions for each of them.

As I see these problems they are:

1. The threat of Russian communism, both military and economic.
2. The farm problem.
3. Labor problems.
4. Inflation.

These problems must be solved.

These problems, in one form or another and in varying degrees, have been with us for many, many years. Thus it would serve no purpose to attempt to place the responsibility for them on either of the major political parties. They are our problems, not partisan political problems.

Your Government, meaning the administration and those of us who represent you in the Congress, needs your help and your suggestions in arriving at solutions.

It will be my purpose to offer some concrete suggestions.

I hope you will help me, and through me the administration and the Congress, by presenting your ideas.

Certainly no one man is wise enough to have all of the answers.

I am so thoroughly convinced, however, that the future of this Nation and the free world depends upon sound solutions of these problems that I propose to seek out, with the help of others whose responsibility it is also to try to solve these problems, concrete programs aimed at their solution.

It is my duty to do so because that is what you elected me to do.

Some of my suggestions may be partly or wholly unsound. In any event I am going to speak out with my ideas and it will be the prerogative of those who read what I have to say or hear my broadcasts and telecasts to be the judges.

Someone must come up with the right answers and soon.

It is my best judgment that we just cannot go on as we have been without risking real difficulty.

I foresee the possibility of:

1. A third world war.
2. Ruinous inflation.
3. Unbearable taxes.
4. Huge governmental expenditures.
5. A bankrupt agriculture.
6. Chaos in labor-management relations resulting in great suffering on the part of our people.
7. The adoption of socialistic schemes.

Let me discuss in a little more detail the particulars involved in each of the major problems.

1. The threat of Russian communism, both military and economic, of course, involves the possibility of war.

(a) It likewise involves the possibility that Russia could force us through her cold war tactics to bankrupt ourselves with resultant socialism.

(b) Somehow, someway, the Berlin situation must be solved.

(c) So must the problem of the division between West and East Germany.

(d) So must the problem of the control of atomic weapons.

(e) Should we consider trade with Russia?

2. Our farm problem must be solved.

Look at these facts:

(a) Our agricultural program this year for every purpose will cost over $6 billion.

(b) Yet we have in storage $9 billion of surplus.

(c) It is apparent that the price support program yet has failed to accomplish the purpose for which it was intended.

(d) Farm prices today are much too low.

(e) We continue to involve farming, strictly a private enterprise, with politics.

3. The seriousness of our labor problem is generally recognized.

Look at these facts:

(a) Labor and management in many instances are not working together.

(b) Much of this difficulty is due to existing Federal laws and/or the failure of local law enforcement officers to enforce existing laws.

(c) Approximately 4 million are unemployed despite an otherwise very high level of economy.

4. Inflation is a real danger.

(a) We continue deficit spending.

(b) Governmental expenditures on all levels—local, State, and Federal—continue to increase.

(c) Taxes continue to go up and up—local, State, and Federal.

(d) The purchasing power of the dollar continues to decrease.

These are the problems I propose to attack. If you should disagree with me, as many of you will, I hope you will at least give me E for effort along with your own ideas.

The solution of these problems is the responsibility of every American, regardless of politics.

## Western Defense Pays Off Again

EXTENSION OF REMARKS

OF

### HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. ENGLE. Mr. President, for a long time California's Coach Pete Newell has clung obstinately to his belief that defensive basketball is the best basketball. His conviction paid off again over the weekend—it won for a California school the national title for the third time in 4 years. As an alumnus of the University of California, I was pleased to read Mal Florence's story in the Los Angeles Times describing the hard fight last Friday between the University of California Bears and West Virginia's Mountaineers. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, Mar. 22, 1959]

CAL HOLDS OFF RALLY BY WEST VIRGINIA

(By Mal Florence)

LOUISVILLE, March 21.—California fought off a determined West Virginia rally to win the NCAA basketball championship here tonight by a score of 71 to 70.

Trailing by 10 points early in the game, the Bears swept to a 39–33 half-time lead which they expanded to a 13-point margin in the second half. The Mountaineers, however, nearly caught the Californians at the finish.

West Virginia's smooth star, Jerry West, gave the Bears fits during the first few minutes of the contest and led all scorers with 15 at the break.

The Mounties shot 56.5 percent in the first half, compared to Cal's 41.7 percent, but West Virginia was limited to 23 shots from the field while Cal was taking 36.

FAST START

West Virginia started fast and, after 9 minutes of play, had built up a 23–13 advantage over California.

The Mountaineers were particularly quick at following their own shots and their work close in under the bucket accounted for the lead.

The Mounties were also employing a zone press on defense but the Bears kept their heads and managed to bring the ball down court.

CAL CUTS LEAD

West Virginia, and especially its All-American West was more than matching Imhoff and company on the boards during the early going.

The Bears called time when down by 23–13 and when play resumed a push shot by Dalton and follow bucket by McClintock cut the lead to 23–17.

West broke free on a drive to score but it was the last bucket for the Mountaineers for quite a spell. Cal, now playing tough defense, gradually overhauled West Virginia.

Doughty, replacing Imhoff, canned a short jump to tie the score at 25–25 with 6:45 left in the half. West sent West Virginia ahead with a free throw but another jump by Doughty and a push by Grout left Cal in charge, 29–26, with 5:03 to go.

## Press Release Relating to Address by Hon. Henry S. Reuss, of Wisconsin

EXTENSION OF REMARKS

OF

### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. PROXMIRE. Mr. President, I note that on Thursday the distinguished minority leader [Mr. DIRKSEN] commented on a brief newspaper account of a speech delivered recently by my Wisconsin colleage, Representative HENRY S. REUSS.

The minority leader used this five-paragraph news article, which appears on page 4109 of the RECORD for March 19, 1959, as a basis for defending the administration against Mr. REUSS' charges of "politics as usual." The fact is that the Reuss speech covered a good deal more ground than that.

I think the minority leader ought to have the opportunity to reply to the other points made by Representative REUSS. Also, the readers of the RECORD ought to have a more complete account of the speech.

Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD the text of a press release issued by Mr. REUSS on March 11, 1959, covering his speech of that date.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

"UNITED STATES MUST GIVE UP ECONOMICS AS USUAL, POLITICS AS USUAL TO SURVIVE," CONGRESSMAN REUSS DECLARES

WASHINGTON, D.C., March 11, 1959.—"If the United States is to survive and to win in the mounting struggle of international competition, we have to give up two luxuries—economics as usual, and politics as usual," Congress HENRY S. REUSS, Democrat, of Wisconsin, said Wednesday morning.

REUSS spoke to the second annual National Workshop for Religious Liberals at All Souls Church in Washington.

"It is ironic that the administration which, quite rightly, declares itself ready to stand up to danger in Berlin, is so Milquetoastish about our own economy," REUSS declared.

"In practicing economics as usual, the administration is declaring itself afraid to try to make our economy work on the full employment-full production basis that is obviously required to meet our international responsibilities.

"It submits to some 5 million unemployed, and about one-fourth of our productive capacity at a standstill, and an annual

growth rate in our economy of only 2 percent, while the Soviet Union advances at a rate of 8 to 10 percent a year.

"Growth through bold economic policies, not drift, is what the United States must have, both for our own defense and to make an effective contribution to the democratic advancement of the uncommitted, underdeveloped countries of the world," REUSS declared.

REUSS noted that Secretary Dulles, Undersecretary Dillon and other administration officials "have been saying, rightly, for some time that the Development Loan Fund needs $1 billion a year for 5 years, to do a good job."

"But what happens when Ike-the-Economizer gets through preparing his flimsily, fancifully balanced budget? The Development Loan Fund comes out at $700 million for 1 year—and that's all.

"This is but one example of economics as usual that has to be discarded. Just as worshipping the golden calf was almost the end of the children of Israel, so worshipping the unrealistically balanced budget may be the end of us."

Turning to "politics as usual," REUSS asserted that "American foreign policy needs a new face—the face of the ugly engineer and the Iowa chicken expert and the Wisconsin powdered milk master in the Ugly American.

"It's not enough to have a sound diplomatic, military and economic policy, even if we did. In addition to having policies, we must stress the character and quality of our American representatives abroad," REUSS said.

"We can't afford the luxury of having ambassadorships purchased with campaign contributions.

"We can't afford the luxury of refusing to appoint the best qualified man to head our foreign aid program because he's not a card-carrying Republican. (In passing, let's note that Paul Hoffmann was chosen Marshall plan chief by President Truman because he was the best man. The fact that he was a Republican was no disqualification.)

"We can't afford the luxury of having the State Department becoming a wastebasket for schedule C political appointees, and having these spoils-seekers turn up later Wristonized into the Foreign Service where they can hurt us forever.

"We can't afford the luxury of encouraging two-way international trade, and having a reasonably sincere reciprocal trade program, and then kick low foreign bidders in the face when a Republican senatorial candidate says his election depends on giving the contract to an American high bidder.

"If we want loyal friends and allies, we must treat them with consistent fairness, not inconsistent churlishness. If we want to win the peoples of Asia, and Africa, and South America to our side, we must send out the kind of men Abraham Lincoln would have chosen for the job—humble, friendly, knowledgeable and eager to learn—instead of arrogant men such as King George sent to keep the Colonies under English control."

## Critical Importance of West Berlin

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the March 16 issue of the Nashua Telegraph, New Hampshire's second largest daily newspaper. This editorial, entitled, "Our Slumbering Must Cease," warns Americans of the critical question of West Berlin and its great importance to the United States and our allies. I commend it to the reading of all Senators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nashua (N.H.) Telegraph, Mar. 16, 1959]

OUR SLUMBERING MUST CEASE

Let's turn off the TV set, put the car in garage, sit down and face the harsh, painful, urgent facts.

The big one:

The showdown with Russia over Berlin and Germany is the worst crisis we've had since the firing stopped in World War II. And it won't be solved by throwing out the first baseball in mid-April.

The intense pressure Soviet Premier Khrushchev is applying carries great peril of a ruinous nuclear war, by accident or miscalculation if not by design.

Yet we Americans neither feel nor show any real sense of urgency. Perhaps we are calloused by so many manufactured Russian alarms. Last year the Middle East, this year Berlin. Same old boring show. We give it a bad rating and switch to our trusty westerns.

In one breath the Eisenhower administration says any conflict over Germany almost surely would be nuclear, but the President talks of balancing the budget, cutting the Armed Forces, seeing no need to step up our lagging missile pace.

Mr. Eisenhower tells us not to get too stirred over this crisis. The words might sound better if we were awake at all. In the circumstances they amount to patting a sleeping head, putting a cautionary finger to the lips, and tiptoeing out of the room.

We're not alone in our slumber. The vaunted NATO never has risen to more than a fifth of its planned strength. British leaders keep a constant weather eye on the next elections. Other allies are reducing their armed forces or slashing the draft term at the very moment when the West's great verbal posture is firmness.

In all the complex maneuvering between East and West, we appear to pay slim heeed to the often critical uses of psychological warfare.

Endlessly we stress negatives, the things we can't or won't do. We find no advantage in trying to push the Reds off balance as they so frequently do us. We blandly assume we can only lose propaganda combat at a summit or other conference, and fear we will be "taken," no matter what is done or said.

Are we so unintelligent, so naive, so lacking in faith that we must conclude this?

And are we so wrapped up in personal and national concerns that we refuse to see danger until it stands on our doorstep? Will we talk of balanced budgets until the day the Russians balance them for us?

We've got to cut through Khrushchev's soft purring of "peace, peace" and find the tough, unsoftened core of his demands.

We've got to look hard, too, at what exactly we have on hand or in prospect to deal with this threat, if the worst should come.

And we've got to grasp once and for all why Berlin and Germany mean so much to us. Why would we risk the destruction of New York, Washington, Chicago, Los Angeles, and many other cities to keep Berlin free?

The truth is not new, but it's still devastatingly important. West Berlin, just part of a divided city, is a great political and economic entity.

An island in the East German Communist sea, it is a showcase of liberty. More, it is a bastion, a forward outpost. Yield so huge a prize and you cast into the black the morale and spirit of resistance not only of Germans but Frenchmen, Britons, Hollanders, Belgians, Greeks, and others. You may lose the game in Europe.

When that happens the orbit of freedom will be crucially narrowed, and our own safety infinitely more imperiled than ever in our history.

## High Cost of Federal Government Blocks Efforts on Local Level

EXTENSION OF REMARKS
OF
### HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. SPARKMAN. Mr. President, we hear and read comments from time to time about the need to shift various programs away from the Federal Government to the States and localities. Such comments have been made particularly with respect to urban renewal. I am certain many persons would take the same attitude concerning the very bill which is under consideration. Similar comments have been made about Federal aid to airports and many other Federal aid programs.

The Mobile Register of March 15, 1959, published an article entitled "High Cost of Federal Government Blocks Efforts on Local Level," written by John Will, one of its outstanding reporters. The article relates something of the difficulty which city and other local governments have nowadays in raising sufficient revenue to finance necessary programs. I think it may very well demonstrate, also, the unreasonableness of the point which is often made that local governments should participate more fully in the various aid programs.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGH COST OF FEDERAL GOVERNMENT BLOCKS EFFORTS ON LOCAL LEVEL

(By John Will)

There is growing agitation in these days for more local effort in Government financing, with the obvious purpose of cutting Federal control and restoring local self-determination.

This is a worthy objective. Each State and each community within the State knows its own problems and how best to meet them. But in the last analysis it takes money to solve those problems. And if most of the money is to come from Washington, then Washington is going to lay down the general policies.

Now we may as well be realistic about it and admit that under our present economy and with the world situation still unsettled, we cannot free ourselves of a certain measure of Federal taxation and the consequent Federal regulation. In this day and age, we cannot function as a lot of separate little units with no coordination. That would make us sitting ducks for the Russians.

There must be continuing military expenditures at a high level and they must be handled by the Federal Government. Probably some savings could be accomplished in this field by better planning and management. But whether we like it or not, we must maintain preparedness for almost any eventuality in the world. And we simply have to depend on the judgment of the Nation's military and diplomatic leadership, even though the cost may seem excessively high.

Furthermore, there must be broad coordination of certain facilities within the country from a defense standpoint. For example, the new Federal highway system cannot be built according to local desires. It must be planned and constructed on a national basis. There is no other way to do it.

Furthermore, being realistic again, each community naturally strives to get its full share of every Federal program. The money spent in such programs helps local business and it is argued that since we pay Federal taxes, we may as well try to get back all we can. Of course, this leads to the encouragement of more Federal spending on the assumption that more will come back to the local communities.

Nevertheless, it is clear that unless the cost of Federal Government is substantially reduced, there is not much hope for greater local effort. When the combined taxation of all governments—Federal, State, and local—reaches a certain point, the effect on the economy is bound to be harmful. Industry and business have to channel funds into taxes which they otherwise might use for expansion. The spending power of people for goods and services is restricted. Excessive taxation eventually dries up the sources of revenue.

The fact is that if this move for greater local effort is ever to come to anything, the States and communities must stop running to the Federal Government for all sorts of help. And that is not so easy. The trouble is that if we stop taking it, that will be just so much more for other sections of the country. So the temptation is strong to join the others in line at the Federal pie counter.

Talking about the need for economy in government is a waste of time. The real need is for the people of Mobile and Alabama and every part of this country to get out of the habit of expecting government to provide everything they think they want. Until people are ready to curb their wants and put up with less, the cost of government will keep on its upward spiral.

It seems unless for Federal officials to preach more local effort to States and communities until Congress makes a really serious effort to pare down Federal spending. And even in that highly unlikely event, there will have to be careful figuring to determine what new local taxes are best suited to replace the Federal taxes that may be taken off.

We have only tried to point up the complexity of the problem. There should be more local effort and less Federal control. But we will be honest and say that until there is a fundamental change in the public attitude, the prospects for such a change are virtually nonexistent.

## The American Merchant Marine

EXTENSION OF REMARKS

OF

### HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. BUTLER. Mr. President, merchant ships as well as warships and overseas bases share equal valuation in the equation for effective and adequate seapower.

Unfortunately, this essential point is frequently overlooked by our citizenry. However, Rear Adm. Roy S. Benson, USN, deputy commander, Military Sea Transportation Service, in an address last week before the antisubmarine warfare symposium of the Navy League, persuasively set forth the value of the American merchant marine, and I ask that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHY AN AMERICAN MERCHANT MARINE?

(Address by Rear Adm. Roy S. Benson, USN, deputy commander, Military Sea Transportation Service, before the antisubmarine warfare symposium of the Navy League, Washington, D.C., March 4, 1959)

Since World War II there have been expressed two points of view as to the functions of the Navy.

One stemed from the teachings of Mahan; in a few words, that sea power consists of merchant ships, overseas bases and warships, and that warships have as their purpose the protection of the sea lines of communication so that the bases can be maintained and the merchant shipping can ply the trade routes unhampered. Those who subscribe to this theory, and exclude all other needs for warships, would reduce the Navy to an antisubmarine force. Presumably, naval ships of various merchant ship types to lift troops, petroleum products and other supplies would be included and would be afforded protection. Purely naval types, however, would be antisubmarine forces. The function of naval forces would be to fight only on the high seas.

The other opinion of the functions of the Navy stemmed particularly from World War II experience; shore-bombardment with guns and planes, and amphibious attack. These had been done in previous wars but not to the extent that they were done by the U.S. Navy in World War II. Directly from them comes the thought that the purpose of the Navy is to land troops and their support, and to attack the enemy homeland with nuclear and other weapons. Included here is the Polaris program. Those who subscribe only to this opinion would limit antisubmarine warfare to protection of the forces which can carry this attack to the enemy. In the extreme case, there are perhaps those who would limit naval attack to submarine launching Polaris missiles and there would be no antisubmarine warfare program. Their Navy would fight only from the sea.

Which opinion is correct? As with so many other things, both are correct. Naval forces are so versatile that they are useful for both and needed for both.

I do not need to make a case for the Navy's usefulness to fight from the seas nor to fight on the seas as necessary. The emphasis is on the last word, "necessary." Obviously, we must have naval antisubmarine forces capable of protecting other naval forces and ships of the American merchant marine, but they must not be utilized to protect anything unless what they protect is necessary.

The task I have been assigned is not to tell you how to protect merchant ships from enemy submarine attack. That is part of the task of other speakers. My task is to explain why we have and should continue to have our American merchant marine.

It really seems unnecessary for me to explain why we have and should continue to have an American merchant marine. General Twining has recently explained that it is incredible that anyone would think that new concepts of warfare obviate the necessity of further fostering a merchant fleet. Admiral Burke's speeches are full of support for our merchant marine.

The Merchant Marine Act of 1936, sometimes referred to as the Magna Carta of the merchant marine, gives as reasons for the merchant marine, national defense and the development of foreign and domestic commerce. As I am sure you all know, the merchant marine gets Government subsidies. They are for the building of ships and for their operation. The principle is that, due to these subsidies, our operators can compete financially with foreign operators. If a ship has defense features, the Government pays for them. Also, the American merchant marine gets a great deal of U.S. Defense Department business. In fiscal year 1958 funds for subsidies amounted to about $150 million; for defense features about $1 million; defense business some $300 million. These last two are, of course, not subsidies.

Rapid, emergency shipbuilding during World War I cost $3 billion; during World War II, $17 billion. Costs of this kind could pay for subsidies at our present rate for 100 years.

Lack of shipping nearly lost us both World War I and World War II. The turning point in each was reached when we built ships at a greater rate than German submarines were sinking them.

What does the United States get in return for paying subsidies and for defense features? If the American merchant marine can be justified either economically or for defense, it is worthwhile. It can be justified both ways.

Complete justification can be made economically during peacetime. Time does not permit me to cover it here. All I can do is assure that it is definitely worth it, in dollars and cents in peacetime operations, for the American people to support their merchant marine. It is a real bargain. I consider that the American merchant marine should do more to make this known to the public.

The justification during peacetime is not what we are talking about here today. We simply do not want to provide antisubmarine protection for anything unless the units protected are necessary.

The costs to the taxpayer can also be justified because of the wartime use of the merchant marine. Again we have a bargain. Obviously, if you are going to have merchant ships, their crews, building and repair yards on short notice for wartime use, they must exist in peacetime. For either limited or general war we get for our tax dollar, ships which can be quickly converted into naval auxiliaries or used as they exist by the Military Sea Transportation Service. Ships of the American merchant marine carried most of the supplies to troops during World War II, the Korean war and even recently in the Lebanon crisis. Without them we could have been severely handicapped. Without them I simply have no idea how the supplies would have reached the theater of action.

There are two other wartime uses of ships of our merchant marine during wartime. One is to assist to meet civilian needs of our allies. They cannot remain allies for long if they need imports of foodstuff and other items for civilian consumption and if these supplies cannot be delivered. It is not our job, but if not done we can lose our allies.

Finally, and a book could be written on this, the United States is not self-sufficient. We have to import in order to keep our industrial might going. Even jet aircraft are not homegrown. U.S. industrial might was the real secret weapon of World War II. We cannot keep our industry going without imports either in peace or war. We tell ourselves this repeatedly but I think the facts deserve a real campaign to explain it to the American public. The sources of the materials must remain in friendly hands and we must vouchsafe their movement by sea.

The ships of merchant marine, our own and those of our allies, must fill the needs. If the ships are to arrive safely they must be protected from enemy attack.

It is not enough then to provide antisubmarine protection for naval task forces and the ships carrying troops and their logistic support. We must have adequate antisubmarine warfare protection for ships supplying our allies and American industry. In addition to Atlantic and Pacific routes, I am referring to the routes leading to and from Middle East and southeast Asia. The routes are worldwide. The anitsubmarine warfare problem thus is worldwide. The difficulty is great. The price of failure would be greater.

What have I said in this brief talk? I have tried to urge that—

1. That a greater effort be made by the American merchant marine to get over to the public that as a peacetime operation they are definitely worthwhile on a dollars and cents basis.

2. The fact that the United States is not self-sufficient but must import from the corners of the earth, both in peace and in war, in order to survive must be proved again and again.

3. That our antisubmarine theater of action is, of course, worldwide and is not limited to areas in which naval task forces operate.

## Understanding the Wilderness Preservation Bill

EXTENSION OF REMARKS
OF
## HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. NEUBERGER. Mr. President, my home city of Portland, Oreg., is privileged to have an outstanding civic organization dedicated to better understanding of public issues and policies. This is the City Club of Portland. On March 13, 1959, the club's program was devoted to discussion of the value of wilderness to modern man. The City Club was indeed fortunate to hear on this occasion a most able spokesman for the wilderness principle.

The remarks were made by Mr. David R. Brower, able executive director of the Sierra Club. Mr. Brower knows America's wilderness firsthand. He has explored much of it on foot with knapsack and bedroll. But he has other qualifications which add value to what he has to say about the untrammeled parts of our Nation. Dave Brower is a sensitive individual who can articulate the spiritual impact of wilderness, the need to preserve it as an element in human survival.

I recommend the reading of excerpts from Mr. Brower's address, "Conservation: The Wilderness Bill," to all those who seek understanding on the proposal now before Congress to establish a wilderness area preservation system. He has synthesized the extent of the problem, the meaning of the legislation and the everlasting value of its adoption. I ask consent to include with my remarks some portions of Mr. Brower's speech of March 4, 1959, to the North American Wildlife Conference.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

CONSERVATION: THE WILDERNESS BILL

(Talk by David R. Brower, executive director, Sierra Club, before the City Club of Portland, March 13, 1959)

It is much to be regretted that the official leaders of the conservation movement—than which nothing is more important to the country—have never shown a cordial, much less an aggressive, interest in safeguarding our great scenery, or in promoting, in general, this part of their admirable program. * * * The fact is, there is no more popular and effective trumpet call for the conservation movement than the appeal to the love of beautiful natural scenery. In this matter the idealists are more practical than the materialists, whose mistake is that they never capitalize sentiment. A money valuation of the uses of our gerat natural scenery, attracting, as it does, a vast number of summer sojourners and the traveling public in general, would make an astonishing showing.

It could be easily proved that the fear of offending the hardheaded and practical man by such an appeal is without foundation. The first thing that a man does after he obtains a competence is to invest his money in some form of beauty, and it is in the interest of good citizenship that he should have a plot of ground to be proud of. He settles in some town, suburb, or other region mainly because it is beautiful, and he is all the happier if his home can command an attractive natural view. * * * The American still apostrophizes his country with the lines: "I love thy rocks and rills. Thy woods and templed hills," and he is not willing that this sentiment shall be changed to read: "I love thy stocks and mills, Thy goods and crumpled bills." * * *

What is needed is the inculcation, by every agency, of beauty as a principle, that life may be made happier and more elevating for all the generations who shall follow us, and who will love their country more devotedly the more lovable it is made.

I don't know how much you believe of what I have said. I don't happen to believe all of it myself, for part of it no longer applies. It was written in 1910—not by me—as part of an editorial appearing in the old Century magazine. I imagine the author was Robert Underwood Johnson, who was still concerned that at the Governors' conference of 1908, and in action subsequent to it, there had been so much ado about the practical utilization of commercial resources, and so little about the beauty of America. It was as if man worshipped no other gods than productivity and the market place, as if he never expected to lift up his eyes unto the hills, but always to look down at the spinning lathe. This seemed to be the compulsion then. How far has a half-century brought us?

I'm not going to answer this question. I'll just ask it and let you think about it. You see, I feel a little uneasy—a little the way I felt 10 days ago in New York. There it was a little like proposing a toast to the WCTU, bourbon and all. For I found myself standing up and asking the question "Where should management stop?" at a conference called by the Wildlife Management Institute. And here I am today, at a meeting in the lumber capital of the United States, in effect asking the question, "Where should logging stop?" My answer will be that logging must stop at the borders of wilderness, and we must save sizable areas of wilderness within those borders.

To risk alienating my audience completely, I will suggest this definition for wilderness: Wilderness is not for lumbermen, but for people. For people willing to accept what God has done with a piece of land. It happens that many a lumberman uses and enjoys wilderness, and wants to share the advantages he finds there with his children and his children's children. But he knows it will be there to share only if he travels into it minus his chainsaw. Only if he leaves behind one of his favorite beasts of burden—the bulldozer.

To help explain my answer, let me say a little about the Sierra Club:

For 16 years before the word "conversation" became popular, the Sierra Club was practicing it, just as John Muir had before the club was founded. Conservation has meant many things, and through the years members of the club have individually been interested in all of them, including the conservation of soil, water, forests, and materials in general—conservation in the sense of wise use, with minimum waste, of the resources the earth affords for man's economy. The club itself, however, has never been more than indirectly concerned with the economics of resource conservation. From the beginning its specialty has been the preservation of natural scenery, in national parks and monuments, in national forest recreation areas, in wilderness under whatever jurisdiction, in State and local parks, together with a deep interest in the wildlife that makes these places complete. Whether justifiably or not, those who work for conservation of natural scenery and wildlife have come to be known as conversationists, a term which excludes the people who have a role in managing a resource for profit, even though they may conserve it in doing so.

Thus the Sierra Club is a group of conversationists, active and potentially active, whose interest in the cause of conservation has received its impetus from direct knowledge of scenic America which the members have acquired in the club's program of outings and other outdoor activities. This, at least, was the principal stimulus of conservation interest in the early decades of the club. More recently there has been a pronounced rise in the number who support the club solely to further its public-service program, only rarely to enjoy its activities.

In all its program, the club has carefully avoided taking action that would benefit itself or its members any more than it would benefit the public as a whole.

The club, in its conservationist role, has placed special emphasis on wilderness preservation in the last quarter century because wilderness, after all, is the most precious of our scenic possessions. It is least likely to get support from the branch of conservation devoted to resource management. And it can never be replaced if the resource managers covet it successfully.

Which brings us, as conservationists, full circle—back to where we collectively need to keep our conservation interest broad enough to be aware enough of resource-management needs to preserve wilderness from management. For instance, wilderness will be safest from exploitation by lumbermen if the extensive tree-bearing areas that need not be wild are managed with maximum long-range efficiency. It behooves us, then, to know enough about the technique of forestry to know when it is not efficient—to be able to point out to the lumbermen who cover the wilderness forest that there are other ways, if they operate efficiently, to get the lumber dedicated forests could produce but should not. You can understand, therefore, how pleased we were to read these remarks by Robert Ingram, NLMA president, made 4 days ago in Mobile, Ala.:

"Despite the many encouraging statistics in its Timber Resource Review, the Forest Service somehow has concluded that this Nation will be hard pressed to meet its timber demands by the year 2000.

"To the Forest Industries Council, the American Forest Products Industries, Inc., the National Lumber Manufacturers Association, and other reputable trade groups, the Timber Resource Review means something else.

"It means that we have adequate supplies of timber to meet all present needs and that every indication points to more-than-adequate supplies for all future requirements.

"Actually, those who have analyzed the situation closely suggest that our danger is more an oversupply, rather than an undersupply of timber.

"Those who have studied market trends, applying commonsense and logic to our problems, believe the lumber industry must take decisive action—not in the year 2000 or in 1975 or even in 1965—but immediately, right now, in order to avoid a catastrophic situation where our mills are glutted with timber but starved for lack of markets."

So we say amen, and let's don't glut the market further—or ever—with timber that should stay in wilderness, for reasons I'll try to develop later.

* * * * *

To compress the history of wilderness into a few lines: The Middle Ages tell us nothing. In the Renaissance, Conrad Gesner found reason for the admiration of mountains. Then very little until William Blake worried about those dark, Satanic Mills. More recently, Olmstead, Emerson, Thoreau, and Muir. Finally the explosion of man across the earth, and here, in the United States, wilderness vanishing so fast that we know, inescapably, that man alone is responsible for the loss. The 1920's and the Forest Service trying hard, led by Aldo Leopold and Robert Marshall, to define wilderness in terms of what man should find in wilderness, ought to find, had to find, if the spirit that has stood him upright was not to perish in an overcivilized, lukewarm world.

Marshall used the word wilderness "to denote a region with no permanent inhabitants, no possibility of mechanical conveyance, and spacious enough that a person crossing it must have the experience of sleeping out." Survival in it, he said, is up to you. Find environment in it; don't bring one with you.

This idea of wilderness, new though it is, is now quite widely accepted. It isn't yet underwritten by Federal law, but it does appear in an international treaty we signed 18 years ago.

Let me add one more definition from the wilderness bill: "A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain." This is a lot of detail about definition. Why? Because there is a sophistry abroad which completely obscures the meaning of wilderness. There is a proliferation of nonsense about wilderness use which a friend of mind describes this way: "It is like comparing Beethoven with Elvis Presley and proving it with last year's record sales."

Howard Zahniser explains what is really at stake: "We work for wilderness preservation, he says, not primarily for the right of a minority to have the kind of fun it prefers, but rather to ensure for everyone the perpetuation of areas where human enjoyment and the apprehension of the interrelations of the whole community of life are possible, and to preserve for all the freedom of choosing to know the primeval if they so wish."

And we work hard, with a sense of urgency. The wilderness we now have is all the wilderness we shall ever have in America. There is little left—less than one-third acre per person in the United States, if you count all the wilderness that has any administrative protection in our national parks and forests and wildlife refuges and on Indian lands. One-third acre person today; less as our population expands, all of it completely vulnerable to the administrator's pen.

So wilderness can no longer be abundant enough for everyman to walk on it. Some people will be able to walk on it, and most of them will be the better for it. Some may wish to but never make it. Some people may not care to go there at all. But their sons may wish to. And wilderness must be there or the world's a cage. You don't have to walk on the Mona Lisa to enjoy it. You just need to look. And it's no good to look at the blank wall where once it was displayed.

I say all this about wilderness because it is the essence of the wilds we need around us. Since it lives but once, there should be ample opportunity to review the death sentence so many people in the chambers of commercialism would like to inflict upon wilderness.

Many of us feel that wilderness should have an automatic stay of execution, and that Congress should provide it.

Hence the wilderness bill—the proposal to establish a National Wilderness Preservation System.

* * * * *

In short, opponents are attributing monstrous powers to a council which has no powers, but would merely try to keep a horizontal route open across the vertical channels of the bureaus concerned. Finally, they attempt to assign the consideration of permanent protection of wilderness to a temporary group that was not created to protect anything, but rather to study and recommend, the National Outdoor Recreation Resources Review Commission.

Let me clarify this point if I can. Supporters of wilderness protection welcome all the attention the Outdoor Recreation Review Commission can give to the subject. They do not, however, want to see the Commission used as a device for delaying protection which is needed now.

There has already been a decade of careful study leading up to the present wilderness bill. There is immediate need for what William H. Whyte, Jr., calls retroactive planning—for protecting now the land we think is needed, then rationalizing later how right we were all along to have done it. If too much wilderness is protected this way, we can always correct the situation later. If too little is protected, if too much has been turned over to exploitation, then we cannot unfry the egg.

The Commission was never conceived of, by its originators, as a device to delay protection, but rather as a way to defer destruction, and to find an equitable basis for halting that which studies should demonstrate to be needless. We knew that the scenic resources—wildlife, wilderness, parks, and the outdoor recreation deriving from them—were getting short shrift. Millions upon millions of dollars were available for planning the Nations' future commodity programs, next to nothing for recreation. It was time to start balancing this; hence the Outdoor Recreation Resources Review Commission.

Wilderness protection must not be delayed. If you will remember your first aid course, you will remember the priorities of treatment. It does little good, if a patient is bleeding to death, to sit down and study objectively what kind of bandage will be needed on the wound. You get in there and stop the bleeding. Otherwise you'll have nothing to bandage but a corpse.

The best way to help the Commission in its study is to keep some living wilderness for it to count upon. The wilderness bill can check the bleeding.

For all the opposition furor, there is an amazing body of public opinion supporting the wilderness bill and its provision for an automatic congressional stay of execution of moves to obliterate designated wilderness. That opinion was represented in a 50-to-1 ratio of letters sent to the Senate Interior Committee for inclusion in the record of last fall's field hearings on the bill.

Support comes from no hastily organized battalion of rugged hikers, no wilderness lobby; it reflects broad public concern about direction. It reflects growing conviction that the Nation does not exist to serve its economy; that there must be more public participation in the treatment of the single heritage of land that must serve all the generations, and that to leave these things to the experts is to resort to absentee citizenship.

It also reflects the dawning realization that growth without end is soon monstrous, then malignant, and finally, lethal—than an economy based upon incessant growth may well turn out, in the long run, to have been a chain-letter economy, in which we pick up the handsome early returns, and either our children or theirs find the mailbox empty, their resources having been expended by us.

I was trying to make this point in Berkeley a short time ago and a question came up from the floor: could we afford to do anything less than keep growing incessantly, inasmuch as that was what the Russians were doing. While I struggled ineptly with a reply, a chemist came to my rescue. "You've heard of the game of chicken, haven't you"? he asked. "It's a sort of Russian roulette on wheels. Two juveniles head directly toward each other at high speed on the highway, and the first one who turns to avert the crash is chicken. We frown on such behavior in adolescents, but we seem to accept it as national policy."

Supporters of wilderness—and of the restraint that is inherent in preserving it—also like civilization. They like it well enough not to want it to take too many steps, with the bland leading the bland, down the road paved with good intentions, on which there may be no turning.

So don't look for the words "wilderness lobby" on the door of some office near Capitol Hill. Look instead at the land—all the land the country is ever going to have for all the U.S. citizens ever to be born—and the rapidity with which many of its resources have been used up for so few.

## The Challenge of Inflation

EXTENSION OF REMARKS

OF

## HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of of the RECORD an article entitled "The Challenge of Inflation," published in the March 28, 1959, issue of National Review. The author, Howard Buffett, a former Member of Congress from Nebraska, analyzes our current economic instability and proposes a straightforward approach to this problem in an effort to prevent State-controlled capitalism in America. The au-

thor and the editor of National Review magazine are to be commended in their efforts to enlighten the American people to the destructive results of malignant inflation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From National Review, March 28, 1959]

THE CHALLENGE OF INFLATION

(By Howard Buffett)

"Lenin is said to have declared that the best way to destroy the capitalist system was to debauch the currency. By a continuing process of inflation, governments can confiscate, secretly and unobserved, an important part of the wealth of their citizens."—JOHN MAYNARD KEYNES.

The top protagonists of communism, Lenin and Stalin, recognized America as the key stronghold of capitalism and individual liberty. If they were alive today, how would they regard the situation in the United States? It requires little imagination to conclude that they would be well satisfied. For our Government is herding us down the road to inflation, debauching the currency, devaluing the savings of the people, and thus undermining the economic, political, and moral foundations on which the Nation was built. Unpleasant as this appraisal may sound, it is buttressed by sobering evidence.

One event of 1957 illustrates the gravity of the situation. The Presirent sent a budget to Congress calling for the expenditure of $72 billion in the fiscal year beginning July 1 of that year—a budget 80 percent larger than that of his Democratic predecessor, President Truman, just 10 years earlier.

A grassroots protest quickly spread across America against the spending plans of the administration, totaling $200 million a day for every day of the year. Thousands of letters and telegrams poured into the offices of Congressmen and Senators, demanding a substantial reduction in Federal spending. Veteran Capital reporters, who had seen previous economy drives blossom and fade, were amazed at the size and duration of the taxpayers' protest of 1957. The immediate result was that leaders in both parties solemnly pledged that Federal spending would be reduced.

That was the promise. What was the performance?

Instead of going down, Federal spending went up! During the fiscal year ended June 20, 1958, it came to almost $72 billion—$2,463 million in excess of spending during the previous fiscal year. A $2,800 million deficit was recorded. These figures show the futility of letter-writing campaigns as a defense against inflationary spending.

PRESSURE GROUPS

What explains this failure? The simple truth seems to be that the American people have lost control over their government. Both political parties are no longer responsible to the people. Instead they are subservient to pressure groups which profit from Socialist spending policies that depress the value of the dollar.

What is more important, in the process the lights of human liberty in America are going out one by one. That is the history of the inflation sequence: liberty disappears simply because the vast majority become in one way or another dependent on government favors or subsidies. That is the danger, and that is the prospect unless conservative leadership develops an effective cure for inflation and makes national acceptance of that cure the paramount goal of all its political efforts.

The words "paramount goal" mean just that. Those who defend continuing inflation plead the hostility between the United States and Russia. We are brainwashed into believing that unrestrained spending at home and overseas is the necessary answer to the Russian threat. Yet the actual truth seems to be that inflation, unless it is soon brought under control, will lead to a complete victory for communism in America—whether from within or without is of little importance.

If this forecast seems too alarmist, let us consider our recent history and our present prospect.

In 1933 our Government repudiated the gold standard, and thus eliminated the decisive bulwark that had historically prevented disastrous governmental inflation. In another unprecedented action it repudiated and outlawed a basic freedom—the right of the American citizen to own gold. This action placed us in strange company. At that time, among major nations, only Russia, Germany, and Italy forbade private ownership of gold. Stalin, Hitler and Mussolini had each called in all the gold (aside from that in jewelry and other nonmonetary uses) that was in private hands.

Twenty-five years have passed since then. During this period the cost of living has risen until today it is well over 200 percent higher than in 1933. And a new and frightening spiral of inflation has already taken shape.

Dr. Howard Kershner recently made a study of the record of irredeemable paper currencies in many lands. He found none that retained any semblance of the original value longer than 42 years—that was the outside limit. We have had gro ing inflation for 25 years. If history repeats itself, the value of our irredeemable dollar will approach zero by 1975.

A NEW LOOK

To be sure, our great productive system suggests a slower deterioration in America. On the other hand, never were the floodgates of inflation opened to the world as they are here. Congress today, frightened by the late 1957 business downturn, is eagerly pushing old schemes and concocting new ones to step up inflation via the issuance of bonds and Government guarantees. Generally these have a new look so as not to remind the citizenry of the PWA and WPA of the Rooseveltian era.

One example of Federal inflation is the gigantic highway-building scheme called the Interstate Highway System. This multibillion-dollar outlay resembles Hitler's autobahn project of the late thirties. Another is the countrywide Federal building program, financed by guarantees to private capital so that the outlays do not appear in the public debt. This pattern was used by Mussolini two decades ago. No wonder columnist Dorothy Thompson once exclaimed: "This country is moving toward State capitalism (along with the rest of the world) and communism is just state capitalism with longer experience."

RESTORE THE GOLD STANDARD

The mounting inflation since 1933, and the collapse of fiscal responsibility in Government, should convince any thoughtful conservative that managed irredeemable money is the road to totalitarianism, here as elsewhere, and that it is imperative that we find an effective cure. Unless someone has a better answer, restoration of the gold standard would seem the intelligent solution. When the people can demand gold for paper money, the Government cannot long spend irresponsibly. If it does so, its gold holdings will disappear and its borrowing power will end.

How can we get back on the gold standard?

The answer is obvious. Congress took us off the gold standard. Only Congress can again make our currency redeemable in gold.

Of course Congress will not, of its own volition, restore the gold standard. Congress will always talk economy, and it may even set up another OPA to regiment us again as inflation gets worse. But it will not voluntarily restore the gold standard, for politicians take the course of least resistance—and today that means "just one more round" of inflation.

The gold standard will be restored only if American citizens make it clear that they will drive from office all elective officials who will not face up to this issue promptly and courageously. This means either to make our currency redeemable in gold, or to legislate an alternative cure for inflation, if there be one. In the absence of such action, the bipartisan tactics of tranquilizing talk about economy and stabilizing the cost of living will continue until State capitalism, the refined label for communism, has completely engulfed us.

That tragedy need not happen. It will not happen if American conservatives have the wisdom to concentrate their patriotic efforts on the decisive issue—sound money. Victory on this battlefront is the key to America's future as a free land.

---

## Administered Prices, Wages Kill Markets, Jobs

EXTENSION OF REMARKS

OF

## HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. KEFAUVER. Mr. President, Mr. Harold B. Dorsey has written an interesting and thoughtful article on the economic impact of administered prices and wages which was published in the business section of the Washington Post and Times Herald of Monday, March 23, 1959.

The importance of a solution to administered prices is being thought of more and more by those dealing with the problem of inflation.

I ask unanimous consent that Mr. Dorsey's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ADMINISTERED PRICES, WAGES KILL MARKETS, JOBS

(By Harold B. Dorsey)

"The objection to administered prices and wages is not so much that they create inflation, but they tend to retard growth and to increase unemployment." (Woodlief Thomas, economist at the Federal Reserve Board.)

The use of the present tense in this economist's astute observation is most appropriate. Administered prices and wages have now continued long enough to permit some of their adverse effects to become visible. High prices for automobiles—as well as styling—must have something to do with the fact that our exports of cars this year are expected to be down about 20 percent from 1958 and less than half the 1955 figure, while imports, only about 57,000 cars 5 years ago, are expected to be about 450,000 this year. Unquestionably these facts also have something to do with the unemployment situation in Detroit today.

The adverse effects of the whole gamut of administered costs and prices was illustrated again in an airing last week of the difficulties of the machine tool industry, which is recording not only a loss of export markets to

foreign producers, but also an increasing loss of domestic markets to the same competitors. The prices of some of the foreign machines were reported to be 25 to 40 percent below the comparable U.S. products.

Administered prices and administered wage and tax costs must be associated with a decline in steel exports from some 5.2 million tons in 1957 to 2.7 million in 1958, while there was an increase in imports from 1.2 million tons to 1.7 million. These figures are only a small percentage of the industry's total, but the trends are sharp and significant.

While the current mounting criticism of administered prices and wages is leveled at the auto and steel industries and at big labor, the supply-demand-price principles of a competitive economy are being violated in many other quarters. The prices of most foreign commodities are being administered—supported—at tremendous expense to the taxpayers. Imports of lead, zinc, electric power equipment and oil are being restricted for the purpose of supporting the prices of these commodities.

That commodity indices did not record a natural corrective reaction in the postwar recessions was not entirely the fault of administered labor costs and administered prices in the auto and steel industries. The causes are much broader than that. In addition to the above noted examples of deviation from the principle of permitting supply-and-demand relationships to determine prices, we have to recognize that tax costs are constantly being administered to higher levels.

The virtue of mentioning so many examples of administered costs and prices is the fact that it makes one realize the degree to which the condition has already reached the breeding stage. An unjustified increase in the income of any one favored sector of the economy becomes a higher cost and a consequent pressure for higher prices for other sectors. Higher prices for goods and services purchased by the Federal, State, and local governments caused their expenditures to rise. So taxes have to be raised again and this further increases the tax cost imposed on the economy's productive effort.

While this leapfrogging of labor costs, prices and taxes is in operation—some call it creeping inflation—and it is an unfortunate fact that the real purchasing power of one sector after another cannot keep up the pace. Higher costs for steel and copper at the next midyear labor negotiations naturally will tend to increase the cost and prices of motor vehicles, machinery, and other fabricated metal products.

The loss of real purchasing power for the fixed income groups is apparent. Less obvious perhaps, but illustrating the point nevertheless, is the position of the group comprising nearly 2 million textile and apparel workers. Last December their gross weekly earnings were about $58, only half of the $116 received by the steelworkers and less than the $118 for autoworkers. Higher wages and benefits for steel, copper, and auto workers, and the consequent higher prices for steel, copper, cars, toasters, washing machines, and so forth, will not improve the standard of living for that substantial portion of the working population represented by the textile and apparel workers. In fact, their ability to buy their share of hard goods has already been reduced by the rising prices of the metal products. And this failure of their demand is retarding the growth and employment of the hard goods industries.

Why not raise the wage rates of the textile workers so that they may have a better real purchasing power? The profit margins of the textile industries are so thin—for many concerns it is nonexistent—that noticeably higher wage rates would mean bankruptcy. Current wages—comparatively low as they are—are still high in relation to the labor costs of foreign producers. The latter also have the benefit of the lower cost cotton which we dump abroad in order to make our own manufacturers pay a higher price to the farmer.

The point is that the breeding process inherent in creeping inflation ultimately collides with the sterile groups whose incomes cannot rise for various reasons and whose purchases of products of the administered wage and price industries have to be reduced.

It may not be too early to suggest to the advocates of creeping inflation: "Don't look now, but your slip is beginning to show—in the form of increasing evidence that creeping inflation is pricing American products out of markets and American labor out of jobs."

## Visit to the Senate by John H. Reagan Senior High School Red Coats of Houston, Tex.

EXTENSION OF REMARKS
OF
## HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. YARBOROUGH. Mr. President, the John H. Reagan Senior High School Red Coats of Houston, Tex., are visiting in the gallery of the Senate today as one phase of their annual tour. This opportunity for these fine young ladies from Texas to visit the Capital and see the city's points of great historic interest will be an invaluable adjunct to their regular courses of governmental study. The Red Coats are accompanied by six of their teachers.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the names of the John H. Reagan Senior High School Red Coats and their teachers.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

MEMBERS OF THE JOHN H. REAGAN RED COATS

Anderson, Judy; Ayers, Patsy.

Bartlett, Gwen; Befeld, Norma; Berman, Ida Sue; Bettell, Linda; Beutel, Sherry; Bond, Judy; Brandvik, Betty; Broker, Jeanne; Brown, Shelia.

Capps, Jeannie; Casselberry, Leigh Jean; Chapo, Carole; Chinn, Judy; Cleland, Virginia; Collins, Ada; Collins, Delores; Costlow, Anne; Covington, Joyce.

DeMarco, Jackie; Dickey, Janda; Dockal, Cynthia.

Fielding, Gaynelle; Froehner, Marilyn.

Galyean, Pat; Garza, Patsy.

Higgs, Beverly; Hillyer, Glenda; Holloway, Emily; Hulme, Anne; Hunt, Helen.

Ingram, Betty.

Jack, Betty Jo; Jaenecke, Shirley; Jones, Linda; Jones, Nancy; Jones, Sandra.

Kiesling, Fay.

Lawless, Zerlene; Long, Mary Alice.

Mata, Maria; Mathis, Sharon; Medley, Sandra; Menefee, Jane; Milkovisch, Marcia; Miller, Marilyn; Morgan, Jeannette.

McCallum, Karen; McLeod, Anne; McLerran, Kaye.

Patterson, Karey; Pechacek, Patsy; Pflueger, Judy; Phillips, Carole; Poston, Julia.

Ray, Jerry; Rogers, Sandra.

Skrove, Linda; Smith, Marijo; Smith, Shirley; Stroud, Dalana.

Tucker, Lyndel; Tull, Carolyn; Tungate, Barbara; Turner, Yvonne.

Ware, Douglas; Westbrook, Caolyn; Westmoreland, Ela; White, Mary Alta; White, Sandra; Wilson, Linda; Woods, Sherry; Word, Norma; Wren, Sandra.

Teachers: Mr. Frank Cobb, in charge of party; Mrs. Mary Connally; Mrs. Freytag; Mrs. Bernice B. Gale, dean; Miss Katharine Keller, counselor; James M. Ikaines.

## Statement by T. Keith Glennan, Administrator, NASA, Before Electronics Industries Association

EXTENSION OF REMARKS
OF
## HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. STENNIS. Mr. President, I had the privilege of attending a meeting last Thursday of the Electronics Industries Association, at which time T. Keith Glennan, Administrator of the National Aeronautics and Space Administration, made a very fine address.

Dr. Glennan is the Director of the new agency, the National Aeronautics and Space Administration. He and his staff and coworkers are making a splendid start in a very difficult field, where they are having to do pioneer work, in large measure.

I thought his address was splendid and contained much valuable and constructive thought. I therefore ask unanimous consent to have it printed in the Appendix of the RECORD.

Mr. President, I am informed by the Public Printer that it will require approximately 2½ pages of the CONGRESSIONAL RECORD to print the address, at an estimated cost of $180.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT BY T. KEITH GLENNAN, ADMINISTRATOR, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, BEFORE THE ELECTRONICS INDUSTRIES ASSOCIATION, WASHINGTON, D.C., MARCH 19, 1959

If I were to claim affiliation with any one industrial group, I suppose by virtue of my formal education and early experience, I could claim to be an alumnus of the electronics industry. Like many of you, I started with the industry in its infancy and have watched it grow into a lusty giant. As I look out over this audience tonight, I am happy to see quite a few friends of many years standing who now are playing an important part in the management of some of your leading companies.

Since World War II, this era we live in has been called variously the atomic age, the age of automation, and now the space age. And playing a significant part in the development of each of them, we find the electronics industry. Important as have been your contributions in the past, it seems to me that you hold some of the trump cards in the fast moving game in which I now find myself engaged, the space business.

I know the people in the electronics industry are vitally interested in knowing what role they will be playing, what contributions they will be asked to make, what requirements they will be asked to fill in this latest, most exciting of our "ages." I am going to address myself to these questions, but before I do, let me tell you something about the

National Aeronautics and Space Administration.

Ours is an independent Government agency, with full responsibility, under the direction of the President, for space research and operations of a scientific and technological nature which should lead to an increase in various fields of knowledge and to the application of that knowledge in the development of our society for the benefit of mankind. There is necessarily a close relationship between the work of our civilian agency and the space activities of the Defense Department. Obivously, space vehicles and the information gathering techniques that must be employed will be suitable both for scientific exploration for peaceful purposes and for military systems of various kinds—just as aircraft can be suitable both for civilian air transportation and for military use.

According to the National Aeronautics and Space Act of 1958, "it is the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind." The act says that these activities are to be conducted by a civilian agency, which is NASA.

At the same time, the act makes an important exception to this provision. It reserves the conduct of space activities having to do primarily with the development of weapons systems, with military operations, or with the defense of the Nation, to the Department of Defense. Provisions are made in the act for close cooperation between NASA and the Department of Defense in the interests of avoiding unnecessary duplication and providing complete interchange of information between the two agencies. The Space Council, chaired by the President, and the Civilian-Military Liaison Committee are the formal mechanisms established to help accomplished this purpose. But the day-to-day contacts at every level are the most important continuing elements in insuring this collaboration.

The Space Act provided for the absorption by NASA of the personnel and facilities of the National Advisory Committee for Aeronautics—some 8,000 scientists, engineers, and supporting personnel—and the great laboratories, now known as research centers, at Langley Field in Virginia, Moffett Field in California, and in Cleveland, Ohio. Smaller, but very important activities, are the High Speed Flight Station at Edawrds Air Force Base in California, and the rocket launching facility at Wallops Islands on the Virginia Coast.

On the first of October 1958, we officially set up shop, absorbed the NACA and accepted the transfer of the Vanguard project from the Naval Research Laboratory. Before the end of November, more than 160 able scientists had transferred to NASA from the Naval Research Laboratory, including the bulk of the Vanguard project personnel and some very fine scientists interested in upper atmosphere research.

On December 3, the Jet Propulsion Laboratory in Pasadena, Calif., was transferred to NASA from the Army by a Presidential Executive order. Operated by the California Institute of Technology under contract to NASA, this laboratory employs 2,300 people on a variety of projects. These include guidance and control systems, tracking, telemetry, the development of instrumented payload packages, and rocket propulsion. Thus, JPL, along with the Vanguard group, are our principal centers for electronic research.

Excluding the personnel at JPL which I previously noted as a contract operation, NASA expects to have about 9,000 employees by the end of June 1959. Our budget for the next fiscal year contemplates an increase of slightly more than 1,000—mainly scientists and engineers—by June 1960. Our present plan is to keep NASA as small as we can, consistent with our ability to manage our programs in a purposeful and efficient manner. This means that a large part of our research and development activities will be carried out under agreements with other Government agencies, with scientific institutions, universities, and, most importantly, with private industry.

This policy represents a departure from the practice followed in the past by NACA. Our predecessor organization last year had a research and development program amounting to about $100 million, virtually all of it carried on in NACA's own laboratories. The 1959 budget for NASA, including a supplemental request which is now before the Congress, comes to some $385 million. Of this total, approximately $250 million has been earmarked for contracts outside of our agency, most of it already committed.

The President's proposed budget for fiscal year 1960 asks that $485,300,000 be granted to NASA. Of this amount, some $350 million is intended for work to be performed by others—again, principally industry.

Contracting with industry on a multimillion dollar scale requires us to seek the highest quality of American scientific and industrial skill, as well as the best capabilities of Government laboratories. We must draw on these outside resources, if we are to develop and produce the tools needed to establish our leadership in space research.

These tools include booster and upper-stage rockets of much greater size and thrust than any we now have; ultimately, entirely new generations of space vehicles must be developed and placed in use. Such vehicles must be provided with guidance and control mechanisms capable of much greater accuracy and reliability than those we now use. Tracking and data acquisition systems must be improved and many new stations installed in various parts of the world. Scientific experiments will increase in complexity with a resultant increase in the demand for more complex payload instrumentation. Capsules and cabins for manned space exploration in which astronauts can be sustained for days, weeks, or months must be developed. As you look at this list—and it is not, by any means, an exhaustive one—you find one common denominator—electronics.

NASA procurement policies incorporate, as a principal ingredient, the armed services procurement regulations. But there are some differences between our overall procurement program and those of the Armed Forces. One of the most significant is the fact that we do not follow up our research and development contracts by entering into agreements for large-scale production. Each experiment in space is characterized by a high degree of attention to individual design and assembly. Even in a series of projects having the same general purpose—such as the Pioneer space probes or the Explorer and Vanguard satellites—the payload packages vary according to the data-gathering experiments planned. Stated simply, we are in the research and development business. Seldom, if ever will any two of our flights be identical.

In another important respect, the contractual authority of NASA differs markedly from that of the Department of Defense. This divergence is in the field of patent rights. The National Areronautics and Space Act specificially requires that when inventions grow out of the work performed for NASA under contract, we must acquire the title to them for the Government. As you know, this is quite different from the procedure followed by the Department of Defense. Operating under no such statutory requirement, the Armed Forces normally confine their property interest in inventions to a royalty free license.

I think it obvious that two such contrary patent policies, followed by Government agencies working in closely related fields of research and development, can be detrimental to the kind of cooperation that we must have from industry if our joint efforts are to go forward with effectiveness and urgency. We are quite aware of the attitude of industry—your industry in particular—on this matter.

On the other hand, you must realize that these rules are written into the law, and we cannot ignore them. The Administrator of NASA has authority to waive these patent rights, but only if he judges this action is clearly in the public interest. As an interim measure, we published recently in the Federal Register a statement of conditions under which requests for waivers of the patent clauses might be considered. As I think you know, NASA will hold public hearings on this matter of waivers in mid-May. In due course, I am sure, the Congress will want to review this entire matter. In the meantime, we are going to make every effort to administer the legal requirements in the patent field fairly and objectively, with due regard for the interests of both Government and industry.

Now that I have talked about my favorite subject, let me turn to yours, the electronic industry. In this space business, we depend upon you to make vital contributions to three major areas: design and fabrication of certain of our payloads; tracking, data acquisition, and reduction; and guidance and control of booster rockets.

A specific example will illustrate how great is our dependence upon high-quality, special-purpose electronic gear. A few minutes after midnight, the morning of March 3, our U.S. team of NASA, the Army and JPL launched from Cape Canaveral a deep space probe, Pioneer IV. Its conical payload weighed 13.4 pounds and measured 20 inches in length and 9 inches in diameter.

Within those limits of weight and size, there was packaged the following: two Geiger-Mueller tubes to measure radiation—one of these was shielded with lead to cut out all but high energy radiation—a photoelectric sensor, shaped like a pistol, to test its effectiveness near the moon in activiating picture-taking mechanisms in future space mechanisms; a despin mechanism, to slow down the spinning of the payload package so the above-mentioned sensor could perform its mission, and telemetery equipment.

The telemetry equipment included a battery-powered radio transmitter, with three subcarriers, designed to transmit continuously on a frequency of 960.05 megacycles for about 90 hours, using 180 milliwatts of power. The transmitter had to telemeter information about radiation, about operation of the photoelectric sensor, which, incidentally, didn't operate because it was set to work only after the probe got within about 20,000 miles of the moon. Actually, the closest approach was 37,000 miles. There was also a monitor device, incorporating a germanium diode, to report on the radio beacon's transmitted power at the source, and an independent arrangement whereby operation of the despin device was telemetered to the ground station.

I have gone into all this detail, because I think it important to emphasize our dependence upon good communications between our space payloads and data-receiving stations on earth. It has been widely reported that Pioneer IV continued to send back data until it had traveled more than 406,000 miles from the surface of the earth, the longest communications link in history. Since then, of course, it has continued its flight into orbit around the sun. I hope I may be forgiven if, in this connection, I note that the 406,000 miles was a distance approximately 32,000 miles greater than that an-

nounced by the Russians for their lunik—with an advertised payload of almost 800 pounds.

The useful life of Pioneer IV, however, lasted only as long as the transmitter's signals were received intelligibly on earth, and not one second longer.

Today, unfortunately, our rate of progress in exploring space is handicapped by our lack of an adequate payload capacity. Even with the exceptional efforts you and others have made to miniaturize experiments and the equipment to transmit data back to ground-receiving equipment, there are very real limitations to the scope of the experiments we can mount upon the presently available launching vehicles. Essentially, we are limited to first-generation experiments for the next 12 months.

To remedy this situation, we are working with great determination and vigor to improve present systems and to develop larger boosters and upper stage rockets—in fact, complete vehicle systems—designed specifically for their space misisons. Money spent now for propulsion systems development will make more certain and more economical the work we want to do in space in the years immediately ahead.

The ratio of weight between the launching vehicle of Pioneer IV and its payload was 10,000 to 1, and even when we begin using the launching systems of the Atlas class, the ratio will still be about a thousand to one. The new engine systems we will be using some years from now, will have a ratio between launching weight and payload of about 200 to 1, for interplanetary missions, and perhaps as low as 50 to 1, for satellite uses.

Today's payloads, on a per pound basis of useful instrumentation are enormously expensive. This is forcing us to perform our planning operations very carefully. Frankly, I think the program we have laid on for the next 2 or 3 years is more realistic and is really a better program from almost every point of view because of the need for this critical examination of both the technology and economics involved in maximizing the efficiency of use of payload packages during the period prior to the availability of more adequate propulsion systems.

As we press forward in our efforts to achieve more thrust and maximum reliability in these propulsion systems, we find ourselves smack up against another area in which we need very expert assistance. As I see it, we will be requiring very great contributions from the electronics industry to improve our means for guidance of space vehicles systems, not only for the aiming of them during the period of takeoff, but also, and perhaps more importantly, during the powered flight of the upper stages, midcourse guidance in the vernacular of the trade. When we begin sending space probes toward the planets, we are faced with the fact that we don't know precisely where these planets are, out in space. Right now, for example, we don't know where Venus is within 50,000 miles; this is the accuracy of our astronomical data. And we don't know yet how to gage our vehicle velocity with the precision that is required. Assuming perfect initial guidance, an error of only 1 foot per second in launch velocity would result in a miss-distance from Venus—if we knew where the planet was—of 25,000 miles.

The guidance and control problems are enormous; so are the contributions needed from men and organizations skilled in the art of electronic applications to these problems.

In the all-important effort to advance basic knowledge, it is, of course, impossible to predict the precise nature of what will be learned. But there are already visible ways in which we as a nation are bound to benefit from our space activities—in a dollars-and-cents way—and sooner than many would have imagined possible even a short time ago.

The two most frequently cited examples are the Vanguard II, the cloud cover satellite that sent back over a quarter of a million feet of taped signals. Although it was only a faltering first step on the road to development of a global weather forecasting system, Vanguard II was a very great accomplishment. The scientists and engineers involved now have a much clearer understanding of what must be done to develop a practicable system and we are planning the followon program with greater assurance than we had before that flight.

Communications satellites also offer great promise. The need for rapid and reliable global communications for the military is obvious; and studies have shown that there is bound to be a great increase in requirements for commercial global communications also. Independent analyses have predicted an increase in the total of overseas messages from the 1,500,000 level which existed in 1950 to 3 million in 1960, and to 21 million by 1970.

The use of satellites offers the possibility of solution to this growing problem of world communications. Using existing microwave techniques, a satellite system could be provided with almost unlimited bandwidth. Television, which requires the equivalent of 1,000 voice channels, would find great utility in this feature. There are several possible techniques for such use of satellites; they differ markedly in the complexity of the electronics carried in the satellite and in the size and extent of the ground-based equipment which will be required.

A technique we are going to explore will be a so-called passive system, with neither receiver nor transmitter being carried by the satellite. The transmitted energy can be beamed at the satellite, but the reflected energy will spread out in all directions, and because of this, very weak signals must be detected by the receiving antenna.

The requirements placed on ground station equipment in this system, of course, will be tough. High-powered transmitters will be needed to send as much energy up to the satellite as is practicable. Low noise or very sensitive receivers to detect the very small amounts of power reflected from the sphere also will be needed. We will have to have large, steerable directional antennas to gather as much of the reflected power as possible, and computers to calculate the path of the satellite and point the antennas.

On the other hand, the passive communications satellite, because it carries no electronics, lends itself to multiple simultaneous party-line use. Also, because there are no frequency determinants in the satellite, the bandwidth or amount of intelligence carried would not be limited as it would be for some other systems.

We plan to launch a 100-foot-diameter sphere into orbit this fall to study this passive communications technique. The sphere will be made of plastic with a vapor-deposited aluminum coating to provide a radiowave reflectivity of about 98 percent. At 1,000 miles altitude, the sphere will be brighter than the North Star. In 1960, we expect to launch two more of these giant size satellites which, incidentally, weigh 150 pounds, and communications will be established using the NASA-JPL antenna at Goldstone, Calif., and Bell Telephone laboratory's equipment at Holmdale, N.J. It is our hope that additional industrial organizations may want to participate in these experiments.

Another system, perhaps farther off, would involve use of satellites carrying both a receiver and a transmitter. Signals beamed from the earth would be received and then immediately rebroadcast on another frequency. If the satellites can be placed in orbit at an altitude of about 22,000 miles, its speed will be such as to cause it to appear to be stationary in space with respect to a point on the earth's surface. Such a system would permit use of very large fixed antennas. But there are very difficult engineering problems to be solved. Among these will be the provision of means for precise positioning of the satellite in orbit, for attitude control and for supplying power to the receiver-transmitter over a long period of time.

Another area of interest to the electronics industry is data acquisition and computation. These past few weeks my associates and I have appeared before Congress to explain our need for a $48 million supplemental to the fiscal year 1959 appropriation. About $12 million of that sum will be used for increasing and improving our tracking facilities. Extension of the minitrack electronics tracking system by establishment of four new stations, located in Alaska, the northern part of the continental United States, Newfoundland, and Northern Europe, together with installations of improved equipment at other stations, will cost $3,300,000. Installation of 85-foot radar dishes, similar to our Goldstone Station, in Australia and South Africa will enable the tracking of probes sent deep into space, $3,350,000 will permit initiation of the procurement of these units. The remaining $5,250,000 is for precision radar acquisition, tracking, communications, and associated systems, at a location in southern Texas, for tracking midcourse reentry and landing of the Project Mercury orbital capsules. Project Mercury is the name of our program aimed at placing a man into an orbit around earth and returning him safely.

As I mentioned before, Pioneer IV established a record communications link of over 400,000 miles. But that was a fairly short transmission link when we consider probes traveling far beyond the moon. That is why we are looking forward to the installations of MASERS and parametric amplifiers for use in connection with our big dishes. We must learn how to maintain communications up to 40 million miles in 1960 and to hundreds of millions of miles as soon thereafter as possible.

As for data handling, some experiments will require the transmission of raw data half way around the world from tracking stations to computation centers in the United States. Other experiments may require the partial reduction of data at the receiving site before transmission.

In general, we will utilize data reduction centers in the United States to analyze the data and yield usable scientific information. We are well along in this respect. We have the Vanguard computing center here in Washington which will be expanded substantially in the next few years, another computing center at NASA-JPL in Pasadena, and we plan to use the Defense Department's space track installation at Cambridge and the computing center at the space-technology laboratories in Los Angeles.

To sum up, it has been my privilege to be associated with the development of a number of new fields of technology during the past 32 years—first, the sound motion picture business, then the antisubmarine warfare game, then the atomic energy program and now the space business. Each of these has required the ingenuity, the services and the dynamic drive of this great industry of yours. Whatever the immediate task may be, your contributions will doubtless be just as applicable to the strengthening of military technology as they will be to the development of our greatest human resource—knowledge. In this spirit of high adventure I look forward with you to the exciting days ahead. I do this with the fervent hope that our pursuit of the unknown in space may prove to be important mechanism for bringing men and nations together for peaceful collabora-

tion and competition rather than as an added element in the cold war which is draining the world of energies that ought to be put to use for man's benefit everywhere.

## Democratic Congressional Policy on Federal Budget

EXTENSION OF REMARKS
OF
### HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. PROXMIRE. Mr. President, Roscoe Drummond, in his New York Herald Tribune column this morning, has criticized the Democratic majority in the Congress for failing to give the American public a clear-cut budget alternative to the Eisenhower budget which the Democratic Congress has obviously rejected.

Mr. Drummond makes sense. We, as a majority party, have failed to put together at the beginning of the Congress at least a tentative fiscal framework within which we can responsibly determine our airport, housing, military, agricultural, foreign aid, and other spending. This failure prevents us from making financially responsible decisions when each of these authorization measures comes to the floor of Congress, or indeed when we send the authorizations on their way from committee.

Mr. Drummond suggests "the Democratic majority or the Democratic advisory council" should decide our Democratic congressional policy on a Federal budget.

I feel very strongly that only the Democratic majority in the U.S. Congress can do this responsibly; but I agree wholeheartedly with Mr. Drummond that we Democrats in Congress "owe it to the country to show openly what we want the public to approve rather than to remake the budget piecemeal behind the curtains."

Mr. President, I ask unanimous consent that this article by Mr. Drummond be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUDGET BLUR: DEMOCRATS AREN'T MEETING ISSUE HEAD ON

(By Roscoe Drummond)

Are the Democratic leaders going to be willing to face the Eisenhower balance-the-budget issue head on and soon in order that the voters may have some say in the outcome?

They are not doing it so far.

The effect of Democratic speeches and Democratic maneuver is to blur the issue, confuse the issue, and so delay the issue that it will be difficult to determine who has unbalanced the budget, where, and for what reason. And it will come so late in the session that public opinion will have little chance to make itself felt one way or the other.

If the Democrats are going to meet the Eisenhower hold-the-line budget issue and give the voters a chance to support or reject an alternative policy, they must do two things:

1. They must quit jiggering the budget piecemeal, adding a hunk here, chipping off a corner there, and, instead, offer Congress and the country a coherent, total spending program which they can look at whole and decide whether they want it.

2. Do it soon enough so that the consequences of the Democrats' national budget—good or bad—can be seen and judged in comparison with the Eisenhower national budget.

When the President sent his budget to Congress—precariously balanced, but still balanced, with an estimated $70 million surplus—he was beginning to point up a real, fundamental, and philosophical difference between the Democratic and Republican Parties.

Mr. Eisenhower, even in the face of a $40-billion defense program, was proposing to hold the line on a great deal of Federal spending; he was freezing some programs, cutting others, and proposing little in the way of new or increased public services. He emphasized balancing the budget as a vital end in itself and as a measure to hold inflation. If he could get a surplus, his priority was to use it either to reduce the debt or cut taxes.

Here, at last, there appeared to be in the making a basic party divergence of both principle and practice. Most of the Democrats said they wanted to spend more for defense, more for housing, health, aid to education, airports, roads, and aid to distressed areas where unemployment is still high. At the same time many Democrats argued that more Federal spending would promote economic growth and that an unbalanced budget might even be beneficial.

There is no doubt, I think, that a pretty sizable gulf spreads out between the two parties on this budget-spending issue. But so far it is being fogged by a piecemeal approach and the prospect is that it will be cleared so late in the session that neither Congress nor the country will quite know what's happening before it is too late.

Either by default or by design, the Democrats are tending to conceal the issue rather than clarify it.

Obviously the very methods of congressional operation contribute to blurring the issue. By long habit and by the jealously guarded division of authority between committees, Congress always considers and acts upon the spending side of the budget item by item—and never in total and never in relationship to revenue.

The appropriation committees and the tax revenue committees consider spending and revenue separately—never together.

This means that in the upcoming airport and housing bills, which the Democrats have somewhat cut back under White House pressure, the Democratic majority is already in process of unbalancing the budget—but no one will know for sure until Congress is nearing adjournment. The reasons will be blurred, responsibility will be blurred.

The only way Congress and the country can intelligently choose a Democratic Party alternative to the Eisenhower budget is to have a chance to look at it whole soon.

It seems to me that the Democratic majority—or the Democratic Advisory Council—owes it to the country to show openly what they want the public to approve rather than to remake the budget piecemeal behind the curtains.

## The Education of Veterans

EXTENSION OF REMARKS
OF
### HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. ENGLE. Mr. President, my attention was recently called to an address given by Dr. Roland R. Renne, president of Montana State College at a meeting of the Montana Veterans of Foreign Wars. Dr. Renne's speech contains an excellent review of the education and training programs under the GI bill of rights, and points up the tremendous influence such programs have had upon our society. I commend this address to the attention of Senators and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EDUCATION OF VETERANS—A GREAT EXPERIMENT

(Address by Roland R. Renne, President, Montana State College, to the mid-winter meeting of district No. 2 of the Montana Veterans of Foreign Wars, Memorial Hall, Conrad, Mont., January 24, 1959)

I am happy to speak to you tonight and to the listening audience throughout Montana on the education of veterans under the so-called World War II GI bill in which the United States embarked upon the largest veterans training program the world has ever seen.

Montana can be very proud of the record of its veterans, not only in their war services in which they fought to defend the basic principles of our democratic society, but in the very active part which they have taken in helping to build finer communities wherever they live.

I understand that the No. 1 goal of the Veterans of Foreign Wars is community service, and I am informed that the Freedoms Foundation Award for community service has been won by the National VFW for the seventh consecutive time. This certainly speaks highly of the strong community service program developed by the VFW. I also understand that Montana is one of only five States that has had two national commanders of the VFW. These records bespeak the competent leadership which the Montana VFW has been privileged to have.

All of us who are fortunate to share the many privileges of our democratic society are indebted to all of those who have fought for our country or served in the Armed Forces. Each of us, I am sure, is anxious to see to it that our war veterans are provided basic health, educational, and related services in the amount and quality which is their due.

The recent information that the go-ahead signal has been given for construction of a new multimillion dollar replacement hospital at Fort Harrison and to use the present structure as an administration building is indicative of the desire of our people reflected in the actions of our elected representatives to provide the medical facilities and related essential services for our veterans.

Although the record of the United States and Montana in providing for the basic

needs of veterans is unexcelled, the programs for education and training of veterans begun toward the close of World War II are on a scale unheard of previously. Public Law 346, commonly referred to as the GI education bill and the Servicemen's Rehabilitation Act of 1944, provided for the Federal Government, through the Veterans' Administration, paying the institution a veteran wished to attend for the customary costs of tuition, related fees, books, supplies, and equipment necessary for pursuing the desired course of study. These benefits were available to any person who served in the active military or naval service on or after September 16, 1940, and prior to termination of the war, who had an honorable discharge, and who was not over 25 years old when he entered the service.

The amount of training which a veteran could receive depended upon the length of his war service. He was allowed as many months training as months of war service. The veteran had to begin his education or training within 2 years after his discharge or termination of the war, and such training or education had to be completed within 7 years after the close of the war.

Veterans were required by the provisions of Public Law 346 to maintain a satisfactory grade average based on the standards and practices of the institution he attended. It is interesting to note that at Montana State College, for example, veterans maintained very satisfactory grade records on the average. In fact, veteran students averaged approximately a point higher than the average of all students. (In a sample study covering the academic year 1947–48, with nearly 1,700 veteran undergraduate students enrolled out of a total of some 3,100 in the institution, the veteran average was 78.495, and the all-student average was 77.42).

In addition to having all of his tuition, fees, books, supplies, equipment, and related costs of schooling paid by the Government, the veteran received $50 per month subsistence allowance if he had no dependents, and $75 per month if he had one or more dependents. Later, veterans were granted a larger subsistence allowance, the amount for veterans with no dependents being increased to $105 per month and those with dependents increased proportionately.

The number of veterans who took advantage of this unprecedented federally financed educational and training program was over 7,800,000 or just over half (51 percent) of the 15,400,000 World War II veterans. Of the 7,800,000 who took advantage of the provisions of the act, 29 percent, or not quite one-third, attended a college or university; 3½ million or approximately 45 percent, attended institutions below the collegiate or university level, and the remainder or slightly over 2 million, or about one-fourth, took on-the-job training. About 700,000 of these more than 2 million took on-the-farm training.

The total cost of this great educational program was $14½ billion, of which approximately 5 percent was for administrative costs. Fourteen and one-half billion dollars is a lot of money but, compared with our annual expenditures for defense, the total cost of this unprecedented educational program amounts to less than one-third of the current annual expenditure of defense.

What evidences are there that this program was worthwhile or that the veterans really benefited from this federally financed training and education in return for their war services? Records show that the median income of veterans during the past 6 years is up 51 percent compared with only a 19-persent rise for nonveteran males in the same group. The average veteran's educational level is better than 4 years of high school, while the level of nonveteran males of the same age group is but 2 years of high school. Thus, we have a very high direct correlation between the extent of education and training and the average income earned. It would seem then, without any question of doubt, that the veterans' educational program, as provided by Public Law 346, increased the earning power of the veterans appreciably.

It is interesting to note the fields of study undertaken by the veteran students. Out of every 100, one-third or 33 aimed at a highly skilled trade and industrial job; 10 pursued scientific studies, including engineering and medicine; 10 took courses in management and business administration: 10 took scientific farming; 6 studied humanities; 5 took sales and clerical courses; 3 took courses preparing them to teach; and the remainder, or 23 percent (approximately one-fourth) prepared for a wide variety of occupations.

In addition to being good students in terms of satisfactory grades and averaging generally higher than the nonveteran students, what kind of students were World War II veterans in college? Studies show that veteran students had a greater inclination to complete their education and carried heavier course loads than nonveteran students. Also, many veteran students carried part-time jobs while in school. Many of them participated in extracurricular activities, especially in leadership training roles, and brought to the campus a greater degree of mature judgment and varied experiences which made the student body generally more serious-minded. Veteran students were somewhat less inclined to go for all the rah rah of the typical College Joe, but they, nevertheless, did participate in those activities which they felt were desirable, and in general were loyal, cooperative, friendly students.

A significant percentage of World War II veterans, after finishing their college education, chose to follow research or teaching work. For example, at Montana State College 73, or approximately one-fourth, of the present teaching faculty are veterans.

In addition to Public Law 346, or the so-called GI bill of rights, there have been four other laws passed by the National Congress concerned with the education of veterans. One is Public Law 16 which provides for the education of service-incurred disability or rehabilitation cases; Public Law 550 provides for the training and educational program for Korean war veterans; Public Law 894 provides for the training and educational program of Korean rehabilitation cases; and Public Law 634, known as the War Orphans Act, provides for educational benefits for sons or daughters of deceased veterans.

This year, 761 veterans have enrolled at Montana State College to date; 12 of these are attending under Public Law 894 (Korean rehabilitation veterans); 16 students who are sons or daughters of deceased veterans are receiving educational benefits under Public Law 634, and the remainder, or some 733 students, are enrolled under Public Law 550, known as the Korean GI law. The greatest number of veterans attended under the provision of Public Law 346 (World War II GI's) with the peak of more than 2,000—or approximately two-thirds of the total student body—such veterans enrolled at MSC in the academic year 1946–47, but this program came to an end for practically all veterans of World War II in 1956. There have been no students under this program enrolled at Montana State College since the 1956–57 academic year.

Veterans' Administration figures show that the percentage of veterans enrolled in insituations of higher learning is considerably greater for Korean war veterans than for World War II ex-servicemen. Of some 4½ million Korean veterans eligible for schooling, 1½ million, or one-third, entered training. More than half (51 percent), or some 765,000, of these Korean veterans who entered training enrolled in a college or university, and 10 percent enrolled in a graduate-level program. This compares with less than one-third (29 percent) of World War II veterans who took training who enrolled in colleges or universities. The Korean bill, Public 550, expires in 1956. It provides for payment of $110 per month to the veteran who has no dependents; $135 per month if he has one dependent; and $160 per month if he has more than one dependent. He is allowed a period of training equal to 1½ times the duration of his active service but not to exceed a total of 36 months. Korean veterans pay their own fees, books, and other expenses from their subsistence allowances.

Nearly 10 million individuals have been provided training and education under the five congressional acts providing for education of World War II and Korean veterans and sons and daughters of deceased veterans. Obviously, this great educational program of veterans has had and will continue to have a tremendous influence upon our society, making possible increased production of goods and services as a result of the increased training and education, and making possible an even higher standard of living for Americans.

Three major effects or contributions of the veterans' educational programs can be summarized:

(1) The Nation gave training and education a new and higher value in public esteem by so rewarding veterans. It is a revolution in thinking; it affects the teaching profession, the educational aspirations of our people, and the investment of our national wealth. The whole concept of support or financial aid for education underwent a change. Education now is something for which the Nation produces its wealth in order to purchase.

(2) The veterans' education program proves that a higher percentage of the population can, with profit, benefit from higher education. Talent will continue to be searched out in the lower economic strata, since brains are no respecter of persons, areas, or economic status.

(3) The veterans' educational program demonstrates that we cannot escape the national obligation to provide training and education to those who cannot afford such education and training. Only in this way can we equalize training and educational opportunities for all those who have the ability to benefit effectively from such opportunities.

The new National Defense Education Act passed by Congress in the summer of 1958 to strengthen our American system of education so it can meet the broad and increasing demands imposed upon it by considerations of basic national security provides for student loans, national defense fellowships, guidance institutes, language development programs, grants to States for services, mathematics and foreign language instruction, area vocational programs, and other important educational and training activities. Authorized appropriations are $47½ million for 1959; $75 million for 1960; $82½ million for 1961; and $90 million for 1962. Montana's allotment for 1959, out of $47½ million, is $186,431.

Thus the program of Federal aid undertaken most extensively in the education of veterans in the last 14 years is being applied more generally than formerly and reflects the evolution of increased Federal concern and greater responsibility—especially with higher education. This would appear to be a natural development to meet the increasing demands imposed by the space age, modern technology, and our basic national security.

In closing, it can be said that the veterans' educational and training program financed by the Federal Government for World War II and Korean war veterans has been a major factor in building the background for more responsible and adequate Federal participation to assist our American educational system to meet the increasing demands placed upon it in the interests of our national security.

## Nomination of Lewis Strauss To Be Secretary of Commerce

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Should the President Want To Bring Back Lewis Strauss?" published in the Louisville Courier-Journal of October 27, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY SHOULD THE PRESIDENT WANT TO BRING BACK LEWIS STRAUSS?

President Eisenhower has appointed Lewis Strauss to succeed Sinclair Weeks as Secretary of Commerce. A more ill-timed and injudicious appointment can hardly be imagined.

To say that Mr. Weeks has been an undistinguished Secretary of Commerce is charitable. To be equally generous, it might be said that Mr. Strauss will not enhance the record.

As Secretary, Mr. Weeks first came to public attention when he announced, to the astonishment of laborers, farmers, and white-collar workers that this is a businessman's administration. He then began a concerted effort to give away public holdings to private utilities, climaxing this questionable undertaking by surrender of the Hell's Canyon site, and a fringe involvement in the Dixon-Yates scandal.

He further distinguished himself by becoming the champion of a so-called additive which was supposed to restore vigor to dead batteries. And when his own Bureau of Standards tested and labeled the additive "useless," Mr. Weeks hounded from office the Bureau chief, the noted scientist, Dr. Edward Condon, helping in the process to smear Mr. Condon's reputation and cast public doubt on his patriotism. He continued to champion the battery "goat gland" even after private testers had admitted it was something less than efficient.

ALWAYS THE GRAB FOR POWER

Mr. Strauss will be remembered, though not fondly, for his unique performance as the arrogant, power-hungry boss of the Atomic Energy Commission. Under his chairmanship the Commission became the center of suspicion, bickering among the members and a running controversy between Strauss and Members of Congress. Impatient with the opposition of the other members of the Commission, Strauss asked Congress to give him powers of principal officer or dictator of the Commission, which would have permitted him to act without consulting his fellow members. Congress refused so Strauss simply usurped the powers, acting in matters vital to our national security without the knowledge of the other members.

Congress then passed a bill specifically forbidding one-man rule of the Commission, but that did not stop Strauss. The later Kefauver investigation showed that Strauss, despite the orders of Congress, had consistently acted without the knowledge or approval of the Commission, had concealed information from the other members and had often acted against their expressed opposition. He was a prime figure in the Dixon-Yates scandal.

As Chairman of the AEC, Strauss insisted on handing over to private utilities the development of atomic reactors, though both Congress and scientists warned that we were lagging behind other countries in this research. Strauss was instrumental in driving Dr. Robert Oppenheimer from Government service. When employees of AEC differed with him, Strauss harassed them with security checks, inquiries, and investigations, and even pursued them into civilian life after he had driven them out of AEC.

WILL THE SENATE CONFIRM HIM?

One by one, he drove able members out of the Atomic Energy Commission. A great part of his last 2 years in office was spent before congressional committees, explaining why atomic research was not progressing more rapidly, and why he had consistently denied to Congress vital information about our atomic-energy status. He earned the enmity of powerful figures in both parties and both Houses to such an extent that President Eisenhower, knowing that his reappointment would not be approved, persuaded him to leave.

He has continued, however, to exert an influence on government as a financial adviser to President Eisenhower and as a member of that shadowy group around the now discredited Sherman Adams that has wielded such questionable power in Washington. Now he pops up again, to take over the reins of Commerce from the ham-handed Mr. Weeks. It must have been difficult to find a man who will grace the Secretary's office even less than Sinclair Weeks, but in Lewis Strauss the President has found him.

Getting him confirmed will be something else again. Members of the Joint Atomic Energy Commission can hardly have forgotten Strauss' pompous, high-handed conduct in dealing with them. Members of the House are not likely to have forgotten his insulting refusal to turn over needed information. To the Democrats, who will undoubtedly control both Houses of Congress by considerable margins, his appointment is an open slap. Nor are Republicans apt to welcome back another public reminder of old scandals and our embarrassing lag in atomic development. Why the President should choose thus to antagonize the very men whose help he is going to need so much in the 2 years ahead is anyone's guess. But there is at least one bright note in this appointment—it isn't likely to stick.

## TVA

EXTENSION OF REMARKS
OF
## HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. SPARKMAN. Mr. President, on Saturday, March 21, 1959, the New York Times published an editorial entitled "TVA as a Business." There are some very pertinent and potent thoughts expressed in the editorial, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA AS A BUSINESS

Over the more than 25 years of its existence the Tennessee Valley Authority has been criticized by its natural enemies as battening on the taxpayer's money and competing unfairly with private utilities. As far as the taxpayer's money is concerned, TVA has had the use of about $1.2 billion, of which about $300 million has been paid back into the Treasury. TVA has also benefitted by cheap credit and its payments, in lieu of taxes, have been somewhat lower than the prevailing rate in the southeastern part of the United States.

At the moment, however, TVA is not asking to borrow money from the Federal Government. It is proposing, as it has done before, to issue revenue bonds expanding its power facilities—and mainly its steampower facilities, since the waterpower of the Tennessee Valley has been pretty well developed.

At present the situation is that a bill has been introduced into the House, and approved by the House Public Works Committee, to permit TVA to raise $750 million and spend the proceeds on new steam-generating equipment. There is not much chance that the demand for power in the Tennessee Valley will fall off. TVA's spokesmen have pointed out that this demand is increasing by 10 to 12 percent a year and that new construction, costing about $180 million a year, is necessary to keep up with the demand.

In this great power market there are farms and homes that have benefited immeasurably by new sources of energy, but more than half of all the kilowatt-hours sold goes to Federal agencies, among them the Atomic Energy Commission. TVA helped save the Nation during a second World War by producing airplane materials and by its help in developing the atomic weapon and atomic energy. The wars, we hope, are over, but TVA still works for defense and still works for the improvement of living conditions everywhere.

The way in which TVA shall do this needful work is a practical issue, not an ethical one. This newspaper believes that the authority should continue to function like any other going concern within the area it now serves—that is to say, the familiar butterfly pattern that comes around in a great sweep from the Kentucky Dam on the west to the dams on the tributaries of the Tennessee, coming down out of the northeastern mountains. We do not believe this service area should be expanded, or needs to be. There should be ample space outside this pattern for private enterprise to profit by what TVA can teach and to teach lessons from which

TVA may gain. This ought not to be a war between public and private power. It should be a friendly competition with cooperation wherever cooperation will be mutually beneficial.

We therefore hope that the revenue bond proposal will pass both Houses of this present Congress and become a law. New Yorkers, who are accustomed to the way in which our own port authority and triborough bridge authority operate, will see nothing revolutionary in this practical policy.

## Debate on Administered Prices

EXTENSION OF REMARKS
OF
## HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. KEFAUVER. Mr. President, Mr. Edwin L. Dale, Jr., one of the able financial reporters of the New York Times, wrote an article titled "Debate on Administered Prices," which was published in the New York Times of Sunday, March 22, 1959.

I commend Mr. Dale upon the technical expertness of his article. The article discusses the charts of Gardiner Means, a well-known economist, which were presented to the Antitrust and Monopoly Subcommittee. It is unfortunate that the charts cannot be reproduced in the CONGRESSIONAL RECORD, but they are very well described by Mr. Dale.

I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEBATE ON ADMINISTERED PRICES

(By Edwin L. Dale, Jr.)

WASHINGTON, March 21.—A term created a quarter century ago, debated vigorously among economists at the time, then quiescent for most of the decade after World War II, has returned to the news and to the attention of Congress.

The term is "administered prices." It was devised by an economist, Gardiner Means, to help explain the way prices behave in the economy.

The elementary textbooks say that prices vary according to supply and demand, with the seller having only very limited control over what he charges. If demand is sluggish, he must usually cut his price.

The reason he must cut his price, according to the textbook explanation, is that one of his competitors will do so to get more business.

In the case of farm prices and securities on the stock market, where the number of sellers is, in effect, infinite, the seller has no say over his price at all. It varies hourly with varying offers to buy and sell.

Mr. Means accepted the textbook explanation for a wide variety of prices in the economy. But he found that it did not hold true for many other prices. His test was the frequency with which prices change.

INFREQUENT CHANGE

Mr. Means found that an important group of prices in the economy changed very infrequently. He knew that demand for these items was moving up and down like demand for everything else, but the price did not respond. Thus his first definition of an administered price was one that changed infrequently, presumably on the ground that the sellers were largely immune to changes in demand.

Mr. Means and others soon concluded, formally or informally, that the power of sellers in the administered price area stemmed mainly from the fewness of their numbers. That is, prices were most rigid in concentrated industries—either those with few concerns overall or those dominated by a very few companies. Steel and automobiles, needless to say, were perfect examples.

There, for practical purposes, the case rested in the late 1930's.

Then came the somewhat puzzling rise in prices from 1955 to 1958. It was a time of budget surpluses and tight money and, most important of all, peace. The classical source of inflation—excess demand—seemed not to exist. There were few shortages of supply.

KEFAUVER INQUIRY

A curious Senator, ESTES KEFAUVER, Democrat of Tennessee, believed the explanation might be found in Gardiner Means' long-neglected theory of administered prices. So he started an investigation and set off a debate among experts and politicians that is still continuing.

Senator KEFAUVER's inquiry appeared to be running out of steam until the events of last year's recession. But the prices in some key industries went up in spite of extremely slack demand, with steel and autos again the most-mentioned examples.

Even persons who had long believed the administered price problem was of no great importance—such as the brilliant collection of staff economists at the Federal Reserve Board—sat up and took notice. And Senator KEFAUVER returned to the attack.

Early this year he struck gold. The strike took the form of a set of charts prepared by, of all people, Mr. Means. The two most telling are reproduced on this page. They have caught many an eye.

Mr. Means sought to show that practically the entire rise in prices in the recent period occurred in the administered price area. The lack of a general excess of demand is proved, he believes, by the failure of demand-sensitive items to rise.

He concluded that demand-repressive measures, particularly tight money, are useless against this type of inflation, and indeed actually harmful. He thought the administered price problem should be tackled directly.

Critics of the Means analysis have usually accepted his figures. But they make three main counterarguments.

LABOR BLAMED

The first is that it is the power of organized labor in these sectors that is the real cause of the upward price movement. True, the industries have pricing power, this argument goes, but the prices were actually increased mainly because of higher costs.

Basically, the critics here charge that the pricing power of an industry could be inflationary only if the industry actually used that power to increase profit margins substantially on each item produced. They give figures showing that even where profit margins have risen, the effect on final prices is very small, particularly compared to the effect of the rise in total costs (labor and others).

The second main counterargument is that the Means chart can be almost wholly explained in terms of classic demand theory. That is, the areas that rose most in price—metals and motive products and machinery—were precisely the areas under the heaviest pressure of demand in the 1955–57 boom when most of the price increase took place.

MEANS' FIGURES

Mr. Means produces figures of his own, mainly involving the use of industrial capacity and the labor force, aimed at refuting this idea. The demand theory has trouble explaining some of the price increases in 1957 and 1958 when demand was falling off, though it appears that the increases in the administered sectors were less in those years than in the previous two.

Finally, the critics say that the Means theory offers very little help in explaining the rise in consumer, as distinct from wholesale prices. Mr. Means concentrated heavily on steel, for example. One critic, Simon Whitney of the Federal Trade Commission, sought to show that the entire steel price increase since 1953 would have added only about six-tenths of 1 percent to the consumer price index.

The reason is that consumer prices are heavily dominated by food, services and soft goods. Food and soft goods are generally competitive.

RETORT MADE

The retort of the Means backers here is that a steel price increase eventually is reflected in practically everything consumers buy. It pushes up medical care through the cost of equipment, food through the price of cans. It remains true, however, that the whole steel industry accounts for less than 4 percent of the total value of the Nation's output of goods and services.

There is also, of course, debate on just how widespread the administered price problem is. No statistics are more tricky than the statistics on concentration of industry. There is by no means unanimous acceptance among experts, for example, even of the generally held public belief that concentration has been steadily increasing.

And so it goes. The Means attack on traditional theory, backed by the Kefauver hearings, has by no means torn down the barricades as yet.

But if the prices in the administered area continue to march upward at anything like the pace of the last few years, there is a real prospect that Congress will demand direct action. And that would mean some form of price, and probably wage, control—the very thing President Eisenhower has repeatedly said is incompatible with a free economy.

## Analyst Finds Economic Recovery Sluggish

EXTENSION OF REMARKS
OF
## HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. COHELAN. Mr. Speaker, in an article printed in the Washington Post Sunday, March 22, Mr. Bernard Nossiter, the distinguished staff reporter for that newspaper, compares the rate of recovery from the 1958 slump with recovery in 1949–50 and in 1954–55.

He reports that the present recovery is the slowest of the three according to results of most economic measurements. He further advises that many experts say unemployment has actually grown progressively worse.

This data is especially pertinent to various legislation being considered at this

time. I wish to include Mr. Nossiter's article in the RECORD so that it will be available for the careful study of all Members:

RECOVERY RATE FOUND SLUGGISH

(By Bernard D. Nossiter)

The national economy is moving out of the worst postwar slump at a sluggist pace.

A comparison with the recoveries from the two earlier recessions shows:

The present recovery is much slower than the 1949–50 revival.

The present recovery is somewhat slower than the 1954–55 comeback.

Moreover, a new method of calculating jobless rates—a method which many experts now favor—shows that unemployment has not simply held at an uncomfortably high level in the last 3 months. Instead, it has grown progressively worse.

Under the new method, unemployment, corrected for seasonal factors was 5.8 percent of the labor force in November; 6 percent in December; 6.2 percent in January and 6.4 percent in February.

Any five economists will offer at least six mutually exclusive methods of measuring recovery. And some will insist that by any standard the present recovery is satisfactory. This contented group argues that the fact that the recovery appears uninterrupted for 10 months after the recession hit bottom last April is the really significant feature.

Moreover, some contend that a comeback as fast as the one in 1949–50 would breed other evils. A snapback of that sort, it is argued, would quickly press output up against capacity, create shortages and put pressure on prices.

It is this group also that generally argues (in private) that relatively high unemployment is unfortunate for those out of work but useful to temper union wage demands.

Finally, some economists say that the current recovery is so close to the pace of the 1954–55 affair that the differences are unimportant. However, that earlier comeback followed a mild dip. So, a more proper comparison, another school asserts, is with the first, more severe postwar slide. On that basis, this recovery is substantially slower.

To measure recovery, four key indicators were compared for the three periods: Gross national product or total output, corrected to eliminate price changes; the jobless rate; personal income, the sum of payments to people; and industrial production.

The recent slide in unemployment, reflected in the figures used here and compiled by the Committee for Economic Development, will come as a surprise to some.

Published Government figures show no change between December and February. However, the Census Bureau is privately measuring jobless rates in the same fashion as CED and is expected to publish this new approach.

Some economists argue that the recent worsening in unemployment reflected in the numbers is illusory. This group holds that the figures result from an extraordinary expansion in the labor force—that is, a rush of new job seekers in the last 3 months.

However, in the nine preceding months, the labor force, corrected for seasonal changes, actually declined. It normally increases by 800,000 over a year; from February 1958, to February 1959, it increased by only 300,000.

Therefore, the rates showing a worsening of unemployment are compiled against a less-than-normal increase in job seekers. A normal increase would make the picture look blacker.

Another unusual factor is supporting current production, employment, and incomes. Perhaps 20 percent of the recent buying of steel is inspired by strike threats. Customers are building inventories to tide them over an emergency predicted by the industry as early as last September. If this scare buying were not in the picture and steel output were tailored to real demand at the current price, the production index would probably show not even the modest increase registered in the past 3 months.

Here's how much each of the three postwar recoveries had come back after each slump had hit bottom as shown in the four indicators: (The numbers are the percent gain or loss for the tenth month after each slump hit bottom—February 1959 for the current recovery. Gross national product is measured quarterly so the comparisons are for points three quarters after each slump touched bottom. This GNP for the first quarter of 1959 is estimated to have increased by 10 billion unchanged dollars from the fourth quarter.)

Industrial production: First postwar recovery, 15.4 percent above the preslump peak; second recovery, 1.5 percent; current, 0.7 percent below the preslump peak.

Personal income: First, 7.9 percent; second, 6.7 percent; current, 3.5 percent.

Jobless rate: First, was 4.5 percent 10 months after trough or 10 percent worse than preslump peak; second, 4.2 percent or 61 percent worse; current, 6.4 percent or 49 percent worse.

Gross national product: First, 9.5 percent above preslump peak; second, 4.4 percent; current, 2.1 percent (estimated).

Another method of comparison would be to measure how much each indicator had climbed from the trough.

On this basis, the first recovery was again the best for all four indicators. But the current recovery is about the same as the 1954–55 comeback in one measurement, faster in one and slower in two others.

To sum up: In all eight measurements, the first recovery was the fastest. The second leads the current comeback in five, is even in one and trails only in two.

## Student-Aid Loyalty Oath

EXTENSION OF REMARKS

OF

## HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Fealty Furor," written by William Henry Chamberlin, and published in the Wall Street Journal of March 20, 1959. The article discusses a legislative accomplishment of our colleague, the distinguished Senator from South Dakota [Mr. MUNDT].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEALTY FUROR—ACADEMICIANS WHO BATTLE STUDENT-AID LOYALTY OATH MIGHT BETTER RAIL AGAINST MORE REAL THREATS

(By William Henry Chamberlin)

The insertion, at the initiative of Senator KARL MUNDT, of loyalty provisions into the National Defense Education Act has aroused a considerable storm in the normally placid groves of academe. Cries of "McCarthyism" and "thought control" are heard in the land.

Some colleges have decided, as a matter of principle, to refuse to accept the benefits of the act. Presidents of others have indicated disapproval without going so far as to deny their students the scholarship advantages which are made available.

The act provides funds for scholarships to students of merit, to be repaid later at a nominal interest charge. The recipient is required to affirm his loyalty to the U.S. Government and also to give assurance that "he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods." It is this last requirement that has drawn the outcry of "thought control" in campus circles, student and professorial, that like to think of themselves as liberal.

CAUSE OF LIBERTY

In this age of totalitarian states, mass pressures and big organizations, Government and private, the cause of individual liberty deserves every consideration. But is it really monstrous, impermissible tyranny if a government makes as a condition of helping students that those who receive its help shall not be dedicated to its destruction?

A student could make the required affirmation with a clear conscience and still be able to hold and advocate a very wide range of dissenting opinion. Like some of his professors and others who are old enough to know better, he could advocate unilateral nuclear disarmament for America and its allies, one-sided retreat on every disputed issue with the Soviet Union.

He could recommend, as the wave of the future, a system under which the Federal and local governments would take not one-third, as at present, but two-thirds or three-fourths, or nine-tenths of every citizen's earnings for the supposed needs of foreign aid and the welfare state. He could be in favor of maintaining full employment by issuing fiat money so that everyone could receive a check for $10,000 from Uncle Sam for extra spending money.

He would be just as free as the rest of us to play around with and sympathize with any kind of utopian scheme for the reorganization of American society, subject only to the reservation that this did not involve trying to overthrow the Government with one hand while accepting its handout with the other.

Actually the number of prospective applicants who should be inconvenienced by taking an affidavit renouncing sympathy and participation in any organization committed to violent overthrow of constitutional government in the United States would be extremely small. It would boil down to a handful of dogmatic Communists with enough integrity, or fear of legal consequences, to boggle at swearing falsely.

A sizable segment of public opinion is probably represented by an alumnus of one of the colleges which decided to reject participation in the scheme because of objection to the affidavit.

He wrote to his college newspaper: "To assert this is thought control is ridiculous. It requires the recipient to conform to a reasonable standard of good citizenship at the time of the affidavit.

"As a taxpayer, I respect the sound judgment of the Members of Congress who approved this provision. It is designed not to spend my money on educating someone who, when he receives my bounty in one hand is,

at the same moment, determined to destroy me with the other. I must also applaud those who supported Senator MUNDT's addition to the act for the very practical reason that a conviction on the score of a false affidavit is cheaper, easier, and speedier to obtain than is a conviction under the various anti-Communist statutes. Thanks to the U.S. Supreme Court, the FBI's, and others' vast expenditures of money, effort, and time in an attempt to eliminate the subversive elements have been nullified."

There is always room for crusaders for freedom. But they should always be sure that the cause is genuine and worth the effort. A far more real case of tyranny is the experience of a Michigan poultry farmer named Stanley Yankus. Mr. Yankus has been assessed fines of $4,500 for not observing the wheat quota, although he has never accepted any Government subsidy and never contracted to take part in the price-support program.

GOVERNMENT REGIMENTATION

Mr. Yankus is so fed up with his experience that he proposes to migrate to Australia. It would be interesting if some energetic researcher would get to work and find out how many Stanley Yankuses there are in a system where Government subsidization equals Government control equals regimentation of the individual.

Still another promising field of study for a champion of freedom would be the experience of the individual worker who holds out against joining a union, perhaps a union run by obnoxious underworld characters. There are dark spots in American life, where freedom ought to ring loudly. But the individuals who have been sounding off against the affidavits in the National Defense Education Act seem like Don Quixotes, charging furiously at windmills.

## Results of 22d Congressional District of Ohio Opinion Poll

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mrs. BOLTON. Mr. Speaker, the results of my third annual opinion poll, which was recently sent to every household in the 22d Congressional District of Ohio, have just been tabulated. Replies to this questionnaire were received from 17,000 families which comprise a well-balanced cross section of the various economic, racial, political and religious groupings of the 22d Congressional District of Ohio. Since this district represents a sizable portion of the Greater Cleveland area, I believe the results of this poll will be of interest to the Congress in revealing public opinion on certain issues in one of our large metropolitan areas.

The fine response received from my constituents is deeply appreciated. The many detailed explanations and helpful suggestions received are very reassuring, and indicate the serious thought being given by my constituents to some of the vital domestic and foreign issues of our Government. The results of this poll follow:

| | Percent | | |
|---|---|---|---|
| | Yes | No | No opinion |
| 1. Do you favor a relaxation of the trade barriers imposed by the United States against Soviet Union? | 25.5 | 63.5 | 11.0 |
| 2. Would you favor diplomatic recognition by the United States of Communist China? | 22.8 | 68.1 | 9.1 |
| 3. Do you favor continuation of our mutual security (foreign aid) program at approximately the same cost as the past several years? | 43.0 | 45.7 | 11.3 |
| 4. Do you favor gifts of surplus farm commodities to underdeveloped countries? | 76.9 | 17.4 | 5.7 |
| 5. Would you favor price, wage, and rent controls if our economy is faced with a period of accelerated inflation? | 70.3 | 24.5 | 5.2 |
| 6. Do you favor Federal programs, such as the proposed community services legislation to provide long-term, low-interest-rate, Federal loans for local public works projects? | 59.0 | 29.4 | 11.3 |
| 7. Do you favor legislation to provide lower downpayments, and smaller monthly payments through larger and longer mortgages on FHA insured homes? | 59.3 | 31.7 | 9.0 |
| 8. Would you favor larger Federal participation in local slum clearance and urban renewal projects? | 51.6 | 41.0 | 7.4 |
| 9. Do you favor Federal aid to needy States for school construction? | 61.4 | 33.2 | 5.4 |
| 10. Do you favor Federal aid to needy States for increased teacher pay? | 49.4 | 43.4 | 7.2 |
| 11. Do you believe Federal aid to education will result in Federal control of education? | 41.0 | 46.9 | 12.1 |
| 12. Do you favor continued Federal aid to local airports? | 30.7 | 55.1 | 14.2 |
| 13. At present a person drawing social security benefits is prohibited from earning in excess of $1,200 yearly. Do you believe this limitation should be removed? | 72.9 | 22.9 | 4.2 |
| 14. Do you favor a Federal program to provide hospital and surgical care for social security beneficiaries by increasing the wage base for social security taxes to $6,000? | 48.5 | 38.9 | 12.6 |
| 15. Would you favor extension of coverage, and an increase in the $1 per hour minimum wage law? | 62.3 | 27.1 | 10.6 |
| 16. Would you favor legislation during the present session of the Congress to grant statehood to Hawaii? | 82.9 | 7.5 | 9.6 |

## Grain Terminal Association "Daily Radio Roundup," March 18, 1959

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Grain Terminal Association "Daily Radio Roundup" for Wednesday, March 18, 1959.

There being no objection, the Grain Terminal Association "Daily Radio Roundup" was ordered to be printed in the RECORD, as follows:

Why did Fidel Castro win in Cuba? And what was behind the recent flareup in Iraq?

There's always a reason for revolts and uprisings. Remember, we had one back in 1776—and with good reason. People don't like to die. So if they are willing to fight and risk dying, they must feel that there are some serious wrongs that might be righted.

In Cuba the revolt came from the back country, from the provinces. Two-thirds of the men in Castro's army were poor peasants—farm people. In common with many other Latin American dictators, Batista had favored the big landowners and big industrialists.

In the countryside, Castro offered the only answer that had any meaning. That was land reform. That revolutionary promise is as old as history, and with it he won over the peasants who went hungry between the sugarcane harvests.

It was this motley lot of untrained peasants, led by intellectuals, that defeated Dictator Batista's professional army and police force. The promise was land and farms for the peasants who had been little more than plantation laborers.

And what happened just last week in the Middle East's Iraq, far across the sea and far removed from Cuba? Again, land was the issue. Associated Press correspondent Stan Carter, who was there, says the landowning Arab sheiks suffered a crushing defeat. They had lost ground in the change of government a few months ago and this was to be their comeback.

A Catholic priest told the news correspondent that the wealthy sheiks were behind the uprising because "they were afraid they would be dispossessed." They were going to lose some of their land because of the new agrarian reform law. That law limits ownership to 600 irrigated acres or 1,200 unirrigated acres. The rest of the land is to be sold to the peasants, with 20 years to pay. The rich sheiks didn't like that, of course, because for centuries they had been the landlords, taking up to nine-tenths of the crops in rent.

So here are two bloody episodes in today's history. And like so many before them the cause, in both cases, was the desire of the people to be free and own land and till it for themselves.

Here in the United States we can thank our forefathers for their wisdom in encouraging family agriculture with property laws and the Homestead Act. But in their day, our forefathers got the same kind of harsh and unthinking criticism that is being heaped today on efforts to preserve family farming.

We notice in the newspapers that a top official of a big international private grain business says we ought to forget about our small farmers. He has written an article in a publication called Business Horizons in which he recommends that the United States do away with all farm aids and let the so-called free market weed out the farmers who can't live with disaster prices.

But in view of history around the world, yesterday and today, most people will consider that a pretty shortsighted point of view.

## Federal Support for Schools

EXTENSION OF REMARKS
OF
### HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram I have

received from Eula May Taylor, northwest regional director of the department of classroom teachers, in support of the School Support Act of 1959, S. 2.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

TACOMA, WASH., *March 17, 1959.*

The Honorable JAMES E. MURRAY,
*Senate Office Building,*
*Washington, D.C.:*

Participants at Northwest Regional Conference of Department of Classroom Teachers, National Education Association meeting at Boise passed the following resolution on March 14.

Urge continued Federal support for present well established and useful program such as, but not restricted to, library services vocational education school lunch program and others. Believe that Federal support should be given to the State to meet emergency and continuing needs of public school construction and salaries, that these funds should be distributed to all States through an objective allocation basis, and that the administration of the funds should be under the control of regular educational authorities within the State. Further recommend the support of the entire Murray-Metcalf bill which provides Federal funds for each school child with local control and oppose any efforts to substitute lesser provision.

EULA MAY TAYLOR,
*Northwest Regional Director.*

## Fiftieth Anniversary Celebration of Sigma Delta Chi

EXTENSION OF REMARKS
OF
### HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. MONRONEY. Mr. President, on the occasion of the 50th anniversary of Sigma Delta Chi, men's professional journalistic fraternity, CBS has scheduled in 2-hour-long TV shows a week apart, an appraisal of American journalism, including print and broadcast media. The discussion will be on "The Great Challenge" series Sunday, March 29, and Sunday, April 5, with Eric Sevareid as moderator. In order that Members of the Senate may have the information about the speakers discussing two very vital topics, I ask unanimous consent to have a description of the program printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

SIGMA DELTA CHI PROGRAMS

A two-part appraisal of journalism in this country today—including both printed and electronic media—will be presented in hour-long symposiums on "The Great Challenge" series Sunday, March 29 and Sunday, April 5, on the CBS television network 2:30–3:30 p.m., eastern standard time.

The two programs, "Is American Journalism Meeting Its Responsibilities?" (March 29) and "Is the American Public Getting the Information It Needs?" (April 5), are being produced by the public affairs department of CBS news in cooperation with Sigma Delta Chi, professional journalistic fraternity, on the occasion of the fraternity's 50th anniversary.

Examining the responsibilities of journalism in the modern era and the degree to which today's journalists are meeting those responsibilities, will be Barbara Ward, noted author and formerly foreign affairs editor of the Economist of London; John Fisher, editor in chief of Harper's magazine; Engene C. Pulliam, president and publisher of leading newspapers in Indiana and Arizona and head of station WIRE, Indianapolis, and station WOAV, Vincennes; J. Russell Wiggins, vice president and executive editor of the Washington Post and Times Herald; and Sig Michelson, vice president, CBS, Inc., and general manager of CBS News.

Exploring the subject of barriers that limit a journalist's accessibility to vital news will be James C. Hagerty, Presidential news secretary; James Reston, chief of the Washington bureau of the New York Times; noted historian Arthur M. Schlesinger, Jr.; Robert D. Swezey, executive vice president and general manager of WDSU Broadcasting Corp., New Orleans, La., and chairman of the Freedom of Information Committee of the National Association of Broadcasters; and Charles A. Sprague, former Governor of Oregon and publisher of the Salem (Oreg.) Statesman.

Eric Severeid, CBS News chief Washington correspondent, is the moderator for "The Great Challenge" symposiums.

Sigma Delta Chi was founded by 10 undergraduate students at DePauw University, Greencastle, Ind., April 17, 1909. It now has approximately 17,000 members in 116 undergraduate and professional chapters and is the largest as well as one of the oldest organizations in journalism. Mr. Pulliam, a member of the March 29 symposium on "The Great Challenge," was one of the 10 founders and this year is national honorary president of the fraternity.

"The Great Challenge" is produced by James Fleming. Av Westin and Michael Zeamer alternate as directors for the series.

## National Park on Padre Island, Tex.

EXTENSION OF REMARKS
OF
### HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. YARBOROUGH. Mr. President, the first bill which I introduced in this session of Congress was S. 4, a measure to establish a national park on Padre Island in Texas.

Since that time, I have on several occasions brought to the attention of my distinguished colleagues the necessity for the establishment of such a park both to keep its long, sandy beaches as a public playground on a shoreline which is fast becoming privately owned, and to preserve the island as a place of natural beauty where many species of wildlife have their habitat in unspoiled surroundings.

Special studies of other national park areas, principally Gettysburg, Pa., have shown that the longer the acquisition of land of natural beauty and historical significance is postponed, the more expensive it is when purchase is finally made.

I feel we should delay no longer in providing for a national park on this island in the Gulf of Mexico which can easily become a winter playground for the Nation.

Mr. President, in support of my remarks, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter from Mrs. E. L. Crumpacker, Sr., corresponding secretary of the Rivercrest Garden Club in Houston, Tex., evidencing the support of this fine group of farsighted citizens for Padre Island National Park.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GARDEN AND CIVIC CLUB,
*Houston, Tex., March 16, 1959.*

The Honorable RALPH M. YARBOROUGH,
*U.S. Senate,*
*Washington, D.C.*

MY DEAR SENATOR YARBOROUGH: At the regular March meeting of the Rivercrest Garden Club, we had a discussion of the bill that is coming before you, concerning establishment of Padre Island as a national park. As a club, we wish to go on record as being wholeheartedly in support of said measure, feeling it is for the benefit of all, that it is passed.

Thanking you for your support.

Respectfully,
Mrs. E. L. CRUMPACKER, Sr.,
*Corresponding Secretary.*

## America's Attitude Toward Poets and Poetry

EXTENSION OF REMARKS
OF
### HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a poem written by one of my constituents, Mr. Earl Cuevas of New Orleans, La. It is being included in order that it might, in the words of Mr. Cuevas, "strike the fancy of some imaginative person who would be interested in poets and poetry."

Mr. Cuevas' plea, in the form of a poem, for a deeper appreciation and better understanding of the finer arts in America, follows:

THE REVOLT OF THE MUSES
(By Earl A. Cuevas)

Apollo's heart is filled with ire.
He belches words like flames of fire
While Vulcan hurls them far and near
To fill the land with dread and fear.
He calls for Castor's aid.
The hundred-headed Typhon too,
The god now welcomes to his crew
And hurried plans are made.
He calls the muses to his side.
And tells them truths he'd rather hide.
Before he speaks he makes his plans
To place his case in Jove's own hands.
The mighty Jove consents.
A nation's life is now at stake—
A people's conscience must awake.
America has roused the wrath
That blocks the mad god's peaceful path
And causes his laments.

With thundering voice and tear-stained eyes
He takes the rostrum and he cries:
"America, my grief is great
To see my love has turned to hate.
When first your continent was found
I knew the wealth that did abound
Upon your lovely shore.
I then agreed with Mercury
That he should rule instead of me—
Four hundred years—no more.
During the time that Mercury reigned
A vast amount of wealth was gained.
'Twas then, and not until that time
That I should reign and rule sublime
With all the muse's aid.
But now, behold! you have denied
The bond by which we both were tied
When this contract was made."
With this he ceased and then surveyed
The strange effect his words had made.

America in silence sits
In hope that she may gain her wits
And then defend Apollo's charge
Through counsel bought with gold.
Now there she sits, both fair and large
And tragic to behold.
The mighty Jove, to save her name,
In these few words addressed the dame:
"America, we find you fair.
Your comely face, your lovely hair—
Your womanhood deserves my praise.
Can you not here defend your ways?"
A thought now flashes to her mind.
Her unjust acts are thus defined:

"Behold the gold I have in store,
And see the art from shore to shore
My youthful sons have made.
My ships now ply the seven seas—
No nation has such industries
Of equal size or grade."
She points with pride to piles of stone
And boasts that she and she alone
Has not a counterpart.
She mentions that her men of state,
Since nineteen ten (a recent date),
Have added to the nation's slate
An art bureau, both broad and great—
To show the nation's art.

The muses smile, their smiles are broad
Because they know this is a fraud.
The bureau which the lady named
Is one of which she is ashamed;
But yet, she seeks to now appease
The angry god with further pleas.
"See what I've done in recent years.
My cities boast of rows and tiers
Of paintings we have made.
Each building where this art's in store
Has cost ten-thousand-grand or more,
And others are being made.
Each edifice the state constructs
Has paintings of the vast products
The nation makes to sell.
Now, twenty-seven-million "sheks"
Are set aside for art projects
I think that this is swell."

Apollo scans the lady's pride
And tries in vain a blush to hide.
Confused with wrath and pity too,
He tries to give the dame her due.
He speaks, and in these words explains
The reason why he now complains:
"My dear, the school where you were taught
Has much confused and placed at naught
Your knowledge of the arts.
The works that you have now displayed
Deserves the praise that should be made
From all your nation's part;
But those who worship at my shrine
I wish to here and now define.

"I speak of poets and not of art,
For poetry is a thing apart
And should not be by you confused
With minor terms the gods have used.

"Before Saturn was overthrown—
Before the time Jove took the throne,
Man spoke, if but in groans.
The golden age was ushered in
And man, as yet, was free from sin
And spoke in clearer tones.
'Twas even then that ancient man
With new formed words his poems began.
So how can you today decree
That painting passes poetry?
Did not Apollo, poetry's king,
From Phoebe's own dear daughter spring?
When Jupiter, my sire and pride,
Surveyed the heavens far and wide
To find himself a worthy bride,
He called Latona to his side.
Now Phoebe was Latona's dame
And Coeus was her father's name.
Before Diana learned to spoon,
My mothers' mother ruled the Moon.
It should be plain that I am sprung
From gods who were the first among
The heaven's mighty race.
My father Jove had made a vow
That he would find a bride somehow,
Both fair of form and face.
The son this happy union bore
Was called 'Appollo'—nothing more;
And as the fates had long decreed
He was the one they chose to lead
The muses into space.
"I sent them to your lovely shore—
Erato, Euterpe, Terpsichore—
But in your rush for gold and gain
Their mission there has proved in vain
It is for this I now complain
And seek to ruin your vast domain.
The shame that you have meted to
My muses shall be dealt to you.

"What have you done for such as Poe
But let him perish in his woe?
And there is Maxwell Bodenheim
Who starves the while he writes in rhyme.
Sara Teasdale put out the flame
Because you so disgraced her name
Hart Crane sought solace in the sea
And thus returned his soul to me;
And Lindsay took the poison vial
To end the misery of his trial.
Now add to this that Egan hung
Because he found no place among
His fellowmen to ply his trade
And stooped to crimes of lowest grade.
Fred Landon lost his active mind
Because your people proved unkind.
The ones whose names I mention here
Are but a few of my career
Who ended life in suicide
Because you shunned them from your side.
How many now are doing time
In prison walls because the rhyme
The muses melted in their brain
Cannot the needs of life sustain?

"America, my plans are these:
I'll seek the aid of Hercules
And bring your nation to its knees
For such atrocious crimes as these.

"Erato sought to write of Love
(Antheme inspired by gods above)
But she was soon denied.
Then Calliope, in epic style,
Had hoped to pen a poem worth while,
With Clio's help, to make your name
Immortal in the realms of fame,—
And this, was set aside.
I take the matter in my hand.
Both muse and theme I now command.
Now when I bring you to disgrace
Because of follies of your race,
The tragic muse, Melpomene,
Shall stand right here with me and see
A sight to make a theme.
The generations yet unborn
Shall learn how you were shamed and torn,
My prestige to redeem."

Before the god of poetry ceased
His sobs and tears had both increased.
With shaking frame and wetted eyes
He sees, beyond the heaven's skies,
The lovely land he hoped to praise
With poetry in a thousand ways.

When Jove beheld his wretched son
His thought was one and only one—
To bring peace to his breast.
With this thought foremost in his mind
He frames his words and seeks to find
If any plan might yet exist
By which Apollo could desist
From acts he should detest.

These were the words, both firm and kind,
The fairest queen of all mankind
Heard Jove speak clear and loud:
"America, the case is clear.
I know that humans all will err.
Too much is now allowed.
But do you think that sins of yours
Should reach beyond your native shores?
The crimes that echo in your ears
Have been going on for many years,
And those who suffered in your land
Are pleading now with outstretched hand
For justice from my throne.
Before I pass upon your guilt—
Before your youthful blood is spilt—
Call on your worthy men of state.
Make known to them their future fate
And ask them to atone.
The evidence shall thus remain.
Until your case is called again.
Your fate shall be your own."

---

## Knights of Columbus Hear Stirring Talk on Communism

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a learned, informative, and stirring address delivered by Rev. Father Henry A. Kane, C.Ss. R., a member of the Redemptionist Mission Band of Buffalo, N.Y., at the annual communion breakfast of the Lawrence, Mass., Council 67, Knights of Columbus, held in the St. Mary's Auditorium in that city on March 15, 1959.

Attorney Reno J. Orlando, grand knight of the council, headed the group both at the communion rail and at the breakfast that immediately followed. In a few well chosen words, he expressed his thanks to the members of the organization for their attendance in such goodly numbers and following his outline of the past accomplishments of the organization during his service as grand knight, he informed the gathering of the program plans for the remaining months of his term in office.

The Very Reverend Edward J. Carney, O.S.A., pastor of St. Mary's Church of Lawrence, Mass., and former national chaplain of the American Legion, in his talk to the gathering stressed the needs of the Knights of Columbus in these

days of uncertainties. Monsignor Joseph P. Burke, J.C.D., of St. Patrick's Church in that city, and chaplain of the council, cited the members for their example in their Catholic action not only in their religious endeavors but also for the contribution to the civic and community life of that area.

Deputy Grand Knight John J. Hart, 3d, filled the post of toastmaster most fittingly and his introductions of the various speakers were well prepared and most interesting to his audience.

The following were the head table guests: Attorney Reno J. Orlando, grand knight; John J. Hart, 3d, deputy grand knight; Rev. Fr. Edward J. Carney O.S.A.; Monsignor Joseph P. Burke, J.C.D.; Rev. Fr. George J. Callaghan, O.S.A., chaplain of Crusader Circle 651, Columbus Squires; Arthur J. Scott, past grand knight; Congressman THOMAS J. LANE; Hon. John J. Buckley, mayor of the city of Lawrence; Martin J. Killourie, district deputy; Paul H. Phaneuf of Dracut, Mass., district deputy; John Quinn, warden to the district deputy; State Senator William X. Wall; J. Ronald Boutin, chancellor; James T. Early, Sr., financial secretary; Samuel A. Reitano, treasurer; Joseph T. Hayes, trustee; William McIntosh, ticket chairman; Ralph Diodati, outside guard; Nelson J. Blouin, warden; Peter A. Hewett, lecturer; Albert J. Peterson, recorder; and William Licata, inside guard.

The following past grand knights were in attendance: Hon. John E. Fenton, chief judge of the Massachusetts Land Court; James A. McGrogan; Dr. Timothy Fleming, William A. Toye, James J. Regan, Joseph A. Comber, Superintendent of Schools James F. Hennessey, Joseph T. Harty, John T. Finn, Daniel F. Glynn, Charles H. Flathers, and John D. Sands, past grand knight of Dover, N.H.

About 2 years ago, there appeared in our newspapers and magazines a dramatic picture. Before a long, low table stood a cassocked figure. His hands were raised, like the prophet of old, in the familiar manner of a priest celebrating mass. And yet the setting was different than that to which we are accustomed. He was not garbed in colorful vestments. No golden chalice, studded with jewels, rested upon the simple table. In place of the round, spotless host was a small piece of bread. In the background was a flag, the proud and glorious Stars and Stripes of the United States of America. Was this humbly clad figure really a priest offering up the holy sacrifice of the mass in these unfamiliar surroundings? Indeed, he was a priest, a great priest, reliving the precious moments of the Last Supper by mandate of his Divine Master. You may have already surmised that this was a picture of Cardinal Mindszenty, persecuted, imprisoned prince of the church pleading with God for peace in the world through the power of this mass celebrated in the American Embassy in Budapest, Hungary.

This picture was worthy of your thoughtful study then; it merits your serious consideration this morning, because it graphically narrates a story rich in meaning. Clearly it points out the godless viciousness of communism that has relentlessly persecuted this dedicated man of God these many years. Sternly it warns us that the Communist considers nothing sacrosanct and nobody sacred. Hopefully it comforts us with a deeper realization of the power of prayer and the value of devotion to God, in whom we shall find abundant strength to resist the diabolical forces of atheistic communism. Forcibly it reminds us of a truth which the Communists understand only too well: That the might and power of America are today the backbone of the free, Christian world and the hope of God-fearing people everywhere.

In the mind of each man before me this morning there is another picture, the picture of a Communist. What image is reflected upon the screen of your mind when you draw a mental picture of a true Communist? Is he an uncouth, unkempt, wild-looking man standing upon a soapbox in a park denouncing social injustice? Or is he a cleverly trained professional spy operating with the efficiency of a Houdini? Is he rich or poor? Educated or illiterate? Man or woman? Does he speak with a foreign accent, or was he born in Brooklyn or Boston or Buffalo? Does he belong to either of our major political parties and, if so, in which one is he more likely to be found?

If the picture of your Communist is characterized by these features, and these alone, your image of a Communist is both incomplete and distorted. On occasion any one of us here this morning could be unkempt and wildeyed as denouncing, as we do, the evils of social injustice. A Communist could be, and in many instances is, a well-trained spy, but he could also be a mere tool in the hands of professionals. Today there are Communists among the rich and poor, among the educated and illiterate. A Communist could have been born across the seas or in the house next door. And, despite the accusation of some politicians, he may be found equally as well in either of our major political parties, for the Communist Party is too shrewd to build up its strength in one party, only to see the other come into power.

WHAT IS A COMMUNIST?

What, then, is a Communist? A true Communist is anyone who believes in the principles of dialectical materialism taught by Karl Marx and condemned by Pope Pius IX as early as 1846. To the Communist everything in the world is basically material. There is no God, there is no difference between soul and body, there is neither survival of the soul after death nor any hope of a future life. Human society is a form of matter which has evolved through conflict. This conflict must be sustained and, indeed, accelerated by man. Hence, the Communist must, and does, sharpen the antagonisms which arise between the various classes of society. Hatred, violence, and destruction become part of a crusade essential to the progress of humanity. Whatever advances the cause of communism, be it war or massacre, starvation or bloodshed, becomes moral and good. That which retards the cause of communism, be it the Catholic or the Protestant church, America or Hungary, must be destroyed as an enemy of the human race. In the light of this doctrine, why did the statement of Khrushchev that he would bury America shock so many Americans? It shocked only those who do not truly understand the Red menace—and their number is legion. In this the Communist believes, nor does it make any difference whether he was born in Russia or the United States, whether he is a leading industrialist or a lowly lackey, whether he graduated from Harvard or barely slid through grammar school.

MUST RESIST

At this point you may have decided that this doctrine of communism is purely theoretical and makes little difference to you here in the safety of America. So, let me ask you a few questions. Do you believe in the authority of your Government? Do you believe in your authority as a parent? The Communist rejects all authority, civil or parental. Do you own a home? Have you built up a business of your own? Would you resent it, if your home and business were stolen away from you? The Communist would approve of it, provided that it was beneficial to the Party. Do you love your family, your wife, your children? Communism is bent on the destruction of the family. If your wife were sent to work in an airplane factory in California, your children to the coal mines in Scranton, while you remained here in Lawrence, would you rebel unto death against such tyranny? In the doctrine of the Communist, your family belongs to the state, must be educated by the state and produce for the state. Have you a child who is in any way defective? Wouldn't you love that defective child more than one who is healthy, because it needs you so much? Such a child, says the Communist, is a parasite upon society and deserving only of liquidation for the betterment of the state. In these teachings the Communist believes and by them he lives. This is not mere theory, it is current Communist practice in Russia and the satellite nations. Witness, if you will, Russia, Poland, Hungary, Yugoslavia, Korea, and Red China. These barbarities have happened; they are happening this very day in some parts of the world; and they will happen here, unless we are, all of us, courageously determined to resist communism under any guise and to resist as well those duped by the Communists who make the work of the party easier to accomplish in our land.

THREE CATEGORIES

Following closely the words of Pope Pius XI in his encyclical on atheistic communism published in 1937, we have drawn a clearcut picture of the true Communist. Perhaps it is of even greater importance in our day and age to consider this morning those who have been deceived by communism. These are men who proclaim their sincere interest in the cause of freedom, yet who make the task of the Communist easier to achieve because, in the name of freedom, they push the Communist line. They may be grouped into three categories. There are those who advocate an excessive freedom of speech and action tantamount to license. There are those who minimize the danger of Communists because they are few in number. Finally, there are those who claim to be American citizens and yet will not openly declare their loyalty to this Government.

Let us remember that true freedom for society never admits of license. We do not allow our teachers to instruct your youngsters in the art of committing crime. Are we, therefore, guilty of a breach of freedom? Preposterous. We do not allow criminals to invade our homes and snuff out the lives of our children. Is this a violation of the principles of freedom? Incredible. Why, then, should we allow the Communist Party to teach the violent overthrow of our Government? To do so would be equally preposterous and incredible. And if one were to object to the comparison of a Communist with a criminal, I should like to remind him that the teeth have been restored to the Smith Act by our current Congress, thank God, thus ranking Communists with criminals. Moreover, the Communists have consistently, of their own volition, grouped themselves with criminals by hiding behind the first and fifth amendments. These amendments to our Constitution are supposed to guarantee the personal liberties of the decent citizen. They have been abused by members of the Communist Party, who are therefore guilty of license.

As for those who ridicule the danger of communism and smear our FBI as well as its illustrious chief, Mr. J. Edgar Hoover, they are either liars or they do not understand the idea of communism. Lenin wanted members of the party to be an elite and dedicated few, for the obvious reason that

a small group is controllable. Stalin taught that the Communist Party must be small and should function by making transmission belts of non-Communist countries, groups, or individuals such as Cyrus B. Eaton of Cleveland. On January 1, 1957, Mr. Hoover estimated that there were 17,360 members of the Communist Party in this country. For every member of the Party, there may be 10 non-Communists willing to push the work of the party. In 1945, when the Communist Party was at its peak in the United States, it had a membership of 64,600 and was, therefore, stronger in numbers than the Soviet Party was at the time it seized power in Russia. That seizure occurred in 1917 when the Russian Communists numbered a mere 40,000.

NO PLACE FOR NEUTRALIST

Finally, we come to those who will not declare their allegiance to their country, while pretending not to be Communist. To such disloyal Americans—and I definitely include Cyrus Eaton—I address this morning the scathing words of Christ: "He who is not with Me, is against Me." In this day of unspeakable peril, there is no place for the neutralist. Now is the acceptable time for all of us to declare ourselves completely Christian, completely American, completely anti-Communist. We therefore wholeheartedly oppose the current Communist line which follows:

1. We must recognize Red China.
2. We must eventually surrender at Quemoy, Matsu, and Berlin.
3. We must abolish all laws curbing communism.
4. We must support the 24 decisions of the Supreme Court which favored communism and which have been so deeply regretted by the American Bar Association.
5. We must sponsor cultural exchange.

These five points constitute the current Communist line as sent out from Red Moscow.

It is, therefore, our high resolve this morning to oppose the Communist line by the following resolutions:

1. We will not recognize Red China.
2. We will not surrender at Quemoy and Matsu, nor will we be blackmailed by a fear of war to surrender in Berlin.
3. We are delighted with the regret expressed so strongly by the American Bar Association, to its everlasting credit, and we urge this loyalty of jurists to campaign ever more vigorously for laws that will effectively curb communism.
4. We are opposed to cultural exchange between Russia and America, since it is a means of infesting our Nation with trained agents of the Russian Communist Party.
5. We will pray daily for peace, as Our Lady of Fatima requested. Through these resolutions and the power of Mary's intercession with her Divine Son, may we soon see the dawn of peace on earth, ueace in our minds, and peace with God for all eternity in the Kingdom of Heaven.

## Future of Timber Supply in Oregon

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. NEUBERGER. Mr. President, one of the outstanding authorities in the Pacific Northwest on forest management is David T. Mason of Portland, who also has been a leader in the Oregon Historical Society. Mr. Mason is optimistic with respect to the continued source of supply for Oregon's basic lumber industry, and Oregon produces more lumber than any other State in the Nation. Because many problems of the lumber industry are involved in Federal legislation I think that an interview with Mr. Mason by Bob Sever, of the staff of the Portland Oregonian, will be of significant interest to many of my colleagues. Therefore, I ask uanimous consent, Mr. President, that this article by Bob Sever from the Oregonian of March 8, 1959, entitled "Portlander Sees Timber as Principal Source of Income in Oregon for Another Century" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTLANDER SEES TIMBER AS PRINCIPAL SOURCE OF INCOME IN OREGON FOR ANOTHER CENTURY

(By Bob Sever)

Will timber continue to be Oregon's chief natural resource as well as its principal source of income during the next 100 years of statehood? A man who well could bear the title of "Mr. Forester" of the United States believes that it will.

He is David T. Mason, of Portland, who for much of the last half century has waged a tireless crusade to bring about reforms which will assure longevity to the State's timber resources.

A consulting forester, Mason commenced his career in the early 1900's when the timberlands of the West were considered to have an unlimited supply of producing trees.

He was on hand to watch both big and little operators in the industry cut massive swaths through the lush forests of the region with little thought for the day ahead when there would no longer be any trees.

And such might have been the case had it not been for Mason and other energetic sustained yield evangelists who foresaw the danger to Oregon's economic crown jewels in the swashbuckling harvest of its timber stands.

Mason is quick to emphasize that sustained yield management of forests should not be confused with mere selective cutting. Sustained yield management, he explained, involves a much broader scope which includes protection of forest lands from fire and disease, reproduction measures such as reseeding and replanting and the proper quantity cutting at appropriate times.

Turning back to the early-day concept of timber cutting and management, Mason recalled:

"The people thought of forests as they did of coal and copper mines—you might just as well go ahead and use up the timber. They didn't think what we would do after that was gone."

Recognizing the economic danger involved in the cut-it-all concept, Mason seriously turned to the task of promoting sustained yield forest management in 1927.

"The thing I was trying to do was to get the interest of private forest owners in managing lands on a sustained yield basis so they could permanently support the mills," he said.

Sustained yield management was a very old idea, Mason explained, but he pointed out that its application in the United States was new in private lands.

"Theoretically," he added, "the national Forest Service managed its forests on a sustained yield basis but there was so little demand for public timber in the early days that the Federal stands were undercut.

"Soil has a growing power to produce just as the Columbia River can produce electrical power," the forester noted, "but if you don't build a dam, that potential will go to waste, and the same is true with a forest potential which is not properly developed."

In the early days of the industry in Oregon, Mason recounted, there was great economic pressure to cut all the timber and each producer had a tendency to overcut.

Fortunately, progressive operators have accepted sustained yield management of forests through the years and have restrained the unlimited cutting. This has resulted in a much stronger economy in the industry which has been reflected all over the world.

Scientific forestry now is practiced by many of the large operators which have major holdings in the State, and cooperative programs between private owners and Government foresters continue to pay dividends to the Nation and the State.

"Oregon has a great deal of land which is valuable primarily for trees," Mason pointed out. "Forest management is improving right along and no doubt will continue to improve."

Because of this Mason believes that timber will continue to be Oregon's chief natural resource and its main source of income.

One of the most graphic measures of the success of the efforts of Mason and others to bring about a truly enlightened approach to timber management is the large number of tree farms which now exist on private lands in Oregon.

As of the end of 1958, there were 349 such farms covering 4,031,301 acres which represents about two-fifths of the total private forest land in the State.

It is such projects as these privately operated farms which will help keep Oregon's timber resource a major asset of the State during the next 100 years and will provide a continuing flow of income to its residents.

An integral part of sustained yield management of forests is tree farming—growing repeated forest crops on the same land—just as farmers grow crops. Tree farming in Oregon started in 1941. Following are some 5-year figures on private tree farms in Oregon, including number and acreage: 1943, 14 farms, 1,063,703 acres; 1948, 39 farms, 1,705,771 acres; 1953, 112 farms, 2,990,409 acres; 1958, 349 farms, 4,031,301 acres.

## How Well Are We as a People Meeting Demands of Freedom?

EXTENSION OF REMARKS
OF
### HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. SPARKMAN. Mr. President, recently, Mr. McClellan Van der Veer, editor of the Birmingham News, was given an award by the Freedom Foundation, based upon an editorial which he had written sometime before that, and which appeared in the Birmingham News. The editorial is entitled "How Well Are We as a People Meeting Demands of Freedom?"

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW WELL ARE WE AS A PEOPLE MEETING DEMANDS OF FREEDOM?

For a nation or an individual a declaration of independence can be a basically important act, but freedom is never a fixed and completely achieved reality for men. It is some-

thing that must be constantly guarded and achieved over and over again. It is an ever rising goal. No human being is wholly free.

In "The Protestant Era" Paul Tillich, the eminent theologian, wrote that "the depth of reality is freedom, the ultimate power of being is power over itself." Men, of course, are far from that freedom possessed by the ultimate power and reality controlling all things. Nevertheless, they can achieve great and significant realities of freedom. The founding Americans achieved freedom from foreign rule, from "taxation without representation". Ever since all Americans have been facing the unceasing challenges involved in maintaining and extending their freedom.

On this Fourth of July 182 years after the Declaration of Independence, the anniversary, as is the case every year, is most fittingly observed by rededication to the spirit and the responsibilities of freedom. In this growing complex age we should strive to conceive as clearly and comprehensively as possible what are the current costs and demands of freedom.

We have many great liberties—political, social, religious, economic—in this fortunate country. We are free from tyranny. We are free from many practices and conditions that have limited men in other times, that now limit them in other lands. But as individuals we are not free from human weaknesses of many sorts, weaknesses often causing us to fall short of the standards of conduct and achievement we would like to exemplify constantly.

As a people, we are subject, as is the individual, to weaknesses and shortcomings. We are free in a very real sense to the extent that we achieve power over ourselves—power to attain the high goals we set for ourselves in our finest aspirations.

As a people we should be reflecting deeply on this Independence Day how free we are in this basic regard. How free are we from the domination of—

Self-seeking that seriously limits our growth in freedom, that may even endanger our possession of the basic liberties that are ours?

Apathy and indifference as to the great fundamentals of truth, justice, and integrity upon which any system of freedom must so greatly depend?

The cynicism that testifies to grave lack of that faith in men so essential to the effective working of democracy, to the support of real liberty?

The fears, the hatreds, the intolerances, that can undermine the freedom of a nation as well as the freedom of an individual?

The thoughtful citizen can readily add to questions of this kind. And he can readily see that, as a people, our security and our growth in freedom basically rest on how, as individuals, as a nation of individuals committed to a common cause and enterprise, we measure up to the demands of true freedom, the wise and humane control of ourselves that is imperative to strongly established and growing liberties.

## A Southerner to the Court

EXTENSION OF REMARKS
OF
### HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Southerner to the Court?" from the March 22, 1959, issue of the Richmond Times-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SOUTHERNER TO THE COURT?

Can a citizen of the Deep South who is opposed to forced mixing in the schools be appointed to the U.S. Supreme Court?

At first, the idea seems so farfetched, in the present climate of opinion, as to be hopeless. Yet, on second thought, it may conceivably not be so farfetched after all.

Consider the fact that the honest, conscientious anti-integrationist viewpoint is not represented on the present Court. That tribunal rendered a unanimous decision in 1954 in favor of forced race mixing, and last September the three Justices who had been appointed since 1954 were said by Chief Justice Warren to have associated themselves with the other six in that opinion.

Yet there is substantial opposition in the North and West, to say nothing of the South, to compulsory mixing of the races in the schools. Appointment to the Supreme Court of a respected man from the Deep South would give this large and growing element a voice.

Such an appointment would not only help to redress the one-sided balance of opinion on the Court, but it would be worth considering by the White House, from a political standpoint. (The President's appointments to the Supreme Court are supposed to be wholly nonpolitical, of course, but actually politics cannot be kept out of these selections.)

Suppose that when the next vacancy on the Court occurs—and the time may not be far away—Mr. Eisenhower were to name, say, Senator JOHN C. STENNIS, of Mississippi, to that tribunal. Such an appointment might go far to allay the intense feeling of resentment occasioned by the President's dispatch of armed paratroopers to Little Rock in 1957.

There is no more respected Member of the Senate than JOHN STENNIS. A Phi Beta Kappa graduate of the University of Virginia Law School in 1928, he served 10 years as circuit judge in his native Mississipi before his election to the U.S. Senate in 1947. He succeeded the demogogic Senator Bilbo in that body, but he has refused to indulge in Bilboesque rabble-rousing and race-baiting, either in his campaigns for the Senate in 1947 and 1952 or in his service as Senator.

Admittedly the idea that Senator STENNIS could ever be named to the U.S. Supreme Court seems at first to be almost absurd. The odds are definitely against it. At the same time, so fair-minded a man as President Eisenhower might see the justice, even the necessity, of giving the strongly-held, sincere, views of a whole section of the country representation on the Nation's highest tribunal. Certainly no such representation is to be found there now.

## United States Must Remain Firm on West Berlin

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the March 16 issue of the Laconia Evening Citizen, an outstanding daily newspaper published at Laconia, N.H., by Edward J. Gallagher.

I am very pleased to have this endorsement of my position that the United States must remain firm and be ready to fight if necessary, to maintain free access to West Berlin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Laconia Evening Citizen, Mar. 16, 1959]

SHOULD NOT SIT STILL

We hope the men in the Kremlin are taking note of the many statements being made by our high officials that this country is ready to fight over the question of Berlin.

We heartily support Senator BRIDGES' position disagreeing with those who hold we should not be the first to use nuclear weapons. The New Hampshire senior Senator wisely declares we should not sit still and see our country devastated by letting Russia make the first attack.

We would add that for Russia to feel the impact of hot war on her own territory might be the best thing that ever happened.

## The Troubles of Bolivia

EXTENSION OF REMARKS
OF
### HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York Times of March 23, 1959, entitled "The Troubles of Bolivia."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TROUBLES OF BOLIVIA

Taking the 20 Latin American countries and applying all the good will in the world, one would have to say that 2 of them present exceptionally baffling and even exasperating problems to the U.S. Government. These are Bolivia and Haiti.

In recent days Bolivia has been much in the news. The outburst of anti-American hostility that followed the publication of an item in Time magazine a few weeks ago focused some unfortunate attention on the country. In business, diplomatic, and Latin American circles generally, Bolivia has been a constant source of argument. Now we hear that the United States is making some adjustments in its $3 million-a-year technical-aid program (not the much larger program of aid through the Technical Cooperation Administration, which exceeds $20 million a year).

Some argue that Bolivia is not making good use of U.S. aid. Some say the economic, social, and political situation is so hopeless that the United States should give up. Others urge Washington to be tough and demand compliance with rigid standards of finance and economy. And then there is the blithe but deeply and understandably resented theory of the geopoliticians, which Time magazine quoted, that Bolivia should be abolished altogether and divided up among her neighbors.

None of these solutions or criticisms helps in the slightest. Any Bolivian Government

today faces desperately difficult problems. To supplant the present moderate Government with either a rightist or a leftist regime would solve nothing and doubtless make things much worse. The Siles Zuazo M. N. R. government must be encouraged to take as strong measures as possible to bring economic health. If it is pushed too hard it will collapse. If it shows too much friendliness or gratitude to the United States and too little national pride, the leaders will be labeled as Yankee stooges.

U.S. help is not going to be reduced, according to present plans. What is equally important is that the understanding, sympathy, and patience shown by our Government toward Bolivia is also going to continue.

## Draftee Versus Volunteer

EXTENSION OF REMARKS
OF
### HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Draftee Versus Volunteer; Lack of a Full Congressional Debate on Military Manpower Is Deplored." The article was written by Hanson W. Baldwin, and was published in the March 12 issue of the New York Times.

There being no objection, the article was ordered to be published in the RECORD, as follows:

DRAFTEE VERSUS VOLUNTEER—LACK OF A FULL CONGRESSIONAL DEBATE ON MILITARY MANPOWER IS DEPLORED

(By Hanson W. Baldwin)

WASHINGTON, March 11.—The draft got terse and perfunctory approval in the Senate today.

The bill for extension of the Universal Military Training and Service Act for 4 years from its present expiration June 30 had already passed the House—in slightly different form—with even less debate than it inspired in the Senate. Thus, after a routine House-Senate conference and foregone approval of the result, the Nation will be committed to compulsory military service at least until 1963.

In both Houses there had been a sense of apathy, a feeling of inevitability that forecast the affirmative votes long before they were taken.

But the debate, or rather the lack of it, is, in view of the history of the principle of compulsion for military service, one of the more unusual political-psychological phenomena of our times.

Not so many years ago the mere idea of conscription—except during shooting war—would have been howled down by Congress and our legislators would have been flooded with letters of protest. Today, the public seems as apathetic to the issue as Congress.

FAR FROM UNIVERSAL

This is all the more curious, in the opinion of observers here, since the draft has been far from universal and since it has produced major uncertainties in the lives of our young men, and many inequities.

The size of the armed services has been reduced by a million men since the Korean war and today the Army is the only service that uses inductees directly, although "the hot breath of the draft down their necks" undoubtedly increases the voluntary enlistments in the other services.

Both Congress and the services have spared neither effort nor expense to reduce the personnel turnover in the services, much of it due to the draft, and have offered increased pay and other benefits to induce men to become professionals and to increase the incentives for service careers.

Thus, two systems—conscription and professionalism, compulsory service and voluntary service—have been operating side by side with all the personnel difficulties this entails.

The far higher elan and efficiency of the voluntary units, such as the Navy's submarine crews, the pilots and paratroopers, supports the contention of many experts that Armed Forces composed completely of volunteers would be of higher quality, better morale and more effective than unwilling time-servers, or a mix of both.

Others deny this, but nearly all admit, that regardless of the combat efficiency of the services themselves, the application in practice of the draft law has been far less than universal and that the Nation's young men are faced with so much uncertainty and so many options as to ways to serve that they are justifiably confused, and many are resentful.

Thus, a Senate attempt, defeated by a large vote today, to appoint a special civilian commission to study alternatives to the draft had some merit.

But the overwhelming congressional approval of the draft extension and the defeat of proposals to postpone the extension or to modify it were based, not so much on objective analysis of the draft itself, as upon other factors.

The Berlin crisis looms large in legislators' thoughts and all of them were impressed, quite logically, with consideration of the adverse phychological effect that failure to extend the draft might have.

Then, too, Congress has sharply criticized the administration for cutting back the strengths of the Marines and the Army, and many of its members, strongly advocating in increase in strength, are threatening to impose legislative personnel "floors" of 900,000 or 930,000 men for the Army and 200,000 for the Marine Corps.

Thus failure to extend the draft by the very men who were advocating increases in our armed strength would be politically inconsistent.

NEED CALLED APPARENT

A third and persuading factor was the flat assertion of the administration, the Defense Department and both the majority and minority leaders of Congress that the draft was essential to maintain our armed strength, that the services could not be maintained even at their present strength of 2,500,000 without the draft.

These factors, plus a public resignation and congressional lack of interest in the issue, explain the cursory course of the draft law through this session of Congress.

Nevertheless, the terse and inadequate hearings and debate were unfortunate. For the present, personnel procurement policies of the armed services are a hodgepodge, and a new look is undoubtedly needed.

## Mutual Defense

EXTENSION OF REMARKS
OF
### HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. JAVITS. Mr. President, on March 13, the President of the United States sent to the Congress his message on mutual security, in which he stated that—

We cannot safely confine Government programs to our own domestic progress and our own military power. We could be the wealthiest and the most mighty Nation and still lose the battle of the world if we do not help our world neighbors protect their freedom and advance their social and economic progress. It is not the goal of the American people that the United States should be the richest Nation in the graveyard of history.

This eloquent statement by the President, made in his request for mutual security authorizations for fiscal 1960, has expressed for all of us the real issue before the Congress and the country in the annual mutual security program requests.

In an editorial on March 19, the New York Times points out that the $3,930 million is the absolute minimum to meet absolute requirements, and that the only alternative is the abandonment of the rest of the world and a retreat into a "Fortress America."

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR MUTUAL DEFENSE

At a critical moment in history the Eisenhower administration is forced again to engage in an annual batle before Congress to save from suicidal destruction an essential and integral part of our own defense structure and that of the free world. This part is represented by the mutual security program, mislabeled "Foreign Aid."

In this effort President Eisenhower has assumed personal command. He has the support of Acting Secretary of State Herter, Defense Secretary McElroy, General Twining, the Chairman of the Joint Chiefs of Staff, and a distinguished panel of military and civilian experts in this field.

All these experts emphasize that the $3,930 million requested for this program for the coming fiscal year is an absolute minimum to meet absolute necessities. Indeed, the panel headed by William H. Draper, Jr., calls for an increase of $400 million in immediate military aid to our allies to help modernize NATO defenses and urges putting the whole program on a continuous long-term basis for greater effectiveness and greater economy.

Like the President, the panel also makes it plain that the Communist challenge is both continuing and increasing and that this leaves us with only two alternatives. One is to seek safety and peace in mutual and collective security in company with our allies and friends, who can serve that cause only if they are both strong and stable and with whom we must therefore share that part of the common defense burden which they are unable to bear. The other alternative is to abandon the rest of the world and retreat into a "Fortress America."

Obviously, the first alternative is the one we must embrace. It is not only in keeping with all our interests and ideals; it is also by far the most effective and even economical. As Acting Secretary Herter points out, the mutual security program has bought us no less than $141 billion worth of additional security provided by allied forces for an investment of $22 billion, which, as the Draper panel emphasizes, runs at the annual rate of less than 1 percent of our gross national product and 5 percent of our budget.

Let those who harp on the inevitable errors in detail, minor compared with greater errors in our own Defense Establishment, suggest a better way to peace and security before they ditch a program that has already proved its worth in the preservation of the free world and peace.

## Tabulation of a Poll

EXTENSION OF REMARKS
OF
**HON. WILLIAM S. MAILLIARD**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. MAILLIARD. Mr. Speaker, one out of every four registered voters in the Fourth Congressional District of California was invited to respond to my annual questionnaire on some of the important problems confronting our Nation. To date over 15 percent have replied, including a considerable number of detailed comments indicating careful thought.

The following tabulation may be of interest to my colleagues:

1. The President's budget for the year beginning next July 1 calls for expenditures of $77 billion and an estimated income of $77.1 billion. Additional expenditures totaling several billions are being proposed by some Members of Congress. How would you vote on the following:

| | Amount | Percent | | |
|---|---|---|---|---|
| | | Yes | No | No opinion |
| Aids to housing | $1,000,000,000 | 47 | 50 | 3 |
| Added payments under Soil Bank | 700,000,000 | 12 | 81 | 7 |
| Increased payment to civil service retirement fund | 600,000,000 | 33 | 62 | 5 |
| Aid for school construction | 480,000,000 | 69 | 29 | 2 |
| Postal subsidy (above amount proposed in 1960 budget) | 350,000,000 | 21 | 74 | 5 |
| Payments to highway-building fund | 250,000,000 | 51 | 44 | 5 |
| Aid to minerals industry | 160,000,000 | 21 | 73 | 6 |
| Financing community facilities | 150,000,000 | 27 | 68 | 5 |
| Grants for airports | 110,000,000 | 41 | 55 | 4 |
| Aid to depressed areas | 100,000,000 | 66 | 30 | 4 |

2. Of those who answered "yes" to one or more of the items listed above (88 percent), payment for the project(s) by an increase in taxes was favored by 62 percent. Adding to the national debt was recommended by 29 percent, while 9 percent expressed no opinion.

| | Percent | | |
|---|---|---|---|
| | Yes | No | No opinion |
| 3. Do you favor a substantial reduction in the 27.5 percent oil and gas depletion allowance permissible under current tax laws? | 45 | 37 | 18 |
| 4. Do you favor a freer flow of political leaders, students, farmers, businessmen, etc., between the United States and the Soviet Union? | 68 | 29 | 3 |
| 5. Do you favor a trial test for pay TV? | 34 | 62 | 4 |
| 6. Do you favor increasing the Federal gas tax from 3 to 4½ cents per gallon to maintain pay as you go in building Federal-aid highways? | 62 | 36 | 2 |
| 7. Do you favor legislation providing that all quota numbers not used in any year shall be made available to immigrants in oversubscribed areas the following year? | 45 | 52 | 3 |
| 8. The prices of 12 farm commodities (wheat, corn, cotton, etc.) are supported by Federal law at prescribed minimum levels. In general, do you approve of the support program? | 20 | 78 | 2 |
| 9. Would you favor a national fair trade law permitting establishment of a minimum price on trademarked or brand-named merchandise? | 26 | 71 | 3 |
| 10. Do you favor Federal legislation raising the minimum wage from the current $1 an hour? | 60 | 37 | 3 |

## Justice Jesse W. Carter, California's Outstanding Jurist, Lawyer, and Citizen

EXTENSION OF REMARKS
OF
**HON. CLAIR ENGLE**
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. ENGLE. Mr. President, in these days of increasing social uniformity and organized mass advocacy, the rugged individualist is a rare creature. California last week lost a distinguished rugged individualist in the death of State Supreme Court Justice Jesse W. Carter, whose brilliant career as a legislator and a jurist is worthy of note in the CONGRESSIONAL RECORD. Justice Carter believed, as I do, that a free society is founded upon individual liberties. He worked all his life to preserve individual rights and to oppose mass regimentation. He was, in effect, California's own "great dissenter," as our supreme court champion of the Brandeis philosophy, that is, tolerance for all shades of opinion, persecution for none.

Justice Carter took pride in his record of dissent. He once wrote, "The dissenting opinion is a forecast of things to come." I am sure that will be true of many of his courageous minority stands for the common citizen. The justice leaves a distinguished son, Federal District Judge Oliver J. Carter, of San Francisco, who, I am glad to say, is ably carrying forward on the bench his father's great liberal record.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial paying tribute to Justice Carter, from the Redding Record-Searchlight of March 17, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CARTER CHAMPIONED INDIVIDUAL RIGHTS

Jesse W. Carter, one of Trinity County's most distinguished natives and one of Redding's most noted public figures, was also one of California's most distinguished men.

In the 70 years from his birth in Carrville, Trinity County, until his death Sunday from pneumonia and a blood clot, he had packed enough careers and enough battles for several lifetimes.

As an attorney, as a State senator, and as an associate justice of the State supreme court, he was known as a rugged, independent champion of individual rights.

The one achievement that gave him the most pride was his victory, on behalf of Fall River Valley ranchers, in a water rights suit against the Pacific Gas & Electric Co. some 30 years ago.

On the State supreme court he became known as a frequent and vigorous dissenter. His dissents usually resulted from his concern for individual rights. He was sometimes responsible, too, for court majority decisions in favor of individual rights. One of the most famous was the Cahan case, in which the conviction of a bookmaker was reversed beacuse the police had obtained evidence illegally by planting a microphone in Cahan's home.

Carter opposed the loyalty oath for State employees as being unconstitutional, and he contended that taking blood samples from an unconscious man in a drunken driving case was unlawful search and seizure.

Jesse Carter was one of our great men. Like most great men who do things, he developed foes as well as friends. He wouldn't have had it otherwise. He wasn't afraid to speak up for what he felt was right, regardless of how unpopular his stand might be at the time.

As a result, all Californians are more secure in their individual rights.

## Equal Time on the Air

EXTENSION OF REMARKS
OF
**HON. ALEXANDER WILEY**
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. WILEY. Mr. President, we recognize that there is a serious issue pending before the Federal Communications Commission relating to the reporting of political activities in news broadcasts.

The Commission is currently studying the application of the equal time provisions of the law.

Over the years, there have been serious problems relating to requirements by which radio and TV stations, giving time to one candidate in a political contest must also provide matching time for opponents.

The big question in the present situation is the degree to which this statute is applicable to news broadcasting.

We recall that the President indicated recently that he felt a New Look should be taken into the equal time provisions of the statutes.

Recognizing that there is indeed a need for clarification of the situation, I respectfully urge, also, that our colleagues on the Interstate Commerce Committee closely reexamine the law.

I desire to bring to the attention of the Senate two editorials on this issue: First, an editorial from the March 20 edition of the Christian Science Moni-

tor, entitled "Equal Time Abuses," and, second, an editorial from the New York Times of March 22 entitled "Equal Time on the Air."

I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Mar. 20, 1959]

EQUAL TIME ABUSES

President Eisenhower has set Justice Department wheels in motion to obtain a revision of the equal time provisions of the Federal Communications Act. This requires radio or TV stations which give time to one candidate in a political contest to provide matching time for opponents.

The provision was intended to prevent use of national resources (wavelengths) to give any political party or candidate an advantage. It has been most often applied to speeches. But now the rule has been run into the ground. As Mr. Eisenhower says, it has reached the ridiculous stage.

He was stirred to action by a ruling of the Federal Communications Commission in a Chicago case. News pictures of the mayor of the city taken when he welcomed the President of Argentine and opened a March of Dimes drive were shown during a primary campaign in which he sought reelection. A third-party candidate claimed equal time. The FCC ruled that under the law he should have had it. The Columbia Broadcasting System, through the vigorous spokesmanship of Dr. Frank Stanton, has made an issue of the case, demanding a more reasonable rule.

For years there have been complaints about this requirement. Often in campaigns there are many candidates, some making only a token race for a minority party. If equal time must be given each of them whenever an incumbent official appears on a news program, TV stations could easily decide to keep all candidates off their screens.

Certainly the rights of minority groups should be safeguarded. But why should not Congress give the FCC power to permit commonsense interpretation of the rule? Should there then be abuses, could we not rely on the public sense of fairness to require redress?

---

[From the New York Times, Mar. 22, 1959]

EQUAL TIME ON THE AIR

It is a good thing that the recent Chicago case has brought out into the open the question of equal time on the air for opposing political parties or candidates. If it is applied rigidly its results can be just what the President called them, "ridiculous." This is a clear instance of a situation in which the letter of the law killeth.

Theoretically, a man or a party seeking public office should have no unusual advantage in air time that is denied to the opposition. This is all to the good and few persons would quarrel with this thesis. We believe in fair play. If a candidate employs air time for the direct purpose of getting votes his opponents should not suffer because commensurate time is denied. They, also, are entitled to try to get votes.

But when this presumptive principle of fair play is broadened out to the point that it covers the presentation of news that is news for its own sake, and not for the sake of a party or a man, and the result is a partisan demand for equal time, the end product can be really ridiculous. If an eminent Democrat appears for the Red Cross or greets a foreign visitor, presumably an equally eminent Republican should have the same opportunity to be seen and heard on the air. This is nonsense, on the face of it.

Many persons in public life are news because of the offices that they hold or because of traits in personality. To suggest that a counterweight air time should be set up in each case is absurd. The political affiliation of the individual may have nothing whatever to do with the element of news in his appearance.

What is obviously needed here is flexibility in the law and commonsense in its application.

---

## The U.S. Defense Policy—Where Do We Go From Here?

EXTENSION OF REMARKS

OF

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the transcript of the American Forum of the Air in which Congressmen JOHN W. MCCORMACK, of Massachusetts, and LESLIE C. ARENDS, of Illinois, participated, which deals with a very vital subject, "The U.S. Defense Policy."

TRANSCRIPT OF AMERICAN FORUM OF THE AIR, WITH CONGRESSMAN JOHN W. MCCORMACK AND CONGRESSMAN LESLIE C. ARENDS, SUBJECT: THE U.S. DEFENSE POLICY—WHERE DO WE GO FROM HERE?

The ANNOUNCER. The American Forum of the Air, produced by the Westinghouse Broadcasting Co. in association with Theodore Granik.

Tonights' guests are Congressman JOHN W. MCCORMACK, Democrat, of Massachusetts, and LESLIE C. ARENDS, Republican, of Illinois, who will discuss "The U.S. Defense Policy—Where Do We Go From Here?"

Our guests tonight are two of the most experienced and respected Members of the House of Representatives.

Congressman MCCORMACK is the Democratic majority leader and has been in Congress since 1928. He serves on the Government Operations and Space Committees.

Congressman ARENDS is the Republican minority whip in the House and has been a Member of Congress for 26 years. He serves on the House Armed Services Committee.

Mr. MCCORMACK and Mr. ARENDS are here tonight to discuss one of the major arguments of the 86th Congress, "Is our defense program adequate?"

Mr. SNYDER. Gentlemen, everyone in Washington seems to have taken sides on the running argument on our defense program.

Congressman ARENDS, as a veteran Republican Congressman, how do you feel about our defense program? Is it adequate?

Mr. ARENDS. I shall base my answer on my experience on the Armed Services Committee of the House of Representatives for many years.

During the session of Congress beginning in January, our committee set up hearings as to our military posture, our present-day defense forces.

We started by having the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, the various chiefs of staff of the respective services who both on and off the record gave us a very factual and informative outlay of what our military posture is at the present time.

Frankly, let me say that I was reassured as to our capibilities in strength, that I feel today that we have the necessary military posture to carry out any assignment that may come to us for one reason or another.

In other words, putting it this way, I think we have the capabilities to combat any such thing as a brush war, or we have the retaliatory forces necessary to combat an all-out war.

In other words, putting it in one sentence, I think that we are ready and able to meet any contingency that might arise at this particular moment.

Mr. SNYDER. Congressman MCCORMACK, I won't ask you to agree with Congressman ARENDS. I will ask you on what points do you disagree with him

Mr. MCCORMACK. I am not in sharp disagreement with Congressman ARENDS as of today, but there are some sharp differentiating considerations that must be borne in mind.

When you ask is our defense adequate, it is a relative term. Adequate in relation to whom? Little Liberia? Oh, it is too adequate.

We don't have it too strong in relation to Britain because we have no fear from Britain or France or any other country. Our military strength could be sharply reduced if it was relative to countries like that, but national defense is relative to the Soviet Union as everyone knows and the question is is it adequate in connection with the Soviet Union?

Now, I am one of those Members of Congress, and one of those Americans, whether one agrees with me or not, it is my sound judgment, and it is consistent with my conscience that I, in the world of today, believe the only thing the Communists respect is what they fear.

That is military power and strength greater than they possess themselves.

If I am going to err, I would rather err on the side of strength than on the side of judgment.

Now, my friend from Illinois has said we are adequate for brush wars. Well, the President ruled that out in his press conference the other day. He said, "We are not going to have any ground affairs."

Brush war means essentially foot soldiers, the Army and the Air Force in cooperation with the Army. It is therefore the objective analysis of what the President has in mind is, we are not going to commit ourselves against large masses like the Soviet Union, either in Europe where they have unlimited reserve strength from a military angle, or in Asia, so far as the Soviet Union and Red China is concerned.

Mr. SNYDER. Are you questioning the President's military leadership?

Mr. MCCORMACK. I am just commenting. You asked me the question, is our defense adequate? And therefore, it means that we are going into an all-out nuclear war from our angle. That is our policy now.

Now, the question is, are we adequate?

Well, it is known we are behind the Soviets so far as the intercontinental ballistic missile is concerned. I think with time we can catch up and go ahead of them, but as of today we are behind them.

Furthermore, we find our Army being reduced from 900,000 to 870,000. I honestly question that. If not from a military angle, from a psychological angle, at this particular time.

Mr. SNYDER. Congressman ARENDS, how do you feel about the reduction in forces?

Mr. ARENDS. Let me cover a couple of points my good friend, Congressman MCCORMACK, has made.

Mr. MCCORMACK. I have only started, of course, but go ahead.

Mr. ARENDS. I think what you say in part is true, but I do think there is still a possi-

bility of some brush wars like we have had in the past and which we are capable to cope with almost immediately.

I think the thing we overlook in this question of whether we have sufficient missiles of one kind or another—and it is true that we possibly are behind to a small certain degree in the ICBM's—the fact remains that in the matter of defense as far as the United States of America particularly is concerned, it is a question of balance.

In other words, a balanced offense necessary at a particular time.

Now, in looking at both the Army, the Navy, the Air Force, the Marine Corps, we have that type balance in this country today which is so vital, I think, to prosecuting anything that might happen in the way of aggression on the part of, let's say Russia, and therefore I think the need for being comparable in every respect to them is not as great as it might be in their instance, and so with this balance defense, I think we are able to cope with this situation and will be able to cope with it.

Looking at these charts and the information that has been given to us, as I say, both on and off the record, I can visualize the picture as the Joint Chiefs of Staff see it as to their capabilities and really I must repeat, I feel better about it than I did prior to the time we had these hearings.

Mr. McCORMACK. Well, of course, the Joint Chiefs of Staff are not happy. You know that, because they have all made reservations, every one of them now. They agree to the budget figures with reservations.

In other words, they said, "We have to agree to it, but we are making the record as to what we ought to have."

They are not satisfied, my good friend from Illinois, and you know it. Let's give the public the truth now because the American people ought to have the information.

Mr. ARENDS. As many years as I have been on that committee, never yet once have I heard any one of the chiefs of any single service say they had enough. That is true. But the chairman of the Joint Chiefs of Staff, through the respective chiefs, has said that they could and would do the jos necessary under the provisions in this budget.

Mr. McCORMACK. That is a different proposition. As good soldiers and good officers, they would say that if they are ordered to do a certain thing they will do the best they can. But they are not satisfied with it.

Now, the question was asked, Are you satisfied with the reduction in the Army from 900,000 to 870,000?—by our friend and I haven't heard you answer that yet.

Mr. ARENDS. I will be glad to answer just as quick as I can get the time.

I thought the President handled that very well the other day in his press conference, and I was pleased to have him state as he did, for the American people to learn and to understand what his position was; namely, that it is wholly impossible for us to fight a ground war in Russia.

In other words, we are not going to accept the type war that Russia might want us to fight.

Mr. McCORMACK. So you agree with my interpretation that the only thing left is a nuclear war.

Mr. ARENDS. Let me complete if you will. In other words, we are going to fight the kind of war necessary to win a war if it comes about.

Mr. McCORMACK. I am in accord with that.

Mr. ARENDS. Let's finish the other question first.

The reduction of the Army from 900,000 to 870,000, a matter of 30,000 people; in the Marine Corps a matter of 20 of 25 thousand which the reduction may be, as the President said the other day, how could you particularly use those people at this moment? How are we going to get them over there? What could they do?

If we are not going to fight a ground war, and these people are mainly ground soldiers, then what good are they at this particular time?

Now, I am not averse to building up the kind of defense we need in this country; in fact all of us do. We are all loyal, patriotic American citizens and we want to appropriate every dollar we need in this country to do the job. It is a matter of difference of opinion. And the other angle of it is, I certainly have a wholesome respect for the President because of his background, his ability—I don't think he knows as much about politics maybe as I do, but I certainly do not know as much about the business of being a military man as he does with 40 years background and experience, and I think he is trying to do the kind of a job that needs to be done in view of the world conditions as we see them at this moment.

Mr. SNYDER. There are many Congressmen questioning the President's military judgment.

Mr. McCORMACK. There are more than Democratic Congressmen, too.

You rely on the President and, of course, I agree that the President is a great military man, but General Taylor is a great military man. He is the Chief of Staff of the Army. He says the Army ought to have 925,000 officers and men.

General McC. Pate is a great man, the commandant of the Marine Corps. He says the Marine Corps ought to have 200,000 officers and men.

Do you throw their views out the window, my friend?

Mr. ARENDS. Not entirely, no. And they sit around the table with the other members of the Joint Chiefs of Staff and they reach a final agreement as much as we do up here on the hill. Many times we pass pieces of legislation which we think are inadequate as far as the House is concerned; the Senate does likewise, and eventually around the table we reach a conclusion and a determination is made that although we do not get all we want yet this will suffice and do the job, and therefore we proceed and, as a rule, if it needs correction, later on it is corrected, the legislation.

So, I think what we are doing today in view of the whole world situation, in view of the situation we are in, as far as dollars and cents are concerned in this country, that we are on good sound ground and we are moving right ahead.

Mr. McCORMACK. In other words, you are telling the American people that you are happy and you are pleased and you are contented, and they just simply sit back in their seats and say, "Don't worry, my friend, my fellow Americans, everything is all right."

Mr. ARENDS. I am not saying that at all.

Mr. McCORMACK. Suppose President Eisenhower is wrong, my friend. When you rely on the judgment of one man wholly. I understand a man making a decision, but we now know that every Chief of Staff doesn't agree with him.

Mr. ARENDS. Without being too political, let me say this, Mr. McCormack.

Mr. McCORMACK. There are no politics in this.

Mr. ARENDS. If we are going to question the President of the United States' capacity to make a determination on what is good militarily, certainly the individuals who may be candidates for the presidency or for public office, I would have the right to question them first.

Mr. McCORMACK. Well, you are the only one who is throwing politics into this discussion at this time.

Mr. ARENDS. No, I don't mean to do that.

Mr. McCORMACK. I said the President has to make a decision but there is the views of the others and you and I have got to consider all views.

Now, you talk about a balanced defense. There is a very nice, beautiful phrase. It is pretty much like when I read some speeches made to the effect that "overall we are military strong" but the word "overall" is a word most of us overlook and which interests me.

Our balanced strength can disappear overnight in connection with the Soviet Union if they perfect the intercontinental ballistic missile, its reentry and hitting the target—and they are ahead of us, you know that—before we do and if at the same time they have a defense against our intercontinental bombers, and you know they are trying to prepare one, then we are in the defenseless position and they won't let us catch up and we can never let ourselves get in that position.

Mr. ARENDS. Let me say that your statement right now wholly disagrees with what has been said by some of the Members before the Armed Services Committee as to our capabilities in the way of defense.

That goes to our standpoint of position of strength throughout the whole wide world. Our Air Force, our alertness of the Air Force wherever it may be; our flattops, wherever they may be; our submarines, wherever they may be, and which we on the Armed Services Committee happen to know about at this particular time, this whole program of being ready to do what has to be done, let me say that what you have just said, Mr. McCORMACK, in my humble opinion, is a contrary opinion to what these people have told us before our committee.

Mr. McCORMACK. Well now, Mr. ARENDS, you are just telling the people that I am wrong.

Mr. ARENDS. No.

Mr. McCORMACK. Well, you are just seriously mistaken because I have asked General White, I have asked everyone who appeared before the Science Committee of which I am a member. You were a member of the select committee last year, and we are a rather important committee—the Armed Services Committee, you know, hasn't got the omnipotence of brains in the Congress of the United States on military matters.

Mr. ARENDS. No.

Mr. McCORMACK. Some of us have a little commonsense and the Committee on Science has pretty much the same availability for executive session and public session testimony as your committee, and I have asked everyone the question, assuming—they admit that the Soviets are ahead today in intercontinental ballistic missiles.

They don't know how far they have gone in connection with defense against our bombers because our Central Intelligence hasn't ascertained that yet. They admit they are trying to perfect a defense.

Then I say, "Well, suppose they perfect their intercontinental ballistic missile before we do? And they perfect a defense against our bombers, and we lose our retaliatory power. Where are we?"

And they all admit we are in bad condition.

I think you will agree with me that we can never afford in America to lose a retaliatory power.

Mr. ARENDS. That is right.

Mr. McCORMACK. The ability to hit back.

Mr. ARENDS. That is right, and at this moment I don't think we are going to. I just don't think we are going to.

Mr. McCORMACK. I hope so and I agree. I agree with you that we have the men, we have the men and women, we have the brains, we have the facility in America, the facilities. What we need is coordinated leadership. We are talking as of today.

Now, we just have to be practical. Now, you are talking about tomorrow and that is a different proposition.

Mr. SNYDER. Gentlemen, I don't think there is any question now where each of you stand on this defense argument. Let's move on.

Mr. MCCORMACK. Well, I know that my friend is one of the most powerful national defense men in the Congress. I think he knows I am. And might I give this message to the American people as the Democratic leader: Our country is in very fortunate condition because whatever differences of opinion there might be between the Democrats and the Republicans, the difference is not on the side of weakness where we Democrats are advocating weaker defense.

We are advocating greater defense. So I think our country is in a very fortunate position because we Democrats agree with the President, only we say a little more, plus.

Mr. SNYDER. I think that is an excellent and reassuring point.

Mr. ARENDS. I think I should interject here that that goes for the Republicans as well as for the Democrats because we are all motivated by the same thing necessarily: "Be prepared to do what has to be done. Pray God nothing happens."

Mr. MCCORMACK. I thoroughly subscribe to that.

Mr. SNYDER. It is nice that you agree with each other. Let's move on to a topic upon which I am sure you will disagree again. Labor legislation.

Are you in favor, Congressman MCCORMACK, of the Kennedy-Irvin labor bill and do you think it will get through the House this session?

Mr. MCCORMACK. Why, yes. Of course, there are two bills there and they are separated. It is a question of whether there should be one bill or two bills. That is really the basic question.

I think the other questions involved could be quickly ironed out by reasonable Members in both branches and I think that the protection of the welfare funds is of such paramount importance that it might be wise to put through two bills, to put that one through first, because if you combine them all together, you are going to get into a lot of difficulties and it might end up with road blocks being thrown in the way to the point where nothing might come through. So I think Senator KENNEDY's approach to two bill is probably the best.

Mr. SNYDER. How do you feel about the Kennedy-Irvin bill, Congressman ARENDS.

Mr. ARENDS. It is always difficult to determine what the Senate may do. Last year the Senate passed the Kennedy bill by 88 to 1 and it came to the House and nothing was done.

Mr. MCCORMACK. Oh, yes; something was done. We had a vote.

Mr. ARENDS. We failed to pass it under suspension.

Mr. MCCORMACK. I voted for suspension.

Mr. ARENDS. And it voted against it because it did not incorporate all the things I felt was necessary to do the kind of job the American people expected to be done. Due to the revelations before the McClellan Committee, but over in the Senate this time I think there is some reason to believe as we read the press that they are trying to do a better job this time in perfecting the bill and incorporating therein certain amendments which are necessary if, I repeat, a good comprehensive bill is written.

Over in the House at this time I wouldn't even want to predict what our Labor Committee in the House is going to do and what will be in the bill if they report a bill, so I am just going to have to bide time on that and see what, I hope, if action is taken, if final conclusive action is taken in the Congress, that we write the kind of bill that will protect not only the workingman himself as to his rights, but also the public and just make a good fair bill out of it.

Mr. MCCORMACK. I think that is as fair a statement as any openminded member could subscribe to.

Mr. SNYDER. Gentlemen, there is another issue that is concerning the American people quite a bit these days. It doesn't involve legislation. It is this whole matter of nepotism.

There has been so much publicity lately about this subject. What message would you have for the American people in view of all these revelations that have come out?

Mr. MCCORMACK. How much time is left on this?

Mr. SNYDER. One minute.

Mr. MCCORMACK. It would take more than a minute to adequately answer that. I have no hesitancy in saying that I think it is perfectly all right for a publisher of a newspaper to hire his son or daughter or the editor of a newspaper to hire his son or daughter.

If I heard they refused to hire them because they are a son or daughter, I would say they are no good. I think it is all right for the president or vice president of a corporation to hire a son or daughter, and I think it is all right for a Member of Congress to hire a son or daughter.

Mr. SNYDER. Congressman ARENDS, what do you have to say on that?

Mr. ARENDS. I somewhat agree with Congressman MCCORMACK.

If these people are hired by their parents to work in their office and they work there, well then, that is their business.

The ANNOUNCER. Thank you, Congressman JOHN MCCORMACK and Congressman LES ARENDS for being our guests today on the American Forum of the Air.

---

## Underinvestment in People Called Free World's Problem

EXTENSION OF REMARKS
OF
## HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. WILEY. Mr. President, we recognize that over the years the free world's economic system, particularly ours in the United States, has done an outstanding job of providing the material things of life for our people.

The underlying strength of any society, of course, includes not only the material things, but the ideals upon which our society is established.

The free West has within its arsenal the most potent weapon available to appeal to the minds of men—that is, freedom itself.

Today, when the Communist system is challenging the free world on a variety of fronts, including the ideological, social, economic, and cultural, as well as the military, there is a real need to reemphasize the idealistic as well as to realistically strengthen the human foundation of our system.

Inherent in this challenge, of course, is the need to assure that all our people are sharing proportionately in the benefits of our free society. This means, among other things, employment—a chance for a worker to provide for himself and his family the good things of life.

Unfortunately, in the United States, though it has attained a substantial degree of recovery from its economic setback, there are still about 4.7 million people out of work. This, of course, is a serious problem, which arouses deep concern in the Congress as well as in the Nation as a whole.

The March 20 edition of the Christian Science Monitor carried a thoughtful article by A. E. Grauer, president, British Columbia Electric Co., Ltd., entitled "Underinvestment in People Called Free World's Problem." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNDERINVESTMENT IN PEOPLE CALLED FREE WORLD'S PROBLEM—GRAUER SEES FULL EMPLOYMENT BULWARK

(By A. E. Grauer, president, British Columbia Electric Co., Ltd.)

VANCOUVER.—The major aim of businessmen "should be to so improve the effectiveness of our system that it will yield everincreasing opportunities for more and more of our people." This is a remark of Paul J. Hoffman, Managing Director of the United Nations Special Fund. He went on to say that we would have to take a hard look at our system to find out what has made it strong and wherein lie its weaknesses.

Since Canadians and Americans are forward-looking people, emphasis has tended to be placed on our strength. We have been reluctant to examine, let alone admit, our weakness.

DISPROPORTION SIGHTED

But pressure of events, and especially the fact of a strong, rival system—authoritarian communism—working determinedly and with considerable skill to undermine our system, forces us to shore up our internal defenses; and our most durable defense, surely, is a community with strong feelings of unity and loyalty to its free institutions.

The pace and complexity of present-day affairs, and the punitive rivalry of the other system, have brought doubts and confusions in many minds which could lead to serious divisions and cross-purposes in our society. We must reduce these difficulties.

Business, traditionally, has confined itself to producing the things by which we live. In our part of the world it has fulfilled this narrower role with remarkable success. But we have not done so well in dealing with other real needs of people as individuals. We have had a woeful tendency to overinvest in things and underinvest in people, and this has caused a serious disproportion in our society which we are far from correcting.

FULL EMPLOYMENT KEY?

If the main activity of people is strengthened and made more satisfying in this way, it is bound to support more firmly other institutions and expressions of life in free societies. We know this is so from work already done on these lines in busines life, but this work must be enlarged. The future of freedom rests with individuals and its chances are improved when the healthy aspirations of ordinary people are reasonably satisfied.

Another obvious bulwark of freedom where the influence of business is all important is full employment. Our employees, collectively, are our customers. The vast complex of goods and services which we produce need millions of customers with enough money to buy the things they need and want.

The value of education is also beginning to be more widely recognized by business. Industry in this scientific age requires better educated personnel in all phases of its operations—a requirement which will grow as science advances and technology becomes more an integral part of things.

We are realizing as never before that the protection of freedom requires a widespread

appreciation of its qualities and a consequent willingness to protect and extend it. This latter reason alone is sufficient for insistence on first-rate educational institutions and processes.

SURVIVAL SAFEGUARD

This brings us to an even wider responsibility, to which business in countries such as ours must apply itself. We must work to extend the material and other benefits of our system to peoples of underdeveloped countries, so that freedom's boundaries may be firmly and surely enlarged in the modern world. Two-thirds of the world's people are looking for such help and guidance.

Let us remember that the free world is a small segment—albeit a vital one—of the whole human race. Extending our outposts is no longer a matter of altruism alone. It is a necessary safeguard for our survival.

We do not yet properly appreciate the power of our rivals, the intensively organized Communist movement in this field. What we have to offer, while it may be infinitely superior, in many ways, is much harder to promote and establish in lands where people are harried by hunger and poverty and have never known real freedom. The rival system offers these people relief from ordinary anxieties, through at the cost of freedom.

If we are to hold our own in this grim competition, we must give far deeper thought and attention to framing effective policies that will advance freedom's case.

Therefore, a main goal of business in the future must be to bring about more stability in our own countries, put them on a more vigorous and able footing to compete with the rival system, and attempt to spread benefits of our way of life as widely as possible among less favored people.

John Donne's classic line—"no man is an islande unto himself"—therefore takes on fuller meaning in our troubled times.

---

## An Analysis of the Farm Situation

EXTENSION OF REMARKS

OF

## HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks, I am including herewith an address, given last week by the junior Senator from Missouri, the Honorable STUART SYMINGTON, at the annual National Farmers Union convention, held at Springfield, Ill.

Senator SYMINGTON, with a business background and with an illustrious record as a devoted public servant who rendered an outstanding service in many branches of the executive department of our Government, before being elected to the U.S. Senate, has within a very brief period become one of the recognized exponents of a sound agricultural program. He has a faculty of analyzing the problem, and then being capable of expressing this analysis in simple terms that can be understood even by those who have little or no knowledge of what is admittedly one of the more pressing problems of this era.

Mr. Speaker, it is for this reason that I have requested permission for the printing of this speech, which I hope all of the Members of Congress will read. It does point up the problem; it explains why we are in the position we now find ourselves, but more important it suggests some of the things that can be done to alleviate the situation.

It gives hope, as indicated in the very title of his address, which I am informed was enthusiastically received by these in attendance at the Springfield convention.

AN EFFECTIVE FARM PROGRAM POSSIBLE

It is a privilege to be with you at your annual convention—to see farmers here from all over the country, working together.

You have an ambitious schedule ahead for the next 4 days. I know you will be working hard to prepare a program which will meet the common needs of the farmers of America.

I wish I could stay with you all week, to hear your advice on what can be done in Congress to write a constructive program.

We of the Senate Agriculture Committee know that the members of the Farmers Union are dedicated to the service of farm families, first, last and always.

Your president, Jim Patton, and I have been friends for many years.

We served together in the National Security Resources Board. I found out then what we all know, that Jim is an experienced analyst on the farmers' problem, the finest type of leader American farmers could have.

I am also delighted to see your general counsel, my old colleague, Charlie Brannan.

Charlie and I used to work together for a great dirt farmer, a man people respect primarily because he respects people, the No. 1 citizen of my State, Harry S. Truman.

We of the Agriculture Committee also think a great deal of your Washington representative, John Baker.

John gets just about the most done, with the least words of anybody in Washington.

Before coming into Government most of my experience was in business. But my brother and I raised cattle for many years.

During that time I learned that, fundamentally, farming is a business too, involving such matters as inventory, and assets and liabilities, and of course profit and loss.

My State of Missouri is one of the largest farm States in the Nation.

Agriculture is our largest single industry—in fact, our only billion dollar industry.

One-fourth of the people of Missouri live or work on the farm.

When I came to the Senate, my mail proved that no people in our State have greater troubles than the farmers.

So it seemed right for me to work to get on the Agriculture Committee. I have been there now, for some years, watching the incredible approach of this administration toward the problems of the family size farm; and doing my best to correct them.

I try to look at this problem as a businessman; therefore from the standpoint of what we would call good business practice under sound accounting principles.

If any businessman tried to run his plant or office the way the Department of Agriculture has been run in recent years, he would promptly go broke.

Secretary Benson has spent nearly $30 billion of the taxpayers' money on a farm program that hasn't worked.

And they said the Brannan plan was expensive.

Since the Department of Agriculture was created in 1889, there have been 14 Secretaries of Agriculture plus Secretary Benson.

If Mr. Benson continues to operate at the present rate, by the end of the next fiscal year he will have spent more money than all his 14 predecessors combined.

Let some of the figures, his own figures, speak for themselves.

This Administration has raised the cost of administering the price support program from $34 million in 1952, to $364 million in 1958 an increase of 954 percent.

Twenty-two thousand employees have been added to the payroll.

What worries me more than the past, however, is the growing realization that the people now running the Department of Agriculture simply do not know where they are going.

As example, consider the current problem of Government farm inventory.

Any businessman knows that excess inventory can be his Achilles heel.

If a concern is to be successful, inventories have to be moved.

In 1952, the Commodity Credit Corporation owned some $1 billion of farm commodities.

Today, six years later, it owns over $5 billion.

But that is far from the whole story.

According to the President's budget message, by June, 1960, the total CCC investment—inventory and loans—will be over $10 billion.

And let me make this prediction today. Based on the current Government corn support policy, price supports on corn with no controls of any kind whatever—that inventory estimate of the President's is going to turn out to be plenty conservative.

A few weeks ago, when Mr. Benson came before our committee to ask for authorization for more billions, we asked him questions any banker would ask any businessman who requested a loan.

I asked him whether he had any definite plans to move this gigantic inventory out of Government warehouses.

The Secretary said he did not.

I asked him how much inventory he could move this year.

He said he did not know.

I asked him how long it would take to move it.

He said he didn't know that either.

On that basis, if it were your money, would you loan him any more?

But it is your money, and my money, and the money of millions of other Americans.

Maybe the men in charge of our farm policies are not good businessmen but they are very good advertising men.

They plant their propaganda into city newspapers and weekly magazines favorable to their cause. In this and other ways they have been highly successful in influencing city folks who do not have access to the facts.

If these people had been half as successful helping farmers as they have been spreading fairly tales about farmers, we would have a far better farm program today.

One of the stories these bureaucrats try to sell is that the farm problem is the result of the inefficiency of our farmers.

That is just not true.

American farmers are the most efficient and productive farmers in the world.

As illustration, here are a few figures.

Last year, average per acre yields on nearly every major commodity set new records.

We now produce the same amount of food and fiber on 57 acres that in 1940 we produced on 100 acres.

This Nation produces more pounds of meat, with less feed, than ever before.

Since 1944, milk production per cow has increased 39 percent.

And who have reaped the benefits of this great productivity?

Primarily the American consumers, the best-fed and best-clothed people on the face of the earth.

Another misconception, currently cultivated by some, concerns how hard farmers work.

I don't think the average city family has any real idea about the expense, the work, the risk that farmers put into the loaf of bread, or the thick steak, or the quart of

milk which shows up so miraculously on the kitchen table.

It takes a lot more than pushing buttons on some automated farm gadget.

It takes hard work, 12, 14, sometimes 16 hours a day.

How many people know how it feels to lose a prize calf, or suffer prolonged drought, or see a whole year's investment destroyed by one June hailstorm, or one late-season frost?

And I am sure few of those city people have any idea what it is like, in terms of trial, tribulation, and heartbreak, to live through 6 years of Ezra Taft Benson.

There is a third misconception which stands in the way of public acceptance of a good farm program. It is that farmers occupy a privileged position in the Federal Government.

That is not true.

They are supported some, but so is every other segment of our economy.

And the supports are not nearly as much as the Department of Agriculture continues to assert and imply.

A study of the budget of this Department was made at the request of your and my good friend, Senator MILT YOUNG, of North Dakota.

This study showed that of the total expenditures of the Department in the fiscal year 1958, considerably less than half went primarily for the benefit of farmers.

The rest—some $2.8 billion—went for programs chargeable to everybody: overseas food programs, defense, milk for school and school lunches, research, meat inspection, forest management, and the like.

Reduced to its actual size then—$2 billion—how does the farm support program compare with supports or subsidies to other parts of our economy?

Since the end of World War II, this Government has allowed tax writeoffs and other tax privileges to mining and manufacturing industries which total $43 billion.

Many billions more have been earned by industry as the result of tariffs imposed against low-cost goods anxious to come in here from foreign lands.

In the last 10 years, this administration has given over $6 billion in subsidies to magazines and newspapers.

We have a minimum wage law.

We have a social security program.

We have unemployment compensation.

We have insured savings.

We have many other Government programs which assist and support other groups in our economy.

We know we can afford these other programs.

Surely therefore we can also afford a program which will give a fair return to those who produce our most important commodity—food.

The trouble with fairy tales is that, if they are retold often enough, people soon get to believe them.

And that is true about the fairy tale that the way to lower farm production is to reduce farm prices.

In fact, that tale has been the basic premise behind the farm programs of the past 6 years.

The programs have failed because this premise is 100 percent false, and here is the reason why.

We all know there are fixed costs connected with farming: payments on notes and mortgages, installment payments on equipment, out of pocket costs for fertilizer, seed, fuel, and such.

In recent years, these costs have been steadily going up.

To meet these fixed and out-of-pocket expenses, and at the same time take care of family expenses, a farmer must have a minimum income.

That income, of course, is derived from price times volume minus costs.

If your price goes down at the same time your costs go up—and that has been the case in recent years—you have only two choices: Increase your volume, or go broke.

In the past 6 years, nearly 4 million farm people have been forced off our farms.

But the rest of our farmers have taken the other course. You have taken advantage of every new technique of farming to vastly increase your production.

Let's look at the record.

During the past 6 years, farm prices have averaged 15 percent below the 1952 level.

But farm production has gone up in each of these 6 years; and is now 15 percent greater than in 1952.

So you can see that efforts to reduce production by reducing prices have failed completely.

The men behind this policy did not appreciate the strength and the determination of the ordinary American farmer to stay in business.

The present program has been bad for the farmer, bad for the consumer, and bad for the Government, because it has caused lower farm prices, higher food prices, and costly surpluses.

It is time this administration got back to sound economic principles.

Only then will we be able to get out of the mess we are in.

A basic principle of farm economics is that a relatively small increase in production and marketing causes a much larger drop in farm prices.

Some of the top farm economists, including Professor Cochrane, who will speak here later this week, tell us that a 1 percent increase in the total marketing of farm products results in a heavy drop in the farmer's price.

This concept has been the backbone of nearly every farm program that has ever worked.

Despite all the sweet talk about freeing the farmer to produce unfettered by controls, experience has proven the following:

For most farm products, price supports, without effective production or marketing controls, just do not make sense.

And we taxpayers now have this $8 billion inventory to prove it.

A good specific example is the corn program.

In 1956 the Department of Agriculture told farmers that in order to get the $1.50 support price, they would have to comply with acreage controls.

Later on they turned around and gave those who did not comply $1.25.

This was the beginning of the end for the corn program.

In 1957, compliers were given $1.50, noncompliers $1.10.

In 1958, compliers got $1.36 a bushel, noncompliers $1.06.

Is it any wonder that last year only 12 percent of our corn was produced under acreage allotment?

Last November 25, there was a corn referendum. To the farmers who had not been complying, the Agriculture Department said:

"Vote for our program and we will raise your price supports at least 6 cents a bushel.

"Vote against us and you won't get any support at all."

To the producers who had complied, the Department said: "If you don't vote for our program, we will cut your acreage and cut your price."

Secretary Benson's program carried, and he reported with pride that he had won a great vote of confidence.

Now Mr. Benson has his corn program.

But what is he going to do with it? If weather conditions are normal this year, he will end up with at least a billion dollars more corn to add to his already gigantic inventory.

My friends, when the American people come out of this farm binge, they are going to have a hangover the likes of which have not been seen.

This surplus hangover is going to be with us long after the present farm policies are buried.

It is going to prove a grave handicap to any new program, no matter how sound and effective.

That is why we should make the control and liquidation of this inventory our first order of business.

To do this, we first need an overall program designed to bring farm production more nearly in line with our needs.

We must begin to use the sound economic principles that have been ignored in recent years.

There are 5 million farms producing over 200 different commodities. Therefore no single, simple program will work.

For some commodities, the direct payment plan offers many advantages.

For other commodities, price supports through nonrecourse loans may still be the best answer.

The continued success in certain commodities of marketing orders, and marketing or bargaining co-ops, provides a base from which a similar approach might be extended to many other commodities.

Used properly and where best adapted, each of these can contribute to the ultimate objective.

What is that objective?

A situation in which farmers are able to compete favorably with the other, more closely organized segments of the economy—and thereby earn a return on their investment, labor and land comparable with the returns in other areas.

Any sound program must also provide for the varied and growing credit needs of farm families.

It must stress improved quality of product and more efficient, effective marketing.

It must deal with the special problems of the chronic underemployed, low income farm families.

These families need more than just the talk, plans, meetings and moral support now being provided under the Department's rural development program.

If time permitted, we could go into many other problem areas; such as the need for improved conservation of our natural resources, greater use of democratically elected county committees.

You members of the Farmers Union are familiar with these areas.

In nearly all cases, the legislative authority for a fair and workable farm program is now on the books.

But this does not guarantee that authority will be used.

The best farm program written into the law does not guarantee a prosperous agriculture.

You must have a sympathetic and understanding administration which believe in farmers and will fight for the farmer's interests.

But even with a sound, effective farm program we must face up to the problem of moving the current huge and growing inventory.

Here are some suggestions.

Part of it should be set aside as insurance in case this country was ever attacked with modern weapons.

I have introduced a bill to stockpile food, medical supplies and other basic items necessary for survival.

Some of the inventory can be well used to alleviate hunger and malnutrition in our own country.

I was in West Virginia just last week, where conditions are truly tragic.

One hundred thousand children in West Virginia have only one-third of the calories and proteins they need.

We can do far more than we are doing to move our surplus food into our own areas of economic distress.

And last, but not least, we can and should use the productive genius of American farmers to promote our goals in the world.

What do all of us want more than anything?

A just and lasting peace.

We want the kind of world in which we can farm and raise our families, free from the dreaded fear of nuclear war.

We can have that kind of world if we use our national strength in the most effective manner.

This Nation is strong in many things—not only in faith, but also in food.

This food can be used to strengthen our ties with the underdeveloped countries of the world.

It has been suggested that the free nations set up a world food bank, in which storable food could be deposited, withdrawn, or loaned, in order to meet emergencies of member nations.

As long as we are going to be in the righteous business of strengthening countries to resist communism, why not do much of it with food, of which we have plenty, instead of dollars, with which we are having increasing troubles?

This is not only good foreign policy, it is the humane and right thing to do.

It is a sin to waste food when people are hungry.

But it is worse than a sin when this food could have been used to help build a peaceful world.

In closing, let me state my confidence that the farmers of America, with the cooperation of their Government, will develop an effective farm program at a greatly reduced cost to the American taxpayer.

The work you are doing here this week will contribute to that goal, to a strong America, and to a peaceful world.

## Another Strauss Controversy

EXTENSION OF REMARKS

OF

### HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Another Strauss Controversy," which was published in the Toledo Blade of March 1, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER STRAUSS CONTROVERSY

The Senate very rarely refuses to confirm men the President appoints to positions in his Cabinet. It is a wise policy because the Chief Executive ought to be able to pick his key assistants without the sort of legislative interference which, under conditions of extreme partisanship, could degenerate in mere harassment.

Nonetheless, President Eisenhower himself invited a departure from the customary, routine senatorial accommodation in the matter of appointees when he named as Secretary of Commerce Lewis L. Strauss, the controversial former Chairman of the Atomic Energy Commission. Mr. Strauss' confirmation is being held up at the instance of Senator ESTES KEFAUVER, who wants a close examination of the former's role in the Dixon-Yates affair, a near-scandal involving the granting and later cancellation of an AEC contract to private utilities interests.

It would not be surprising, however, if the senatorial hearings ranged over the whole manner in which Mr. Strauss performed as AEC Chairman. In that post, he displayed a positive genius for dissension. His mania for secrecy, his authoritarian manner, his bias, his lack of candor made it a positive relief to Congress, to the country, and, we daresay, to some of his colleagues, when he retired last June at the end of a 5-year term.

In shifting Mr. Strauss to another high post, the President did not shake off the Strauss liabilities. He is retaining in his official family a man who, whatever his other accomplishments, hasn't demonstrated a temperament particularly adapted to public office. In the end the Senate will no doubt confirm, as it usually does, but it could scarcely be expected to do so without some expression of displeasure from Democratic foes in that body at finding the arrogant "Admiral" Strauss still on the administration's quarterdeck.

## What of Tomorrow?

EXTENSION OF REMARKS

OF

### HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What of Tomorrow?" by L. Nelson Bell, M.D., F.A.C.S.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT OF TOMORROW?

(By L. Nelson Bell, M.D., F.A.C.S.)

The writer was recently invited to sit in a group called together to hear a recording produced by some Army officers to whom had been assigned the task of ascertaining why so many American prisoners of war in Korea succumbed to brainwashing, and as a result collaborated with their captors.

It was a depressing experience. This report is the result of several years painstaking study; of personal interviews with hundreds of our men; a study of the backgrounds of these men; and also an appraisal of Communist reports and material which fell into the hands of our intelligence.

Several things stand out in these findings.

Thirty-two percent of those captured died under the rigors through which they passed. Of the remaining number 33 percent eventually collaborated with the enemy.

A study of the latter group revealed a number of startling facts; conditions which can well have a serious effect on the future of our Nation, either in peace or war. The majority of these men seemed to have lacked: (a) Spiritual and moral conviction; (b) understanding and appreciation of the American heritage; (c) discipline in the sense of a basic concept of right and wrong; (d) an understanding of communism and its propaganda methods.

Many of these men came from broken homes while few of them had church training or religious ties.

It is interesting that this report repeatedly laid stress on the value and importance of home and church training, repeatedly speaking of the Sunday school and church and urging a return to both the values of the past and the effective means of transmitting those values.

As we listened to this report (which lasted for an hour and a quarter), there gradually developed in our mind some steps which seem imperative for us to consider. These fall into the physical, political, and spiritual fields.

PHYSICAL

We hate to admit it but America has become a land of softness. Easy living, transportation by car, long hours before a TV or watching sporting events, all have conspired to take the hardness from our muscles while other things have taken the convictions from our souls.

During our visit to Korea last winter we visited one of the Turkish units near the DMZ (demilitarized zone) and heard tales of the hardness of these troops. In one POW camp in North Korea it was reported there were 1,657 American prisoners of war and 300 Turkish soldiers. Four hundred and fifty of the Americans died from the rigors through which they passed. Not one Turk died although subjected to the same privations.

Some months ago one of our leading news weeklies gave a report showing how greatly European youth excels American youth in health and stamina. There young people walk to school or travel for miles by bicycle. Few of them know the luxury (?) of sitting at home watching TV and eating ice cream. America may have the highest standard of living in the world but it is not necessarily the best standard for the developing of youth.

POLITICAL

By a strange change in emphasis in history, patriotism has become passe in some circles. Love for country, pride in her achievements and a patriotic thrill at the sight of the American flag is something which in past generations was encouraged and without which man became suspect. Much of this has changed and it is not good.

Little wonder that young men brought up without proper indoctrination in American tradition and national appreciation fell prey to the clever propaganda of the Communists. Confronted with allusions to "capitalistic dupes," "slaves of Wall Street," etc., etc., these young men did not know how to answer. Too few of them had learned that while the workers of Russia may own the factories it is the workers of America who own the things produced by the factories.

In fact, much in American education which leads to a proper appreciation of our land had been left out; and, along with superficial education there has gone in hand a lack of those disciplines which strengthen both body and mind.

SPIRITUAL

The most significant part of the report referred to at the beginning of this editorial had to do with the recognized need for spiritual and moral training.

Such training begins in the home and is augmented in the Sunday school and church. That the Army should turn to the Christian home and the church for help is a credit to those who have made this study and a tribute to our historic faith.

Shall we fail our young people and our Nation in this? Few there are who would wilfully neglect a responsibility but as we look at our land today, with its millions of broken homes, its emphasis on sex, its glorification of crime and brutality on TV and over the radio, its book stalls crowded with young people (and older ones too), avidly reading the lewd literature to be had for a price, what are we doing to effectively combat this degenerative process?

We would not for one moment minimize the much fine work which is being done already. But we must not be blind to the fact that the conditions faced by this hard-

boiled Army study are not yet being met head on. Nor do we believe they will be met until we begin as individual Christians, trying by God's help to make our own homes as Christ would have them be, then as local churches and communities take steps to make an impact for Christ and His Kingdom.

A HERCULEAN TASK

The future is not bright because that which we face is so difficult. A pattern has been set, a trend established and the pattern must be broken and the trend reversed.

Instead of physical softness we need hardness.

Instead of political ignorance we need a genuine patriotism for which men will die.

Instead of spiritual and moral decay we need good soldiers of Jesus Christ.

Can such a change take place? Yes, but only by the grace of God coupled with the determination of men and women who see the situation for what it is, the future for its inevitable debacle, and the Christ who can make all things new.

## Rips New Fair Trade Bill as Incurably Defective

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the RECORD an article appearing in the December 8, 1958, Drug Topics entitled "Rips New Fair Trade Bill as Incurably Defective," by Essell Thomas.

The article concerned refers to an earlier version of the Harris fair trade bill, but in the language of its author H.R. 1253 is substantially identical to H.R. 10527 of the last session. Accordingly, the comment is germane to the bill presently pending before the House Committee on Interstate and Foreign Commerce.

RIPS NEW FAIR TRADE BILL AS INCURABLY DEFECTIVE

(By Essell Thomas)

WASHINGTON.—The Federal fair trade bill (H.R. 10527) sponsored by the National Association of Retail Druggists is incurably defective and will fail if enacted and tested in court, according to John W. Anderson, president, American Fair Trade Council.

American Fair Trade Council, it is reliably reported here, has a fair-trade bill of its own drafted which it plans to push in the new Congress. In a telephone interview from Miami, Mr. Anderson refused to verify the report. However, he authorized the following comment:

"We (American Fair Trade Council) are advised by counsel that the Harris bill is incurably defective and will suffer the same fate as the Miller-Tydings Act and the McGuire Act if it is enacted and later meets a Supreme Court test."

TIED TO TRADEMARK LAWS

It is not known what approach the American Fair Trade Council bill follows but speculation ties it to the trademark laws. Capitol Hill sources say only that it differs considerably from the Harris bill which is an amendment to the Federal Trade Commission Act.

American Fair Trade Council this year announced its preference for an antimonopoly amendment to the Lanham Trademark Act, but no bill embodying this idea was introduced.

American Fair Trade Council's absence from the congressional fair-trade fight this year was noted by Representative OREN HARRIS, Democrat, of Arkansas, who introduced H.R. 10527, in his recent speech before the NARD convention at Philadelphia.

He ended his talk by mentioning some opposition fair-trade promoters can expect to meet in 1959. Then, throwing an obvious barb American Fair Trade Council's way, he added:

"The American Fair Trade Council which has always promoted fair-trade legislation, curiously enough, is standing on the sidelines this time. They are neither supporting nor opposing the bill. The council didn't even testify during the hearings on the bill."

Entrance of a new fair-trade bill in the legislative arena might delay progress of any fair-trade legislation if it splits backers of the principle, observers here believe.

Even without this divisive element, supporters of the Harris bill don't expect final congressional action until 1960. An extended delay might be fatal, they say.

Fair-trade opponents, some of whom claimed this year they were not given sufficient time to be heard, are expected to be more vocal and active in 1959.

They will include affected Federal agencies, discount stores, various economists and lawyers, and organized labor. However, the bill's backers are still confident they can win.

Present plans call for House action first, then Senate action. The House hearings are not expected to start until late February or early March as it usually takes at least 2 months to reorganize each new Congress.

There is also speculation the House hearings may be broadened to include a Federal antiloss leader bill and the American Fair Trade Council bill, if introduced.

Meanwhile, it was learned that the special Fair Trade Subcommittee of the Senate Interstate and Foreign Commerce Committee is not expected to hold further hearings this year.

Subcommittee Chairman ALAN BIBLE, Democrat, of Nevada, earlier said additional hearings might be scheduled after the November elections on S. 3850, the fair-trade bill introduced jointly by Senators HUBERT H. HUMPHREY, Democrat, of Minnesota, and WILLIAM PROXMIRE, Democrat, of Wisconsin.

## Placing of Statue of Charles M. Russell in Statuary Hall in Honor of the State of Montana

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. NEUBERGER. Mr. President, many in the Senate join in congratulating our distinguished colleagues from Montana [Mr. MURRAY and Mr. MANSFIELD] upon placing in Statuary Hall, as a representative and symbol of the State of Montana, a statue of the great and authentic cowboy artist, Charles M. Russell.

In my native city of Portland, Oreg., on March 20, 1959, the Oregonian paid tribute to the artistry and genius of Charles M. Russell. I ask unanimous consent that the editorial, entitled "Immortal West," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregonian, Mar. 20, 1959]

IMMORTAL WEST

Congress took a few minutes off this week to pay tribute to a great American, Charles Russell, the Montana cowboy whose paintings are unsurpassed as a record of the Old West.

Charlie Russell's work hangs in saloons as well as the most exclusive museums. He was no impressionist, no abstractionist. But like all great artists he painted his subjects as he saw them through an artist's eye. And his eye could see things hidden from the best of cameras—the tragedy of the American Indian, the loneliness and ruggedness of the life of the cattle range, the majesty of the common features of a western landscape, the poetry in the flowing lines of a fine animal.

This week his likeness in bronze was placed in the U.S. Capitol along with the statesmen, the soldiers, the writers, and others whose deeds are immortal, but none more immortal than the West which lives in Charlie Russell's brilliant canvases.

## Obligation of Defense

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include a very fine editorial, "Obligation of Defense" appearing in Washington's Archdiocesan newspaper, The Catholic Standard, and in its issue of March 22, 1959.

OBLIGATION OF DEFENSE

To answer the questions prompted by last week's editorial stating that unquestionably this Nation has a right to repel an aggression by striking a first blow, it is necessary to indicate the right of a nation to defend itself.

Actually, a nation has the same right and obligation to defend its citizens as the father has to defend the members of his family. He cannot deny that obligation. His only excuse for not fulfilling his obligation is his inability to do so. So with the nation. The Government is absolutely obliged to defend the rights of its citizens and those who are dependent upon it, even by treaty obligations. General Maxwell Taylor was unquestionably correct in stating unequivocally that this country has a solemn obligation as a result of its agreement to defend the citizens of Berlin. Obviously, it has the same obligation toward the rights of all citizens in the United States.

It is immoral for the country not to defend its citizens. The only excuse for not so doing is inability to defend them. Although the Government obviously felt that it could not vindicate the rights of its airmen shot down by Russia and by Yugoslavia, it was departing from a more cour-

ageous concept of its power in former generations. In past years there would have been a more resolute solidarity and demand for justice whose diminution we can only lament.

The increase in the menace to our rights and the increase in strength of the Reds does not diminish or change the obligation of this Government to defend its citizens. The menace to our rights only increases the obligation. The fainthearted who say that any attempt at defense will only destroy us, must remember that any war we ever entered entailed some risk. The great risk of defeat did not deter us from gaining our independence in 1776 nor should a less risk deter us from keeping it.

## George P. Monaghan

EXTENSION OF REMARKS
OF
## HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. CELLER. Mr. Speaker, a dedicated and efficient public servant is George P. Monaghan, New York commissioner of harness racing. He is my friend and I am pleased to assemble for the RECORD numerous ecomiums published concerning him as follows:

[From the New York World-Telegram, Feb. 14, 1959]

NEW YORK HARNESS DISCIPLINE FIRM UNDER MONAGHAN BIG STICK

(By Lou Miller)

The annual New York State Harness Racing Commission report, besides revealing new alltime highs for 1958 in total atendance, betting and revenue to the State, also shows that 153 suspensions were handed out by Commissioner George P. Monaghan, his judes and others making up the sport's so-called little FBI.

While temporary or permanent revocation of licenses did not reach the record category, it came within three of equaling the high, achieved in 1957.

Monaghan has steadfastly insisted:

"The welfare of the public must be paramount. Public confidence must be created where it never before existed prior to 1953. Investigative alertness will be kept on a high plane and there will be no 'kicking under the rug.' The facts always will be available to the public."

There were some critics among horsemen who insisted Monaghan's judges often were too hasty handing out sentences on such nebulous charges as "inconsistent driving."

Many other substantial personalities in harness racing, however, insisted that the numerous suspensions had a large, direct relationship to the tremendous rise in the popularity of the sport.

BOOM DUE TO MONAGHAN

Among the commission's foremost boosters were officials at Yonkers Raceway, which last year set a world's record for harness racing handle with a mark of $190,684,574 in 104 nights of activity.

"The big boom in harness racing in this State is due mainly to the leadership and administration of Commissioner Monaghan," exclaimed Marin Tananbaum, Yonkers president.

"The public has more confidence in the sport with Monaghan and his stewards and judges on the job. People feel they are getting a fairer shake than ever before because the commission men are on the lookout all over the scene.

"Tom Dewey did a very wise thing, when he was Governor, in appointing Monaghan his harness commissioner. He knew the kind of supervision George could give, having observed him as member of his own staff when he was district attorney and as police commissioner of New York City. Who could do a better job of patrolling the harness beat than a good old honest cop with a stout nightstick?" Tananbaum concluded.

SUSPENSIONS WERE FEW

Before Monaghan, suspensions for on- and off-track violations were few and far apart. In 1953, his first year in office, there were 75 revocations of varying duration.

During 1955 the number rose to 117, then 149, and in 1957 there were 156 suspensions. Last year's 153 may be the first signal of a turning point downward because of the constant vigilance of the "little FBI."

There were several particularly significant cases turned up by Monoghan's officials last season:

Driver Sid Moiseyev suspended for life for alleged attempt to fix a race at Monticello, with drivers James Curran and Joe Cardana assessed 30 days each for giving false information during the investigation.

Charles Wingate and Harry Burright suspended indefinitely for allegedly fixing another event at Monticello and wagering on horses other than their own. Wingate has since been indicted by the Sullivan County grand jury.

Revocation of licenses of owner Tom Loss and his groom, suspension of driver-trainer Howard Beissinger for balance of year when saliva test of Widower Creed showed traces of atrophine after race at Yongers Raceway. Beissinger was held responsible, although it was shown he probably was unaware of the doping.

Driver-Trainer Charles Amachie suspended 1 year for illegal possession of hypodermic syringe.

REVISED CONCEPT

Insisting that his most important duty was to keep harness racing clean, Monaghan has changed the general concept of the duties of a track steward. Almost all of his stewards are outstanding graduates of the New York Police Department.

These include Tom Burke, at Roosevelt and Yonkers, Jack Sheridan, at Monticello and Batavia and Rudy McLaughlin at Buffalo Raceway and Vernon Downs. All turned up vital evidence in one or more of last year's big cases. Although the stewards soon learn everything necessary about actual racing problems, Monaghan leaves this phase of the work to his stand judges, all sharp-eyed and expert horsemen.

Among crackerjacks on the Monaghan little FBI staff are Deputy Commissioner Mike Monz, Anthony Perone, chief of investigation, and Sam Rosenberg, accountant. The latter did much of the spade work on the old DeKoning case involving labor abuses at Roosevelt Raceway. All are prior members of the staffs of Dewey and District Attorney Frank Hogan.

From the time Monaghan took over in 1953 things began to get rough through tighter licensing rules for questionable characters who had been hanging on. Of 15,443 occupational license applications processed by a small staff of 30 to 40, as many as 206 were denied for various reasons, including criminal records.

Since 1953, through 1958, there have been 99,832 sets of fingerprints taken by the commission. Besides their use for harness racing, they have been sent to local, State, Federal, and international law enforcement offices. As a result, a working arrangement with these worldwide groups has been effected. Thus, notice of arrests of any of the harness licensees is promptly made to Monaghan's office.

DOPE TESTS DOUBLED

Another result is that New York now is used as a clearing house for information on applicants by all States and even ruling bodies in France, England, and Italy.

From 1953 to date, 515 license applications have been denied and 538 revoked or suspended from such widely varied activities as horse ownership, driving, training, grooming, mutuel clerking, working in restaurants, parking lots, etc.

From a total of 5,062 saliva and urine tests taken in 1953, Monaghan has multiplied the checks on possible doping so that 10,753 specimens were taken in 1958.

Many of Monaghan's procedures have been adopted by commissions throughout the country. Certainly they must have helped bolster public confidence in the sport. Otherwise, it would have been impossible for New York State to come up with such record highs last year as $465,384,651 in handle, 7,050,002 in attendance and total revenue to the State of $36,829,304.50.

[From the New York Mirror, Feb. 21, 1959]

A WASTEFUL IDEA

Harness racing is a big and growing business. In 1958, New York harness tracks returned in revenue to the State and to those cities and counties in which the sport is conducted a record $39,181,718, which was an increase of $4,507,113 over the previous year.

Now a couple of upstate legislators are proposing that harness racing be ruled not by a one-man commission, as at present, but by a three-man commission.

The idea, in our opinion, is cockeyed.

Of course it would create a lot more jobs for politicians to fill, but that is inconsistent with Governor Rockefeller's pledges of economy.

The fact is that the sport has thrived and been cleaned up under a one-man commission, headed by George P. Monaghan, former New York City police commissioner and one of Tom Dewey's aces in the old racket-busting days.

It is just as silly to water down commission authority among three members as it would be to have three men running a police department or fire department.

We believe Monaghan has done an outstanding job. But personalities are beside the point.

The principle should be one-man control and responsibility.

The legislature should ignore the proposed, wasteful net setup.

[From the Batavia Daily News, Feb. 24, 1959]

ONE-MAN RULE PROVED BEST

(By J. E. Brown)

When Charles A. Lindberg landed his Spirit of St. Louis plane in Paris a good many years ago, making it alone, someone hailed the accomplishment in an unusual way. He summed it up cleverly when he noted that the Lone Eagle could never have made it if he had a committee.

The story is recalled with the current efforts in Albany and beyond to replace a one-man accomplishment with a committee or commission of three and ousting an appointee in 1953 of former Gov. Thomas E. Dewey. The official is George P. Monaghan, who has served efficiently in the role of commissioner for harness racing.

Mr. Monaghan replaced a three-member commission and then proceeded to do with the harness racing sport what Keneshaw Mountain Landis did for baseball. The records prove that and the public has responded with a new interest, new support, and new respect for the official.

Senator Frank Van Lare, of Rochester, has introduced a bill in Albany to put harness

racing under a three-member commission instead of the one-man rule of Commissioner Monaghan. The bill, which could be pushed by the U.S. Trotting Association, would bring back to harness racing the part-time rule and which most claim was far from satisfactory.

Mr. Monaghan, an ex-New York City police commissioner and a competent attorney, was named by Governor Dewey to clean out the undesirables and to protect with an iron fist if necessary the public's interest in harness racing.

Revenue to New York State has increased 62 percent in the 5 years Monaghan has ruled harness racing. Revenue to cities and counties up 19 percent in 1958 and has showed a 40-percent boost in the past 2 years.

Mr. Monaghan obviously has the respect and confidence of other State racing officials. He recently was elected president of the new National Association of Harness Racing Commissioners. Most States have patterned their administrative controls and operations of trotting after the highly successful system evolved by Mr. Monaghan.

Apparently, the public has confidence in the job being done.

With but 33 percent of the racing dates allotted throughout the entire United States, New York last year accounted for 55 percent of the national attendance and 65 percent of the national parimutuel handle.

There appears to be no reason except politics for a three-man commission. Besides these three appointments (and political affiliation is not specified in the Van Lare bill), the door would be open to political deals in naming racing officials. Racing, if it is to continue enjoying public confidence (the confidence that put $37 million in the State treasury last year) must have officials with knowledge and experience, not political assets.

Under the Van Lare bill, the commission chairman would get $15,000 a year and two other members would each receive $10,000. It is doubtful if men of stature, men with the necessary background, could be obtained to devote full time to a job at these prices.

It's peculiar, too, at a time when Governor Rockefeller's tax and budget problems would seem to indicate economy that a proposal for a lot of extra jobs would even be entertained.

There is a feeling that the USTA, a private Ohio corporation which dominated harness racing throughout America for many years, is behind the move to take from Mr. Monaghan's achievements. Mr. Monaghan figured that horsemen shouldn't race under officials which the horsemen's organization had selected. The legislature agreed and struck out a State law that required racing officials to be USTA members.

In harness racing, they still tell the story about an Illinois commissioner, one of three. When Mr. Monaghan adopted a slow down racing rule a few years ago, the Illinois official complained bitterly. He said a three-member commission would never allow such a stupid rule. If one member suggested it, the other two would surely be smart enough to knock it out, he boasted.

New York had copied its slow down rule from the Illinois Harness Racing Commission's rule book. The part time commissioner didn't know his own rules.

---

[From the New York Journal-American, Feb. 21, 1959]

GEORGE DID IT

(By Warren Pack)

Someone was saying the other day that New Yorkers would really be facing even tougher tax bills if it weren't for the $80 million the State picks up from betting on horse racing. It would break down to something like $20 more per taxpayer.

The fact that harness racing will probably produce more than the thoroughbreds this season is due in great part to a guy who has been the target of a nasty hate compaign, George Monaghan, the commissioner of harness racing. His lead in getting aid for the tracks to build new plants has resulted in the State's revenue jumping each year.

"When the tracks have finished paying off their new plants," Monaghan said, "the State will get another $8 to $10 million a year."

Monaghan's main accomplishment, however, has been the cleaning up of the sport, which was rocked by scandals 5 years ago.

"I'd say the biggest thing I've been able to do is to free the judges from the pressure of horsemen's groups like the U.S. Trotting Association and made them responsible to the State and to the public," the commissioner said.

HOW HE BECAME TROT CZAR

"Before we passed New York State racing rules, the judges were under pressure from the USTA, which licensed them. Here was a case of a private organization, with headquarters 700 miles from New York, employing powers which belonged to the State."

The USTA is in a lot of trouble with the Federal Government trying to force it out of business under the antitrust laws. Monaghan has suggested to the USTA that it comply with the Government's orders and revert to the role of a recordkeeping and information organization.

"We recently formed an association of harness racing commissioners, which may be the first step toward getting independent commissions in other States, where the USTA still rules," Monaghan added.

He recalled the way he became head of the trotting sport in the State.

"I was police commissioner here," Monaghan said, "when I got a message that Governor Dewey wanted to see me in Albany. Well, I had no idea what it was all about. I was working on a big investigation here and thought he wanted to talk to me about that.

"I got to Albany and the Governor said to me: 'How would you like to be commissioner of harness racing?'

"I didn't know what to say. It was such a surprise. But I had always thought that being a sports commissioner was a good job and told Mr. Dewey I'd have to think it over.

"He told me that I would have complete authority, that he felt that a one-man commissioner could do the job best, especially if the right legislation were passed. And he promised that the legislation would be passed.

BROKE IN COLD, GOT HOT QUICK

"'Why not go home and talk it over with your wife, Helen?' he said to me.

"The Governor's thoughts that scattered powers would not be conducive to supervising the sport, and my thoughts that one man should be responsible, were important to me. I felt that if one man couldn't do the job, then they should get rid of him."

Monaghan finally took the job and has provided New York bettors with the best racing in the country. Of course, in enforcing the rules strictly, he has run up against the horsemen, who have been trying to knock him out of office for some 4 years now. Two of his main opponents are Frank Wiswall, who runs Saratoga Raceway, and Octave Blake, formerly head of Vernon Downs and an important breeder of harness horses.

He has made mistakes as he has gone along, but they are minor compared to the valuable contributions he has made to this sport, an amazing record considering the fact he broke in "cold" and had to make an immediate cleanup under orders of the Moreland Act Commission.

His top credential is the fact that he now is being compared to Kenesaw Mountain Landis, who performed similar chores for baseball 38 years ago. And Landis, we recall, had a lot of enemies, too.

---

[From the Rochester Democrat and Chronicle, Feb. 2, 1959]

IN THIS CORNER

(By George Beahon)

THE "GET MONAGHAN" MOVEMENT

George P. Monaghan, since his appointment by then Governor Tom Dewey in 1953, has done relatively as much for harness racing as Kenesaw Mountain Landis did for the sport of baseball.

Since he became State commissioner of the sulky sport the former New York City police commissioner has done more for the game than any one person or any one group in its entire history. This is a matter not of opinion, but of record.

It follows, therefore, that a "let's knock success movement" against Monaghan is on the march. There is a strong suspicion that the bill introduced in Albany to put harness racing under a three-member commission, supplanting Monaghan's rule, is fostered, or at least inspired, by the U.S. Trotting Association, which openly advocated in the past a return to the part-time rule and divided authority which nearly brought a downfall to the State's biggest sports enterprise.

It was Monaghan who freed the game's judges from the pressure of horsemen's groups like the USTA, thus making the judges responsible only to the State and to the public. Previously, the judges were responsible to the USTA, which licensed them, even though its headquarters were 700 miles removed from New York. This was a private organization, to quote Monaghan, "employing powers which belonged to the State."

OTHER STATES CHEER HIS SYSTEM

The USTA currently is facing antitrust action by the Justice Department, which is trying to force it out of business. Monaghan, who all but tossed the USTA out of New York on its ear, suggests that it revert to the capacity of a recordkeeping organization.

Meanwhile, Monaghan recently was elected president of the new National Association of Harness Racing Commissioners. Monaghan hopes this will be the first step toward getting independent commissions in other States, where the USTA still rules.

Obviously, Monaghan has the respect and confidence of racing officials in other States. Most of them have patterned their administrative controls and trotting operations after the unparalleled system evolved by Monaghan.

Dewey appointed Monaghan with express orders to clean out the undesirables and to protect with a policeman's nightstick if necessary the public's interest in harness racing.

VIOLATIONS SHRINKING

Evidently the public also has some confidence in his work. Because while New York State has only 33 percent of the racing dates allotted throughout the United States, New York last year accounted for 55 percent of the national attendance—and 65 percent of the national parimutuel handle.

When he first began swinging the big stick, Monaghan's critics complained that in some instances his judges were too quick to hand out stiff sentences on such nebulous charges as "inconsistent driving." Before that, and since, Monaghan has had to fight to make his sentences stick.

He has suspended horsemen because they won. When in winning, their racing time moved up incredibly from what were apparent "fresh air outings" in previous races,

just a build a price. He sustained severe criticism for some of these rulings. The net result was that such flagrant violations all but vanished.

In 1953, his first year, there were 75 revocations. In 1955, there were 117. In 1956 there were 149 and in 1957 there were 156 suspensions. Last year there were 153, possibly a sign that Monaghan's "messages" are getting through to the cheaters.

In the process of setting up what the horsemen call his little FBI, Monaghan has named as stewards former policemen—nearly all of them, including Jack Sheridan at Batavia Downs, former standouts on the New York City Police Department.

THE LAW IN ACTION

Since Monaghan took over, his outfit has recorded 99,832 sets of fingerprints. These have been sent to local, State, Federal and international law enforcement agencies, for double checking, past, present and future. The controlling bodies in France, England and Italy now use Monaghan's office as a clearinghouse for information on license applicants. In this regard, Monaghan's office has denied and revoked or suspended over 1,100 licenses in all categories—owners, drivers, trainers, grooms, mutuel clerks, etc.

Add to his little FBI work the fact that Saliva and urine tests on horses have more than doubled since 1953, now more than 10,000 per season.

In too many other States, political affiliation, rather than knowledge of racing or experience in police and security work is the qualification for a racing commission plum. Quite possibly this is why racing does not flourish in these other States.

Under the three-member system being proposed, the door might be open to political deals for racing officials. Under the proposed bill, the commissioon chairman would get $15,000 and two other members $10,000 each. Where do you find the men of proper stature, with necessary background, to devote full time to a job at these prices?

Nearly everyone connected with the game agrees that Monaghan has done an exceptional job and that his solid administration, free from outside interference, has been the very best harness racing in New York ever enjoyed. So much the best that the rest of the world is copying Monaghan's program. Why mess with success?

It may not be important that the public supported harness racing in greater numbers and in greater betting volume than it did flat racing in New York State last year. It may not matter that harness racing contributed $37 million to the State treasury (more than the flats). This is an all-time record.

But it should matter here (and this comes from one who has done more than his share of criticizing) that a man who has contributed more to his sport than any other individual dead or alive today is being kicked in the teeth at the very time when he should be drawing applause.

---

[From the Buffalo Courier-Express, Feb. 19, 1959]

SECOND GUESSING

(By Frank Lillich)

THE RAILBIRD

When the Justice Department cracked down on the U.S. Trotting Association, the feeling here was that most of the detractors of the able State harness racing commissioner, George Monaghan, would be discredited, and the shameful campaign of vilification carried on against him would die a natural death.

Not so, however. A bill has been introduced in Albany which would replace Monaghan with a three-man commission, recalling the pre-Monaghan days of confusion—and worse—which led to his appointment.

The proposal, on the face of it, is ridiculous. Since then Gov. Thomas E. Dewey decided to "let George do it," harness racing has become a cleaner, pleasanter sport. Monaghan has attacked the multiple problems with efficient and courageous honesty.

He has weeded out the questionable elements and punished transgressors with severe impartiality.

He has campaigned for safety devices, such as the crash helmet which is credited already with saving several drivers from death or crippling injuries.

He has withstood pressure groups and gone ahead with the formation of rules which have helped racing—many of which have been adopted by other States.

He has been a major factor in encouraging the growth of the sport, through better-equipped and cleaner plants which, in turn, have resulted in increasing revenues for the State.

He has, first and last, protected the public. That has been paramount objective ever since he took the job.

For all this, he should be replaced?

---

## President Garcia of the Philippines Salutes America

EXTENSION OF REMARKS

OF

## HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Monday, March 23, 1959*

Mr. MUNDT. Mr. President, the United States is justifiably proud of its historic part in protecting the Philippines and in helping that democratic country achieve its independence.

That friendly sentiments between the Philippines and the United States of America are a two-way street is clearly illustrated in a recent letter which I received from Mr. P. W. Reeves, of Manila. Mr. Reeves is a former administrative assistant on Capitol Hill, where I came to know him. He has spent many years living in the Philippines; and I take pleasure in sharing his letter with those who read the CONGRESSIONAL RECORD.

Therefore, Mr. President, I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MANILA, PHILIPPINES,
*March 15, 1959.*

Hon. KARL E. MUNDT,
*Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR MUNDT: Press dispatches reaching Manila during the past few days indicate that some badly written and badly timed articles by writers representing periodicals in the United States have caused anti-American demonstrations in Bolivia. The riots and bloodshed in Bolivia were widespread.

In recent months a number of articles have appeared in Southeast Asia which caused considerable friction and ill feeling toward America. It is difficult for me to figure out why American writers desire to turn nationals of other countries against America.

The Philippines has served as America's show-window of democracy in Asia. The Philippines has done more than any other country to help America's prestige in Asia. If the Filipinos were to turn against America, or if America were to turn thumbs down on the Philippines at this time, it would be very difficult for America to sell democracy to any other country in Asia. That part of Asia which remains free is watching the Philippines. If the friendly alliance between the United States and the Philippines should be abandoned—or even temporarily interrupted—the rest of free Asia will be lost to the Communists. This fight against President Carlos P. Garcia is a subterfuge. The masterminds in this tirade of vituperation and conspiracy against President Garcia are willing to accept any expedient in order to discredit the President of the Philippines.

If attacks on President Garcia and the Philippines continue, foreign investments will have rough sailing here. An occasional article can be overlooked and the people will conclude that the writer was misinformed. The unpleasant article will soon be forgotten. However, commencing in August 1957, one periodical in the United States viciously attacked President Garcia in particular and the Philippines in general. The same magazine followed up that first attack in August 1957 by attacking President Garcia and the Philippines on April 21, 1958; and another attack on February 2, 1959; another attack on February 16, 1959; and another attack on February 23, 1959. Unquestionably, a diabolical scheme is in operation to drive a wedge between America and the Philippines when the same magazine in the United States makes five vicious attacks on a country and its President. Also, under date of December 4, 1958, the Associated Press dispatch to Manila carried almost a full column about graft and corruption in the Philippines which appeared in a leading Washington, D.C., newspaper of the same date.

What will American newspapers and magazines gain by insulting other countries of the world and their Presidents? And why should anybody in America want to turn the Philippines against the United States?

Throughout his entire life, President Garcia has been a friend of the United States. On March 6, 1959, the United Press International news service carried a dispatch to the effect that Gen. Douglas MacArthur stated in New York that he held President Carlos P. Garcia of the Philippines and his administration in the highest regard. General MacArthur also mentioned that during World War II, Carlos P. Garcia was the leader of the resistance movement and rendered excellent service. No man on earth is in better position to pass judgment on Carlos P. Garcia and the Philippines than Gen. Douglas MacArthur. General MacArthur was stationed in the Philippines for many years—from the time of President Quezon in the Commonwealth days until the beginning of World War II.

Just to remind the American people about President Carlos P. Garcia's feelings for the United States, I quote the following from an address which President Garcia made in New York City on June 24, 1958: "I give this pledge on behalf of the Filipino people that we shall stand with the American people in defense of freedom as we have stood with them in the past loyalty without counting the cost.

"It would appear that a policy of neutralism has the net effect of abetting the aggressive purposes of international communism, whether it seeks to achieve these by armed attack or by subversion. The proof of this is to be seen in Asia and Africa where neutralism is a much favored philosophy, and where, consequently, communism has been encouraged to make heavy inroads by stealth or by armed intervention. On the other hand, in Western Europe, where neutralism has been rejected, communism has found it less easy to pursue its objectives.

"I dare to stand and be counted with the American people on the side of freedom."

Speaking at the Memorial Grandstand in Manila on July 4, 1957, President Garcia stated:

"Our relations with the United States are particularly noteworthy. With this onetime conqueror of our land we subsequently developed a warm and sympathetic friendship which reached its highest expression in the peaceful yielding to us of sovereignty on this date 11 years ago. Our relations since that date might well serve as a pattern for the world community. Assistance has been extended and accepted by us in the spirit of friendship rather than subservience. We have cooperated in the achievement of common objectives and due respect for each other's views, freely exchanged as equals, and with the course of each party determined solely by sovereign initiative in serving the best national interest. Our policies have paralleled those of America only when it served our national interest to do so, on other occasions following an independent course. And be it said to America's credit that no pressure ever has been exerted to have us do otherwise. To that great Nation which today celebrates its own achievement of independence, I know our people extend heartfelt greetings and a reaffirmation of our dedication to common ideals of peace, justice and liberty * * *."

President Garcia is fully aware of what the United States of America has done for the Philippines and, like the overwhelming majority of the Filipinos, he is truly grateful. In his speech to the Rotary Club in Manila, July 5, 1956, Vice President Garcia stated:

"Filipino and American statemen, educators, soldiers, businessmen, scientists, and industrialists have worked in complete cooperation and understanding to rebuild the Philippine nation on the basis of freedom and democracy * * *. The United States fought victoriously two world wars. In the first one, the United States fought to make the world safe for democracy. We offered the cream of our youth for military service under the American flag. In the second, our country was invaded and the Americans and Filipinos heroically fought side by side in defense of country, freedom, and democracy, under the mingled shadow of American and Filipino flags. American blood flowed freely in Bataan and Corregidor and other places. We fell under the Japanese occupation forces for 3 bloody and frightful years. But our love and loyalty to the United States remained steadfast in those gloomy year. When almost everything was lost to us, home, liberty, hope, and happiness, the immortal pledge of the American people through President Roosevelt 'that our freedom will be redeemed and our independence established and protected,' revived our dropping national spirit and galvanized us into new unity and solidarity to continue fighting for the cause of democracy, the cause of the United States and her allies * * *. America kept faith with the Filipino people and strictly in accordance with her pledge, established our independence on July 4, 1946 * * *. This deed of mighty America whereby she redeemed in all good faith and fidelity her plighted word of honor to the Philippine nation will endure forever with the pulsing of eternity * * *."

President Garcia's tender affection for America was not born after he became President. While he was Vice President, on January 19, 1954, he made a public address, from which I quote the following:

"The new administration will continue and improve on the keystone policy to preserve and maintain the most friendly and cordial relations with the Government and the people of the United States of America. As the most enlightened and altruistic champion of democracy and democratic dealings with others, we look up to America, the sponsor of the international idea of live and let live. The spiritual affinity of the American and Filipino peoples, established by 50 years of association and forged on the anvil of war and sufferings, cannot be assessed in terms of dollars however astronomical the amount may be. Corregidor and Bataan, the twin summits of glory where American and Filipino soldiers fought side by side and fell in common graves, symbolizes the spiritual solidarity of American and Filipino peoples * * *."

These people who are making the attacks from the United States certainly do not know President Garcia, the man they are trying to crucify. No scandal or smear has touched him since he became a congressman in 1925. His record for honesty, integrity, statesmanship, and faithful service is unimpeachable. He served 6 years as a congressman, 9 years as Governor, almost 14 years as senator, 3 years and 3 months as Vice President, and 2 years as President.

President Garcia is one of the kindliest of men. Incidentally, he is a devout admirer of the Great Emancipator. On February 12, 1959, President Garcia sent me a beautiful letter about our immortal Lincoln. Knowing that you, too, are a devoted follower of Lincoln and what he stood for, I shall quote three lines from President Garcia's recent letter:

"Lincoln's deeds will long live in the hearts of peoples everywhere who cherish the dignity of the human person and the equal opportunities afforded by a democratic society."

When I saw President Garcia a few days after the receipt of the above-mentioned letter, I thanked him; and then President Garcia said: "It appears that some of your American writers do not like me. I shall borrow the words of the immortal Lincoln by saying, 'I do the very best I know how, the very best I can, and I mean to keep on doing so until the end.' "

President Garcia has not lost any of his popularity in the Philippines. The little group now attacking the President in 1959 also opposed his candidacy for Vice President in 1953 when he was the running mate of the late Ramon Magsaysay. The same group opposing President Garcia in 1959 also bitterly opposed his candidacy for reelection as President in November 1957. By the will of God, Vice President Garcia became President of the Philippines on March 17, 1957, when the late President Magsaysay lost his life in a plane crash. Almighty God who controls the destinies of men and nations willed that Carlos P. Garcia should become the President of the Philippines. It is unthinkable that the little group now opposing the President and trying to discredit him in the eyes of the world will be able to defy the will of God.

Sincerely,

P. W. REEVES.

439 ARQUIZA (ERMITA).

## Why Unemployed Still Do Not Have Jobs

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. McCORMACK. Mr. Speaker, our people have been given some reassuring statements by the administration about increased business activity but very little, except misleading slogans, about the conditions of unemployment.

There are at least two amazing phenomena in connection with the present recession.

First. As business improves, unemployment remains at a high level.

Second. The price level has increased during the recession. This is strong evidence of a controlled economy by big business.

In my extension of remarks, I include an interesting and informative article appearing in the Business Week of March 7, 1959:

WHY UNEMPLOYED STILL DON'T HAVE JOBS

Paul Henly, Lindbergh Evans, Domian Almaguer—on one day or another last year, each of them knew the panic and shame that hit a man as he first tries to adjust to the bitter truth: "I've lost my job." And there were more than 5 million like them.

At first, after the initial shock, most of the 5 million found unemployment a nuisance, but little more. They couldn't fight it—men were being laid off all around them—so they took life easy. Their unemployment benefits had many weeks to run.

Besides, everyone knew the Government wasn't going to let a real depression develop. Just as in 1949 and 1954, things would be tough for a little while. Then business would start improving again, and there would be plenty of jobs at good pay.

IT DIDN'T HAPPEN

Henly, Evans, and Almaguer have learned by this time that the script has been changed. Sure, business got better, and those who were still working made out fine. But employers didn't take back many of the people they had laid off, nor do they show signs of doing so in the near future. This is the tragedy of Henly, Evans, and Almaguer.

Henly is 56 years old. When he was laid off by Dodge on January 10, 1958, he had 11 years' seniority; now he fears no one but Dodge will ever give him a job again. At his age, who else would want to put him into a pension program, to take a chance on his health or on his ability to learn a new job better than a young fellow could?

Almaguer, 24-year-old Mexican spot welder, has the opposite problem. Being young, he has had no chance to build up seniority. How can he get into a steady job when guys with 10 or 15 years' seniority are still waiting to be rehired? Almaguer has worked only 8 months of the last 24.

Evans, 22, has the same problem of youth and lack of seniority—plus the worry that the color of his skin has something to do with his troubles. It just doesn't seem as if there's going to be much work around Chicago for fellows like him for a while.

THEIR PREDICAMENT

These three men and Charles Kamm, Celia Wisniewski, Steve Rozboril and Leon Elstner are all suffering from the most frightening disease of a free economy: unemployment. Is it one disease that strikes them all, or is it several different ailments that have the same effect? And, their personal hardships aside, is the present unemployment situation worse than it was in the previous postwar recessions and recoveries?

The answers come partly from statistics, partly from a study of technological and social changes that are just beginning to be recognized and understood.

I. WORST SINCE THE WAR

Unquestionably, the unemployment problem this time has been worse than in other postwar recessions. The figures show it in a number of ways.

Most obviously, unemployment rates have been higher. Adjusted for seasonal factors, unemployment last August reached a peak of 7.5 percent of the labor force. In 1949–50, it didn't quite reach 7 percent (unless you count the one-month bulge caused by the

1949 coal strike), and in 1953–54, it barely touched 6 percent.

More alarming, unemployment has stayed high despite rising business activity. From the August peak of 7.5 percent, the rate dropped to 5.7 percent in November. Then it moved back up to 6 percent in December and 6.2 percent in January.

In January, 4.7 million workers were jobless. That's 200,000 more than a year earlier, when gross national product was running about 6 percent lower in physical volume. Through the postwar years, an unemployment rate of 4 percent has come to be regarded as "normal." Now, even with business continuing its moderate improvement (Business Week, Feb. 21, 1959, p. 23), it looks as if the norm may be shifting upward—to 5 percent or higher.

In cold fact, we would have to add some 2.2 million jobs in 1959—with the labor force growing all the time—just to get unemployment down to a 5 percent rate. In 1955, a great boom year when gross national product jumped 10 percent in volume, we added only 1.9 million jobs.

*Hurting more*

Moreover, total figures don't reveal the full severity of today's unemployment problem. Long-term unemployment has hurt more people than in earlier postwar cycles. Last spring, about 2 million people had been without work for 15 weeks or longer, and that was roughly twice as many as in 1949 and 1954.

Recovery since then has reduced the number of long-term unemployed, but less than could be expected. At the turn of the year, there were at least 1.3 million long-term unemployed, and 800,000 of them hadn't worked for 6 months or more.

*Hardest hit*

This recession worked the greatest hardship on the core of the labor force—men, heads of families, in their best working years. Layoffs were broadest among men in their twenties, thirties, and early forties; older men had seniority rights. But whenever older men did lose their jobs, they had the greatest trouble of all in finding work.

Among men in their most productive years, Negroes were the worst affected. Negroes make up only 10 percent of the labor force, yet during the recession and so far during the recovery, one out of every five unemployed has been a Negro.

Unemployment among women and teenagers also rose, but this wasn't so much the result of layoffs from regular jobs as from the entry of wives and children into the labor force to earn what they could when the men were laid off.

II. NATIONAL SORE SPOTS

What accounts for the remarkable severity and persistence of unemployment during this recovery? The explanation isn't to be found in any one factor but in a whole array of factors that go to the very heart of the change in the American economy.

The most direct way to an explanation is to pinpoint the areas of most concentrated unemployment. These are:

Michigan chiefly because of autos.

Pennsylvania, chiefly because of steel, coal, and railroads.

New York, New Jersey, Connecticut, Illinois, Indiana, Ohio, Maryland, and Alabama, because of a variety of hardgoods industries.

Massachusetts, Maine, Rhode Island, chiefly because of a decline in textile industries.

West Virginia, Kentucky, Montana, Colorado, and Minnesota, because of troubles in mining.

Thus you see the persisting unemployment as Murray Wernick, Federal Reserve Board economist, sees it: "A cluster of localized problems rather than a general problem." Last week, Business Week reporters all over the country tried to isolate the key factors in each locality.

Detroit: In Michigan's auto centers, for example, employment has been sliding not just during the recession but for at least 5 years, ever since defense production was cut off. Many factors have been at work: rising productivity, diversification in the auto industry, some flight of nonautomotive plants to warmer climates.

Employers say business caution has held down rehiring. They cite two reasons: (1) Bad public relations if they have to lay off again after a brief time; (2) the steep cost of SUB and other fringe benefits that have been written into auto labor contracts.

Primarily, though, rehiring has been slow because auto demand is tepid and workers simply aren't needed in mass for extra shifts.

Unemployment in Michigan is still well about last year's rate. Employers and union leaders agree that even getting back to past peak levels of production would leave a sizable pool of men made jobless by more efficient use of machines or better planning.

For example, Chrysler Corp. reorganized all its machine shops in the Detroit area into one new shop; only 400 of the 1,400 workers in the Dodge machine shop found jobs in the new operation. In another plant, back-to-back lines of drill presses were turned to face each other across an aisle where one man can operate two machines, eliminating half the work crew.

Only 2 years ago, the United Auto Workers had 1.4 million members at work nationally; now it has less than 1 million.

Philadelphia: In the Philadelphia area, production has climbed a lot but employment has improved little. Businessmen admit they're being cautious.

"Why shouldn't we be?" asks a spokesman for an appliance manufacturer. "The consumer is—he certainly isn't going overboard. And suppose autos are in for another bad year. Besides, we are expecting a steel strike."

Manufacturers of hardgoods are doing the least hiring, are getting more production out of reduced work forces. "People are scared and are working harder to keep their jobs," says one man. And they are being worked longer hours.

This can go on, business economists say, only so long, perhaps only until the last half of the year. Even then, though, they don't expect the free and easy hiring of prerecession days.

Rest of Pennsylvania: Overall, Pennsylvania is still one of the worst hit States with about 10 percent out of work.

In most depressed areas—Altoona, Erie, Johnstown, Scranton, and Wilkes-Barre—unemployment runs about 12 percent. Some of this is chronic unemployment. Scranton and Wilkes-Barre are centers of the anthracite coal region, Altoona has the Pennsylvania Railroad shops, Johnstown is a steel town, Erie produces heavy machinery.

Pittsburgh, of course, is in a ferment about unemployment, with a critical labor negotiation fast approaching. The steel companies argue that rising productivity has been achieved without causing real job losses—only a slowing of growth in their work forces. President David McDonald of the United Steelworkers stresses that 155,000 United Steelworkers members were jobless last April and that about 100,000 are still unemployed.

In 1958, McDonald says, steel employed 411,565 hourly paid workers—an average of 14 percent less than in 1937—yet steel shipments in 1958 ran 56 percent higher than in 1937.

Cleveland: In the Cleveland area, there's unemployment in the machine tool industry chiefly because volume of machine orders hasn't followed the general comeback of the economy. Because the industry is predominantly job shop, there hasn't been much increase in productivity to eliminate workers. When capital spending snaps back, the jobs will be there.

California: On the face of it, California's worst labor troubles are over. Employment has returned to prerecession highs. Even here, though, signs of the new technological unemployment are showing up, especially in the aircraft industry and its suppliers.

Even if total spending on defense remains near its Korea peak, technological unemployment seems bound to increase in the aircraft industry:

Planes are giving way to missiles as the big procurement items, and missiles require fewer workers than aircraft do for the same dollar volume.

Defense hardware is being ordered in smaller quantities. It requires a smaller but more skilled work force; research and development make up a higher proportion of product value.

Commercial aircraft show a similar trend. Each new jet transport does the work of several piston-engined airliners that it replaces, so fewer planes will be built. In the first 10 years after World War II, for example, Douglas Aircraft Co. built an average of 100 transport planes a year; now it has orders for only 140 jet liners, to be delivered over the next 3 years or so.

III. DRAWING CONCLUSIONS

From the mass of reports from around the country, several general conclusions can be drawn:

Employers are unusually cautious about rehiring workers they have laid off. The recession forced them to make changes to cut cost—and jobs; the increasing burden of labor costs per worker, including fringe benefits, discourages them from hiring as many people as they might like.

The public's lack of enthusiasm for autos and other durables continues to depress metalworking industries.

Despite the Nation's march to peak levels of income and consumption, capital spending still hasn't revived. That's because excess capacity is hanging over industry from the recession, particularly in the heavy goods industries east of the Mississippi.

The rapid advance in technology both increases output per worker and cuts down employment of unskilled and semiskilled workers (a large proportion of whom are Negroes).

*Service industries next*

So far, advances in productivity have been concentrated in the goods-producing industries (manufacturing, mining, construction, agriculture), giving them more and more output with fewer workers.

Meanwhile, employment in the service industries (trade, finance, transportation, public utilities, Government, and such miscellaneous services as domestic work, teaching, hospital work) continued its long and relentless climb.

Now, however, automation and advanced techniques have spread to these industries, and they may not be able to create as many jobs as they have in the past. They're just about holding their own at the moment in number of employees.

*One growth area*

The one real growth area on the job front is among the professions—scientists, engineers, highly trained people of all kinds.

Within manufacturing employment [chart, not printed in RECORD], you can see the rise of so-called nonproduction jobs, pushed by new emphasis on research and development, even as production jobs decline. The United States is in the full swing of its "brainpower revolution" (Business Week, Apr. 27, 1957, p. 176).

Shifts in the employment market are going to put a high premium on education, retraining, and other measures to upgrade workers into new jobs.

Labor Department experts don't expect geographical mobility to contribute much to reducing unemployment. Mainly, it is young

male workers who will shift from one region to another; others are bound by families, homes, and other community ties. At present, geographical mobility wouldn't help much. No area is expanding fast, and most already have a surplus of labor.

Basically, where rising productivity can be expected to increase pressure is in a search for ways to multiply the Nation's total demand for goods and services, to keep the whole labor force employed. And if demand can't be increased, there'll be still more cry for a shorter workweek.

## Ten Years Are Needed for the United States To Top Russia's Fleet of 460 Submarines

EXTENSION OF REMARKS
OF
### HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. OLIVER. Mr. Speaker, the Russian submarine fleet at this very moment poses a most serious threat to our national survival. This threat increases by the hour, while we hesitate to launch a program of oceanic research necessary to counter Soviet advances.

Experts have advised that it will take the United States 10 years to formulate a foolproof defense system which would insure the United States against sneak enemy submarine attacks. This 10-year estimate is based on the assumption that our country will roll up its sleeves and launch a comprehensive program of oceanic research.

The following article which appeared in the New Bedford (Mass.) Standard-Times emphasizes the pressing necessity for an immediate increase in our program of oceanic research:

TEN YEARS ARE NEEDED FOR UNITED STATES TO TOP RUSSIA'S FLEET OF 460 SUBMARINES

(By Everett S. Allen)

It will take 10 years of the hardest kind of work before the United States can be sure it has gained clear and overwhelming technical superiority over Russia's existing fleet of 460 submarines. This estimate, based on sound evidence and authoritative opinion, does not take into consideration radically-improved U.S.S.R. subs that might appear during this period. Presumably, they would be too few in number to affect the overall situation, and most of the existing submarines still would be in service.

In 1956, the National Academy of Sciences sponsored an intensive summer-study group at the Whitney estate on Nobska Point in Falmouth. The specific subject matter of the discussion remains top secret, but it had to do with the sea and national security, and the scientific approach to this general field.

The military aspects of the ocean were thought to present a situation sufficiently serious so that 60 to 80 very important persons gave up their summer to think about it.

REPORT GATHERS DUST

The report embodying the recommendation of this highly qualified group of specialists—which has been allowed to gather dust thus far—is in the hands of the NAS and available to Congress, upon request. It is to be hoped Congress will make such a request and consider its contents carefully when it formulates U.S. policy in the marine sciences in this post-sputnik era.

What did they talk about? Here are some good bets:

The true submarine presumably is just around the corner. To date, the sub has been merely a surface ship that could submerge, but as it advances in technique, it will operate deeper and deeper. Even now, some of them stay under water for 2 weeks or longer.

In a military deterrent system, staying hidden is perhaps the most important factor. U.S. subs, therefore, must learn to navigate without coming to the surface, must learn to deal with deadreckoning problems under the sea. This means their navigators must have a knowledge of all three dimensions of the ocean, including its underwater areas.

CHARTS NEEDED

The Navy now has surface charts of the sea. What it needs for the immediate future are charts of the ocean bottom, and charts showing how the waters of the seas circulate.

U.S. oceanographers already are engaged in the long, slow task of gathering this data. At intervals of roughly 80 miles, their little ships make 5-hour stops to take soundings, check temperatures, salt content, currents, bottom sediment, and to record their position. It takes a long time to cross the ocean this way, but it is the only means by which the vitally needed information can be obtained.

The submarine of the future will be specialized, not an all-purpose fleet vessel as in the past. The Navy already has a fighter sub, the first step in this direction. Part of the problem of new sub design is acoustical, since operating at greater depths, that is, down to 1,000-plus feet, is an evolution in the direction of utilizing concealment. If they want to remain hidden, even though deep, American subs must cut down on the noise they make.

Principally, this noise stems from the propeller; when shaped for greatest efficiency, it is somewhat noisy. A propeller can be designed that isn't noisy, but it would lose an estimated 5 percent of its efficiency.

NEED IS CHANGED

The design of sub propellers has not been emphasized because up to the present moment, fuel has been a big problem. Since carrying enough fuel, and refueling, have been major considerations, the most efficient propeller was desired, in order to get the most out of the fuel supply.

With atomic fuels, subs can carry a sufficient supply for months, and this is no longer a problem. Despite this, the traditional concept of the most efficient propeller still is adhered to, even though there is no need of it. In consequence, the brand new, atomic-powered Navy sub *Nautilus*, though fast, is noisier than need be. There is no present indication that the Russians have been so short-sighted as to make their new subs unnecessarily noisy.

Surface ships, such as destroyers and destroyer escorts, one of whose principal functions is to attack submarines, also have a noise problem. They can't hear subs well on their underwater gear because of their own commotion. As they operate faster, they make more noise. Marine scientists are trying to help the Navy avoid a situation in which an enemy sub can detect a destroyer long before it is aware of the sub's presence.

SUGGESTIONS OFFERED

What can you do about it?

Two dollars and fifty cents worth of rubber in the right places made autos quiet; this is one approach that might help destroyers. Engines can be wrapped up, too, with sound-isolating material, or they can be remounted higher, nearer the center of gravity. More drastic, steampower could even be substituted for diesel, if necessary.

Adoption of any of these measures undoubtedly means a slight efficiency loss, as in the case of the sub propeller. Therefore, they aren't adopted, because they constitute what is considered a step backward and what consequently is a move against all the traditions and training of marine engineers and architects.

But the fact is, the Navy as a whole, not just its subs, needs to become the silent service.

SECURITY IS PROBLEM

For most objective observers close to the situation agree that the Russian subs look good and that any tricks the United States has, it will undoubtedly need, if it is ever matched against them.

This brings up the question of security and sharing of information, and opinions vary greatly on these. Maybe two out of five marine scientists are irked by security regulations. Most scientists have a tendency to want as free an exchange of information as possible.

One of the aspects that bothers some marine scientists is that they believe America's present lead in nuclear propulsion for ships could gain this country a new and commanding position at sea comparable to that held in the days of the Yankee clipper and the New Bedford whalers. But they insist that secrecy and redtape are preventing technical breakthroughs in this field, even though it holds promise of immediate efficiency, since any ship that can carry long-range fuel supplies is potentially efficient.

But the military facet of the situation involves different factors. Although the United States possesses some good systems of antisubmarine warfare, they can all be circumvented by a clever person, especially if he has some idea of the principle on which they operate. The same holds true for any nation's anitsub systems. You will, therefore, find the more outspoken marine scientists reluctant to come clean entirely with all of America's NATO allies, as has been suggested from time to time.

Quite frankly, they figure America can't tell everything—not quite—even to the British, whose security system has been somewhat leaky in late years. As for the French whose Government is loaded with Communists, most prudent U.S. scientists believe if France knew all about American antisub tactics, the Soviet Union would know also, within a matter of days.

The fact is, however, Congress and the military set the security rules and scientists have nothing to do with decisions about passing classified information—so such opinions among scientists are no more than academic. Very little oceanographic information as such is classified; its application to warfare is mainly the business of the Defense Department laboratories.

## The Oregon Association of Future Farmers of America

EXTENSION OF REMARKS
OF
### HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Monday, March 23, 1959*

Mr. MORSE. Mr. President, in the press of important legislative business, such as we have dealt with already this session, and that with which we have

yet to come to grips, it is easy to overlook some happenings which are not news, but which in the long run are perhaps even more important than some of the measures we scrutinize in this Chamber.

One such important event, which took place on March 18 through March 21 in Corvallis, Oreg., was a convention of young men who were gathered together to hear speakers, present awards, and exchange experiences. A very special group of young men met on the Oregon State campus, for they are members of the Oregon Association of Future Farmers of America.

They are, along with their younger friends and colleagues in the 4–H Clubs, the seed corn of our future America, for they typify the best that rural communities all through our country produce each year. They are our most precious natural resource, for they, and those like them, will be the ones whose production of food and fiber will feed and clothe the America of the future. I salute them in their State convention, and I extend to them every good wish for success.

Mr. President, Bill Kessi, of Scappoose, Oreg., was honored by the last national convention of the FFA, in St. Louis, Mo., by being selected for the top degree of the national organization. Because his story represents a model for the aspirations of his coworkers, I think it fitting that this tribute be paid to him and, through him, to the other 377,922 future farmers in the 8,933 local chapters of his organization.

Therefore, I ask unanimous consent, Mr. President that a news article on his achievements which appeared in the February issue of the Oregon Future Farmers be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILL KESSI RECEIVES AMERICAN FARMER DEGREE

Bill Kessi, Scappoose chapter young farmmer, received the American farmer degree at the last national FFA convention in Kansas City, Mo. Bill was one of the four young farmers in Oregon selected to receive the top degree in the future farmer work.

Bill started his farming program at the age of nine by going into partnership with his father and brother, Bob. They bought two cows and started raising heifer calves. Then they rented barns and pasture to grow the young stock until they had enough cows to justify buying land and building a barn. In 1952, when Bill started high school they put in a grade A dairy. For his first 3 years in vocational agriculture, Bill kept records on his individual projects which had grown to seven registered Jerseys, eight acres of Ladino pasture, three beef animals and 10 acres of cabbage. In his senior year Bill included his one-third share of the 57-acre farm and 40 milking cows in his recordkeeping, and has continued to farm since.

Bill's labor income for the 6 years on his individual projects and one-third farm interest amounts to more than $28,000, most of which he has put back into the farm, equipment, and livestock.

In addition to maintaining a high scholarship record, he was class valedictorian. Bill's school activities won him the coveted outstanding boy award for his senior class. His activities included: Freshman representative to the student council, catcher of varsity baseball team for 4 years, vice president of the international League, treasurer of the honor society, president of his church youth group, a lead in the senior class play, charter member of the Kay Club, and catcher for the American Legion and Connie Mack baseball teams.

In his 2 years of college he received the Lewis and Clark chemistry award, was a member of the Lewis and Clark National Science Club, and was catcher on the Lewis and Clark varsity baseball team, and at the same time living at home and doing his part of the work on the dairy.

Bill was secretary and then president of his Future Farmer chapter and was a leader in many chapter projects during his school years. He won the Northwest FFA District Better Farming contest and was a finalist for the State Star Farmer award. Bill participated in State and county fairs as an exhibitor and contestant in livestock judging contests. He was a member of a third place team in the State Dairy Judging contest. In addition, he received many individual honors in judging. Bill represented the Scappoose chapter in district speaking contests, and was chairman of their parliamentary procedure team for 2 years.

A stanch believer in Future Farmer activities, Bill tries to show through his example what other boys may accomplish through the Future Farmers of America organization.

Mr. MORSE. Mr. President, I am also especially proud to inform the Senate that the national president of the Future Farmers of America, Adin Hester, hails from Canby, Oreg. He will participate in the Oregon Association convention this year as an inspiration to the delegates and members.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, a list of the officers of the Oregon Association of Future Farmers.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

STATE EXECUTIVE COMMITTEE

STATE OFFICERS

President, Edward Manary, Route 1, Box 308, Sheridan; vice president, Jerry Justice, Box 397, Enterprise; secretary, Roger Schoenborn, Route 1, Box 338, Molalla; treasurer, Roger Rothrock, Route 1, Box 57, Adams; reporter, Don Franzen, Route 5, Box 136, Salem; sentinel, LeRoy Lim, Route 2, Box 101, Canby.

DISTRICT PRESIDENTS

Northwest district, Donald Bischof, Route 2, Box 43 A, Sherwood; south central district, James Klukkert, Star Route, Redmond; Rogue-Umpqua district, Allen Barnes, 1576 Beall Lane, Medford; Snake River district, Paul Seaquist, Route 2, Box 92, Vale; Upper Willamette district, Eugene Maahs, Route 1, Harrisburg.

DISTRICT BOARD OF DIRECTORS

Blue Mountain, Hadley Akins, McEwen; Capitol, Alton May, Gervais; Columbia River, Ray Reif, Canby; Eastern Oregon, Norman Koopman, La Grande; Lower Willamette, Cliff Wirfs, Yamhill; Northwest, Bill Sawyer, St. Helens; Rogue-Umpqua, Ed Griggs, Central Point; Snake River, Charles Witty, Adrian; South Central, Bob Sawyer, Prineville; Upper Willamette, Roland Hendricks, Halsey; advisor, Ralph L. Morgan, Salem.

## Statement of Rev. Robert J. McEwen, S.J., on Fair Trade Legislation

EXTENSION OF REMARKS

OF

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. McCORMACK. Mr. Speaker, under permision to extend my remarks I include a statement made by Reverend (Father) Robert J. McEwen, S.J., chairman, Department of Economics, Boston College, Chestnut Hill, Mass., and chairman, advisory consumer council to Hon. Edward J. McCormack, Jr., attorney general of Massachusetts, before the House Committee on Interstate and Foreign Commerce on Fair Trade Legislation, March 23, 1959.

TESTIMONY OF REV. ROBERT J. MCEWEN, S.J., CHAIRMAN, DEPARTMENT OF ECONOMICS, BOSTON COLLEGE, CHESTNUT HILL, MASS., BEFORE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, IN HEARINGS ON FAIR TRADE LEGISLATION

Mr. Chairman, my name is Robert J. McEwen. I am an associate professor of economics and chairman of the department in the university at Boston College. In addition, I am the chairman of the advisory consumer council to the attorney general of Massachusetts, the Honorable Edward J. McCormack, Jr. For the record, the membership of this advisory consumer council is as follows: Mr. John Cort, Newspaper Guild; Dr. Virginia Galbraith, Mount. Holyoke College; Prof. Phillip Gamble, University of Massachusetts; Prof. Joseph Golemme, Northeastern University; Attorney John Graham, Northeastern University; Prof. James R. McPherson, Boston College; Mrs. Martha O'Neil, Teachers Federation; Prof. Arnold M. Soloway, Harvard University; Prof. Colston Warne, Amherst College. I may say that our position on the question of fair trade is a unanimous one.

I myself have specialized in teaching courses in social responsibilities of business, in the socioeconomic teaching of the churches, and in business ethics. On the subject of fair trade legislation, I have been doing research and writing for the last 9 years.

My testimony will bear witness to the fact that philosophers and economists in the Judaeo-Christian tradition are vitally interested in the practical problems of the business civilization and in governmental interventions with business activity.

Political and economic policies and actions, particularly those dealing with the rights and wrongs of business conduct, are fundamentally moral and ethical decisions. If right principles of justice and honest objectives guide us to the selection of correct and just practical policies, the moral tone of our society will remain healthy. On the other hand, a dangerous cynicism will pervade the minds and souls of the people if they are told that practical decisions of government are based solely or mainly on narrow or selfish pressures.

The specific focus of my testimony will be on the aspect of desirable public policy for governmental action in this area of price regulation. My viewpoint will blend economic, social and ethical considerations.

THE KILLING OF THE PRICE SYSTEM

We used to think that in any discussion of American business problems it could usually be assumed that all participants would agree on the desirability of a functioning price system. It is most discouraging, therefore, to find that leading economists and governmental officials have been forced in recent days to warn U.S. business that a return to wage and price controls by the Federal Government was probably necessary as a solution to the problem of administered prices and inflation. Such despair in the possibilities of a pricing system and a market system, manifested by this call for price-fixing laws and wage and price controls, makes one wonder about the traditional conservative opposition to all forms of socialism. By and large, it is the traditionally conservative groups that are now clamoring for these price-fixing laws.

I have no hesitation in stating bluntly that those businessmen who are thus advocating a uniform price for every product in every store where it is sold, and who are thus cooperating in stifling the price system and the market system as the regulator of our economy—such men are leading us into the socialist state economy by the back door.

SUMMARY CONCLUSIONS

At this point, I wish to summarize for the committee the conclusions of my study of fair trade laws in the following five points:

1. There is no sufficient justification for lending public legal support through price-fixing laws to the objective of protecting trademarks or channels of distribution for the private manufacturer. While these may be legitimate private goals, there is no evidence that they constitute such a valid object of public concern that prices must be fixed by law.

2. The consumer protection argument cannot be taken seriously. Consumer organizations deny such a need. The sponsors of fair trade have not been recognized as champions of the consumer. No independent evidence of the need for consumer protection of this nature has been found. The statistical evidence advanced by fair trade advocates was found to be inadequate, false or misleading. Errors of statistical procedure have vitiated every attempt to produce statistical proof of the necessity for Federal fair trade laws.

3. There is merit to the argument that small business must be given some form of special assistance. Fair trade laws are not the proper instrumentality to give this aid to small business. They probably do the small man more harm than is realized, particularly because they raise the general cost of doing business and invite chainstore competition with specialty shops.

4. The concept of competition in business that is found to be implicit in the fair-trade position is distorted and deficient. It is inadequate to fulfill the function of competition as conceived by Christian price-justice doctrine. It is deficient because (a) it excludes seller competition completely from the retail level; and (b) it really makes possible the exclusion of price competition even at the manufacturer level in many industries. The fair trade position implies the desirability merely of interproduct competition. Both Christian price justice and the United States antitrust laws imply interseller competition. Only the latter is able to supply a theory of the function of the retailer that makes it clear that distributors perform a real economic service to society worthy of a justified financial reward.

5. The inadequacies of legal measures which attempt the direct control of prices and the undesirability of adding public law sanction to privately fixed prices supply further motives for concluding that fair trade laws are not in harmony with the principles of price justice.

Before I go any further let me emphasize that the first principle I teach my students with regard to retail business is the following proposition: By and large, the only real protection for the consumer is his own knowledge and trust in the skill and integrity of the retailer from whom he makes a purchase. I realize that there do exist certain unethical practices by a small minority of retailers. I realize, too that frustration at the unfairness of some of these tactics has been partially responsible for the demand for governmental protection such as is thought to be given by fair trade laws. For that reason, I have some sympathy with the small businessman and his emotional demand for price-fixing laws.

THE CONSUMER PROTECTION PURPOSE

An evaluation of the consumer protection purposes of the fair trade laws is a difficult and complicated task. The difficulty comes not so much from the problem of deciding the economic effects of fair trade on the consumer, but from a host of noneconomic considerations.

First, these are laws allegedly designed to protect consumers and the public interest. But they are violently opposed by the recognized consumer organizations and the labor organizations and by the departments of the Federal Government that are specifically charged with safeguarding the consumer interest and that of the public in general.

Secondly, the objects from which the consumer is to be protected seem to vary with the case in hand—and in general seem to embrace the whole world with which the consumer comes into contact. He is to be protected from himself, from his unscrupulous retailer, from the manufacturer who deteriorates quality, from a dealer who does not give service (which the consumer may not want but apparently should have), from high prices, from low prices, etc. Furthermore, in the case of the liquor fair trade laws, the consumer is to be protected from the moral degradation involved in the overindulgence which would be stimulated by lower prices.

Finally, most of the so-called statistical evidence that this writer found in the literature of the proponents of fair trade is to be viewed with extreme skepticism, particularly evidence purporting to show that polls of consumers reveal support for fair trade.

HIGH PRICES

The argument on consumer protection from high prices through fair-trade laws is also marked by doubtful statistical data. One NARD representative has made the assertion that: "To mean anything, comparative price figures must present averages not exceptions". Statistically, however, that proposition is open to question. For some purposes averages may be the best comparative measure. But they are incomplete without an added measure of dispersion. For other purposes, the range of price quotations may be the really significant item. For the protection of the consumer who is willing to look around and compare prices in different stores, the possibility, or mere availability of a low price is extremely important. This is the precise difference between a fair-trade and a non-fair-trade area. Even if the average price in a non-fair-trade area should be higher, and the range or spread of prices greater, the consumer who was interested in getting the most for her money would be better off because she at least had a chance of finding the lowest price. In a fair-trade area, even with a lower average price, the consumer would be deprived of this advantage.

On the face of it, therefore, the argument that fair trade prevents exorbitant prices from being charged the consumer is a little difficult to accept in view of the fact that fair-trade laws set minimum and not maximum prices. The proper way to prevent high prices, as is evident from war-time price controls, is to set maximum limits. This is now permitted in England and Canada, and this writer would suggest that the same permission be given manufacturers in the United States—if any power over price is to be given them.

QUALITY

The consumer is also supposed to be protected by fair-trade laws with regard to the quality of products. A congressional friend of fair trade has put the matter thus:

"The consumer has confidence in brand merchandise, he has the desire to purchase brand merchandise, and if he can have confidence in a uniform price, he will trade in many instances with the small businessman.

"If he desires to buy unbranded merchandise, he also has this field to explore but he does so on his own judgment and at his own risk."

The implications of this last statement for the retailing profession are both manifold and dangerous. Either, (1) the retailer also is incapable of judging the intrinsic merits of unbranded goods, or (2) if he is capable of so doing, he is unwilling to act as the consumer's guide in the selection of such merchandise. Otherwise, why must the consumer act on his own judgment and at his own risk?

If the retailer is an expert in his field, the customer should be able to depend upon that expert knowledge to make intelligent purchases of both branded and unbranded goods—but it should be especially valuable in the case of the latter.

A curiously twisted argument is advanced by fair-trade proponents. They say that products are very complex, sales people are unskilled in technical details of product qualities, and consumers are completely ignorant—therefore, brand reputation is important to establish consumer confidence either in the manufacturer or in the retailer, or both. Therefore, the price of the brand must be set and fixed. This is a truly remarkable nonsequitur. All the argument can legitimately prove is that consumers' ignorance leads them to try to supply for their lack of knowledge by trust in the knowledge and integrity of the seller or maker. Prices are not directly involved at all in this line of reasoning.

But the fair-trade proponents are aware of this and they try to show that the consumer really has some choice about price. He can always buy the product of some other manufacturer—who, also, presumably, will be setting his own price. And in a large sense, all articles are in competition with one another, diamonds compete with Cadillacs. This is somehow supposed to prove that in a system such as ours the consumer is the final arbiter in the market.

It is necessary to emphasize that what this type of argument involves is simply a denial that the consumer market should have a say in determining the prices of individual brands. Price is not to be one of the considerations subject to consumer voting in the market.

There is an element of subjectivism and relativism in these arguments about brand reputation that is quite alarming, especially when it is used as a basis for national legislation. In view of money and time spent by a manufacturer in establishing the consumer acceptance for his brand, he has provided the consumer with some standard measure (imagined or real) which enables the consumer to make his choices with greater confidence. It apparently matters little whether this confidence is well founded or not. As long as the manufacturer has spent a lot of money creating it, it must be protected.

This attitude, too, amounts to a denial of the possibility of any retailer acting as the

eyes and ears of consumers in helping them make reasonable choices of competing commodities and prices. Their function as reputable advisers to their customers is abolished and they are reduced to vending machines, puppets on the strings of the manufacturers. Above all, the customer must be preserved in that comfortable feeling of getting full value for his money. This is really the economics of illusion. What possible objective meaning can the maximization of welfare have under such circumstances?

Furthermore, even if some of these contentions on the subject of loss leaders and consumer knowledge are true, are such irrational reactions justification for legal action to perpetuate them? Especially when, in large measure, they are due to the advertising by the makers?

The slur to consumer knowledge and intelligence that is implicit in the loss-leader argument was recognized by Mr. McGuire during the House debate. One of the very few speakers to bring the point out into the open, he said:

"It can be argued, I suppose, that Mrs. Smith may be smart enough and determined enough to buy only the customer-bait items. If she does, she will get a bargain; but Mrs. Jones and Mrs. Brown and all the other customers will surely pay for Mrs. Smith's bargains. If all customers were smart enough and determined enough to see through the price-juggling tricks of retailers who prefer to compete unfairly, you can be sure that loss leaders would no longer be profitable and would, therefore, immediately disappear from the market place."

If that is an accurate statement of the problem, and this writer agrees that it is, there are two avenues of solution open. One is the way of intelligence and freedom—let Mrs. Smith obtain the reward for being a smart shopper. Meanwhile, use every means to increase the knowledge and sharpness of Mrs. Jones and Mrs. Brown so that they will become like Mrs. Smith. Thus, the natural forces of the market, namely, intelligent buyers and sellers, would soon tell the merchant whether loss leaders were profitable and desirable or not.

The other way, which is the solution reached by fair traders by some miracle of twisted logic, is the way of ignorance and compulsion. Mrs. Jones and Mrs. Brown are to be left alone in their ignorance, simplicity, and laziness while Mrs. Smith is to be prevented from receiving a reward for diligent shopping, because storekeepers must offer to each and all identical prices. By all standards of justice, this is a further deterioration of the perfection of the natural forces operating to make a correct market.

Such tremendous distortions introduced into the economic system as a consequence of the fair trade laws completely overshadow the private advantage of some individual manufacturers which may be served by the system. Therefore, on balance, the consideration of the trade-mark protection and the consumer protection arguments must conclude that no moral or economic justification for Federal fair trade price fixing can be found in those objectives.

Several further points have been raised in my mind as a result of listening to these hearings. The first relates to the financial burden of this law. The bill will make it an unfair practice under the Federal Trade Commission Act to deviate from the price arbitrarily set for the retailer in sales to consumers. The Federal Trade Commission therefore is obliged to prosecute violations of manufacturer-set prices. Is it fair to ask to general consuming public, which will have to bear the burden of these higher prices for branded goods, also to pay higher taxes for the prosecuting costs of the Federal Trade Commission? Is it right to shift these enforcement costs from the private companies to the general taxpayer of the United States?

I think not. Therefore, if this law is passed, I suggest that a substantial franchise tax be levied on all companies availing themselves of the Federal privilege granted by the Government through this bill. Before any company could fix prices, it would have to pay this yearly franchise tax.

Something like this will surely be necessary if Congress in going to be asked to add millions of dollars annually to the budget of the Federal Trade Commission to take care of prosecution of fair-trade cases. One company alone used to spend about a million dollars annually to bring such fair-trade suits. Will Congress want to spend an extra million dollars annually out of the taxpayers' money to help this one company police its fixed prices? And how many additional millions of dollars will be required for all the other companies in the United States?

This point, I think, has not been sufficiently discussed in this hearing. Under State fair-trade laws, the private companies bear the enforcement cost. Under Federal fair trade, the taxpayer will have to pay it. Secondly, I have a great deal of sympathy for the objections of manufacturers who wish to prevent certain practices by retailers which are thought to be destructive of brand reputation. This has led to the Boykin bill. I would suggest a modification of that bill which will, I think, accomplish the desired result without directly giving price-fixing power to private manufacturers. Give the manufacturer permission to enjoin or forbid any seller, who has obtained merchandise without the manufaoturer's knowledge and consent, from any further retailing of the branded article—provided only that the manufacturer stand ready to buy back the goods at the seller's cost.

This has the virtue of avoiding direct interference with the price system. It is this feature of fair trade which makes it so abhorrent to any trained economist or businessman who appreciate the central and sensitive role the price system must play in an economy which is satisfying the needs of the people at the minimum level of socially necessary costs.

## Great Achievements in Agriculture

EXTENSION OF REMARKS

OF

### HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following notes used in an address by Under Secretary of Agriculture True D. Morse before the awards banquet of the Michigan Junior Chamber of Commerce recognizing winners of the four outstanding young farmers' contest in Michigan. I believe Mr. Morse's timely remarks regarding our farm situation today will be of considerable interest to all Members of the House.

GREAT ACHIEVEMENTS IN AGRICULTURE

During my first years in the agricultural service business, I had the privilege of being a member of the junior chamber of commerce. It was a rich experience. The young men with whom I was associated as jaycees have moved up into important positions of responsibility in businesses, in the professions, and in continuing community and citizenship activities. I recommend that young men become jaycees when they have the opportunity.

It is especially appropriate that this achievement award banquet be held in the hometown of a young man who is making an outstanding record. In 1952, this district elected ALVIN M. BENTLEY, then only 34 years old, to the Congress of the United States. He had already distinguished himself with the diplomatic corps and in helping alert the United States to the menace of communism. This is the seventh session of Congress in which I have been able to observe at first hand his good work in Washington. AL BENTLEY has the moral fiber; the intellectual capacity; and other abilities needed in government.

We are living in a fast moving atomic and space age. It is fascinating. It is challenging.

In no segment of the economy are the wheels of progress turning faster than in agriculture. There has been more farm progress in the past 50 years than in all prior recorded history. This terrific surge forward will continue—as the technological revolution rolls ahead.

It has brought problems along with the great benefits. For example, how to adjust to these rapid changes—surpluses are most conspicuous. Those who resist progress or fail to adjust to it become part of the problems. It has always been thus.

There are two broad groups of farmers and farm families. These will become even more distinctly different in the future.

Now 2 million farms produce as much as we consume—and a surplus. These are the commercial farms. They are predominantly family farms. They have grown much larger, and will become even larger.

These farms are less than one-half of all farms in number—yet they produce about 90 percent of all farm products marketed. We consume about 90 percent of all the farm products this Nation produces. About 10 percent is exported.

These commercial farms—with the larger incomes—produce most of the products for which the Government spends billions of dollars for price supports.

Farms grow larger by farmers buying neighboring farms and additional land. Many commercial family farms now include the land which was formerly two farms or several farms. In major grain and cotton growing areas small farmers have charged that governmental price support money has enabled the larger farmers to buy up the smaller farms.

Ninety percent of the expenditures for price support on wheat result from about half of the farms growing wheat—the largest ones.

Seventy-five percent of expenditures for cotton price support result from production on about one-fourth of the cotton farms—the largest ones.

For other supported crops, a similarly disproportionate share of the expenditure goes to the large producers.

The tremendous progress of the 2 million larger commercial farms and ranches is apparent as you travel through the more prosperous farming areas. It shows in statistics and financial statements.

Since these 2 million farms produce 90 percent of the farm products marketed they have accounted for most of the new all-time high records set by all farms.

The value of property owned by farmers is record high—now about $200 billion.

The net value of farmers' property is record high—$177 billion after deducting bills owed and other debts.

Gross farm income was record high in 1958—$37.6 billion.

Income from all sources per person on farms for 1958 was the highest on record. It is higher as compared with incomes of nonfarm people than in 1952.

Farm land values are record high. Farm ownership is record high. Farm foreclosures are extremely rare—near the all-time record low. Farms are better equipped and are more mechanized than ever before. Crop yields per acre keep moving up to set new high records.

Total crop output last year set a new all-time high, with new records for 14 important crops. Output per sow, per cow, and per hen keeps moving up to new highs. Income from dairying continued near-record high last year.

The level of living on farms is the highest in history. This is measured by such factors as the percentage of farms with electricity, telephones, water systems, central heating, electrical appliances, and automobiles, and the purchasing power of the average value of farm products sold or traded.

There are 2.7 million farms that produce only about 10 percent of the products marketed. That is about the proportion of our farm output that is exported—sold abroad.

These are small-scale, part-time, and residential farms. Incomes are low. There are too few acres, soils are often poor, frequently one-half of even the small acreages are in timber or brush and in many areas there are other farming handicaps—like hills, mountains, and rocks.

Many of these poorer farm families produce no price-supported crops. Those that do produce such crops market so little that governmental price-support programs can never solve their income problems.

Each of these 2.7 million farms has on it a farm family. They represent millions of fine rural people—and it is people and their opportunities that are our major concern. People are America's most vital resource.

Since most of the billions of dollars of Government price supports "are spent on the production of a relatively few large producers" (President's message to Congress, 1959; see also message of 1954), it was important to develop a program that would bring greater opportunities to the farm families with the lowest incomes. The resulting rural development program that got underway in 1955 is now bringing more income to farm families on small farms—those who need help most.

Wholesome country living on the farm is being combined with other employment or sources of income. Areas are developing mixed incomes or diversified incomes, and becoming more prosperous.

Michigan has been helping give strong leadership to the new rural development approach. In this great State you are showing how local, State, and Federal leadership can work together in more complete resource development to get higher incomes for rural families.

This is in keeping with the activities of the outstanding young farmers we honor here tonight. They have made significant contributions in community, State, and national affairs, in addition to having made great progress in their agricultural careers and with good farm practices.

A new rural America is emerging rapidly. Areas adapted to commercial farming are becoming more efficient and productive. The small and residential farms have their place, too. It is good to have families living on the land, if there are adequate employment and sources of income. Total rural or resource development will bring great new achievements for the future. The vigorous intelligent leadership of young farmers and organizations like the Junior Chamber of Commerce must understand the progress underway and help push it ahead to build a stronger America.

Prosperity of Michigan farmers does not depend on price supports for the basic crops. Only about 13 percent of their cash farm incomes is from these six crops.

In fact, taken as a whole, Michigan farmers have probably been hurt much more than helped by such price supports. The reasons are simple. Farmers of this State sell meat, milk, eggs, fruits, and vegetables—most of them buy feed.

They pay taxes—and it takes taxes to maintain the present program, "which is excessively expensive." President Eisenhower in his message to Congress further said, "By the end of this fiscal year it is estimated that there will be in Government hands, surplus farm products worth about $9 billion.

"And by July 1, 1959, Government expenditures for storage, interest, and handling of its agricultural inventory will reach a rate of $1 billion a year.

"We need new legislation. The situation calls for prompt and forthright action."

The outlook for farming is good. A major reason is the favorable economic outlook. The strong demand and expanding markets for farm products will continue.

Dr. Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, says, "The economic outlook, to the extent that we can see very far ahead in these matters, is good. We have had a broad-based and generally healthy recovery and it is entirely reasonable to expect it to continue through the year and into 1960. Indeed, there are good grounds for believing that 1960 will be a year of considerably higher production and employment than 1959.

"Whether this proves to be the case or not will depend in the main on how steady our recovery is in 1959 and how successful we are in avoiding increases in costs and prices. The prospect is rather good at the moment, but we must have the right combination of governmental and private policies to obtain the best results."

The Congress of the United States has two major problems before it which will have major impact on the future of our economy.

I have already referred to the urgent need to change farm price support laws. Will there be prompt and forthright action?

The other problem to which I refer is that of balancing the Federal budget. The Constitution places upon Congress the responsibility for determining the scope and amount of Federal spending. As the President has said, "We must avoid any contribution to inflationary processes which could disrupt sound growth in our economy."

The Illinois College of Agriculture points out that inflation "is a cruel tax because it weighs heaviest upon those least able to pay—widows, orphans, and older people who have worked hard to save for their later years.

"It is a dangerous tax because it has toppled democratic governments, bred dictators, and led to wars and destruction.

"Inflation hurts almost everyone. It cuts the value of life insurance policies, savings deposits, bonds and social security, and other retirement credits."

Bringing farm program expenditures under control is important to achieving balanced Federal budgets.

Your Government—our Government in Washington—is in the process of deciding whether as a nation we will live within our expected $77 billions of Federal income. It is the way to greater progress, more jobs, more farm progress, and a better life for all our people.

I have emphasized progress and change, but there are certain basic and enduring values that do not change.

We tend to forget them under the pressures and rush of this atomic and space age. Yet they are basic to our Christian and American way of life.

They have given us our great America. They have led us into the spiritual, cultural, and economic growth that has given us the abundant life which we enjoy.

I am referring to the ideals we live by—the faith by which men and women of character live. They were present in the minds and hearts of our forefathers, they exist in our form of government, and we must be ever vigilant to protect and hold fast to them.

Our honored and cherished American system of free enterprise is founded on spiritual values—not material values.

It assures us of an ever new and expanding, limitless dimension for our abilities and for the future of agriculture and of all of America.

Furthermore, we here in this country, as President Theodore Roosevelt said a half century ago, "hold in our hands the hope of the world, the fate of the coming years—and shame and disgrace will be ours if in our eyes the light of high resolve is dimmed, if we trail in the dust the golden hopes of men."

---

## The Crisis in Outdoor Recreation

EXTENSION OF REMARKS

OF

## HON. CLEMENT W. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. CLEMENT W. MILLER. Mr. Speaker, it is particularly instructive on the day we consider the Interior budget to include this commentary by a leading expert in recreation showing how we are lagging in providing for our needs.

THE CRISIS IN OUTDOOR RECREATION

(By Marion Clawson)

If you are one of the growing majority of Americans who go outdoors for recreation on annual vacations and on weekends, chances are that your patience has been tried by all those other people who like the same things you do. Having to reserve cabins that you used to just drive to on the spur of the moment; pulling into crowded camp sites where your neighbors' smoke gets into your eyes, their radios into your ears, and their children almost into your laps; perhaps actually being turned away by a full camp sign; working reaches of a stream where there seem to be more fishermen than fish; lining up to wait your turn for communing with nature at a once-quiet scenic spot; these are only some of an all too familiar set of frustrations.

The chances are, too, that you have met with more of these exasperating circumstances in 1958 than in 1957, more in 1957 than in 1956, and so on. Unless your experience has been very different from the average, this will not have been just because your temper has grown shorter. Recreational use of all kinds of public lands has more than trebled since the end of the war, and is still rising. Despite strenuous efforts, new recreation facilities are not being added nearly so fast.

None of this, of course, is exactly news to the general public, much less to the people who use recreation areas or are responsible for providing and administering them. The growth of outdoor recreation and the attendant squeeze on recreation facilities is just about the most open secret of our time. What is happening is clear enough. The question is: What does it mean? Are we suffering a natural, healthy spell of growing

pains, or are we working up to a crisis in outdoor recreation?

To me, the evidence suggests that we are approaching a grade-A crisis, unprecedented in both size and character. In saying this, I am fully aware of the earnest and well-directed efforts that are being made to provide more and better facilities for outdoor recreation. At least two of these—Mission 66 of the National Park Service, and Operation Outdoors of the Forest Service—are on a considerable scale. In addition, there are several other Federal programs; numerous State, county, and city programs, many of which are well conceived and well led; and some very effective work by private groups like the American Forestry Association and the National Recreation Association, and by a handful of large private landholders, chiefly timber companies. All these activities add up to a very large total effort. But it is not nearly large enough.

Each year the gap between the active demand and the opportunities for outdoor recreation grows wider, and the gap between potential demand and opportunity wider still. The result is not merely a larger problem, but a quite different problem. As Luther Gulick has recently pointed out, changes in scale can be large enough to change the whole nature of problems or even to create problems where none existed before. He used an example from engineering of the critical speed at which a plane must cease trundling along on its wheels and become airborne. From all signs, outdoor recreation in the United States has reached the take-off point. What up until now has been largely a matter of inconvenience to an increasing number of individuals is turning into a serious national problem that concerns not only the use of many million acres of land but also a large segment of our whole national pattern of life. It is no longer enough just to do more of the same kind of thing we have done in the past.

The situation calls for a fresh look, from a broad viewpoint. That is what gives so much significance to the recent creation of the National Outdoor Recreation Resources Review Commission. Establishment of this distinguished group, under the chairmanship of Laurance Rockefeller, would be a notable action under any circumstances. Coming last fall, by an act of Congress signed by the President, it is an encouraging sign of an awakening nationwide concern, and of a comprehensive new approach to the recreation problem. The commission is directed to survey present needs and opportunities, to look ahead to the prospects for the years 1976 and 2000, and to outline policies and programs for meeting current and future needs. Its report, expected in 1961, could be a landmark.

One of the first great contributions that the Commission can make is to chart the present situation more accurately than is now possible. Having recently tried, with the aid of a number of governmental and private authorities on various phases of recreation, to bring together the statistics that are available, I can speak of this at first hand and with some feeling. The result of our effort, recently published by Resources for the Future as "Statistics on Outdoor Recreation," though it does present a more complete picture than has heretofore been assembled, is nearly as useful for what it doesn't say. The gaps and inconsistencies are rude reminders of the work still to be done before we can really see the current position and try to understand how and why we got there, and where the main trends are leading.

But I believe that enough of the facts are already known to give at least an approximation of the situation the Commission will be grappling with, and perhaps a preview of some of the forces and issues involved. The remainder of this article will seek to establish some rough measures of the size of the nation's total problem of outdoor recreation. In a succeeding article I hope to lay out for examination of a few of the specific problems and some of the ways in which they might be resolved.

In our quick survey of the situation and the outlook, let us first remind ourselves of the tremendous importance of outdoor recreation, and how deeply it is imbedded in the American way of life. We are not dealing here with any passing popular fad or with the demands of a fortunate minority, but with a set of continuing forces that will find expression in one way or another. If their direct course is blocked, we may be sure they will find other outlets, with perhaps unexpected and not always pleasant results.

I am not thinking primarily of the strictly commercial importance of outdoor recreation, although that, too, is already great and constantly growing. Here, as with so many aspects of our subject, there is a sad lack of realiable statistics. But there have been some responsible estimates of consumers' expenditures for all recreation. The Commerce Department's estimate for 1956 is slightly more than $13 billion. A Fortune magazine estimate for the year 1953 was $18 billion; if extended to 1956 the figure probably would be around $20 billion. Apparently between 5 and 8 percent of all family spending is for recreation. How much of this total is for outdoor recreation is anybody's guess, but such breakdowns as are available for large items like sports equipment and travel suggest a level of at least $4 to $5 billion. In any case, it is perfectly apparent that in many communities recreation has become a leading industry, sometimes the leading one, and that the rise of winter sports is making this more and more of a year-round situation.

The main point goes much deeper. We Americans don't just want outdoor recreation; we need it. Moving from farms to cities and suburbs has not meant turning our backs on land and water and open sky. As a people, we don't feel right unless we can get back from time to time to the out-of-doors. If we should ever lose this urge, there will have been a profound change in the national character. Meanwhile, it is abundantly clear—even if not subject to statistical proof—that outdoor recreation is not just one alternative use of family income and leisure time that rises and falls automatically with changing costs and fashions. Meeting the demand for such recreation is a national problem of the first rank.

For all these reasons, social and economic, recreation is becoming one of the chief uses of land, along with farming, forestry, and grazing.

To get some idea of the dimensions of the coming crisis in recreation, let us pick as a definite date the year 2000 which, remote as it may sound, is only 41 years away. Anyone can see that the problem will be much bigger than it is today, if only because there will be about twice as many people. In addition, an even larger proportion of us will be city dwellers who will have to go looking for our outdoor recreation rather than find much of it at home. It is almost certain, too, that we will have more money to spend and more leisure time away from the job. Nevertheless, it is hard to grasp how much bigger the demand for outdoor recreation is likely to be. At first glance, the best figures that can be worked out seem too big to be believed.

I find it hard to grasp, too. So that you can see for yourself, let us go through the essential steps in the best scientific tradition without, however, getting bogged down in too many technicalities.

Any professional economist who wants to look forward nearly always starts out by looking backward. So let us begin by glancing at the record of the past to see what the main trends are and where they are likely to lead.

Consideration will be limited to public land use for recreation purposes, partly because better records are available for such lands, and partly because they are today much more extensively used than private lands for recreational activities other than hunting and fishing. Private lands, however, are a potential recreational asset of great value, and their intelligent use can do much to meet future needs. For example, a recent industry survey showed that some form of recreational activity is carried on on 42,737,567 privately owned woodland acres, with some of their programs being outstanding.

As an example of public land use, let us see what has happened in the national parks. (Chief reason for choosing the parks is that they were started first and are devoted wholly to recreation of one kind or another; comparable statistics run back over a longer span. In recent years the national forests have been just as important in the outdoor recreation picture; their story is equally interesting and, in its main outlines, quite similar.) Until 1910, one of the great problems was to make the general public more familiar with the parks, and to encourage them to use the parks then in existence. In no year up to that time had there been a total of as many as 100,000 visits to the whole system.

From 1910 until 1918, there was a more rapid climb in the number of visits, but still nothing sensational; the total at the end of the First World War was under 50,000. But from then on the brakes were off—a million visits in 1920; 2 million in 1925; 3 million in 1928; and so on up to last year's figure of about 60 million visits. Moreover, the increases in use come faster and faster. In the 1920's, the increase from year to year was from 100,000 to 300,000; in the 1930's, from 500,000 to 1 million; and in the late 1940's and 1950's, from 1 to 2 million. The more people come to the parks, the greater the increase, it seems.

It is clear in retrospect that the sharp changes in rate were closely connected with the rise of the family automobile as as American institution. Before 1910, there weren't many cars on the roads, and not many roads fit for them to be on. People came to the parks by train and were driven to and from their hotels in horse-drawn stages. Trips around the parks during their stay were also by stage, or on horseback. In any case, the adventurous few who might have reached the parks by car would have had to leave their vehicles at the gates. Automobiles weren't allowed inside, for the good reason that the roads were crooked and narrow and the horses scary. By the beginning of the first war, when it was clear that the horseless carriage was here to stay, the regulations against its entering the parks were rapidly cleared away, and the tempo and pattern of public use of the parks began to change.

One small but troublesome fly in the ointment is the suspicion that never, since the horse-and-buggy days have the statistics on park attendance been quite dependable. In the days when a train journey was required, plus some rather complicated arrangements after reaching a park, it was a safe bet that in the great majority of cases a recorded visit meant that one person had been at one park during a year. It was also probable that he had made considerably more than an overnight stay. In recent years, thanks to the mobility that the family car has bestowed upon the vacationing family, we are not nearly so sure what a visit means, whether it be to a national park, a national forest, or some other kind of public recreation land.

Nowadays a visit can equally well represent any one of a variety of circumstances: A long journey to spend several days at

some one place, as in the told times; a half-day of sightseeing as an incidental part of a trip to see distant friends or relatives; one of a number of stops of varying length as part of a tour of half a dozen or so parks, monuments, or forests; one of several trips made each year; and so forth. One of the first things that must be done in dealing with the coming problem of outdoor recreation is to collect better statistics on attendance, and gain a better understanding of what they mean. We need to know much more than we do today about who uses the outdoor recreation lands, where they come from, what they come for, and how long they stay. It already is clear, however, that there are a great many more recorded annual visits than visitors. My own guess is that the combined total of nearly 120 million visits to national forests and national parks last year represents no more than 12 to 15 million people, and the 200 million visits to State parks between 15 and 25 million.

Whatever the relationship may be, there is no reason to think that it has changed materially over recent years. Therefore, although we cannot measure the intensity of use of recreation lands we can, through the increase in the number of visits, approximate the increase in use that has been occurring.

The charts on page 30 give the year-to-years story of increasing use of the national park system, and of two other important kinds of public recreation lands—the national forests and State parks. The climb in attendance has been amazingly persistent and consistent. Although attendance fell off sharply during the Second World War when gasoline, tires, new cars, and many other things were scarce, the war was no sooner over than the upward thrust began again. For both the national parks and the national forests, the long-range trend took up almost exactly where it had left off. The picture is not so clear cut for the State parks, because prewar figures aren't detailed or accurate, but obviously something of the same sort happened there, too. In the postwar years, the rate of increase in attendance has been 10 percent a year in the national forests and State parks, and 8 percent in the national park system.

Gains in the number of annual visits to other recreation areas can be shown most quickly in a small but instructive table:

| Area | Number of visits in 1958 or last year of record | Percentage rate of annual gain during postwar years |
|---|---|---|
| Federal wildlife refuges | 8.5 million | 12 |
| TVA reservoirs | 40 million (1956). | 15 |
| Corps of Engineers reservoirs. | 71 million (1956). | 28 |
| Municipal and county parks. | Over 1,000 million. | 4 |

The rates vary, but the direction is every where the same—up.

What can these historical trend figures tell us about the future, specifically the year 2000? Literally and directly applied, not much. Simple extension of trend lines, which under some circumstances is sound economic procedure, in this instance give answers that are nonsensical. If, for instance, in the chart that shows visits to national forests from 1924 to 1956, the recent slant of the trend line were extended to the year 2000, an extra-large page would have to be used, for the line would finally come to roost at a point above the present top of the printed page. There are, of course, space-saving ways of graphing rises of such steepness. One of them is used just as an exercise: A semilogarithmic chart in which the scale becomes progressively smaller as the numbers grow larger, so that the interval between 10 and 100, say, is the same as between 100 and 1,000. This kind of chart, which is used mainly for showing rates of increase, tells us where a yearly 10 percent increase in the number of visits to the national forests would lead by the year 2000. The answer would be 3.4 billion. It is all very simple: A 10 percent annual increase means a doubling every 7 years. Just start with 60 million in 1958, and keep going. The result would mean an average of 12 visits a year to the national forests by each man, woman, and child in the country, assuming a population of around 310 million. Unless everyone stopped working, this would not leave much time for the additional recreational traveling that would have to be done to all the other areas, including an average of more than 40 visits a year to State parks.

Clearly this won't do; our careful calculations have only led down the same blind alley that sometimes tempts playful statisticians to prove by trend lines that some fast-growing town will in a certain number of years have more people than the whole State, and in a certain number of added years, than the entire country. But let us not throw out the baby with the bath; the historical figures, and the current trends that they indicate, are full of meaning that can be ignored only at our own risk. Use of our great public recreation areas has actually been, and still is, increasing at rates of 8 and 10 percent and more a year. The pace will slacken some day, but nobody knows when, or how much. The sober statistical evidence points to a snowballing demand for outdoor recreation beyond anything we have yet experienced.

As for establishing at least a rough measure of the potential demand for outdoor recreation over the next four decades, a more roundabout method than extending trend lines seems to be more trustworthy. Let us examine the four factors that appear to be the main components of total demand.

1. Population. There will be about twice as many people in the United States in the year 2000 as there were in 1950. This is, of course, not a flat prediction; projecting future birth rates is a tricky business, and experts in the business have been very cagey since nearly all of them were caught flat-footed by the upsurge in births during and after the last war. On the other hand, the prospect of a doubled population is much more than an educated guess. The figure already has risen from 151 million in 1950 to 175 million in 1958. Many of the people who will make up the population in the year 2000 already have been born, and the stork still is working overtime. It is reasonable to expect a national population of 240 million in 1980 and 310 million in 2000. We know, too, that an even larger proportion of the future population will be city people who will have to look to specialized areas for getting outdoors.

2. Buying power: People will have more money to spend—perhaps twice as much per person in 2000 as in 1950. This will greatly stimulate use of recreation areas, especially when admission is free or at nominal rates. Vacation travel costs are a large consideration here; so are costs of equipment for camping, hunting, fishing, boating, etc. Income after taxes averaged about $1,600 per person in 1956. A reasonable estimate for the year 2000 is in the neighborhood of $3,600.

3. Leisure: People will have more time for outdoor recreation. The average number of hours worked per week has been dropping steadily, from around 70 in 1850 to around 40 in 1950. Part of the reduction has come through shorter working days, part through shorter working weeks, part through more general adoption of paid vacations. The 8-hour day, 5-day week is by now nearly standard, and its relation to the great rise in all kinds of outdoor recreation is obvious. The future prospect is for still shorter working days and weeks, and for longer and more widespread paid vacations. A reasonable estimate for the year 2000 may well be an average workweek of about 28 hours.

4. Mobility: People will travel more. In 1900, when steam and electric railroads were the chief forms of transportation (together with the horse, which had not yet himself become a rather expensive form of recreation), the average traveler covered about 500 miles a year. Today, with the airplane and the family automobile, the yearly average has risen to about 5,000 miles. Although part of the growth represents a great increase in commuting, there still is a large gain left over for leisure travel. A reasonable estimate for the year 2000 is an average of about 9,000 miles a year for each traveler. In addition, there will be an increase in mobility due to psychological causes which are impossible to measure, but nonetheless important. As a people we are less and less likely to stay in one place all of our lives. Opportunity for outdoor recreation will increasingly be an inducement for moving and for travel.

All four of these forces are pushing in the same direction, and all reinforce each other. To get some idea of the total effect, we need to multiply rather than to add. Twice as many people, twice as much income per person, 1.5 times as much leisure, and nearly twice as much travel comes out to roughly 10 times as much demand for outdoor recreation in the year 2000 as in 1950. The word "roughly" is used advisedly. We don't know that the estimates for 2000 will turn out as projected; we don't know exactly how they will act upon each other. The total increase in recreational demand might be as small as 5 times or as great as 15 times. But a tenfold increase seems the best single figure. There is another important qualification: The projection we have just made is for demand and thus is an index of potentiality rather than a prediction of how much outdoor recreation there actually will be at the start of the next century. The potential will not be realized unless there are more recreation areas and facilities than exist today. The past 40 years' growth in outdoor recreation could not have taken place if the areas and facilities of 1956 had been no better than those of 1916.

What would a tenfold increase in the demand for outdoor recreation mean? There are such great differences in the types of recreation land and their uses that an estimate merely of total demand does not tell us much. But if we make a very simple breakdown into three categories, the picture begins to grow clearer.

One of these categories we might call user-oriented recreation areas, whose most important characteristic is accessibility. Whatever the facilities are—children's playgrounds, tennis courts, golf links, swimming pools, or just green space for strolling and picnicking—they must be located close to the people who use them. Such areas do not have to possess any original beauty or other unique natural qualities. Trees and grass can be grown, playing fields laid out, pools and artificial lakes created, on very ordinary kinds of land. Practically all of the user-oriented classification consists of city and county parks.

At the other extreme are the resource-based recreation areas. With them it is the natural qualities that are important; nearness to users counts for little. The people who do happen to live near by may use them as they would use city parks after hours or on weekends, but the great majority come from considerable distances during their vacations. The average visitor to Grand Canyon National Park, for instance, makes his

stop there as part of a 3,000-mile round-trip journey. Most of the resource-based areas have been chosen as outstanding examples of natural beauty, whether of mountain, lake, forest, or desert. Others are unique as historical or scientific sites. The principal areas in this category are the national park system and the national forests.

In between the two extremes are some important recreation areas that are best described as intermediate. These are relatively easy to get to—no more than a couple of hours driving for most users, and usually less. Scenic beauty and other natural advantages are desirable, but not all important; the aim is to get the best facilities that are available without sacrifice of accessibility. If necessary, quite ordinary land can be made into attractive and useful intermediate recreation areas. All-day outings are the most common form of use, although some people stay overnight and a few spend whole vacations there. Boating, swimming, hiking, picnicking, and fishing are among the most common activities. State parks and the reservoir areas of the TVA system and the Corps of Engineers are the principal lands in this category.

There are overlaps, of course, among the three classifications. A few of the larger and wilder State parks spill over into the resource based category, an occasional county park may be more of an intermediate than user-based variety, and so on. But for the most part the three main categories have quite distinctive qualities of use, size, and degree of artificial improvements.

Now let us try to see what a tenfold increase in demand for all outdoor recreation might mean for each of the three types of area. The estimates that follow, I should point out in advance, are strictly unofficial. I have worked them out myself on the basis of the figures that are available to anyone, with much painful cogitation on how the statistics and projections might best be interpreted. In recent months I have tried out my conclusions on a number of Federal and State specialists in outdoor recreation. Some of these experts, I must confess, have been startled, especially at first, by the size of my estimates, but thus far no one has blown them out of the water. One man with whom I talked recently said that his estimates were quite a bit lower than mine—but then conceded freely that his past calculations of that kind had always turned out to be far too low.

Demand for user-oriented recreation would be likely, I believe, to be four times as large in the year 2000 as in 1950. Larger urban population and more leisure time are the two factors that will make for an increase here. Higher incomes and greater travel will be of little importance; in fact, both might tend to divert seekers of outdoor recreation to places farther from home.

A much greater increase seems likely in the potential demand for intermediate recreation areas—perhaps as much as 16 times. Rises in average income and annual travel should both tend to stimulate interest in these areas.

The greatest increases in demand are likely to arise for the resource-based recreation lands. Lack of time and money still keeps many families from trips to distant national parks and forests. With higher family incomes and longer vacations, the potential demand in the year 2000 may well be 40 times what it has been in the recent past. If this demand were met, it would result in an annual use of the resource-based areas about two-thirds as great as the astronomical figures we arrived at (and rejected) earlier by extending the present trend lines.

Let me repeat that all of these projections are extremely rough. It is not only that we can't predict the future; there is still much that we don't know about what is going on today. It is safer to think in ranges. Even so, the estimates we have arrived at point rather conclusively to what may well be a coming crisis in outdoor recreation.

The prospects for the future suggest many problems: How much additional land should be acquired for public recreation areas? How much would it cost? How can intelligent use of private facilities alleviate some of the pressure? What can be done to protect recreational values, particularly in wilderness areas, that already are threatened by overuse? These and other issues that will have to be dealt with in one way or another will be examined in a second article next month.

## Two Men and Statehood

EXTENSION OF REMARKS
OF
### HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. ASPINALL. Mr. Speaker, it gives me great personal pleasure to insert an editorial from a recent issue of the Honlulu Hawaii Times with regard to the Honorable JOHN A. BURNS.

The contribution made by JOHN BURNS in the passage of the Hawaii statehood bill is inestimable. History will record that when JOHN BURNS made the difficult decision to let the Alaska statehood bill be brought up first for floor consideration, he sealed statehood for both Territories. In so doing, he was willing to sacrifice his own future. But this was the greatest single contribution to the enactment of the legislation which he and his people had cherished for so many years.

I am pleased to note that the Hawaii Times has recognized his efforts in behalf of the statehood legislation.

The editorial follows:

[From the Hawaii Times, Mar. 17, 1959]

TWO MEN AND STATEHOOD

A quiet, unassuming man who played a leading role in the final and crucial phases of Hawaii's successful struggle for statehood has been all but forgotten in the tumultuous excitement of victory.

He is Hawaii's last Delegate to Congress JOHN A. BURNS.

An obviously publicity-eager man who can lay no valid claim to any unusual efforts to gain statehood for Hawaii has been in the center of the statehood victory spotlight.

He is Hawaii's last appointed Gov. William F. Quinn.

BURNS has been twice elected by the people of Hawaii to represent them in Washington and to spearhead their statehood efforts—duties which he has most succesfully carried out.

Quinn has never been elected to any office by the people of Hawaii. He was appointed from Washington—without the people being asked whether or not they would like to have him as Governor.

Yet, news stories from Washington on official activities concerning Hawaii and statehood have mostly featured Governor Quinn, the appointed politician, and ignored Delegate BURNS, elected representative of the people.

It is obvious that Republican administration leaders in Washington have deliberately used their political positions and power to overemphasize Governor Quinn's connection with statehood for the islands, while keeping Delegate BURNS from receiving due acclaim for his leadership and successful tactics.

But will the people of Hawaii be fooled? We think not.

## Research Program for Cotton Ginning and Mechanization

EXTENSION OF REMARKS
OF
### HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following article by B. F. Smith, executive vice president of the Delta Council, in regard to the urgent necessity of an improved research program for cotton ginning and mechanization:

MECHANIZATION RESEARCH—ANSWER TO QUALITY, PRICE COMPETITION?

(By B. F. Smith, executive vice president, Delta Council)

A lot has been written about the plight of the U.S. cotton industry. From between every line, two primary facts are glaringly evident: First, cotton production costs must be reduced still further in order to meet competition pricewise; and, second, quality of the raw fiber must be preserved, even improved, to meet competition qualitywise.

It is equally as evident that mechanization research is the key to these locks.

Development of equipment for obtaining more dependable stands, better tools and techniques for the application of agricultural chemicals, increased efficiency and economy in machine harvesting. These are citical areas of mechanization research which need increased attention—immediately.

Also urgent is redoubled research effort in ginning. Ginning may rightly be considered as the last operation in cotton production. It is of as much concern to cotton growers as to ginners. Until ginning is completed correctly, the producer does not have a profitably salable product.

These and other needs for additional cotton mechanization and ginning research are being emphasized by the Delta Council Advisory Research Committee. Headed by a former Delta Council president, J. R. Flautt, the committee is composed of agricultural leaders from throughout the Yazoo-Mississippi Delta area.

Primary function of the group are to point out suggested research work needed for the betterment of agricultural enterprises of the area; to help make available research data developed by the station to delta farmers; and to act as a clearinghouse for suggested research, recommending only work which will be of maximum benefit to the entire area.

After conferences with Congressman JAMIE WHITTEN, chairman of the House subcommittee on Agricultural Appropriations, and with Congressman FRANK E. SMITH, the advisory research committee developed specific recommendations for vitally important research efforts in mechanization and ginning.

The almost explosive expansion of cotton production outside the United States in recent years poses a serious threat to the industry in this country. In most foreign countries where expansions have taken place, la-

bor is cheap and plentiful. Since labor is neither cheap nor plentiful in the United States our hope for survival depends upon immediate advances in mechanized production and processing.

Revolutionary changes in cotton production since World War II have resulted from publicly and privately supported research. Reductions in labor requirements have come about almost entirely through substitution of machines and chemicals for men and animals. Significant progress has been made. Much remains to be done to enable cotton farmers to produce more efficiently and economically, and thereby meet competition. Gaps in the cotton mechanization and ginning programs must be closed as quickly as possible. Practical answers to some of these most important problems will greatly improve and strengthen the entire cotton industry. Failure to achieve needed breakthroughs in production and ginning barriers will mean that cotton production in many parts of the Nation will be a dying industry.

Research programs in cotton mechanization and ginning have already demonstrated that new and improved techniques and machines can be developed. Results have made it possible for cotton to fight back successfully on a broad front and to hang on tenaciously to a large part of the textile market. There is now a pressing need for additional research efforts directed toward finding answers to specific problems.

Need for these answers is of the utmost urgency, not only to cotton farmers and ginners of the Midsouth, but to the entire industry.

Mechanization research has suffered from lack of facilities for conducting basic research and a lack of manpower to do things which need to be done. There has been such a constant and pressing demand for solutions to problems associated with the transition to mechanized production that little time has been left for research which could result in marked basic improvements in machines and methods. Too much time of trained engineers has been required for routine tasks, such as developing and providing test equipment for conducting weed and insect control research programs.

Three areas of mechanization research demand immediate increased emphasis. These areas are: (1) machine harvesting; (2) the application of agricultural chemicals; and (3) the development of equipment for obtaining more dependable stands.

To illustrate the problem in only one of these areas of needed research, let's look at machine picking. Field losses in machine picked cotton range from 5 percent to more than 15 percent. Grade loss due to machine picking usually amounts to one full grade. In addition to grade loss, there are wide differences in characteristics of machine harvested material which affect processing and costs. If these losses could be reduced by only 50 percent, production costs could be cut at least 3 to 4 cents per pound. Also, additional basic knoweldge of this kind would greatly improve the possibilities for developing a simpler machine which would be better suited to smaller farms.

The ginning research program has made many significant contributions to the cotton industry. These contributions, ranging from the development of seed cotton drying systems to lint cleaners and automatic samplers, to mention only a few, have been or immeasurable value. But we have experienced marked changes in harvesting, production, and processing practices and these changes have tended to offset some of the gains made through improved ginning equipment. It should be pointed out, however, that savings of labor afforded through changes in harvesting practices made possible by improvements in ginning have helped to maintain the competitive position of cotton while enabling cotton farmers to realize a net return from their operations.

Although the list of accomplishments resulting from the work of the ginning research program is impressive, it is a fact that improvements in ginning afforded through research have not kept pace with the problems imposed by changes in production, harvesting, and manufacturing practices. Grades of American cotton have continued to decline slightly with increased use of mechanical harvesters of all types. Also, changes in spinning mill practices, brought on by the increased cost of labor used in processing cotton through spinning and weaving, have placed further burdens upon requirements for processing at gins.

Complaints by mills to the effect that modern cottons are not processing through their plants satisfactorily have opened the eyes of research workers to the role that both mechanization and ginning play in maintaining quality from field to spinning mill.

A closer look at the problem would indicate that modern mill requirements are far in excess of those existing prior to World War II. This is evidenced by the fact that spindle speeds have been increased from 7,000 r.p.m. to 10,000 or better r.p.m.; carding rates have been increased from six pounds per hour to 12–15 pounds per hour in commercial production, and competition of rayon has alerted the spinning industry to the fact that waste in cotton is a serious loss to them and that blends of synthetics with cotton make it possible to increase the output of the spinning process.

The No. 1 problem demanding expanded work at the Cotton Ginning Laboratory at Stoneville covers a specific project for developing instruments and controls which will reduce or eliminate damage now occurring to cotton during ginning due to overdrying. There is immediate need for relief in this field. At the Cotton Spinner-Breeder Conference held in Lubbock, Tex., in October of 1958, almost every speaker on the 2-day program emphasized this problem of overdrying.

The heating system and power expended for drying and cleaning in the early days were so limited that there was very little danger of overdrying. Driers of today, however, are equipped with burners of 3 million B.t.u. capacity, dual fan systems, etc., and are capable of seriously overdrying cottons. This extra drying capacity must be controlled if serious fiber damage is to be avoided. The point is that in solving one problem, development of the drier by the Ginning Laboratory has created another. The simple development of the drier must be followed by the more complicated development of controls. These controls need to be much more than simple thermostats for controlling temperature. They will have to sense moisture of the incoming seed cotton and send a signal to regulate temperature and exposure. Lint will then be measured for moisture content and a correction signal will change conditions to suit.

Detailed sections on both mechanization and ginning are included in Delta Council's Advisory Research Committee's recommendations, along with a breakdown of funds needed and estimates of the time required to complete needed projects.

The very modest increase in funds requested for mechanization research will pay big dividends to the entire cotton industry.

## TVA Yardstick Works Again in Measuring Costs

EXTENSION OF REMARKS
OF
## HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. EVINS. Mr. Speaker, in connection with the recent interest in the award of a contract for turbo-generators to A. C. Parson, Ltd., I include in the Appendix of the RECORD my recent newsletter which comments on this award and its significance, and also an editorial comment by the Reporter magazine in its current issue on this award. My newsletter and the article follow:

TVA YARDSTICK WORKS AGAIN IN MEASURING COSTS

(Capitol comments by JOE L. EVINS, Member of Congress, Fourth District, Tennessee)

The TVA has served the public interest of the entire Nation in many ways since it was established 25 years ago. One of the greatest of these has been the yeardstick measure of cost of producing electric power and also the cost of producing fertilizers with resulting savings to farmers, power consumers and others.

Recently we have seen another example of TVA's use of a yardstick measuring of costs. There are only three companies in the United States who manufacture large turbo-generators for power plants; these companies are the giant General Electric Co., Westinghouse, and Allis Chalmers. During recent years these three companies have built not only all of the generators that TVA has purchased, but also all the big generators for the private utilities and for other Federal power projects. Almost one-third of all the funds the TVA has spent have gone to States in which these three companies are located, largely to pay for these turbo-generators. For example, $350 million has gone to New York, the home of the General Electric Co.; $190 million has gone to Pennsylvania, the home of Westinghouse, and some $64 million to Wisconsin, the home State of the Allis Chalmers Co.

The bids of these three companies have always been remarkably close—usually the spread between the lowest and the highest has been less than 1 percent—so close as to raise a suspicion in some instances of bid rigging. Over the last 8 years these firms have boosted their prices for these big generators by more than 50 percent although the average wholesale price for all commodities has increased by only about 5 percent.

In view of these facts, and especially the increasing costs, when the TVA last year was ordering one of the largest turbo-generators ever built in the world, the TVA decided to invite bids also from qualified foreign suppliers.

Under the terms of the Buy American Act, purchases may be made from competing foreign firms if the domestic prices are unreasonably high. Purchases are required to be made from domestic sources if the domestic price is no more than 6 percent higher than a foreign price, or 12 percent higher if the domestic bidder is in an area of substantial unemployment. Leaning over backward, the TVA said in its invitation for bids that it would accept an American bid if it was no more than 20 percent higher.

TVA received three bids: One from General Electric, one from Westinghouse, and one from A. C. Parsons, Ltd., the largest British manufacturer of turbogenerators. The bid of the Parsons Co. was the only legally acceptable bid because it was the lowest and the only bid responsive to the specifications in the invitation. The TVA has had much trouble with late delivery of turbogenerators in the past. As a result of late deliveries, the TVA has had to buy power from private companies at high prices. Therefore, the invitation for bids called for payment of damages in the event of delays in delivery. Only the Parsons Co. bid included this guaranteed prompt delivery. In addition, the American bids were some $6 million or 50 percent higher than the Parsons bid. American wages are higher than British—about 40 percent higher in this industry. But this difference in wage scale accounts for only about $1½ million in increased labor costs, and this difference the British firm has to make up by paying an import duty of the same amount.

One of the greatest problems in our economy, which in many instances is dominated by giant corporations, is that these giants no longer compete with each other in the old-fashioned free enterprise way. There exists a need for some device to measure their costs. In addition to all the other services TVA performs, this great agency is also providing a yardstick of cost in many fields—power, fertilizer, electric generating equipment—and, in keeping costs down, benefits accrue both to the taxpayer, the consumer and the entire Nation.

---

[From the Reporter magazine]

THE YARDSTICK THAT WORKS

The Tennessee Valley Authority, whose continued growth our President once characterized as "creeping socialism," has gotten out its yardstick again, much to the embarrassment of certain leading private enterprisers. Last month, TVA awarded a contract for a half-million-kilowatt turbogenerator to the British firm of C. A. Parsons & Co., Ltd., after having received bids from General Electric and Westinghouse. The two American companies promptly announced they were appealing to Leo A. Hoegh, Director of the Office of Civil and Defense Mobilization, to invoke the Buy American Act and revoke TVA's purchase in the interest of national security. To their workers the two companies brought the sinister news that British labor, paid only 40 percent of the comparable American wages, was depriving them of more than a million man-hours of work. Rumbles of protest began to mount of Capitol Hill.

A short time ago TVA, whose Chairman, Brig. Gen. Herbert D. Vogel, is an Eisenhower appointee, issued an explanation of its decision to buy British. For some time TVA has been disturbed by the fact that over the last 8 years American firms manufacturing large turbogenerators have boosted prices by more than 50 percent, while the average wholesale price of all commodities has increased only about 5 percent. When it sought a foreign bid, TVA had announced that it would accept the lowest bid from a U.S. manufacturer if it did not exceed the lowest foreign bid by more than 20 percent. (The Executive order issued under the Buy American Act ordinarily requires only a 6-percent preference.)

But when the General Electric and Westinghouse bids, which fell within 0.4 percent of each other, were analyzed, it turned out that they were nearly 50 percent higher than the Parsons bid. The Parsons bid was the only one of the three not containing an escalator clause to provide for future price increases; it also was the only one to accept TVA's requirement of a penalty clause in the event of tardy delivery. By accepting the British bid, TVA stood to save over $6 million.

The TVA yardstick revealed still other interesting comparisons. Taking the General Electric and Westinghouse estimate for the wage differential and multiplying this by the number of man-hours involved in the project, the TVA analyst discovered that the British firm's saving in labor cost, in comparison with American wages, amounts to $1.5 million, which, incidentally, is the amount it will pay in U.S. import duty. There still remains a discrepancy of $4 to $5 million between American and British bids, once the labor-cost factor is eliminated. As the International Union of Electrical, Radio, and Machine Workers pointed out: "This means that if General Electric and Westinghouse had gotten their labor completely free, they would have had difficulty in competing."

This raises some interesting questions. Despite cutbacks in older plants in Schenectady and East Pittsburgh which have caused unrest among the workers, the capacity of the hydraulic-turbine industry in this country increased by 50 percent from 1950 to 1957. Sales of electrical equipment abroad have been running about 10 times our imports. Last year's third-quarter profits for General Electric were the highest for any third-quarter in its history; Westinghouse's third-quarter earnings were its second best. Neither company appears in imminent danger of collapse because of British competition.

The real problem for our private-enterprise economy is how to devise suitable yardsticks by which the performance of our industrial leviathans can be measured. In addition to all the other services it performs, TVA, which is one of the electrical industry's biggest customers, proves its usefulness in this respect, too.

Unless, of course, we decide that a nation's security is endangered whenever it buys generators from foreign firms. If this is true, General Electric, Westinghouse, and all the big exporting companies should try to sell as much as they can to China.

---

## Our Mammoth Foreign-Aid Program

EXTENSION OF REMARKS

OF

### HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following information concerning our foreign-aid program:

MARCH 23, 1959.

MY DEAR COLLEAGUES: As chairman of the Foreign Operations Subcommittee on Appropriations, I feel that it is my duty to place in the hands of every Member of Congress as much official information as possible on our mammoth foreign-aid program.

On Tuesday, there may be an attempt to include in the supplemental appropriation bill additional funds for the development loan program for which there is no real need. The reaction of high public officials, including some 1960 presidential candidates, to the committee's action in disallowing the supplemental request would indicate that it was an act akin to another Pearl Harbor. Now, let us go to the record for facts and not be persuaded by oratory and last-minute departmental revisions intended to sway the Members.

The attached reproduced letter gives you factual information on the Development Loan Fund and the figures have been brought down to the last accounting period, February 28, 1959. Also it shows the total amount of MSA funds unexpended as of December 31, 1958.

I should like to point out the amount of foreign aid funds available in all categories on July 1, 1958, the first day of the present fiscal year. I quote verbatim from information furnished by the Office of Business Economics, U.S. Department of Commerce, and published by the Library of Congress: "Thus, the carryover funds of 9.5 billions, plus new funds of 6.1 billions, provided an estimated availability of 15.6 billions for foreign aid during fiscal year 1959."

Item 1 in the attached letter shows only MSA unexpended funds for foreign aid as of December 31, 1958. It does not include other categories such as Public Law 480 and overseas military construction, etc.

Expenditures for the foreign aid program in the postwar period through June 30, 1958, amounted to $71,551,940,000. Now, add the available as mentioned in the above paragraph for the total foreign aid funds expended and available.

Do you not agree that the foreign-aid program should be operated on the basis of need and not on the basis of bureaucratic demand or political expediency? We are the board of directors of a $75 billion annual business (the U.S. Government), representing 175 million stockholders. Should we not take into account that in this day of great prosperity, to some extent political expediency and bureaucratic demands for excessive spending prompt our action? Is it not true that during this fiscal year we will spend $13 billion more than revenues collected, or, as we would say in private business, more than the net profits?

Sincerely yours,

OTTO E. PASSMAN,
*Member of Congress.*

---

## Poison in Your Water—No. 44

EXTENSION OF REMARKS

OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the Appendix of the RECORD an article appearing in the Tampa, Fla., Tribune of February 19, 1959:

MOSQUITOES SAID BREEDING AT SARASOTA SEWER PLANTS

SARASOTA, February 18.—Increasing effluent caused by the growing number of sewage disposal plants is causing a big jump in the breeding of mosquitoes, Sarasota County Commissioners were advised Tuesday by J. Melton Williams, director of the mosquito control department.

Williams asked the board not to approve any more sewer plants until his department has an opportunity to make a determination on the proper disposal of the effluent.

Since the inauguration of plans several years ago by developers to construct sewer plants, Williams has warned that the improper disposal of the effluent could increase the number of mosquitoes.

The mosquito official said the effluent should be dumped into oxidation ponds,

which would be the responsibility of franchised sewer firms to maintain in a proper manner. The other alternative would be to dump the effluent into a flowing stream. Williams maintained the effluent would not be harmful to fish life.

Williams told commissioners that when the State health department checks a set of plans for a sewer plant it does so from the standpoint of proper operation, but not for possible effect on mosquito breeding.

The director had several bottles of culex larvae to show the commissioners the breeding brought on by the effluent. One of the samples he displayed was from the plant of the city of Sarasota.

Commissioners agreed to cooperate with Williams and will make a further study.

## A Teenager Looks at Our Foreign Aid Program

EXTENSION OF REMARKS
OF
### HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. IRWIN. Mr. Speaker, in virtually every edition of our newspapers there are ugly and disturbing stories about juvenile delinquency.

Yet, I have just received eloquent proof from my district not once, but twice that by and large there are far more fine, wonderful young teen-age boys and girls who are serious-minded, clear-thinking, alert, good God-fearing and decent citizens.

For example, I have just received a letter from a young constituent of mine named Thomas M. Shaw of Greenwich, Conn. It was a letter on foreign aid, a subject hardly associated with the thinking of a juvenile delinquent.

Thomas is only 14 years old—yet in the intelligence of his thoughts and the forcefulness of his argument, he is quite mature.

This fine young man is very interested in government and is opposed to any cuts in foreign aid funds.

In his letter to me, Thomas wrote:

I was surprised to find out that a large part of this foreign aid is military aid. I do not think that we should place such an emphasis on military aid.

Starving children cannot eat guns and bullets, nor can farmers plow their fields to grow needed food with tanks and bombs.

I think such interest in government on the part of a 14-year-old boy is highly laudable and speaks volumes for those who feel, as I do, that the vast majority of young American boys and girls are fine, clean cut, and clear thinking.

Only a small, misguided few contribute to the juvenile delinquency harassing so many of our communities in the United States.

Then, Mr. Speaker, there is a young man from Bridgeport, Conn., named Neil Harding who is my second example of youth at its best.

Neil has just been selected as the North End Boys' Club Boy of the Year and will be honored by his Bridgeport friends at a dinner on April 9, at which I will be privileged to be one of the speakers.

This young man, 16 years old, is the choice from more than 3,000 other boys in the club. He is a third-year student at the University School in Bridgeport.

Neil has volunteered many hours of service to his club as an aid to the swimming instructor, teaching younger boys how to swim. And despite his youth, he has coached the club's swimming team, being active as a member of the basketball team, and is an officer of the club's senior council. Neil also serves as an altar boy at St. Patrick's Roman Catholic Church and is a member of its CYO group.

I do not think, Mr. Speaker, that America can have too many boys like Thomas Shaw and Neil Harding.

Boys of this caliber are in the vast majority among our youth and we need have no fears of their becoming juvenile delinquents so long as they maintain an intense interest in sdo many activities.

I want to extend my congratulations to these fine young men, Mr. Speaker, and to all the other millions of American boys and girls like them.

Youngsters like these are a credit to their families, their schools, their churches, and certainly to their country.

## Washington Report

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 21, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 21, 1959.

H.R. 10 and 11, the Self-Employed Individuals' Retirement Act of 1959, to encourage the establishing of voluntary pension plans by self-employed individuals, passed after spirited debate. The bill permits an income-tax postponement on retirement savings. Thus the self-employed are given the retirement tax relief which employees now enjoy. Providing for one's own future is an old American concept, rooted in tradition and our forefathers' concepts of individual responsibilities and obligations. These are supported by the spiritual beliefs, out of which grew our Declaration of Independence and Constitution. This bill makes an interesting comparison to the relatively new concept of Federal social security, with the individual's increasing dependence on Government. A debate sprang up between those who felt the revenue loss to the Government of approximately $350 million was untimely and those who felt the inequity between employed and self-employed should be corrected. The latter view I shared, outweighing the former.

The temporary unemployment compensation (TUC) bill was passed terminating the Federal part of the program, except for the tapering off which permits those whose claims are recognized by the end of April to receive compensation. Since few emergency Federal activities are ever terminated, this action is surprising and refreshing. Only 17 States participated in the program. Texas was among those States decrying the need for Federal participation, maintaining this is a State function, to which view I subscribe.

The Federal airport bill amendment to continue Federal grants brought on the year's first knock-down political fight. By the time of final passage with debate and amendments completed, possibly a voting pattern for the year emerged. The debate centered about three aspects: (1) Would the amount of Federal money be $297 million or $200 million for 4 years; (2) would the formula for payout be 75–25 or 50–50, the 25 and 50 figures being the percentage amount of the total solely at the discretion of the FAA (Federal Aviation Agency) Administrator to allocate; (3) would the Congress insist on regular appropriation procedures or permit direct expenditures out of the Treasury. The first two were combined (becoming $200 million at the 75–25 ratio), making for a clear-cut choice of economy versus spending, since some Democrats disapproving the Republican 50–50 could now have both economy and the formula they preferred. So it was that 57 Democrats joined 137 Republicans for econmy while 209 Democrats and 5 Republicans voted for bigger spending. The liberals or big spenders won. (Nine Texans, including myself, voted for economy.) Secondly, on the vote for closing the door to the Treasury and returning to constitutional appropriation, 53 Democrats joined 138 Republicans for it, and 212 Democrats and 4 Republicans teamed up to defeat this one, too. Five Texans, including myself, voted for the amendment. The Democrat leadership worked hard on the floor to line up the votes, and succeeded. Since these amendments failed, I voted against the bill. The bill passed by a vote of 272 to 134. Seven Texans (out of 22) opposed the bill. The record is now clear as to who is for bigger spending and constitutional appropriation. The coalition of Democrats and Republicans at full strength no longer outnumbers the liberals or big spenders. Only a veto can same the day—there aren't yet enough votes to override the veto. This will be a rough year. This test demonstrates that the Democrat leadership is not worried about balanced budget, inflation, or preserving the value of our money.

The Joint Economic Committee Report on the President's 1959 Economic Statement establishes the battlelines between Republicans and Democrats as to economic philosophy and the role of Federal Government. No shred of conservatism remains on the Democrat side. A study of this report's majority and minority views should be mandatory reading for members of both parties in Texas.

An amendment to the agriculture bill was my legislative contribution this week. This bill would permit a farmer to grow wheat on his own land for his own use without Federal control or fine. This supports Judge T. Whitfield Davidson's decision concerning Evetts Haley, Jr's, right to grow wheat, a decision the Supreme Court summarily reversed. I join Judge Davidson and Evetts Haley in branding unconstitutional the Supreme Court decision. The attacks on the rights of property ownership have become all too similar to the aims of the Socialist and Communist doctrines.

Urban renewal repeats the attacks on property ownership in various ways. First, your property can be seized through eminent domain, the result of a redevelopment board's judgment of spiritual or esthetic values in community planning.

Secondly, Government public housing, the antithesis of home ownership, goes along hand in glove with urban renewal. I presented a thorough study of urban renewal in the House this week. (Tuesday, Mar. 17, pp. 3906–3921, CONGRESSIONAL RECORD.) I forewarned Members of the heavy expenditures for urban renewal and public housing in housing bills now pending. Forecast: Bigger spending and inflation unless people demand economy of Senators and Representatives.

## Cordell Hull Birthplace, a National Shrine

EXTENSION OF REMARKS
OF
### HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. EVINS. Mr. Speaker, the State of Tennessee in 1953 created the Cordell Hull Birthplace Memorial Association and the Tennessee Legislature has made appropriations for the purpose of restoring the birthplace of this great American. Many believe that in view of the great contribution Cordell Hull made to our Nation and particularly in the area of improving our relations with the other nations of this hemisphere, it would be appropriate to make a national shrine of his birthplace. Recently the Senate of the Tennessee Legislature adopted a resolution to memorialize the Federal Government to this end. Under unanimous consent I insert this Senate joint resolution in the Appendix of the RECORD. The resolution follows:

SENATE RESOLUTION 22

Resolution to memorialize the Federal Government to make a national shrine of the Cordell Hull birthplace in Pickett County

Whereas the State of Tennessee created the Cordell Hull Birthplace Memorial Association in 1953 and appropriated the funds and authorized the purchase of the Cordell Hull birthplace in Pickett County, Tenn.; and

Whereas additional appropriations were made thereto in 1955 and 1957 for the purpose of restoring said birthplace to its original form as nearly as possible and to take measures for preserving the same; and

Whereas such has now been done and the property has been purchased, the log cabin restored to its original form, and improvements have been completed thereon; and

Whereas there has been some indication that the Federal Government, through the efforts of the Tennessee delegation in Congress, representing the State and the district wherein such property lies, has become interested in making such birthplace a national shrine and otherwise pay tribute to the memory of that great Tennessean; and

Whereas the attitude of this State on such project has been solicited by Senator ESTES KEFAUVER and others interested therein: Now, therefore, be it

*Resolved by the senate of the 81st general assembly*, That Tennessee's delegation in the U.S. Congress be urged to continue its efforts in securing this tribute to the memory of Judge Hull, and that it is the expressed thinking of this body that should the Federal Government see fit to develop this historic spot as a national shrine, the State should vest title in such birthplace in the Federal Government and cooperate with it in any way toward the full development thereof; be it further

*Resolved*, That a copy of this resolution be mailed to Senator ESTES KEFAUVER, Senator ALBERT GORE, and Representative JOE L. EVINS, of Tennessee.

Adopted March 19, 1959.

WM. D. BAIRD,
*Speaker of the Senate.*

## Foreign Aid Used To Keep United States Out of War, David Lawrence Says

EXTENSION OF REMARKS
OF
### HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. McGOVERN. Mr. Speaker, as the Congress considers President Eisenhower's request for approximately $4 billion in foreign assistance funds, I believe that the following article by the noted columnist, Mr. David Lawrence, is most pertinent. The article appeared in the Sioux City Journal of March 20, 1959. I include it in its entirety as follows:

FOREIGN AID USED TO KEEP UNITED STATES OUT OF WAR

(By David Lawrence)

WASHINGTON.—If the American people could express in a single sentence their most important wish today, it would be: "Keep us out of war at any cost."

Yet when, out of a national budget of $77 billion, the President asks for $3,930 million to keep American boys from fighting abroad, and calls for a mutual security program to bolster our allies, this is derided as a foreign-aid program or a giveaway.

The label is wrong. It's really a keep-us-out-of-war program.

EXPLOSIVE SITUATION

Few of the critics realize the explosive situation that exists in the world today or how interrelated America's fate is with the other free countries—or, if they do realize it, they fail to see how many billions more our defenses would cost if America had to do the job alone. That's why President Eisenhower's address Monday night was so important to the country.

For the President had no sooner announced last week that he was asking Congress for $3,930 million when from Capitol Hill—mostly from Democrats—came predictions that the expenditure would be cut by a billion. Acting Secretary of State Herter promptly said that if any such reduction were made it would "serve notice on the world that we are weakening in our determination."

Just why some of the legislators regard any money spent abroad as either a gift or a throwaway is hard to understand unless they think the American people really can be misled by such distortions.

TRUE TEST

Certainly, as sometimes charged, there's waste in the spending of American funds in other countries because the United States cannot always control how other governments disburse the money they receive. But, conceding that there is some waste, it is a fact that in war itself there is even greater waste. The true test is whether, on the whole, war is prevented, and thus far the United States has managed with the help of strong allies to keep us out of a third world war.

It sometimes isn't realized how much America's own allies have been spending since the close of World War II. Rather the impression is fostered by the critics that the United States is putting up all the money for international defense or mutual security. The President in his message a few days ago to Congress said:

"Over the years of our combined effort, these allies and friends have spent on these forces some $141 billion, more than six times the $22 billion we have contributed in military assistance. During calendar year 1958 they contributed $19 billion of their own funds to the support of these forces.

ARMED CAMP

"Without the strength of our allies our Nation would be turned into an armed camp and our people subjected to a heavy draft and an annual cost of many billions of dollars above our present military budget."

What perhaps isn't generally understood in America is that economic assistance plays a vital role in maintaining the stability of other nations. If there were no stable governments among our allies America would not have strategic bases overseas.

Dissenting Members of Congress aften concede that the military program is logical but they claim the economic support abroad is questionable and this they would cut. In doing so they would strike a blow at the morale of the countries affected. For without economic stability, political chaos ensues, and then the Communists find fertile ground for exploitation or even overthrow of existing governments.

## West Berlin's Mayor Willy Brandt Says: "Never Let the Russians Think You're Weak"

EXTENSION OF REMARKS
OF
### HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. BRADEMAS. Mr. Speaker, one of the great symbols of freedom in the world today is Willy Brandt, the courageous mayor of West Berlin, a city of free people encircled by communism.

I am pleased to insert in the RECORD an article by Willy Brandt published yesterday in This Week magazine:

NEVER LET THE RUSSIANS THINK YOU'RE WEAK

(By Willy Brandt)

BERLIN, GERMANY.—I am the mayor of a unique city. There is no other like it anywhere. It lies 110 miles behind the Iron Curtain—a lonely but solid outpost of the freedom that we, like you, cherish so deeply.

My city has been split in two: As mayor of West Berlin I preside over the 2,200,000 inhabitants of our zone, spread over 184 square miles of territory, but I have no jurisdiction over the 1,200,000 Berliners who live in the eastern part of our city, allotted to the Russian conquerors. We are completely surrounded by Soviet-occupied territory. We can cross it by car, over certain highways, by rail or by air, but we are not allowed to stop or visit our friends on the way. We cannot wander at will in our city's outskirts.

NO PLACE TO GO

The countryside around Berlin is dotted with lakes, forests, and rivers. But on a warm summer Sunday there is no place for a Berliner to go, except to the suburban lakes of Wannsee and Tegel. You can see us on summer weekends, creeping bumper-to-bumper to Wannsee. A Berliner can go to Wannsee or Tegel—or stay home. He is barred from the forests, right at his very doorstep, where he used to spend his weekends camping, fishing or swimming. This makes for claustrophobia and a feeling of isolation, which depresses us now and then.

"Divided she stands" has been said of Berlin. This city has two currencies and two regimes, based on mutually hostile ideologies. We receive refugees (from 100 to 500 a day). We shoulder the burden of being a showcase of freedom in a partitioned nation.

The Free University in West Berlin, which you have helped us to build, has now the largest enrollment in all Germany (almost 12,000). More than a third of the students are refugees from East Germany and the influx continues. What would you say to a boy who comes to you, having risked his life by escaping, and says: "I want to live in a free world." You would not send him back. We do not. We give him a free education and subsistence.

Because of the division many special tasks have been added to the usual problems of a big-city administration. We now in West Berlin have our own gas, electricity, heat, and our own transportation system. But we are dependent on our neighbors' permission for problems connected with shipping, air traffic, sewer system and even our own railroad station.

Trains run in and out of Berlin to West Germany every day. By a fluke in the four-power agreement of 1945, our station in West Berlin was left to the administration of the East Germans along with the rest of our railroad system in Berlin. It has only recently been rebuilt. The bomb-ruined hulk of the station had been such an eyesore to us in the midst of our orderly streets that our newspapers began to needle the East German administration about it. They suggested we should rebuild the station and make a gift of it to our neighbors. That did it; the East German administration promptly set to work and rebuilt it.

ALWAYS, THE GREAT UNCERTAINTY

Since the blockade 10 years ago, when for 11 months all surface traffic was stopped, and we were fed by you through the airlift, the flow of freight to and from the West has proceeded without a really serious hitch. Only on a few occasions have trucks and trains been delayed or goods confiscated by the East German police at check points. But we can never be sure what their next move will be. Supposing an epidemic broke out. Would they work hand in hand? If a fire spread across the boundary zone, would our fire brigades be allowed to proceed unimpeded? We do not know the answer.

I have never met my opposite number—the mayor imposed on East Berlin by the Russians. His name is Fritz Ebert; he is the son of one of the founders of the Weimar Republic. It is sad that a man of such distinguished heritage should find himself in the enemy camp. I have found out there is no sense meeting him.

I am certainly proud to be mayor of West Berlin. Our people are among the finest in the world. They have the kind of courage that comes from constant exposure to danger. They also are fun-loving and witty.

HE KEEPS A MEMORY ALIVE

Though now I am a Berliner, I was born 45 years ago in Lubeck, the old Hanseatic town near the Baltic Sea. I spent most of the years between 1933 and 1945 in Norway and Sweden and returned to Berlin in December 1946. Soon after I had the great privilege of meeting a man many of you have heard of and admired—the famous mayor of Berlin, Ernest Reuter. I met him in the house of a friend on a snowy February evening in 1947. I have been his disciple ever since. His death in September 1953 was a great personal loss to me, as it was to all German people and the world. In October 1957 my turn came to fill in his job. It is a great responsibility to live up to his beloved image.

Demanding as my job may seem, I have one great compensation, and I wish every politician had the same luck as I had. My wife is my greatest asset and help. Rut is Norwegian; we met during the war and were married right here in Berlin in 1948. We have two sons, and one firm resolution I have is to reserve at least an hour for my family every day.

I have often been asked what is my most recurrent nightmare. The answer to that is quite simple. It is that one day, because of some slight mistake on our part, the Russians may miscalculate the attitude of the West and our determination to remain in Berlin at all cost. This would be a fatal mistake, and the consequences would be tragic. We must never let the Russians think we are weak. We are not. Even here, behind the Communist guns in this encircled city, we feel confident and strong, because we belong to the West, and we know that we will continue to belong to the West.

## Statement on the Development Loan Fund

EXTENSION OF REMARKS
OF
### HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

MARCH 23, 1959.

Memorandum for Congressman PASSMAN:

In accordance with your request, the following information has been obtained from the International Cooperation Administration (Comptroller's Office):

| | | |
|---|---|---|
| 1. As of Dec. 31, 1958, the unexpended balance of all MSA program funds was | | $6,671,156,582 |
| 2. In connection with the development loan fund: Total appropriations | | 700,000,000 |
| | Fiscal year 1958 | 300,000,000 |
| | Fiscal year 1959 | 400,000,000 |
| Total obligations (as of Feb. 28, 1959) | | 409,300,000 |
| | Fiscal year 1958 | 102,100,000 |
| | Fiscal year 1959 | 307,200,000 |
| Total expenditures (as of Feb. 28, 1959) | | 21,983,804 |
| Loans | | 21,486,305 |
| Administrative expenditures | | 497,499 |
| Unexpended balance (as of Feb. 28, 1959) | | 678,016,196 |

*Clerk and Staff Director.*

## Foreign Aid Needs Cleaning Up

EXTENSION OF REMARKS
OF
### HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Mr. William S. White's column appearing in last Friday's Washington Evening Star entitled "Foreign Aid Needs Cleaning Up." This is a sober, thoughtful and intelligent article pointing out what needs to be done with the foreign aid bill so that the Members may vote for it with some confidence:

FOREIGN AID NEEDS CLEANING UP—ACTION URGED ON COMPLAINTS OF WASTE, LEST CONGRESS TOSS OUT PROGRAM

(By William S. White)

The warning bells for the future of foreign aid are ringing with rising stridency but there is little indication that the administration generally is paying much heed.

The program no doubt will survive the short run—this year and next at least—if only because of the Soviet Union's habit of fomenting crises like Berlin. Its most effective, if unwitting, lobbyists, indeed, have been the Russians. They largely caused foreign aid to be adopted in the first place, in its initial form known as the Marshall plan.

Less than tactfully, they overran Czechoslovakia just as Congress more than a decade ago was being asked by the Truman administration to face up for the first time to the postwar economic and military vacuum left in Europe. Congress was understandably weary of shoveling out the billions as it had done all during the war. But it simply could not look the other way in the fact of this brutally candid disclosure of Russian intentions.

The longer outlook for foreign aid, however, is far from good. President Eisenhower himself has put more heart into backing the program than into anything else in his tenure. No one familiar with the inner situation denies him good marks here. Down below, however, where actual operations go on, the administration's leadership is progressively less impressive.

In the first place, there is massive, cumulative evidence—not merely the prejudiced evidence of isolationists—that there is a good deal of waste and bureaucratic nonsense in foreign aid.

The President's own distinguished advisory committee, headed by industrialist William H. Draper, Jr., has more politely now said just about as much. Foreign aid's best friends in Congress have been saying the same thing for years, and for the same reason. They hope, and so does the Draper commission, that the administration can be prevailed upon to clean up this situation before Congress becomes completely fed up and throws out the baby with the bath water.

Complaints about waste have been treated as though they were merely irresponsible attacks on the principle of the program. Some of them have not been in good faith, but many have been. And these need urgent attention; the time for alibis is running out fast.

In the second place, the present mixture of military and economic assistance in a single congressional bill and program is a case of oil and water. There is a world of difference in the two objectives. The one, military security, is totally intertwined with our national security. Military aid thus could be more rationally handled by simply and

frankly throwing it all into the same large pot with the Pentagon's functions. One bazooka is pretty much like another, no matter the nationality of the corporal who fires it.

The second objective—economic aid—is both economic and political in purpose. It is unwisely involved now with our purely military planning.

Again, in its longer meaning economic aid to our friends is only our present substitute for a fully rational policy of freer world trade. And it is at this point that the whole of the administration, this time including the President as well, is performing in what can only be called an odd way. More and more we are puting petty protectionist devices on world trade. Here we deny to a foreign firm a construction contract it has won in open bidding. There we lay down import restrictions.

Thus, one hand of the Government assists other countries in foreign aid. The other hand hampers them in foreign trade. And foreign trade is, after all, the oldest and cheapest of all forms of foreign aid, and the best in the end for both parties to the transaction.

Finally, to one who has watched the program from its very beginnings it increasingly appears that the administration officials before Congress are putting the secret label on too many things too often. For years we have been spending X millions on foreign military installations, some of which are right next door to Soviet or satellite territory. It is not likely that the Russians have got to read the CONGRESSIONAL RECORD to discover as much.

## In One Field We're Beating Paul Bunyan

EXTENSION OF REMARKS
OF
### HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I should like to call the attention of my colleagues in the Congress to an excellent editorial that appeared in the March 18, 1959, edition of the Ventura, Calif., Ventura County Star-Free Press.

IN ONE FIELD WE'RE BEATING PAUL BUNYAN

The tales told about Paul Bunyan make up one of the most enlivening chapters in our authentic American folklore.

On one occasion, as we recall it, Paul accidentally or carelessly dropped a kernel of corn on a fertile spot somewhere, probably in southern Minnesota or Iowa. Within a matter of days, the resulting cornstalk was reaching, like a giant Douglas fir, for the sky. Soon, the demands of its root system were lowering the level of the river nearby and threatening to dry the stream completely.

Paul sent one of his reliable loggers to fell the stalk. But in one of his mighty swings the blade stuck tight in the spongy trunk. In struggling to release the ax, the man was carried upward by the steady growth; before long, he was far above the earth and felt obliged to let the tool go and look after his own safety.

However, no matter how fast he was able to scramble down, he remained even further from terra firma, so rapid was the growth made by the tall corn.

There probably was some later ending to the tale, but it escapes our memory, and this is a good place to leave the situation anyway, because that seems to be approximately the dilemma our good Uncle Sam presently faces.

By July 1, Editorial Research Reports tells us, the U.S. Government will hold, outright or through loans more than $9 billion worth of surplus farm products that have come up like Paul Bunyan's cornstalk out of our rich farm soil. And no matter how energetically we try to get rid of them, the more they pile up. The hoard now includes: Wheat $3.2 billion, corn $2.4 billion, cotton $1.2 billion, etc., etc.

The Government wheat would supply all the nation's consumption, export, and carryover needs for a whole year if not a single new bushel were harvested. Storage alone on all Government crop holdings is costing close to $1 billion a year.

Paul Bunyan was not familiar with the word "productivity," but that was exactly what caused his problem then and the problem of Secretary of Agriculture Benson and the rest of us now. American cotton fields are yielding 10 times as much per acre as they did 30 years ago; the average cow gives up one-fourth more milk daily than her mother did even 10 years ago.

If the story of Paul verges on the slightly improbable, what can be said of today's even more colossal cropgiantism?

## Dr. Moses Waddel and Willington Academy

EXTENSION OF REMARKS
OF
### HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. DORN of South Carolina. Mr. Speaker, John C. Calhoun received a classical and formal education at the feet of Dr. Moses Waddel, one of the greatest teachers in the history of the United States. After 2 years at Dr. Waddel's Willington Academy, John C. Calhoun entered the junior class at Yale and graduated with distinction in 2 years.

Dr. Waddel first established a log-cabin school in 1794 at Appling, Ga. In 1801 he established another log-cabin school at Vienna in South Carolina. In 1804 he established the famous Willington Academy for Boys at Willington in the Old Abbeville District—now McCormick County, S.C. He taught at Willington until 1819 when he became president of the University of Georgia.

Dr. Waddel's Willington Academy was a log-cabin building in the midst of the woods on the frontier. He opened each day's recitation with prayer and closed with prayer. He believed in strict discipline, hard physical labor, and classical studies. He taught his pupils how to think for themselves. He instilled in them ambition, pride, and individuality. He taught Latin, Greek, French, geography, history, and the basic fundamentals. More of his pupils became famous nationally than those of probably any teacher in the history of our country.

Being a Presbyterian minister, as well as a teacher, he trained scores of famous ministers of the Gospel, doctors, and educators. The following is a partial list of his pupils who became famous as public servants:

John C. Calhoun, spokesman for the ante bellum South, vice president.

William H. Crawford, U.S. Senator, Minister to France, Secretary of the Treasury.

Hugh S. Legaré, U.S. Attorney General, eminent scholar, Secretary of State.

George McDuffie, U.S. Senator, Member of Congress, and Governor, South Carolina.

A. B. Longstreet, college president, eminent lawyer, clergyman, author.

James L. Petigru, attorney general, South Carolina, brilliant lawyer.

Eldred Simkins, Member of Congress, South Carolina.

W. D. Martin, Member of Congress and judge, South Carolina.

Andrew Covan, Member of Congress, South Carolina.

George B. Gilmer, Member of Congress and Governor, Georgia.

George Carey, member of Congress, Georgia.

John Walker, Member of Congress, Alabama.

Henry W. Collier, Member of Congress, chancellor, and Governor, Alabama.

Geo. W. Crawford, Member of Congress and Governor, Georgia.

Patrick Noble, Governor, South Carolina.

A. P. Butler, U.S. Senator, South Carolina.

Preston Brooks, Member of Congress, South Carolina.

W. J. Grayson, Member of Congress, South Carolina, author.

D. L. Wardlaw, judge, South Carolina.

F. H. Wardlaw, chancellor, South Carolina.

Thomas W. Cobb, Member of Congress and Governor, Georgia.

P. M. Butler, Governor, South Carolina.

William Harper, judge, South Carolina.

Lawrence E. Dawson, judge and distinguished lawyer, Alabama.

John S. Hunter, judge and lawyer, Alabama.

Mr. Speaker, the following description of the Willington Academy is taken from "History of South Carolina," by Dr. David Ramsay:

Besides what has been done by the State and by religious sects and private societies for the advancement of learning and the diffusion of religious knowledge among the inhabitants, there are several private schools, both in Charleston and the country, for teaching classical and mathematical learning. Among these, one, under the care of the Reverend Dr. Waddel, of Abbeville district, deserves particular notice. In it from 70 to 80 students[1] are instructed in the Latin, Greek, and French languages, and in such of the arts and sciences as are necessary to prepare a candidate for admission into the higher classes of the northern colleges. The schoolhouse is a plain log building in the midst of the woods, in a high and healthy country, and too small to accommodate all the scholars in the hours of study. To obviate this inconvenience, they are permitted and encouraged to build huts in the vicinity. These are the rough carpentry of the pupils, or constructed by workmen for about $4. In these, when the weather is

[1] The number grew afterward to 180.

cold, and under the trees when it is warm, the different classes study. To the common school or recitation room they instantly repair when called for, by the name of the Homer, the Xenophon, the Cicero, the Horace, or Virgil class, or by the name of the author whose writings they are reading. In a moment they appear before their preceptor, and, with order and decorum, recite their lessons; are critically examined in grammar and syntax, the construction of sentences, the formation of verbs, the antiquities of Greece and Rome, the history and geography of the ancients, illustrative of the author whose works they recite; and are taught to relish his beauties and to enter into his spirit. Thus class succeeds to class, without the formality of definite hours for study or recreation, till all have recited. In the presence of the students assembled a solemn and appropriate prayer, imploring the Eternal in their behalf, begins and ends the exercises of each day. In this manner the classics are taught 190 miles from the sea coast. The glowing periods of Cicero are read and admired. The melody and majesty of Homer delight the ear and charm the understanding in the very spot and under the identical trees which, 60 years ago, resounded with the war whoop and horrid yellings of savage Indians.

Of the large number that attend this school 9 in 10 are as studious as their health will permit, and as orderly in their conduct as their friends could wish. Far removed from the dissipation of cities, and among sober, industrious and religious people, they must be studious, or lose all character, and be pointed at by the finger of scorn. If disposed to be idle or vicious, they cannot be so otherwise than by themselves; for the place will not furnish them with associates. Monitors are appointed to superintend each subdivision of the students; and such as transgress the rules of the school are reported once in every week. Over them a court is held. They are allowed to justify or extenuate. A summary decision is made. Though corporal punishment is not excluded, it is rarely inflicted. The discipline of the school respects the pride of youth, and is chiefly calculated to repress irregular conduct by attaching to it shame and dishonor. The sagacious preceptor quickly finds out the temper and disposition of each student, and is the first to discover aberrations from the straight line of propriety. By nipping mischief in the bud, he prevents its coming to any serious height. By patience in teaching and minutely explaining what is difficult, he secures the affections of his pupils and smooths their labors; while at the same time judicious praise rouses ambitions and kindles in their breasts an ardent love for improvement and an eagerness to deserve and gain applause.

## Area Redevelopment: Antidote for Unemployment

EXTENSION OF REMARKS

OF

### HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. IRWIN. Mr. Speaker, on Friday, March 20, I was privileged to appear before a joint committee on State development of the Connecticut General Assembly in Hartford, Conn.

Along with some of my congressional colleagues from my home State, I was asked to present my views on area redevelopment legislation under consideration by this Congress.

This, Mr. Speaker, I was very pleased to do, for I believe strong area reedvelopment legislation—legislation with substance—is needed to eradicate joblessness and to help remove economic waste.

I think that my colleagues in Congress would be interested in my comments before the Connecticut Assembly's Joint Legislative Committee on State Development, and, therefore wish to introduce my statement before that group into the CONGRESSIONAL RECORD.

STATEMENT OF CONGRESSMAN DONALD J. IRWIN, BEFORE JOINT COMMITTEE ON STATE DEVELOPMENT OF CONNECTICUT GENERAL ASSEMBLY, ON SENATE JOINT RESOLUTION 13, MARCH 20, 1959

It gives me special pleasure to appear before this committee to present my views on legislation now pending before Congress relating to redevelopment and the alleviation of unemployment in this country and in Connecticut and my district in particular.

As the congressional Representative from the Fourth District, which as of yesterday had 14,000 unemployed, I am vitally concerned with the passage of legislation that will help put these thousands back to work.

In the entire State of Connecticut, according to the March 19 figures released by the employment security division of the Connecticut Labor Department, there are presently 52,067 unemployed.

My district, with 14,000 jobless, therefore, has well over one-fourth of all the unemployed in this State.

Obviously, I am extremely anxious to do whatever I can, as their Representative in Congress, to put this vast number of idle people back to the business of drawing regular pay checks.

Legislation now before Congress which will stimulate area redevelopment unquestionably will contribute materially and effectively to the alleviation of such substantial and persistent unemployment as now exists in Fairfield County.

The city of Bridgeport, for example, second largest in this great State, has nearly 9,000 jobless walking the streets looking for work. Stamford, Danbury, and Norwalk—other cities in my district—have approximately 5,000 more of the unemployed in Fairfield County.

We must do something drastic to wipe out such situations as this—and I repeat that area redevelopment designed to eliminate economically depressed areas should go far toward achieving that goal.

I feel very strongly that the maintenance of the national economy at a high level is vital to the best interests of the Nation, the State, and, of course, my own district.

But only yesterday I heard of layoffs in three cities in my district. A transportation equipment manufacturer in Bridgeport laid off more than 100 people. There were 30 people idled in the hat industry in Danbury, while an electrical products firm in Norwalk furloughed 35 more.

And I think the mere fact that the House Banking and Currency Committee in Washington is plowing through some 50 bills calling for area redevelopment programs throughout the country is proof positive of the seriousness of the problem all over America and not only in Connecticut.

Before leaving Washington, I was informed that the House Banking and Currency Committee intends to conclude its hearings today on all these bills. A committee report will be forthcoming within a few days, I understand.

What will emerge from committee, undoubtedly, will be a compromise bill embracing, certainly, many of the provisions contained in H.R. 2969 and H.R. 3450, which are under discussion here today.

The Senate Banking and Currency Committee has already completed action on area redevelopment legislation and has voted 9 to 6 a bill authorizing $389.5 million for redevelopment of chronically depressed areas. This is a bill similar to the one which President Eisenhower pocket-vetoed in 1958.

I firmly believe the area redevelopment bill which will emerge from the House Banking and Currency Committee (in probably a compromised version of H.R. 2969 and H.R. 3450, sponsored by Congressman BOWLES) is must legislation to bring renewed industrial vitality and thus full employment to such surplus labor areas of Connecticut as Bridgeport, Stamford, Danbury, and Norwalk, where, as I have said, there are now 14,000 jobless.

Other surplus labor areas in Connecticut—Bristol, Danielson, Norwich, Ansonia, Meriden, New Britain, Torrington, Thompsonville, Waterbury, Middletown, Willimantic, and New Haven, to name them—will, of course, similarly benefit.

Proponents of Federal legislation to alleviate unemployment in economically depressed areas—and I am such a proponent—argue quite logically, I think, in claiming that the Federal Government has a clear-cut obligation to promote maximum employment, production and purchasing power.

This obligation, I maintain, is not being fulfilled, is not being met, so long as we have critical pockets of unemployment in communities such as Bridgeport and the other Connecticut communities I have mentioned.

I further maintain that unemployment such as now exists in Connecticut generally and in my district specifically is a threat to the stability of our entire economy.

A depressed area—such as the one in Bridgeport right now—is much like the proverbial acorn which grows into a big oak tree. The local depression, unchecked and unresolved, also can grow and spread to surrounding communities, since the purchasing power of residents in a depressed area is cut below adequate levels.

Something much more than a shot in the arm is needed to restore employment and to encourage the establishment of new industry.

The passage of appropriate legislation by Congress to alleviate unemployment in economically depressed areas will, I believe, provide the industrial stimulant necessary to revitalize the economic health of such cities as Bridgeport and other hard-hit communities of this State and my district.

My esteemed colleague, Senator PRESCOTT BUSH, has opposed area redevelopment legislation, I understand, because of fears that it would stimulate the highly unethical practice of industrial pirating.

H.R. 3450 contains an antipirating clause which, if retained in the final bill brought to the floor, should eliminate Senator BUSH's fears.

In section 6(a) of H.R. 3450 it is stated specifically that "financial assistance shall not be extended to assist establishments relocating from one area to another when such assistance will result in substantial detriments to the area of original location by increasing unemployment."

In summary, I would like to reiterate my belief that adequate area redevelopment legislation is required in the national interest.

The restoration of economically sick areas is essential to the national welfare. Putting these regions back on their feet is an urgent necessity. The Nation and Connecticut need their productive capacities to fight inflation and to maintain the posture of economic strength essential to our survival as a free country.

I maintain that we must not allow the Soviet Union to outstrip this Nation in economic progress.

Consequently, it is dangerous folly to consign millions of Americans to unemployment. Our country and our State must have their fruitful labors and appropriate area redevelopment legislation will go far toward putting the legions of jobless back into the Nation's work force.

Joblessness in large numbers is costly. It cuts heavily into tax revenues. It denies to the market billions of dollars' worth of goods and services. It accounts for large outlays of public funds for unemployment benefits and direct relief.

And vitally necessary as these programs may be, it would be much better for all concerned if the jobless had the opportunity for gainful employment.

We need strong area redevelopment legislation—legislation with substance—to eradicate joblessness and to help remove economic waste.

I thank you most sincerely for inviting me to appear before this committee and I hope my remarks have helped you understand why I feel substantial and appropriate area redevelopment legislation will be good for Connecticut generally and revitalizing for my own district in particular.

## National Church Leader Praises Rural Electric Cooperation

EXTENSION OF REMARKS
OF
## HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. McGOVERN. Mr. Speaker, one of the most inspiring gatherings in the Nation's Capital in many years was the recent annual meeting of the National Rural Electric Cooperative Association. Some 7,000 delegates from all parts of the country met in Washington to discuss the achievements and problems and the future course of rural electrification in America.

The REA cooperatives have won the respect and appreciation not only of millions of rural families who have been blessed by the comforts of electricity, but also our country as a whole has been invigorated by this stirring experiment in grass roots democracy.

The Very Reverend Francis B. Sayre, dean of the Washington Cathedral, and one of the principal speakers at the NRECA meeting, offered a challenging portrayal of the spiritual and social setting in which rural electrification has gone forward. Believing that the dean's remarks will be of interest to the Congress, I ask unanimous consent that they be printed at this point in the RECORD:

EPISCOPAL LEADER LAUDS COOPERATIVE MOVEMENT: TEXT OF HIS REMARKS AT NRECA MEET

(By Francis B. Sayre)

I'm grateful to Charlie Hooper and Clyde Ellis and my other friends among the Rural Electric Cooperatives for letting me share in the 17th annual meeting of your association.

You may not realize it, but assembled right here in this armory is just about the finest witness our Nation could ever hope to present to the world. Here, in this great gathering of managers and members of 950 service systems, all brought here in the companionship of a common enterprise, is America's best foot put forward; not the marching feet of soldiers which usually echo in an armory and which all too readily remind the world of the power of death; but here, in the paths of peace, is power for life.

Mankind must thrill to the achievement of electricity carried to the humblest cabin, conferring there not merely some respite from toil, but the self-respect of jointly owning the instrument which can so bless a whole community.

I wish the Russian Ambassador were with us now, to see in your faces the faith and strength which have made this cooperative movement a true arsenal of human freedom. Lenin once said that communism is just socialism plus electricity. Well that may be, but this convention can with far greater truth proclaim that democracy is faith plus electricity. When those two precious commodities are put together, then you have the stuff of which freedom is made.

After all, it was God who first put body and spirit together to make man in God's own image. And is this not the glory of your cooperative association? Will courage of the spirit and the workaday force of electricity you have forged a power for life that is the strength of our Nation and the hope of mankind everywhere.

"Oh well, now," I suspect some of you may be thinking, "let's not exaggerate. Those are flowery words about being the hope of the world and all that, but really what we've been doing all along in this electrification program is just trying to improve our farms and get our wife's elbow out of the washtub. The amenities of life, but hardly the hope of the world."

If you feel that the battle these cooperatives have been fighting is as humdrum as that, then I have a story for you—about a lady happily pursuing her own little way, who was suddenly given a much greater vision. It happened in the great cathedral which perches on top of Mount St. Alban in this city.

A couple of years ago the National Geographic magazine wanted to get a full-page picture in color of the great church full of people to publish as part of its inauguration issue. Now it's no mean task to set up for such a picture.

I don't know how many millions of candlepower were required to illumine the vaulted ceilings 100 feet from the floor. The photographers went through many a rehearsal with their remote-controlled cameras and their carefully placed lamps, until all was in readiness on Easter morning. Naturally on that day the cathedral was packed, and the service, televised across the Nation, proceeded with all the panoply and majesty possible in such a place. Just as the service concluded I observed a little lady pushing her way through the standing crowds until at last she stood in the opening at one side of the high altar. This was heaven as far as she was concerned. She'd never seen anything like it. Mecca. She reached into her handbag and drew forth a tiny Brownie camera with flashbulb attached. Just as she was focusing for her little picture, Brrm—the whole cathedral went off in a blaze of light. I'll never forget the look on her face. She stared in astonishment at her little bulb and visibly wondered how her tiny snap could have conjured up such a blinding light.

I don't know how many have come to this meeting with their little Brownie cameras, thinking of rural electrification in the terms only of kilowatts and interest rates on Government loans, and new deep freezers in the back hall. But I hope when you leave here you will have caught some new glimpse of the wider glory that lies in your joint stewardship of this mysterious power which we call electricity—power that God gives us not just to operate dairy machinery and chicken brooders, but power that can give leisure and quality to life, bringing us together in the enjoyment and use of it.

For it is true that just as a cathedral gives scale to the eternal majesty of God, so this meeting, 7,000 strong in the Nation's Capital, bespeaks the determined unity of country people and those in small towns, to band together on a scale and with a force comparable to any of the other vying forces of society; and to do it for the good of all, not just of some.

The Bible says that man cannot live by bread alone. And thousands of greedy advertisers have seized on this to persuade us that besides bread we must also have the latest cake mix, and a mixer to stir it up, and a streamlined stove to bake it in, and a fancy dining room set on which to serve it, and a veritable host of other things. But this isn't the conclusion of the Bible. For the Scripture says "Man doth not live by bread only, but by every word that proceedeth out of the mouth of the Lord doth man live." And God's word is not the shallow quickness of instant coffee, but the abiding trust of a people who have learned to dwell with one another in peace, sharing the power of life as they break bread together day by day.

How much mightier is this saving word of God than all the babbling voices of men, which would divide us, smother us, and finally dismiss us with an imprecation because we persist in believing in the wider truth of brotherhood and will not give in to the littleness of private greed.

There is another way of seeing the importance of going forward together. It lies in the fact that everywhere in the world the barriers that divide men are rising higher and higher. Far from walking together, people are increasingly staring at one another across all sorts of borders. Misunderstanding and hostility have the world in the grip of cold warfare, and even in this democracy the ramparts of race and section and economic status hold people apart in disturbing ways.

Several months ago I stood in a place that made this vivid for me. It was in a lovely little valley of China, about 50 miles from the city of Hong Kong, where East faces West across a little winding stream running through the rice paddies. Nothing could be more peaceful than the stillness of gentle hills on either side, and the farmers about their business in the quiet fields. The border is marked by a wooden bridge across the stream. On the little bridge there is nothing more than a plain sawhorse to signify the place where the world is cleft in twain. The bridge is guarded by Chinese on either side. On the British side they wear blue, and carry pistols. On the Communist side they wear khaki, and carry rifles. The tragic truth of all mankind seemed to be pantomimed by those guards on either side of the sawhorse; men of the same race and blood, yet not able, because of the difference in dialects to speak to each other but only to stare dumbly and in enmity at one another. Human hostility in a valley which God had planted with peace; such is the sorry state of our world today.

Now there are others, as we all know, on the other side of that Chinese fence who have seized upon electricity as an instrument of power in the brutal arsenal of absolute control. Electricity in itself is neither good nor bad. In the hands of an irresponsible government, or even of some avaricious private power combine, it can be used for devastating oppression. This is when the people blow up the dams, preferring darkness at their lamps to slavery in their souls.

But when people take this power into their own hands; dig the post holes and string the wire and share the electricity as a trust that God gives them in common, then the ramparts are bridged, and understanding begins to grow, and there is healing in the world.

I do not know of any movement of people anywhere that is capable of giving more realistic hope to other people than this cooperative movement of yours. In it I have seen every kind of barrier torn down, and people of every religion and race and economic standing, joining to gether to bear a witness that is like living water to a thirsty world. What could be more important than that, either to them or to us.

I don't know whether you read about the Moslem delegate who came to New York to attend a session of the United Nations. He didn't dare wear his fez, for fear it would be out of place in that bustling city. But it made him sad to have to renounce, even temporarily, the symbol of his creed. However, as he walked down Madison Avenue, he was overjoyed to meet whole groups of men wearing jaunty red fezzes. It was a bunch of Shriners on a spree. So the U.N. man went happily back to his hotel to don the headpiece that told the world what he was, in the providence of God.

If others in the world could know what you are doing in the rural electric cooperatives, I think they would take it as a true sign of our faith; like a fez proclaiming what we are. For we are a people on this continent who really care about the marginal areas of our land, and the lesser fellows who are obliged to live on it, and the women and children who look to it for nourishment. The homeliness of our life is not the fat complacency of the ugly American whom some have seen abroad, but rather the sturdy honest plainness of a face like that of Abraham Lincoln, born 150 years ago this week, who suffered and fought and died lest this country be divided.

You men and women of the cooperatives are called upon to show us all how to hold it together, with faith and hard work.

## The South Bend Tribune Supports Foreign Aid

EXTENSION OF REMARKS
OF
### HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. BRADEMAS. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD an interesting editorial published on March 20, 1959, in the South Bend Tribune, a Republican newspaper, in support of the foreign aid program:

BASIC FOREIGN AID ELEMENTS

The Acting Secretary of State in Secretary Dulles' absence has described the value of the foreign aid program, in principle, with exceptional pungency.

Testifying in the House Foreign Affairs Committee hearings on the aid bill, Acting Secretary Christian A. Herter said: "Militarily it supplies the shield. Politically it promotes freedom and stability. Economically it improves conditions of life. Psychologically it displays our determination to continue in a role of leadership in the fight for free world objectives."

The fact that most of the foreign aid budget has a military stamp may not be understood by most people in this country. So Secretary Herter's emphasis on that is timely. Actually protection also for Americans is a purpose of this. Our domestic military budget would be much larger if this program were not in existence.

His emphasis also on the psychological meaning of the program should impress his fellow countrymen and their representatives in Congress. A decisively reduced foreign aid program undoubtedly would have bad effects. It would be interpreted elsewhere in the world as an indication of U.S. determination to cut back responsibility for free world conditions in this terribly disturbed period.

The foreign aid program isn't perfect. Nobody says it is. But a reliable substitute, with due consideration of the military, economic, political and psychological conditions, isn't in sight now.

In detail, the proposed 1959–60 program is debatable. Some changes in it might be justified. But there should be agreement that it should not be changed so that any of the four basic elements emphasized by Secretary Herter would be adversely affected.

## The Oder-Neisse Frontier

EXTENSION OF REMARKS
OF
### HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum prepared by the Polish American Congress regarding the problems of the Oder-Neisse frontier and its relevancy to the European peace settlement.

The Polish American Congress represents more than 7 million Americans of Polish descent in the United States. The president of this organization is Mr. Charles Rozmarek, who is also the president of the Polish National Alliance, the largest Polish-American fraternal organization in this country.

During its 2-day session of the board of directors of the Polish American Congress, held here in Washington on March 16 and 17 at the Statler-Hilton Hotel, the following memorandum regarding the western boundaries of Poland on the Oder-Neisse River was adopted.

This memorandum was prepared by the Polish American Congress as a sincere contribution toward resolving some of the problems regarding a lasting peace in Europe. It was presented to the U.S. Department of State and to Senator J. W. FULBRIGHT, chairman of the Senate Foreign Relations Committee because, as American citizens, the executive board of the Polish American Congress sincerely believes that resolving the problems of the postwar boundaries between Poland and West Germany would help strength the U.S. foreign policy, which has as its basic goal preservation of peace in the world.

The memorandum follows:

MEMORANDUM ON THE PROBLEM OF THE ODER-NEISSE FRONTIER AND ITS RELEVANCY TO THE EUROPEAN PEACE SETTLEMENT, PRESENTED BY THE EXECUTIVE OFFICERS OF THE POLISH-AMERICAN CONGRESS TO THE DEPARTMENT OF STATE, AND TO SENATOR J. WILLIAM FULBRIGHT, CHAIRMAN OF THE SENATE FOREIGN RELATIONS COMMITTEE, MONDAY, MARCH 16, 1959

Final recognition, acceptance, and guarantee by the Western Powers of Poland's western boundary along the Oder-Neisse River is crucially relevant to the Berlin crisis and European peace settlement. This question cannot be separated from the central problem of peace and security faving the United States, Great Britain, and France, as the immediate respondents to the Soviets' challenge.

We beg to submit our considered opinion in this vital matter as follows:

I. SOVIET PRESSURES AND ADVANTAGES

The Western policy of keeping the final recognition of the present Polish-German frontier in abeyance plays directly into the Soviet hands. The Kremlin, falsely acting as the sole guarantor of said boundary, exerts pressures and blackmail not only on the Polish people, but on other nations of east central Europe as well. These nations are justifiably apprehensive of recurrent German revisionism and irredentism, which is being emboldened to stir international turmoil by the vacillation of Western statesmen in this all-important matter of the Polish-German boundary.

At the same time, this uncertainty as to the jure status of said boundary enables Russia to attempt to lure many West German elements from their loyalties to the West with promises of a deal with the Soviets at the expense of Poland for an obvious price: Withdrawal of Germany from NATO, and forgoing a new Russo-German pact designed for domination either through military forces or joint economic offensive. The possibility of such a deal is inherent in the present situation in which Russia appears to be the sole protector of Poland's western territories, and could, in her perfidious diplomacy feel free to barter east central European stability for drawing Germany on her side.

II. MAJOR LIBERATION

Recognition of the Oder-Neisse line by the West, on the other hand, would have tremendous impact on all the peoples of east central Europe as proof of the implementation of Mr. Dulles' policy of liberation; it would deprive Russia of the role of sole protector of nations subjugated behind the Iron Curtain; it would prevent Russia from tempting Germany with a deal for a price; and to Poland itself, it would mean a major liberation, as a recent editorial in Life magazine eloquently stated.

III. ACCOMPLISHED FACTS

It is inconceivable that the United States, Great Britain, and France, as signatories of the Berlin Conference of July 17–August 2, 1945, would now reverse the process initiated and approved by them, in which the remnants of the German population in the former German territories (east of the Oder-Neisse line) were removed to the four occupational zones in Germany proper. Such reversal would be cruel and inhuman both to the Poles and the Germans. The mass movement of population, started by the Germans in the 1940's, had been completed by the Berlin agreement in wartime conditions, the recurrence of which is unthinkable now.

Practically no Germans are now living in Poland's Western Territories (east of the Oder-Neisse line) which have been settled by 7 million Poles since 1945. Tragically,

however, these Poles now live in a state of uncertainty, waiting for the West to give them aid and comfort in their heroic travails and strengthen their resistance to Russian domination. The removed Germans have been meanwhile absorbed and integrated within the economic and social order of the German Federal Republic.

IV. END OF COLONIALISM

Poland's western territories along the Oder-Neisse line have never been regarded by Poles throughout the world, and by 7 million Americans of Polish origin, in whose name the Polish American Congress acts, as a compensation for lost provinces in the East.

These western provinces were originally Slav-Polish, forcibly colonized and conquered by German armed invasions and regarded even by the Germans themselves as eastern colonial lands; they were never wholly integrated into the German economic, political, and social structure; on the contrary, they were the source of constant German worries as the springboard for Ostflucht, i.e., the flight from the east which has been in progress for decades preceding World Wars I and II.

The end of this German colonialism in the heart of Europe has been brought by the Germans themselves who started the war of aggression and annihilation against Poland in 1939; destroyed or plundered at least 38 percent of Poland's national wealth and, in a planned genocidal fury, killed over 6 million Polish civilians. The total defeat of Germany by the Allied powers brought about the dissolution of the Prussian state which has been the driving force of German aggrandizement for long periods in history.

On the other hand, geographically, the lands along the eastern banks of the Oder and Neisse Rivers belong to the economic and demographic unity with Poland.

We respectfully call your attention to two scientific theses, based on historical, economic, and demographic facts, and published by Hon. THADDEUS M. MACHROWICZ, of Michigan, in the CONGRESSIONAL RECORD of August 15, 1957, entitled "On Polish Provinces East of the Oder-Neisse Line and Economic, Historical, Legal, and Political Aspects Involved" (pp. A6718–A6725) and of August 25, 1958 under the title "The Polish-German Settlement in the Light of International Law" (pp. A7829–A7833).

We firmly believe that it is in the best interest of the United States and its European allies to recognize unequivocally and finally the Oder-Neisse line as an already accomplished and irreversible fact.

Recognition de jure of the situation created de facto by the Berlin Conference of 1945 would quiet down the small but vociferous group of German Irredentists, now emboldened by the absence of a clear Western declaration, who refuse to recognize the Oder-Neisse line as the final boundary between Poland and Germany.

As we have already pointed out, such recognition would have tremendous impact on not only Poland, but on other subjugated nations in East Central Europe—an aggregate of 100 million people. These people want to return to the European family of nations, and the recognition of the Oder-Neisse line would keep their hope of liberation alive.

In their psychological resistance to Soviet domination, they constitute even now, a major deterrent to the outbreak of world war III as the Kremlin fears a series of revolts which, in case of armed conflict, would create a dangerous situation for the Soviet armed forces in their westward drive.

## A Party of Principle

EXTENSION OF REMARKS
OF
## HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 24, 1959*

Mr. RAY. Mr. Speaker, I am glad to place in the RECORD the thoughtful and constructive address "A Party of Principle" which was delivered last Friday evening by the Honorable JOHN W. BYRNES of Wisconsin to a meeting of Republicans in the 15th District, N.Y., which I have the honor to represent.

A PARTY OF PRINCIPLE

As Republicans, we have been going through a period of critical self-examination. The crushing defeat we suffered in the national and State elections last fall requires a searching look at our party. The main emphasis of our studies and discussion has been on making our party a more effective political mechanism, on the organization we must create to win elections. Certainly there is much that must be done in this area.

I do not want my remarks tonight to be misconstrued as quarreling with that objective. As a partisan Republican, and an officeholder, I want our party to win elections, too, and I have been tremendously encouraged by the earnest enthusiasm which has gone into reorganization efforts since November.

My principal point tonight, however, is that the major concern of the Republican Party cannot be just to win the next election. Our principal job is, and must be, the preservation of our Nation and its institutions.

It is to that job we must dedicate our principal effort. For, if we fail in it, there will not be much need to worry about elections. And, if we succeed—by awakening the American people to a recognition of their peril—victory at the polls will follow.

We must bring to our task more than just an urge to take power. A political party enters this fray ill-equipped unless it is armed with basic principles—unchanging beliefs so precious they cannot be sacrificed for any political victory. Without such principles, a political party is nothing more than a gathering of office seekers and their friends. Without principles, a poltical party, in the words of our President, is only a conspiracy to gain power.

We must face up to the fact that a party without principles has captured control of the most important branch of our Government—the Congress. The Democrat Party today is a party, not of principle, but of expediency. Its method of gaining power is to divide the people into groups, to appeal to their special interest, promising special largeness from their government.

Such a party can have no principles, except to assert, in order to make good its promises, that the answer to any problem, real or fancied, is massive governmental action or massive Federal spending. Without principles to guide it, the Democrat Party cannot concern itself with preserving this Nation and its heritage. It is guided only by the day-to-day demands of its own lust for power.

The Republican Party, on the other hand, no matter what its other failings, is a party of deep-seated principles and it must remain so. It is true that any party representing a broad cross section of the American people will encounter differences of opinion as to details and method. That is true of our party. In fact, I suggest that we Republicans have permitted these differences to become so magnified in our own minds and the public mind that the principles which unite us have been forgotten or ignored. As a result there has been all too much talk about hyphenated Republicans—liberal-Republicans, conservative-Republicans, modern-Republicans. It is time—if we are to face the challenges that confront us—that we start thinking, talking, and acting as Republicans—period.

Let us heed the words of Lincoln when he said: "I'm afraid of the result upon organized action where great results are in view—if any of us allow ourselves to seek out minor or separate points in which there may be differences of views as to policy and right, and let them keep us from uniting in action upon a great principle in a cause on which we all agree."

Let us remember that our strength can stem only from the basic principles which unite us.

These principles are so deep and instinctive that we have unfortunately too often felt it either unnecessary or too difficult to put them into words. But they must be put into words; they must be enunciated over and over again. Our beliefs and principles must be articulated so clearly and forcefully that there can be no doubt as to where we Republicans stand and why.

Let me presume here tonight to make a modest beginning at putting into words what we so deeply and firmly feel.

We believe, we Republicans, that no generation can live solely for itself but rather that it has the heaviest of obligations to preserve the Nation and its institutions, strengthened and improved, for those who follow. We know that our heritage was won only by the sacrifice of those who preceded us. We have the high moral duty to sacrifice, if need be, to preserve and protect it.

We know, as we face the problems inherent in preserving our society, that the right way is not always the easy way, but that we have no choice except to take the hard way if it is, in truth, the right way. We recognize that we will find ourselves frequently bucking the popular tide, for we know, just as surely as the Democrats, that there is little political appeal in self-denial. If we accept the responsibility of leadership, however, and that is one of the functions of a political party, we must serve as stern guardians of the national commonsense.

We accept, as part of the responsibility of leadership, the duty of making clear to the people that the easy way, if it is wrong, leads only to the misery of retraced steps or the finality of disaster. Championing what we believe to be right may at times lose us political battles; but we are supremely confident it is the only way to a clear conscience and ultimate victory.

We believe in a government of laws which have as a principal aim the prevention of the seizure of dominant power by any man, or group of men.

We believe that the political and economic strength of a nation depend upon the genius of its people and that genius cannot flourish wrapped round with the chains of an all-powerful state or an all-powerful minority.

We believe that liberty is man's most precious possession and that it includes the freedom to have an incentive to produce. This has led to our faith in the soundness of an economic system based upon man's

universal urge to better his lot. We believe that success, if it is to be the incentive for all, cannot be mocked and scorned and discouraged in an appeal to the envy of others.

We believe in a limited government as the best means of preserving individual freedom and initiative, but this does not blind us to the legitimate needs of our citizens or the challenges which confront our Nation.

We insist, however, that the needs the Federal Government is called upon to meet be real needs which cannot be met by individual initiative or by the unit of government closest to the people, and particularly, that they are not needs manufactured by those looking for special advantage or power.

We believe that the challenges to our Nation's survival can best be met, not through ill-considered actions based on fear or emotion, but by a nation which itself is guided by basic principles, proceeding confidently because it is physically strong, morally right, and carefully prepared.

It is because of these beliefs, these principles, that the Republican Party is called upon by its own conscience to move vigorously to the task of preserving our Nation against the present-day threats to its survival.

In my book there are today three great threats facing us as a people and as a nation.

The threat of communism.

The threat of inflation.

The threat of the new monopolies.

Each must be met head on. Each must be fought relentlessly if what we call the American way of life is to survive.

The first threat is the most dramatic and the most apparent. It stems from the rapid rise of Soviet military and economic power. We have seen the Soviet Union ruthlessly trample on the rights of its people and other nations in its drive to rule the world. By concentrating on the means to produce military power, it has rapidly industrialized its economy and achieved far-reaching scientific advances, a combination which has made it a real threat to world security. We may deplore their methods, but we ignore, at our own peril, the presence of vast military and economic power in the hands of a small group of men imbued with a fanatic belief in the inevitability of communism's world conquest.

The reaction of the Democrats to the more dramatic evidences of Russian military power has been characteristic. Conditioned from habit, their immediate response has been that we outspend the Russians and achieve victory through sheer weight of the American dollar. Democrat spending bills followed quickly in the orbit of the first Russian satellite and every new announcement from the Kremlin quickens their flow.

It would indeed be wonderful if all we had to do to preserve our Nation against the Rusian military threat was to turn on a spending spigot. It is not that easy, and the political party which tells the American people that it is, is gambling recklessly with the future of our Nation. If, as a nation, we rely solely on scattering our national wealth to the winds in order to quiet every fear, we can lose this fight before we start.

We cannot meet the Russian military challenge by siphoning off and diluting our available resources, both of brains and materials. Yet, the numerous critics of our defense policies insist, when you put all their charges together, that we engage in just such a scatterbrained effort. The net effect of following the advice of a Symington who wants more money for one missile, a Johnson who wants more money for shooting at the moon, an Anderson who wants more money for one kind of airplane, a Vinson who wants more money for one branch of service, and a Jackson who wants more money for submarines, would be weakness through dissipation of our strength. It would be a defense based not on the best estimates of our National Security Council, the entire intelligence resources of the Nation, and the expert advice of our Joint Chiefs of Staff and our President, but on the worst fears of our most frightened politicians.

What it will take to beat the Russians at this gruesome game is a government and people ready, of course, to sacrifice whatever is needed for our overall superiority, but determined at the same time to proceed only on the basis of sound estimates, rational thinking, and carefully conceived plans which look not just to today but also to tomorrow. This is the hard road, and only a party of principle has the courage to stand up to the fearmongers and tell the American people it is the road we should follow.

It is clear, too, that only a party of principle can furnish the kind of leadership which stands fast against those Democrats who would sacrifice our world position in the face of the potent power of the Soviet Union. When it is all boiled down, the constant carping over the inflexibility of Mr. Dulles, the demands for a new approach to the Soviet Union, and the laments for the lack of viability in our foreign policy are nothing more than a frightened unwillingness to face up to the fact that you can't appease the Russian without losing your shirt in the process. We are confident the American people won't soon again be led down the so-called easy road of appeasement.

The second threat to our security as a nation is the insidious menace of inflation. Our response to inflation is not only significant in its own right but it cannot be divorced from the challenge of the Soviet Union.

No greater test of the principles of the Republican Party can be provided than in the fight against inflation. It cannot be successfully undertaken unless we are willing, as a nation, to think more of the future than of ourselves and to take the hard but right way so that our Nation and its institutions can be preserved.

As we move positively against the threat of inflation, we Republicans are accused of being preoccupied with balanced budgets, of being negative when we oppose unessential spending programs, and of having a narrow bookkeeping attitude toward the problems of our Nation.

I say to you: There can be no more positive programs, for our party or any party, than to try to save this Nation from the disaster which will take place if inflation, through habitual spending beyond our income, becomes the national way of life.

As we oppose programs which individually have vote appeal but which taken together lead swiftly and surely to national bankruptcy, we lay ourselves open, of course, to the demagogue's cry. But what we seek is more important than any single spending program. Unless we can maintain the stability of our currency, we will not have the strength to support any governmental program, no matter how desirable—be it for defense, for scientific advance, or for human welfare. Bound up in the fight for a balanced budget is the question of whether our economy will have the strength and stability to maintain us in the battle for survival.

Let it be remembered that we have been living beyond our income in 23 of the last 28 years. The credit of the U.S. Government is at the breaking point.

It is not just the national budget that is involved in the Democrat spending programs. The personal budget of each and every individual and family is involved. An unbalanced national budget means unbalanced family budgets; it means loss of credit, of earnings and savings, insurance, pensions and annuities. When unbalanced national budgets and inflation become our national way of life, they all go down the drain together.

There is also a moral issue.

The time has come to end the completely immoral practice of passing on to our children the debts we incur for our own immediate benefit. We could at least have respect for the morality of the spenders if they would suggest that this generation pay, through higher taxes, for the cost of the programs they so glibly propose. They lack the courage for that, and in many cases, like the junior Senator from my State, they not only beguile the people with vast spending programs but promise simultaneous tax reductions. Let us call a spade a spade. Mortgaging our children's future is basically immoral.

There is the question of equity.

The first obligation of government is to treat its citizens equally. There is no equity when a government spends to provide special benefits for some of its citizens, because they are politically powerful, at the expense of all other citizens. But, the inequity is tragically multiplied when a government must borrow and inflate its currency to do so. For inflation does not strike all citizens an even blow; it hits hardest at the weak, the unorganized, at those who lack the means to protect themselves from its subtle and devastating robbery, the widow living on insurance, the aged living on pensions. No government which pretends to serve all the people can retain their confidence if it promotes wholesale inequity by choosing the easy road of unbalanced budgets.

There is the issue of survival.

I have spoken of the military challenge of Soviet Russia and the kind of response we must make to it. Will we have the sheer physical strength for that challenge—no matter how many missiles are on the launching pads—if our underlying base of a sound fiscal structure and a strong economy are rotted away by inflation?

The answer, of course, is no, but the Soviet challenge is more than military: it is a total challenge on the military, political, economic, and moral fronts. Can the United States meet that total threat with its currency debased, its credit gone, its economy in turmoil, its citizens divided and its morality compromised, if we adopt inflation as a way of life? Of course not.

Politically, can we hold ourselves up to the nations of the world as a shining alternative to communism if we are unable to keep our own house in order, if we display a fatal political weakness in our form of government by casting aside principle for the fatal charms of expediency? How can we be an example to the world if we cannot in times such as these even meet our current needs out of current income?

Can we meet the Communist economic offensive if through inflation we price our goods out of the world market and if the American dollar becomes a currency to be shunned rather than desired?

And morally, where does this Nation stand as opposed to immoral communism if it succumbs to the immorality of inflation?

Let no man tell you that those who fight against the unbalanced budgets which cause inflation are preoccupied with the mechanics of bookkeeping. We are preoccupied, but our preoccupation consists of the most urgent and positive program this Nation can undertake—the prevention of a national disaster. It is our job as Republicans, as a party of principle, to awaken the Nation to this clear and present danger.

The President has presented the Nation with a balanced plan for security and public welfare. He has presented a plan balanced as to income and expenditures. It is a truly Republican program. It is our job as Republicans to exert every effort to make this plan a reality.

I mentioned earlier that one of the basic principles of the Republican Party is the belief in a government of laws which have as a principal aim the prevention of the seizure of dominant power by any man or group of men. Because of this principle, the Republican Party is called upon to meet the threat of the new monopolies, powerful labor organizations under the domination of a handful of men.

Under Republican leadership, this Nation met the challenge of the seizure of dominant power by a few industrialists and financiers a generation ago. It curbed the power of the trusts when in the public interest it enacted antimonopoly legislation under Republican leadership.

Today similar power rests in the hands of men who dictate the policies of our national labor unions. It consists of vast economic power, the power to cripple an industry or a nation. It is economic power which has reached out so successfully for political power that it has taken over, for all practical purposes, the Democratic Party and now controls the Congress of the United States. It is a combination of economic and political power which threatens the national interest because it is a power which places its own interest above the interest of all citizens.

Curbing the power of the new monopolies will be infinitely more difficult than dealing with the old industrial and financial monopolies, for the new monopolists have wrapped themselves in the cloak of the so-called common man. They have been careful to inculcate the doctrine that their monopoly interest is identical with the interest, only only of union members, but all working men and women. No attempt can be made to curb the power of the new monopolies without incurring their charge that it is a move against the public interest.

But the public—the consuming public—does not benefit from the exercise of naked monopolistic power to raise wages, and hence prices, beyond the level justified by increased productivity—nor from the extortions of a Hoffa made possible by the power his monopoly gives him.

The public—the union worker public—does not benefit when its dues are stolen, or frittered away, or spent for propaganda or political activity against its wishes.

The public—the taxpaying public—does not benefit when the political power of the new monopolies is used to extract special benefits from a pliant Congress or legislature.

The public—the small-business public—does not benefit when its choice, confronted with the overwhelming power of a giant union, is to accede to its demands or go out of business.

The public—the farm public—does not benefit when the new monopolies drive up farm costs far beyond the ability to increase farm prices.

Nor can the public—all of us as free citizens—benefit when dominant political and economic power rests in the hands of a few men, no matter how much they claim to have our best interests at heart.

Let there be no mistake about it. The evils which have arisen because of the emergence of the new monopolies are the result of the power they hold in their hands. We cannot eliminate the evils until we restore the balance of power and to do so, we must curb the powers of the new monopolies even as we protect the very legitimate rights of working men to organize for their own protection and own welfare.

As a party of principle, we cannot dodge this issue. The Democrats must avoid it at the peril of their extinction as a political force. They are incapable of going beyond what the new monopolies will permit, and this consists only of wiping the smudges off from the faces of those union leaders who have gotten dirtiest in their greed for power. It's up to us to take the lead in a sustained effort to curb this threat to the stability of our Nation. It will in the end earn us the gratitude of the vast majority of the American people who, even now, sense the danger involved in letting unbridled monopoly power run loose in our land.

In these great tasks, then, in meeting the Communist threat, in fighting inflation, in curbing the new monopolies, we Republicans have a job to do. At stake is the future of our Nation and the security and happiness of our people.

There is only one way we can go about this task and that is to devote our every resource to it. We cannot succeed, in the face of an overwhelming Democrat majority in the Congress, unless we arouse the American people to the dangers which confront them and unless we imbue them with a belief in the principles we uphold. We must, through them, make it politically impossible, for any party or group, to lead this Nation down the easy road to its downfall.

We need to make our party an effective political organization. We need to enlist in our ranks the millions who believe, as we do, in the principles we uphold. We need the devotion, discipline and dollars without which a party cannot function. We need to tell our story, clearly, unhesitatingly, forcefully so there is no man in this land who does not know our party's principles, program and goals. We need, in short, to get down to work.

And, as we set upon this noble task of saving a nation, should the path look dim, the goal remote and the obstacles insurmountable, we can do no better than take courage from the faith that: "Right makes might, and in that faith let us to the end dare to do our duty as we understand it."

## Senator Karl E. Mundt Salutes 40th Anniversary of American Legion

EXTENSION OF REMARKS
OF
### HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. BERRY. Mr. Speaker, this past week the Nation saluted the American Legion in recognition of its 40th anniversary. Among those joining in the tribute was South Dakota's senior Senator, KARL E. MUNDT.

In view of the recent recognition of this notable occasion, and particularly since South Dakota's American Legion posts have made major leadership contributions through establishment of such youth programs as Boys' State and American Junior Legion baseball, I think it is appropriate to call attention to the remarks of Senator MUNDT and a letter from the American Legion to the South Dakota Senator.

Mr. Speaker, I ask permission to include at this point in the RECORD, the brief remarks of Senator KARL MUNDT and the letter to Senator MUNDT from the Honorable Preston J. Moore, National Commander of the American Legion.

SENATOR KARL E. MUNDT SALUTES THE AMERICAN LEGION

(By Senator MUNDT)

The American Legion has always been in the forefront of community activities and patriotic endeavor. All Americans can join in saluting this great veteran's organization on its outstanding record of achievement. The American Legion, along with other veterans organizations, has made tremendous contributions to the welfare of the Nation.

The 40th anniversary is particularly significant to South Dakota, because our State has been a national leader in American Legion affairs. Through able, imaginative, and dedicated leadership of South Dakota Legion members, the Boys' State program was developed. Junior American Legion baseball was also a South Dakota Legion invention.

South Dakotans can take pride in their 259 Legion posts for their many activities which reflect the devotion and recognition of Legion members to those fundamental principles which have kept America free.

The American Legion deserves the highest commendation for its many efforts to help America remain alert to the dangers of communism and the subversive agents in our midst.

The Legion has continually encouraged Americans to spend that amount of money and effort necessary to keep America strong in the realization that our only hope for peace is to remain strong.

The American Legion rightfully advocates that our strength is the convincing argument to dictators and potential enemies that war against freedom and America would be both futile and fatal.

Mr. Speaker, the letter from Comdr. Preston J. Moore follows:

THE AMERICAN LEGION,
*March 20, 1959.*

The Honorable KARL E. MUNDT,
*U.S. Senator,*
*Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR MUNDT: Your generous letter of congratulations to the American Legion on the occasion of its 40th anniversary is sincerely appreciated by the officers and members of our organization.

South Dakota can well be proud of its part in pioneering several of the Legion's outstanding programs of youth training that exist in our country today.

Thanks to the vision of South Dakota Legionnaires, a million boys will be playing baseball on sandlots throughout the United States under the auspices of the Legion's junior baseball program. In addition, over 18,000 high school students will be attending Boys' State throughout the Legion's departments, learning the fundamentals of American citizenship and government.

These annual events are but a part of our basic Americanism program which for four decades has attempted to instill in all Americans a genuine love of country and a true appreciation for the sacred obligations of citizenship. The realization of these ideals constitutes a living memorial to the wisdom and foresight of the Legion's founders who met in Paris just 40 years ago this week.

I enjoyed seeing you during the affair at the Army-Navy Country Club, and was proud to have the Washington Post carry the picture of you, Ce Gunn, and myself.

Sincerely yours,

PRESTON J. MOORE.

## New State Slogan for Kansas

EXTENSION OF REMARKS
OF
### HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. HARGIS. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial, entitled "New State Slogan," from the March 19 issue of the Independence (Kans.) Daily Reporter:

NEW STATE SLOGAN

The timeworn slogan "The Wheat State" that has appeared on Kansas vehicular license plates lo these many years is about to be replaced. The 1960 tags will have instead another reading "Midway U.S.A."

"Midway U.S.A." was the brainchild of an 11-year-old schoolboy from Hutchinson. It won the contest sponsored by the Tourist Promotion Council of the Kansas State Chamber of Commerce. It says more in those 9 letters of the alphabet than the experts take in 25 words or less to win contests.

It signifies Kansas is at the center of things—at the crossroads of the Nation. This slogan "Midway U.S.A." should have value in promoting industry as well as tourist traffic.

Kansas has far too many attributes to offer than to be simply identified with a single agricultural product like wheat that is consistently in oversupply and a drug on the market. We are gaining industry and lakes. We are also constantly uncovering additional tourists attractions that are of interest to all.

"Midway U.S.A." tells the story in catchy, rhyming manner.

## TVA Wins a Round

EXTENSION OF REMARKS
OF
### HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. EVERETT. Mr. Speaker, the dean of the Democratic delegation from Tennessee, CLIFFORD DAVIS, has worked faithfully for 4 years in seeking to report from the Committee on Public Works a satisfactory Tennessee Valley Authority self-financing bill. Working by his side has been our colleague, ROBERT E. JONES, of Alabama, who is as well-informed as any other in the country on electric power matters. Both were aided by many members of the Committee on Public Works, and on last Tuesday, March 17, the committee reported a bill which will permit the Tennessee Valley Authority to issue bonds in the sum of $750 million to provide additional generating capacity in the area which it was serving on July 1, 1957.

The President of the United States, on four different occasions, has recommended to the Congress a self-financing bill. No appropriations have been allowed TVA to meet the power needs since 1953. This bill should be passed. All of us in the valley are indebted to CLIFFORD DAVIS for his constant, wholehearted support of this bill.

On March 19, the Commercial Appeal, an outstanding newspaper, published in the city of Memphis, included an editorial in support of this bill, and under leave to extend my remarks in the RECORD, I am including it.

The editorial follows:

TVA WINS A ROUND

A bill to allow the Tennessee Valley Authority to finance the generating plants it needs to serve its present area has finally won approval in the Public Works Committee of the House.

It is a proud occasion for CLIFFORD DAVIS, Democrat, of Tennessee, the representative from Memphis. Although the bill has had support of President Eisenhower for years, none of the Republican members of the House committee supported this law. It also has the support of the two Republican Members of the House from Tennessee but they were unable to influence party members on the committee.

Instead the loud and high-priced voice of the private power company lobby was heard. It is a voice that once said TVA was unable to support itself, and now is afraid TVA will demonstrate that it can.

The next step is the Rules Committee and then the House floor, and Representative DAVIS is confident of two more victories.

Technically TVA has had authority to expand its electric service over about 300,000 square miles, that is to any place within about 150 miles of a TVA dam where there is hydrogeneration. Giving up this geographical expansion has been opposed by many friends of TVA.

Actually, the restriction on area accepted to obtain this committee approval preserves to TVA about 105,000 square miles, which is all it now serves, plus expansions under negotiation at the Kentucky end of the Tennessee River and at the Chattanooga edge of Georgia. It also preserves the interchange of power with neighboring power systems, such as Memphis.

More territory is a secondary consideration with TVA. Its great unsolved problem has been enough generators for the territory it already has. Congress has taken more than half of TVA's electricity for national defense purposes, and stopped the old method of 40-year loans from the Treasury for replacement generators.

With a majority of House and Senate approving, Mr. DAVIS' proposal will allow TVA to sell as much as $750 million in bonds for building more generators as needed.

## Chelsea, Mass., Chamber of Commerce Opposed to Supreme Court Ruling That Corporations Doing Business in Interstate Commerce Are Subject to Income Tax

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the Chelsea, Mass., Chamber of Commerce:

Whereas the Supreme Court of the United States has recently ruled that corporations doing business in interstate commerce are subject to income tax in the various States to which they ship merchandise.

Therefore, the board of directors of the Chelsea Chamber of Commerce, believing that the cost of complying with this law will prove to be excessive and burdensome; that, in many cases, particularly with small manufacturers, these costs will be greater than the taxes involved; that because each State will have its own rate and governing rules, an individual study of the law of each State will be required, entailing excessive labor and expense, has passed the following resolution:

*"Be it resolved by the board of directors of the Chelsea Chamber of Commerce, in meeting assembled on March 18,* That this ruling creates an excessive burden and expense on interstate commerce; and be it further

*"Resolved,* That a copy of this resolution be sent to the press, the Chamber of Commerce of the United States and to our Senators and Representatives in Congress."

## The Largest Explosive Plant in the World Remains Idle

EXTENSION OF REMARKS
OF
### HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. GEORGE. Mr. Speaker, throughout the Midwest many civic-minded professional and businessmen are wondering why the expansive and valuable Sunflower Ordnance Works, near Lawrence, Kans., remains in mothballs and is idle.

Especially are they concerned because of the large number of unemployed throughout the area. The citizens of both Kansas City, Kans., and Kansas City, Mo., join with those of Lawrence, Eudora, DeSoto, Shawnee, Independence, Mission, Bonner Springs, and other cities in the two States in wonderment and astonishment at the failure of the Department of Defense to utilize this vast and expensive facility.

A large labor pool is available in the area. For example, the city of Lawrence, only 13 miles from Sunflower and the home of Haskeel Institute and the University of Kansas, has splendid and progressive leadership but it also has a number of unemployed. Even more industry would no doubt locate in this forward-looking city did not the Kansas River occasionally overflow its banks—a danger not pertinent to Sunflower.

With the rapidity of missile development and with Sunflower equipped and ready to produce solid propellants, the failure of the Government to put this facility in operation certainly appears to be an economic waste—not only of the ordance works itself and the millions of dollars invested in that plant, but of the available manpower ready and anxious to go to work.

The present situation was anticipated by Dolph Simons, the publisher of the Lawrence Daily Journal-World, when he outlined his thoughts in a front-page editorial on February 1, 1958.

Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include this prophetic editorial which was published over a year ago.

WHY HALT SUNFLOWER IN CRITICAL PERIOD?

(By Dolph Simons)

Sunflower Ordnance Works, the largest explosives plant in the word, is scheduled to be shut down completely in 5 months—in spite of the fact the United States apparently is about to embark upon its greatest peacetime military preparedness program.

The great military effort is primarily concerned with missiles and rockets which require special explosive propellants—the very thing Sunflower is equipped to produce

efficiently and rapidly. Why, then, is the Pentagon shutting down this great plant which has maintained a superior production program since first opened early in World War II?

Today, the sprawling ordnance plant 13 miles east of Lawrence employs approximately 1,000 persons engaged in production of small rocket propellants, triple-base cannon powder and carpet roll powder which is processed by the Navy into various sizes for various uses. Much of this material is of the very latest type, with new performance qualities. It makes older explosives in the same category almost obsolete.

If the Nation should be at war within the next year, every ounce of explosive that S.O.W. could produce would be urgently needed.

If S.O.W. is closed, several of these important propellants will go out of mass production unless much equipment from the plant is moved into another operating location, or the Government decides to build entirely new plants and production lines

Perhaps Sunflower Ordnance is even more important to the security of the Nation in an entirely new field—the process of restraining the enemy through launching of intercontinental missiles, satellites, and sputniks—the giant rockets. These rockets, now in the experimental stage, require special fuels, both liquid and solid propellants. Today these fuels are being made only in research centers and on custom order in limited amounts—not on great production lines.

The baby moon launched Friday at Cape Canaveral, and now orbiting around the globe, got its final boost into outer space from a solid powder propellant.

Military experts apparently believe the Navy Polaris is one of the hottest weapons the Nation will have for some time. It has a range of 1,500 miles or more and it is propelled by solid fuel, which means great chunks of the type of powder which can be made in assorted sizes and shapes at S.O.W. The Army's Redstone presumably is designed to be pushed into space by giant grains of solid rocket powder.

If the Pentagon plans to create a stockpile of Polaris and Redstone missiles, it will be necessary for some great explosives plant to produce those giant grains of powder which provide some of the tremendous thrust of the missiles.

Why not manufacture this powder at Sunflower Ordnance, a plant which is all ready to go on brief notice on the manufacture of any type of solid propellant?

Sunflower his the largest nitroglycerine plant in the world, and nitroglycerine is an essential part of a solid propellant. Sunflower has a huge production potential on guncotton, another essential ingredient.

The great plant, which during World War II produced more powder in 1 week than the entire British Empire could produce in a full month, has a well-planned 15,000-acre site—something which cannot be acquired and prepared overnight. It has all the buildings and most of the equipment needed to produce any type of powder or solid propellant now in use or on the drawing boards.

Sunflower has a tremendous water plant which is essential to powder manufacture. It can produce about 60 million gallons a day from dug wells and from the Kaw River, almost 6 times as much as the city of Lawrence has ever used on the hottest and driest summer day.

Most important, Sunflower Ordnance has the trained personnel which could go to work on a minute's notice on any needs the Government might have for additional or new types of explosives, not only the 1,000 people now at the plant, but several thousand more in the drive-in area who are skilled in powder production and who could be called back to their old posts on short notice.

Here there would be no need for schooling or training sessions for raw recruits; these people have the know-how and are ready to get back to the lines when needed.

Sunflower isn't an antiquated operation. The Army and the Hercules Powder Co. have kept it up to date. In fact, one of the several production lines has been completely automated, resulting in increased production, fewer operating personnel, and more economical operation.

If the United States should have another Pearl Harbor, the one automated line could be worth more than its weight in gold—and yet the Pentagon apparently wants to turn off the heat, lock the doors and let the equipment begin to gather dust.

Surely military officials have given much serious thought to the closing of this huge plant, which at one time employed 12,000 people in operation and another 14,000 on construction. But to the average citizen, the decision is puzzling. No patriotic American would want the plant continued in operation simply to create jobs, but if more rocket fuels are going to be needed why not produce them where the Nation already has a well-equipped plant and trained personnel.

Logistically the plant is well located, as far inland as possible from vulnerable coast areas and in the center of transportation facilities.

The Journal-World would have no sympathy for an effort of workmen or labor leaders in attempting to prolong employment solely for continued salary checks of no benefit to the government. But it most earnestly believes that all public information indicates S.O.W. should on some going basis be maintained during these critical months.

Washington is going to look silly if Sunflower is shut down tight this summer and then in a few months land appraisers are sent to some other part of the country to assemble new corn fields into a new site, where another $200 million ordnance plant can be constructed to manufacture explosives. Production would be many months away.

Hercules apparently has had a superior record of operation of this plant, but Hercules could share the operation with some other company that might have more know-how, or it could step aside completely if that seemed the better thing to do. The plant is large enough that different companies could operate different lines with full independence if that seemed best in the overall military program.

The two Senators from Kansas and our Congressmen probably can have more effect than anyone in urging military authorities to reconsider. It is hoped they are genuinely concerned and will not procrastinate.

---

## Address by Hon. Victor L. Anfuso Before Space Law and Sociology Conference, American Rocket Society

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I am pleased to include a splendid address made by the gentleman from New York [Mr. ANFUSO] at a luncheon held on March 20, 1959, by the Space Law and Sociology Conference of the American Rocket Society in New York City. The subject that my distinguished friend, Mr. ANFUSO, discussed is one in which he is well versed. There is no more serious Member of the Congress than the gentleman from New York, [Mr. ANFUSO], who, as a member of the Committee on Science and Astronautics, is rendering outstanding service to our country:

ADDRESS BY THE HONORABLE VICTOR L. ANFUSO, MARCH 20, 1959, BEFORE THE SPACE LAW AND SOCIOLOGY CONFERENCE, AMERICAN ROCKET SOCIETY, UNITED NATIONS PLAZA, NEW YORK

Fellow astronauts, it gives me great pleasure to address you on this historic occasion. This is the first instance, I believe, of formal participation by a congressional committee in a meeting of the American Rocket Society. This partnership of the American scientific and industrial community on the one hand and government on the other is a good augury for the success of our efforts in creating an adequate space program and devoting its fruits, in concert with other nations, to peaceful purposes for the benefit of all mankind.

There is no need to repeat in this company that space development and exploration are important to the peace and prosperity of the world. Many of you, no doubt, believe as I do that they will inevitably become a joint international enterprise.

Space flight is inherently international. Many space activities require the cooperation of other nations for technical reasons, e.g., the use of tracking or telemetering equipment or geographically suitable launching sites. Costs which are too great for one nation can be shared with others. Human and other resources and facilities can be pooled in a common effort.

You are already familiar with the economic benefits to be expected from the peaceful use of space—for example, in communications, navigation, and weather satellites. There will doubtless be even greater savings and benefits than anyone can now foresee, just as radio-isotopes resulting from the atomic energy program have yielded unexpected economies which already amount to roughly $500 million a year.

The peaceful exploration of space will also make possible many kinds of basic investigation—in geophysics, astrophysics, astronomy, and other fields of science. For example, Dr. Hynek of the Smithsonian Institution recently predicted that observations in outer space will do as much for astronomy as Galileo's original invention of the telescope. Dr. Alan T. Waterman, the Director of the National Science Foundation, has stated:

"There is no question whatever that scientific experiments and observations conducted with satellite and space probes will disclose a far-reaching understanding not only of outer space but of conditions upon the earth itself which will progress toward consequences of enormous importance to mankind."

Much of the benefit to be gained from the use of outer space will be lost, or at least limited, unless space development and exploration are carried out as a joint international enterprise. A military race to dominate outer space must be avoided. It will be far less likely if the use of space for peaceful purposes is international, so that national rivalries will not be extended to science or economics nor projected into outer space.

In this connection, let me say a few words about the prospect that within a matter of months the Soviet Union may launch a manned satellite and will represent it to world opinion as a great military achievement. I am not making any prediction out of my personal knowledge, nor am I the

first to call attention to this possibility. Almost a year ago Dr. Walter Dornberger, of Peenemunde fame, stated that in 1½ years a spaceship could be built that would carry a man around the globe. In its space handbook the House Select Committee on Astronautics and Space Exploration predicted that the Soviet Union would put such a vehicle into orbit soon. In another report of the same committee, Dr. Frederick Durant expressed his belief that the U.S.S.R. would send a man into orbital flight and recover him several times during 1959. In a recent speech, Dr. Hugh Dryden, the Deputy Director of the NASA, referred to the same event, which he appeared to regard as probable. Earlier this month Dr. Fred Singer said the Soviet Union may put two men into orbit during the middle of the year.

In view of this chorus of opinion in qualified quarters, there seems to be a good chance that the prediction may be accurate.

Putting one or more men into orbit around the earth would certainly be an admirable achievement for which Soviet scientists and engineers and the brave men who first risk their lives in outer space would richly deserve congratulations. At the same time, such a feat, while involving great effort and expense and advanced technique, would not require any great extension of the state of the art nor have any direct military application. It is the responsibility of the ARS members, I suggest, and of others whose expert knowidge and experienced judgment in astronautics entitle their opinions to respect, to help prepare the American public for this possibility and to put the matter in proper perspective. I recognize that the Government shares this responsibility. It also behooves us all to consider appropriate means of preparing world opinion—which has shown itself to be too impressionable and too ready to ascribe immediate military significance to Soviet astronautical feats.

As an American, and especially as an elected official, I am happy to say that Congress and the administration have foreseen with approval the peaceful international development and exploration of outer space. As long ago as January 10, 1957, in his state of the Union message to Congress, President Eisenhower proposed mutual (i.e., international) control of space missiles and satellites. His suggestion was incorporated in formal disarmament proposals submitted by the U.S. delegate to the United Nations 4 days later, calling for the dedication of outer space exclusively to peaceful and scientific purposes and for international responsibility and control of satellites and space missiles. This proposal was sanctioned in December of 1957 by resolution of the General Assembly. In a letter dated January 13, 1958, to the Chairman of the Soviet Council of Ministers (at that time Bulganin), the President offered to agree that outer space be used only for peaceful purposes. Both Houses of Congress unanimously adopted a resolution (H. Con. Res. 332) in June of 1958 calling on all nations to join in the peaceful exploration of outer space. The National Aeronautics and Space Act itself expressly authorizes the Space Administration to engage in a program of international cooperation in peaceful astronautical activities.

More recently, as you know, the General Assembly of the United Nations has voted favorably on a U.S. proposal to establish a study committee on the peaceful uses of outer space. The opening statement of the United Nations resolution recognizes the common interest of mankind in outer space and proclaims that it is the common aim that it should be used for peaceful purposes only.

It is my firm belief that the United States must take the lead in a peaceful and productive international space program.

At present only the United States and the Soviet Union have made the quantum jump into outer space. Soviet cooperation in astronautics with countries of the Western World has been thus far limited, and it is my opinion that division in blocs is not justified when we are concerned with peaceful endeavors destined for the benefit of all. The Soviet Union has cooperated in the IGY program and has agreed to cooperate in the Committee on Space Research (Cospar), established in October 1958 by the International Council of Scientific Unions (ICSU).

We must continue to seek the Soviet Union's cooperation in the peaceful exploration of outer space for the benefit of all mankind. It is our hope that their cooperation will be more extensive in the future because of their invaluable knowledge and experience in this field. To give up hope at this time of reaching an agreement with such an advanced nation in the field of science and astronautics is to admit that a conflict is inevitable and that there is no hope for the world.

Certainly, the foregoing declarations of principles and intent by Congress, the President, and our actions of the United Nations manifest the willingness of the United States to join such a partnership. I believe that the scientists, engineers, technicians, industrialists, and industrial workers of the entire world would rather put their ingenuity to work for an abundant world than one reduced to shambles by total war.

An illuminating example is the nuclear burst in outer space announced yesterday. The American people would doubtless prefer to share the planning of such experiments—and the burden of their execution—with other nations for the benefit of mankind. The announcement of this great achievement, and the indication that its results will be released in accordance with the IGY Agreement, confirms again the willingness of the United States to cooperate as a partner in utilizing the limitless possibilities of outer space.

It is true that a good deal of work in astronautics is already underway in many countries of the free world. In general, however, high costs have deterred both Government and industry. Many foreign scientists and engineers looking for an outlet for their creative abilities and energies are hampered by lack of equipment, facilities and financial support, and are frustrated by lack of Government encouragement.

The situation is ripe for an internationally coordinated astronautics program. Initially, specific astronautical projects could be conducted as joint ventures utilizing the specialties of other countries in scientific talent or other facilities. Plans should soon be made for exchanges of scientific, engineering, and technical personnel among all countries willing to cooperate in a common space effort. American training facilities in the space sciences should provide increasing opportunities for talented foreign students.

Let me emphasize that the measures I have described would be no more than first steps. They can and should be taken now within the authority granted by the National Aeronautics and Space Act to engage in a program of international cooperation.

Beyond such immediate steps there is a clear need for a common space effort among free world governments, as well as among individual scientists and scientific societies. Sooner or later there must be an international organization for space development and exploration, open to all the world's scientists as working participants. I should think that an organization of this kind might develop under the United Nations, perhaps as a result of recommendations to be made by the study committee to the General Assembly in the fall of this year. I am hopeful that the Soviet Union and other bloc countries will cooperate in this great humanitarian effort. Meanwhile, the free world should take the initiative and set an example in demonstrating the feasibility and fruits of international space cooperation, which will bring greater and greater benefits with every passing year to everyone on earth.

## H.R. 5894, a Bill To Clarify and Strengthen the Escape Clause in the Trade Agreements Act

EXTENSION OF REMARKS

OF

### HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. SIMPSON of Pennsylvania. Mr. Speaker, last week I introduced a bill, H.R. 5894, which will clarify and strengthen the escape clause in the Trade Agreements Act. Considerable litigation, uncertainty, and hardship have resulted and may continue to result from various attempts to interpret the language of the Trade Agreements Extension Act of 1951 with the many amendments that have been added since that time.

My proposal will, if enacted, make unnecessary costly and time-consuming reviews by the courts. It will clarify the escape clause and will remove serious legal clouds from the actions of the President with regard to past escape clause cases.

My bill in the nature of an amendment to the Trade Agreements Act is designed to do two things:

(a) Permit the President, as he has in the past, to reject the recommendations of the Tariff Commission, or to put them into effect in whole or in part, or to take other action aimed at the remedying of the injury found to exist.

(b) Permit the establishment of a firm date for the termination of escape clause cases so the Tariff Commission could entertain a new application. Under this amendment the Congress would be able to participate in escape clause decisions pursuant to the amendment in the 1958 extension legislation which gave to the Congress authority to apply the Tariff Commission recommendations if it could do so by a two-thirds majority. A third benefit that would result from this amendment is that affected industries would not be left indefinitely hanging in the balance wondering what the final decision, if any, might be.

Although these proposals are largely self-explanatory, I might say just a word about the circumstances that make these amendments necessary.

The President has, in a number of escape clause cases, followed the recommendations of the Tariff Commission only in part, or has used other measures not recommended by the Tariff Commission which he hoped would remedy an injury found to exist. All of these actions have now been brought under a legal cloud by a decision of the customs court which said, in effect, that the

President had exceeded his delegated authority. Specifically, the President's action in the so-called bicycle case was held to be in excess of the powers granted to him by Congress in the Trade Agreements Act. That case is being appealed and in due time may be decided by the Court of Customs and Patent Appeals. In the meantime the validity of all similar actions by the President have been placed in question.

My amendment would remove this legal cloud on his current actions as well as those of the past. It would remove the necessity for much legal maneuvering. It is true that the administration has not accepted the finding of the customs court and hopes that the decision will be reversed. Such reversal is by no means certain, in fact some highly respected and experienced lawyers have indicated to me that the language of the present act would hardly permit a reversal. In any event a decision appears to be several months away.

Some of my colleagues may object to this possible broadening of the powers of the President with regard to the escape clause. I hope they will consider the great confusion that would result if the appellate court should uphold the lower court. I suggest they consider the probability that seldom, if ever, would any remedial action whatsoever be taken if the President had only the choice of accepting the Tariff Commission recommendations in full, or of doing nothing.

With regard to the second aspects of the proposed amendment—serious criticism has been directed toward the long delay in executive decision as to final disposition of specific escape clause cases. For example, in one recent rejection of an application for an escape clause study, the Tariff Commission asserted that it had no authority to initiate an investigation because a prior one on the same subject had never been concluded even though that investigation was already 2 years old. In this case the Commission had found unanimously that serious injury had resulted from a lowering of a rate of duty in a trade agreement. The industry had painstakingly proved beyond any doubt that it was being seriously injured and that the tariff reduction in the trade agreement concerned was the cause of the injury.

The President took no action. Neither did he close the case, but kept it open and asked the Tariff Commission for further study of the matter. Even if the President should eventually conclude the case, and even if, at that time, he should take some modified action aimed at remedying the injury, the customs court ruling could render such action an invalid one. If there were an appeal of such a decision an already suffering industry would be forced to go through a long period of further indecision, great expense, and, in the end, the possibility of losing everything.

Under existing law the President is granted 60 days to make up his mind in these cases—an ample time to review the Tariff Commission findings and recommendations and he should not be permitted to extend beyond that period the uncertainty.

We have another major problem in such cases. Such unilateral extension of the 60-day period might remove the Congress from participation in escape clause cases even though a year ago we definitely legislated so that Congress, by two-thirds majority, could put into effect the findings and recommendations of the Tariff Commission should the President refuse to act. Congress and the affected industry should be given clear opportunity to act at the end of the 60 days, and it should not be possible to block the entrance to a new action.

It is only in unusual cases where an industry would want to institute a new investigation immediately after one was concluded, but I have already mentioned one such case. My bill would not require the Tariff Commission to act unreasonably and begin a new study before there was time for any new information to be available. Nevertheless, in the interest of clearcut legislation, the Congress should require that executive action be taken within the time authorized.

I shall press for the consideration of this amendment to the Trade Agreements Act and hope my colleagues will join me in the clarification of what now seems to be serious problems in this area. In taking this action I am not unmindful of the fact that there are other defects in the trade agreement program.

---

## Freedom—Our Heritage

EXTENSION OF REMARKS
OF
## HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. ROOSEVELT. Mr. Speaker, I am more than pleased to place in the Appendix of the RECORD, an address delivered by Rabbi Franklin Cohn of Temple Beth Zion in Los Angeles, Calif., before the student body of Los Angeles High School on March 18, 1959.

The message, given before 2,400 young people, is universal in appeal, universal in its application to all those who have suffered oppression, and indeed universal in its emphasis on faith in freedom.

Rabbi Cohn's address follows:

FREEDOM—OUR HERITAGE

Mr. President, distinguished colleagues, students, I am grateful for you invitation to speak to you, students of Los Angeles High School, on the concept of Passover, a festival observed and celebrated by Jewish people since time, almost immemorial. While it is true that the festival has its background in the religious culture of the Jewish people, I deem it very fortunate that the celebration of the festival in our days has expanded to the concept of observing it as a universal freedom festival. I deem it fortunate because I do not need to refer here this morning to a purely religious observance which would bring me into conflict with my conviction that the American principle of separation of church and State must be maintained at all costs and, therefore, religious teachings shall not be discussed in a Government-supported public school.

On the Passover festival, Jews read from an ancient book, called "Haggadah," relating the stories of the exodus of Israelite slaves from the bondage of ancient Egypt. It is perhaps no coincidence that I am speaking to you this morning of this story in a different vein because I have just published a dramatized version of the "Haggadah" under the title "Freedom—Our Heritage," because that is what I want to see Passover to be: a festival celebrating the ability of men to strive for freedom and independence, for liberty and human dignity. It is also no coincidence that my congregation, Temple Beth Zion, will observe this year the Passover holiday by giving its annual Passover-liberty award to the distinguished Governor of California, the Honorable Edmund G. (Pat) Brown in recognition of his dedicated stand against discrimination of all kinds.

The story of Passover began 3,500 years ago. It is a story of migration. It began when Jacob and his family left Canaan because of famine, and traveled to Egypt. First allotted the land of Goshen, a province in Egypt, the children of Israel prospered as shepherds. But as the Jewish people enjoyed their prosperity, there was darkness around them. The Pharaoh who had welcomed them was replaced by another, who forgot the work of Joseph and how once in famine he had saved the people of Egypt from starvation.

Seizing upon the blind hatred of the Egyptians, a hatred born out of misery, desperation, and envy, he saw in the Jews a scapegoat and an abundant supply of slave labor. Dispossessed of their lands, deprived of their rights as citizens, these Hebrews were driven to work in the fields, in the building of cities. They pulled rocks from the quarries to build the pyramids. Deprived of the life of free men, they engaged in backbreaking toil, building tombs to insure a Pharaoh's immortality. From the bitter past of working under the blazing Egyptian sun, under the surveillance of guards brandishing whips, they had nothing left but dreams, dreams of a future, dreams of freedom from bondage. These dreams stoked the inner fires, the fierce pride, the strength, the courage to continue their battle against the humiliation that came with the cruelty of the whips.

Four hundred years rolled by, four hundred years of slavery, of hunger, four hundred years with nothing but a dream. Like slaves from time immemorial they wore the mask of servility, but in their hearts they sang silently a freedom song.

Proud courage is like a fire. Draw a curtain around it and the glow can still be seen. Pharaoh then decided to exterminate these slaves who with bowed backs bent in toil only camouflaged their will to live.

The Hebrews multiplied; they became a challenge to Pharaoh and to Egypt. In terrible silence they marched to their slaves' work. But this silence of the slaves was more frightening than any manifesto or proclamation. It was more eloquent than any inflammatory speech calling for revolt. In our days, the Reverend Luther King, of Montgomery, Ala., and the Negro high school students in Little Rock, understand that story so well, they are living it.

The Israelite slaves, 3,500 years ago, were emancipated by a great leader, Moses. This emancipation of the slaves, the exodus from Egyptian bondage, is the background story for our celebration of Passover in 1959.

We remind ourselves of the struggle of the ancient Hebrew slaves year after year because their liberation was not yet the end of slavery and oppression for all people.

The age of darkness and persecution continued throughout the centuries and in many lands. Only gradually there came changes. When a New World was discovered,

a change took place. Or, when the Renaissance revived once more the faith in man, when science came into being. Yet, at the same time the tyranny of despots continued as well. So unconsciously the spirit of Passover crept into the souls of other people.

The unwanted of Europe ventured into the New World, and it was in the spirit of Passover when on July 4, 1776, Thomas Jefferson proclaimed:

"We hold these truths to be self-evident: That all men are created equal, that they are endowed by their Creator with life, liberty, and the pursuit of happiness."

It was the Passover spirit within the Jew Hayim Solomon when he gave generously to bring the men at Valley Forge through that terrible winter.

Abraham Lincoln, a man who like Moses, fought the good fight for the liberty of an oppressed and enslaved people, said in our Passover tradition:

"Until all men are equal and all men are free, there can be no peace. As long as there are chains, and whips, and men to wield them, there can be no peace. When the chains are broken and the men who wield the whips are dead, the freemen can have a freeman's peace."

The Passover spirit crept into the Atlantic Charter when Franklin Delano Roosevelt and Winston Churchill proclaimed the four freedoms.

Whether it be the Red Sea or the Delaware, the hope was and still is always the same. The early Americans read the Old Testament and looked upon the people of ancient Judea as their spiritual ancestors. Thomas Paine even devoted a whole page of his newspaper to a Jewish prayer proclaiming the love of freedom and the hatred of bondage.

The old story of the exodus from Egypt was and is now being told by another people in search of freedom. You hear it in that inspiring spiritual, so often sung on the cotton plantations:

"When Israel was in Egypt's land
Let my people go."

Greece, Rome, Assyria, Babylonia, ancient Egypt are mere relics today. Their civilization lives only in the museums and in the classrooms of universities; their culture remains in the notes of scholars and not in the lives of people.

For the faith in freedom, in man's respect for his fellow man, the longing for peace, the belief in a God whose word is law of kindness, not vanity; these alone will survive the long trail of migration.

We shall celebrate the coming Passover as a festival dedicated to freedom, liberty, and justice for all men.

---

## As Republicans, How Do We Stand?

EXTENSION OF REMARKS
OF
## HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent address by Secretary of the Interior Fred A. Seaton, at the annual banquet of the Kansas Day Club, Topeka, Kans., January 29, 1959. The address follows:

AS REPUBLICANS, WHERE NOW DO WE STAND?

The pessimists among us may answer: "These are days of black defeat—an unpalatable foretaste of what is to come."

I do acknowledge that not since the avalanche of 1936, when only 89 Republican Members of the House and 17 Republican Senators survived, has our party's representation in Washington been so shrunken.

A second view, hopefully expounded by our opposition, is that these are the days of the great divide—days when the Republican Party is hopelessly split between two wings, each at the throat of the other with such all-out ferocity as to preclude mutual understanding and combined effort.

Whatever the correct appraisal of our situation may be—and everyone is, of course, entitled to his own—I say this: "Where the Republican Party is today is the place to start, not the place to quit."

I refuse to believe that no matter what we do we can't win in 1960, or that we are so hopelessly divided as to make even the effort unworthwhile.

As Republicans, we can unite. Moreover, we've got to unite. We have no other choice if we are devoted to the salvation either of our party or of our country.

Of course, the job won't be easy.

According to a recent Gallup poll, if all American voters—including self-described independents—now were asked to register as party members, 54 percent would line up as Democrats and only 36 percent as Republicans. (Ten percent couldn't bring themselves to express even an academic preference for either party.) Yes, even with our 36 percent as a solid phalanx, our job as of today is rough enough. If that 36 percent were torn into shreds, our job, frankly, would be impossible.

A split party is a luxury only Democrats can occasionally afford. We Republicans can't afford it at all. In our party today a wing doesn't even have a prayer, much less a chance of victory.

We are in the third month of the campaign of 1960.

Now, how do we go about turning to advantage the instruction of defeat?

First, it seems to me that we have to revolutionize our thinking about politics and campaigning.

You and I know some Republicans to whom politics is a four-letter word. You and I know a lot of people who regularly vote Republican but won't run, work, contribute, or sometimes even talk Republican. Unfortunately, there is much to be said for the generalization that while many Democrats make politics a career, too many Republicans view it as a sacrifice.

We must begin now to recruit for every senatorial and congressional seat, for every governorship, and for every state and county office the most capable and articulate candidates we can find. Notwithstanding the fact that a good candidate does not necessarily insure victory, and that good Republican candidates were defeated last November (as witness what happened here in Kansas), it is an unassailable rule of politics to have the best candidates—if you can. Any political party owes that obligattion to itself. It owes that to the country even more.

By revolutionizing our thinking about politics—by getting superior candidates and enthusiastic party workers into action day and night now—we can help make sure that we will have turned a dark 1958 into a much brighter 1960.

There is a second much-needed Republican revolution: the shift from negative to positive thought, from reverse to forward drive. We must not limit ourselves to telling people what we are against. We must also tell them what we are for!

Sure, we know our Party's purposes and our Party's accomplishments. We have kept the peace, we have kept the Nation's defenses strong. Since 1953, with the leadership of a Republican President from Kansas, the American people have earned more, built more, saved more, and invested more than ever before; they have enjoyed the biggest tax cut and the biggest advances in social security in American history.

If I may paraphrase a man who ought to know, George Meany, the head of the AFL–CIO, "We have never had it so good." Yet in political debate, what happens? Time and again we Republicans find ourselves cleverly maneuvered into seemingly supporting reaction and negation because of our valid and necessary resistance to the wild, even if oftentimes politically appealing, proposals of the Democraat opposition.

You know, it is a wonderful political advantage to be against nothing except higher taxes.

While it isn't even responsible politics, much less responsible government, it is a fact that up to now many—though not all—Democrats have seemingly found the royal road to political success in advocating just such a program.

The Democratic party's record is there for everyone to see if we just make it plain.

They are for more Federal airport money, road money, welfare money, small business money, urban renewal money, and agricultural price support money while they simultaneously advocate low Federal interest rates, lavish tax cuts, and a Federal budget always in the black. The Democratic National Advisory Council only the other day proposed that Federal interest rates be cut and inflation brought to a halt—simultaneously. It would be quite a trick if they could just do it. In fact, if their being allowed to try wouldn't be so disastrous to the country, it would be to our selfish political advantage to stand aside and let them make the attempt. That, of course, we simply can't do.

To sum it up, those opposition salesmen have been getting away with peddling a unique political model car—one which has two forward speeds, left and right, and a reverse; one which will go in all three gears, forward and backward simultaneously.

Do you remember the state of the union message—not President Eisenhower's, delivered on January 9—but Senator LYNDON JOHNSON'S own unique innovation, delivered 2 days earlier? As I understand his thesis, it was this: The President's spending proposals would be inadequate no matter what they turned out to be.

Self-convinced, the distinguished majority leader proposed a series of Federal programs, all without benefit of dollar figures or without indication of who would pay the bills, if indeed he had in mind that anybody would without resort to increasing the Federal debt and thus helping create more inflation.

In his speech, Senator JOHNSON charged that the President and the Republican Party suffers from a "deficit of vigor." Well, my answer is that Senator JOHNSON and his party have an unusual vigor for deficits.

Sure, you and I know the political flivvers of the opposition are phonies. But have we really proved it to the American people? The answer is obvious. We haven't—yet. Nor can we do it by simply digging in to resist one politically appealing spending scheme after another. That simply makes our opponents look great hearted and makes us look stingy. What we have got to do is to climb out of our defensive trenches, go over the top and launch an offensive onslaught of our own.

One thing is certain. If we are to get our message across, we must translate it into words and terms that are commonly understood. Above everything else, we must translate it into local terms—words and facts which make our thesis crystal clear in every locality in America.

After all, most people don't care what happens to the Republican Party as such, our job is to show that when we lose, they also lose.

For example, take the proposal for a Federal dam at the Hells Canyon site on the

Snake River in Idaho. We are told that issue will be raised again in the new Congress, and raised for the sixth time.

The fact is, the proposal for a high Federal dam at Hells Canyon is the reclamation fraud of the 20th century. Not one single acre of irrigated land has ever been directly connected with it.

It would cost the taxpayers of America nearly $600 million, exclusive of any damage claims paid to the Idaho Power Co. Non-Federal development of the same stretch of the same river, which began in 1956, will produce roughly the same results in power production and all the flood control needed in that area, and it costs the taxpayers nothing.

Now, to some people an additional $600 million may not seem to be of much consequence when included in a Federal budget of billions. But consider it this way: $600 million would pay for the Almena Unit of the Missouri River Basin project nearly 40 times, it would pay for the Kanopolis Unit more than 40 times. It would buy more than 50,000 miles of Kansas primary highway or 15,000 elementary and high school classrooms.

Of course, you could save the $600 million altogether, use it to reduce the Federal debt or reduce taxes. Some would call that old-fashioned, but it's an idea, anyway.

When you put the facts that way, people understand what such wild spending schemes mean to them in terms of what they desire or need from Government.

Then ask them this: What happens if all these new and renewed spending proposals become law—those which are vital, those which are nice but not absolutely necessary now, those which are ludicrous?

Who pays?

You know the answer: Every man or woman who makes out a Form 1040 between January and April.

But suppose the greathearted spenders on Capitol Hill just don't have the heart to raise taxes? Suppose they just increase the Federal debt?

The answer's the same: We—you and I—will pay anyway, and our children will pay, and we'll pay in a rougher and more dangerous and costly way: Through inflation, plus more taxes in the end.

For a family or a government, it's always easy in the beginning to spend all your income and then go borrowing. What's hard is to stay in the black, to put something aside. If the Federal Government can't do so now, in a time of high and rising prosperity, when can we citizens hope for relief from the crushing burdens of an ever higher Federal debt or high taxes? You and I know the answer—never.

Time and again the President has put just that question to the American people and the Congress. It lies behind his presentation to the Congress of a 1960 Federal budget which is in balance.

He knows, as you and I know, that unless people throughout America wake up to the renewed threat to the buying power of their dollar which is involved in the Democrats' congressional program, a lot of Americans are going to get hurt, and the country is going to suffer, and deeply. That is just as inevitable as death and taxes.

Oh, yes, some people doubt the danger. Even some of those who stand to get hurt the most say: "Let prices go up, my union will protect me; I'm on an escalator clause." To be sure, there are 4½ million workers who have some such assurances that they can keep their heads above water—so long as their employers are in business—though they may not gain against the tide. But in the total civilian labor force, a worker on an escalator is 1 man or woman in 16. What about the other 15? For them, wages are on the ground, while prices will be in an elevator headed for the roof.

Not only that, all 16 workers will one day probably living in part on social security payments: Already there are 14 million Americans receiving benefits under various Federal pension plans, plus another million and a half under private plans. When retirement time comes, escalator clauses are worthless. The dollar bill, I remind you, is neither Republican nor Democrat. When it goes sour, people of either political affiliation—or none—who are on fixed incomes, suffer.

The grim reaper also has no politics. One hundred twenty-four million Americans now own life insurance policies. If you, for example, should die tomorrow, would you want your wife and children to face certain inflation while subsisting on fixed payments from the insurance company, to have the digits on the monthly payment check never change and the prices on tags in every store keep increasing?

You know people who say, well, it did happen in Germany, and only recently in France; but it can't happen here.

Can't it? Think back to the Truman years, 1945–52. The Consumer Price Index went up 18 points. To be sure, that's a statistic. Putting it in plain, everyday language, what it means is that the price of a pair of overalls went from $2.10 to $3.46—an increase of 65 percent; that the price of a pound of white bread went from 9½ cents to 16 cents—an increase of 68 percent; that the price of a 10-foot two-by-four went from 45 cents to 84 cents—an increase of 88 percent; and the price of a two-bottom plow went from $136 to $255—another increase of 88 percent.

Price increases at the same rate, beginning now, would, within 7 years, take the pair of overalls to $5.77; the price of bread to 31 cents a pound; the price of lumber to $263 per thousand board-feet; the price of a plow to $525.

And I'm sure you remember another thing: The controls that went with this seemingly uncontrollable upward-thrust in prices. I'm sure you remember the Office of Price Stabilization, which fastened small white tags to items after item you had to buy—socks and shoes, toasters, and frying pans.

The Eisenhower administration, I can assure you, is still dead set against controls. And it's still dead set against the weakening of your dollar's buying power. It's against the return of either the disease or the proposed remedy.

That's why the President wants a balanced budget.

That's why, in his state of the Union message, he urged the Congress to amend the Employment Act of 1946 in order to declare it the continuing responsibility of the Federal Government to combat inflation.

That's why we in the administration will fight with all our ability against every spending proposal of those who think that now is the time to launch a new, New Deal.

By taking the offensive, we Republicans can show that contrary to some pundits of political persuasion, being for the dollar is often the best way of being for the man—including the wage earner, the farmer, the housewife, and their children.

What good are wage or profit rises if offset by continual price increases and more taxes? What good is it to talk about bigger and better insurance policies, or higher pensions, when their value is constantly being eaten away by the cancer of inflation?

Don't ever let anyone get away with saying that your party—the Republican Party—yields to any other on the face of this land in its concern for every working man and woman. Since 1953, all American wage earners, organized or not, have made unprecedented gains. And remember, with this record to run on in 1956, a Republican President, Dwight D. Eisenhower, won from 30 percent to 50 percent of the labor vote in one major industrial center after another—an even higher percentage than he had won in 1952.

If we'll just hammer and hammer and hammer those facts across; we shall go far toward victory in a third Republican revolution. By ripping off once and for all the false labels our opponents have pasted on us, we can reveal the true image of the Republican Party as the party of the American people—all 175 million of them.

Can we accomplish these three revolutions—the revolution in our attitude toward politics, the shift from negative to positive thought, the restoration of the Republican Party's true image? Of course we can. The unanimous adoption of the Des Moines conference last week of Chairman Alcorn's plan for revitalizing the party is a heartening indication we're already moving in the right direction.

Every Kansan surely remembers the Republican resurgence of 1952 with a man from Abilene leading the fight—Dwight D. Eisenhower.

We should never forget what he did that year under his leadership. Nor should we forget what happened in England the year before. The two, taken together, point the way for us between now and 1960.

Following the defeat of 1945, the British Conservatives rebuilt British conservatism. They got rank and file party members to make regular contributions to the party, invigorated its appeal to labor, to intellectuals, and to the young; and started campaigning the year 'round to bring to everyone its principal product, fact.

And in 1951 they won.

The moral for us is clear. Here in the United States in 1958, 1959, and 1960, we Republicans can and must build on fact for victory. We can and must put fight and heart into our party. Once we've accomplished that, we will win, and we will deserve to win.

The time to begin moving is now.

---

## Kidnaping Our Cars

EXTENSION OF REMARKS
OF
## HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an outstanding editorial from the Oregonian, Portland, Oreg., regarding the annual boxcar shortage in the Pacific Northwest. I feel this editorial very clearly points up the reasons for the shortage and its remedy.

KIDNAPING OUR CARS

If it were possible to rent a $20,000 house for $85 a month, there would be little incentive for the average person to build a $20,000 house. This simple economic truism does much to explain why a recurring freight car shortage has plagued the Pacific Northwest in times past and is about to do so again.

The price tag on a modern railroad boxcar is about $20,000. Such a car, built by a western railroad and loaded with lumber from a western mill, may roll eastward in a freight train and disappear. It may spend weeks, months, or the rest of its useful life shuttling back and forth on eastern railroads, which can keep it for the nominal $2.75 daily car rental charge specified in the car service rules of the Association of American Railroads.

There are several reasons why western railroads, which spend enormous sums building fleets of new freight cars, perennially find themselves short of cars when it is time to move large quantities of grain and plywood and other products of western farms and forests. A basic one is that the natural flow of freight in the United States is from the South and the West to the more populous East. There is a natural tendency for cars to pile up on eastern roads.

One effort to correct this imbalance has been the rule that an empty car is supposed to be loaded only with a shipment bound in the general direction of the railroad which owns the car. Another is the per diem rental charge, which has been raised from its prewar level of $1 per car per day to the present $2.75 level. But these measures have not proved adequate.

The Southern Pacific Co. last year built 2,349 new freight cars, raising its total fleet to more than 81,000 cars. It expects to build 1,450 more in 1959, at a cost of some $22 million. The Union Pacific is engaged in a $17-million freight car construction program. Under the present circumstances east coast shippers rather than west coast shippers will get most of the benefit from these programs.

During last year's business recession, the Pennsylvania Railroad, the Nation's biggest carrier, cut its car-building program to the bone. It did not even repair its old cars. About 25 percent of the Pennsy's fleet of 174,000 freight cars presently stand idle on the rip tracks with flat wheels, faulty brakes, or broken couplers. Officials of the railroad frankly admit they couldn't afford to spend the money on repairs or a car-building program when they could use the cars of other railroads for $2.75 a day.

The western railroads have been doing their best to serve their shippers. The percentage of "bad order" cars awaiting repairs on the SP, for example, is a trifling 1.5 percent. If the eastern railroads would observe the elementary principles of fair play, the western shortage of freight cars would be much less serious. One good way to encourage them in this respect would be to jack up the rental on freight cars so that it no longer will be cheaper for eastern railroads to rent our boxcars rather than build their own.

## National Historical Significance of the Old Mint at San Francisco

EXTENSION OF REMARKS
OF

### HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. GEORGE P. MILLER. Mr. Speaker, I know of no man better qualified to discuss the old mint in San Francisco than Mr. Augustin C. Keane, who has generously sent me a copy of a paper that he recently filed in connection with the retention of the mint as a national historical shrine.

Under leave to extend my remarks in the RECORD, I include the paper as follows:

NATIONAL HISTORICAL SIGNIFICANCE OF THE OLD MINT AT SAN FRANCISCO

(By Augustin C. Keane)

San Francisco's 90-year-old United States Mint teems with stories of coining for hard metal economies, of the lure of gold in California, of the development of the Pacific slope, of treasure that aided to save the Union and restore its prosperity. The mint building tells of the noble idealism of the American people. To preserve that building the law requires an official finding that it possesses national historic significance. Questions of cost and of eventual use may be considered only after the fact of national significance has been established.

For an extreme example of this legal position, take the case of the Declaration of Independence. When proclaimed in 1776, that instrument had a vitality and force greater than any message ever given by man and barely short of gospel. But by 1781 and the adoption of the Articles of Confederation of the United States, the Declaration of Independence had served its whole purpose, its intended functions had been discharged. The paper on which the Declaration was engrossed, with the signatures of patriot founders attached, had become merely a document of historic significance. But of what significance. There could be no question of the need or propriety of its preservation, nor of the cost of safeguarding, certainly none as to whether enough quarters or half dollars might be collected from the curious willing to pay to see the document so that the expense of saving it might be defrayed or possibly even show a profit. The significance is all that counts, all that should be considered and, under the act of Congress, all that is to be determined.

What then is the national historical significance of San Francisco's old mint?

The mint has especial historic consequence because it is practically the last such building erected and in all probability another such will never again be built. The old mint stands for the end of an era which began in the eighth century B.C. Throughout that era mints served the hard metal economy of the civilized world. Woodrow Wilson's Federal Reserve Act of 1912 brought the era to a close, and President Franklin D. Roosevelt finally rang its death knell when he recalled gold from circulation. Five dollar gold pieces and beautiful ten dollar eagles and superb double eagles have disappeared, rarely to be seen except as curios with increasing collector's premiums. They were typical of the coast, typical of the Golden State of California, and their production an unsurpassed achievement of the San Francisco Mint. But mints were no longer needed to coin them. With their passing, an ancient system closed. This old mint stands a subline monument to the long era out of which our present practices in money and finance have grown.

The western land, the irrepressible outward drive of pioneers, the times and the march of events placed the Old Mint in San Francisco. When its building was begun in 1868, other mints were coining bullion in other parts of the country. Twenty years earlier the rest of the United States had known of the Pacific Far West only as distant, inaccessible, savage, and darkly forbidding. Discovery of gold in California bedazzled America. Gold seekers surged to the Far West. That discovery quickened growth. Bullion shipments began to flow to the Atlantic seaports. Southern politicians intrigued to make California a slave State. In 1861, President Lincoln instructed Gideon Welles, Secretary of the Navy, who had only 40 ships with which to blockade the thousands of miles of coastline of the seceding States, to be sure to protect the "treasure-ships" from California from capture by the Confederates. Treasure from California helped save the Union. After the Civil War it helped stabilize the country. That treasure had too great value to be risked in overland transportation for minting in the East lest the stagecoaches west of the Mississippi or such railroads as there were beyond the river to carry it become a prey to highwaymen, road agents, or Indian raids.

The precious metals of the West must needs be coined in the West and so the great western mint was built in San Francisco and began producing coins in 1874.

The initial operations of the San Francisco Mint became so effective and of such great volume that the newly established mint quickly ceased to be subordinate to the U.S. Mint at Philadelphia, as were the mints at New Orleans and Carson City. The San Francisco Mint, from being an independent mint, rapidly grew to be the principal mint of the United States. Within 3 years of its opening, it was producing $50 million of coins a year. Because of its location and the strength of the structure, the Government made it a depository for the country's gold reserve. Toward the end of its service the Old Mint's receiving room was taking in over a million dollars a day of gold bullion. When finally Fort Knox was designated for the safekeeping of bullion, more than one-third of the Nation's gold reserve was stacked in the vaults of the San Francisco Mint.

Nor should it be forgotten that great political battles had raged about the operations of the mint. The Populist Party had rampaged through rural areas with its demand for "the free and unlimited coinage of silver." William Jennings Bryan's rousing peroration, "Thou shalt not crucify mankind upon a cross of gold," set off the 16-to-1 issue for 3 presidential campaigns. Throughout generations American national politics revolved around the operations of the mint.

To the world at large the Old Mint personified the cosmopolitan city of San Francisco. Not only did the mint issue the lovely silver and gold pieces we knew so satisfying to see, to feel, and to possess, but it served foreign governments as well. There Japan, then newly taking a place in the civilized world, had its bullion coined into money for modern commerce. There also many Latin American governments had their coins minted in order to establish and maintain monetary standards. From the Old Mint coins of unexcelled beauty went into ciculation around the world. The institution won a significance that was even more than national.

While notable movements of American history were actuated by operations of which the old San Francisco Mint was the center, its actual significance to the people of the Pacific coast and in particular of San Francisco caused them to glow with affectionate pride and gratitude. Those people, before the mint opened in 1874, had been resentfully conscious of their distance from the Government in Washington, had felt that their public opinion counted for little and could hardly be expected to affect far-off decisions —they felt that they were out of things. Then the Federal Government established this important institution in their midst. To Californians and to the entire coast, the building of the mint meant, as the San Francisco Morning Call put it, that although more than 3,000 miles from Washington, "the people living on the Pacific slope were citizens of the Union." The noble mint structure evidenced the regard of the Government for the people of the coast and made them sense the Government about them and of being a part of the whole Nation.

The possessory confidence which San Franciscans had enjoyed in having the mint at the heart of their city gave way to terrifying shock in the shaking catastrophe of April 18, 1906. As San Francisco burned in the great fire, enveloping conflagration consumed every building surrounding the mint. Flames caught at one corner of the building. The city's water pipes had been broken in the earthquake. Fire hydrants were dry. Employees within the building fought valiantly to save it. U.S. troops arrived to aid. Fortunately, there were two wells on the mint grounds, and having only a 1-

inch hose and dauntless heroism, the employees fighting around the clock succeeded in putting out the flames and preserving the building. For long months thereafter when all about it was in ruins and leveled, the old mint stood out alone, undamaged, certifying to the courage and devotion of the men who had saved it. More than that, they saved the mint's gold supply valued at $200 million. It was that gold supply which later stimulated the city's economy which made survival possible and gave assistance to construction for the San Francisco of today—a city proud and grateful for its old mint.

The very structure of the old mint presents a significance to arrest attention and evoke acknowledgment. The unsurpassed perfection of the design of the building has won it a place among the outstanding buildings upon this continent. The facade of the old mint exhibits the peak of architectural design achieved by the classical revival of the 19th century. The initiation of that revival has been credited erroneously to the influence of one or another planner of buildings who sought to perpetuate the architecture of ancient Greece by copying the designs of its temples and public structures. But the classical revival in architecture throughout the United States was no mere academic mimicry of antique forms. Instead, that revival came as the spontaneous expression of fraternal enthusiasm inspired throughout the United States by the revolutionary outbreak of Greeks fighting to cast off the tyranny of the Sultan of Turkey in order to set up a free and independent government of their own.

To patriotic Americans of the early 19th century, the modern Grecian heroes were champions of liberty—the liberty which had been announced to the world by American revolutionaries less than 50 years earlier, the liberty proclaimed by our Declaration of Independence and Bill of Rights. Already the Latin American countries had adopted that liberty and freed themselves from Spanish despotism. Now the spirit of independence and self-government (perhaps in those days more vivid and vital in the minds and hearts of men than it may be today) had spread to Europe and far-off Greece. Americans were fired to cheer and advance the cause of freedom for the Greeks. Daniel Webster, in Congress, urged aid to Greece. President Monroe made the United States the first country to recognize Greece as a sovereign State. Monroe did so in the famous message in which he declared that America would stand with those peoples who by the exercise of their own free choice are in independent control of their own destinies. Americans felt exalted in fellowship with the Grecian champions of liberty. In our fervor of a common cause with Greek revolutionaries we launched the great classical revival. It became a tribute to the principles which had brought into being and sustained American democracy. In architecture the great revival became visual, seen by all. As the high point of its achievement the revival produced the architectural masterpiece which is San Francisco's old mint. Designed by A. B. Mullett, architect of the Treasury Department, the building embodies in its beauty the political and spiritual ideals of freemen.

"Significance" is a weak word with which to try to classify the noble and momentous things for which the old mint stands in the history of our Nation.

When it is officially established that the old mint at San Francisco is of national historic significance, the building will then be available for appropriate public use. It has been suggested that it may be developed as a museum. It has likewise been suggested that it may be put to a more practical use to supply needed office space for Federal departments, including the National Park Service. The California Supreme Court has expressed an interest in the possibility of being housed in this structure. At the moment the important question, however, is the preservation of the building. Whatever its use, it will always be a monument to the vital spirit of the tried, independent, self-reliant, imaginative individuals whose lusty determination brought about the development of the West and the western contribution to the saving of the Union and the national economy—the pioneers who built their city to match the supreme beauty of the hills and of the great bay of San Francisco.

---

## "I Think That I Shall Never See"

EXTENSION OF REMARKS
OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. PORTER. Mr. Speaker on March 2, I had the privilege of sending to Members of Congress do-it-yourself kits containing baby Douglas-firs. This tree-planting equipment was supplied through the courtesy of the Blitz-Weinhard Co., Oregon's only—and largest—brewery.

The special Oregon kits are designed to help spread the word about my State's 1959 centennial. The word has been spread, indeed, it has been planted, on all parts of Capitol Hill and in a good many States.

This amusing and worthwhile promotion by the Oregon firm found 534 worthy friends. The warm, friendly and humorous thank you's from "parents" of the Douglas-fir seedlings made good reading. I would like to include all of them in the RECORD. Space limitations make this impossibile, but I do want to cite some unidentified samples.

Furthermore, I am ready to dispute any skeptic's contention that Members of Congress lack a sense of humor. Nonsense.

Let me quote:

So far, it (fir tree) seems to be doing quite well in my office, but before it get uncontrollable I hope to have it placed in a more permanent location.

* * * * *

I want to take this opportunity to thank you and the Blitz-Weinhard Co. for presenting me with the toddler Douglas-fir. My family and I shall do our best to give the baby a good home and to protect it from the Maryland snows.

* * * * *

We would like nothing better than to plant your 2-year-old Douglas-fir at my home in Maine. Unfortunately, it would not be likely to survive, for I could not guarante one of the ingredient of T.L.C. prescribed in your letter, namely, "no deep snow." I am, therefore, turning it over to one of my staff members to try in Maryland soil and climate.

* * * * *

COMPLAINTS WILL BE REFERRED

I have already planted the tree on the grounds of the apartment building where I live here in Washington. If in a few years the Park Commission begins to complain, I will refer the complaints to you.

* * * * *

I am planting it in a flower pot, and before it breaks through my ceiling, I will replant it in my yard in South Carolina.

* * * * *

Being an old do-it-yourselfer from southern California, you can bet your boots I'll plant this Oregon fir tree in a prominent place at my home.

* * * * *

Now I know whom to contact for shade. Come and sit with me in the shade.

* * * * *

I do hope I will prove to have a green thumb.

* * * * *

I would like to assure you that I will give it only the tenderest care and treatment during its adolescence.

* * * * *

Mrs. ——— and I will certainly enjoy having a little bit or Oregon around the house.

* * * * *

The Douglas-fir will be planted, and eventually, I shall have you out to properly christen it and give it the good word that it should be happy in the backyard of a Californian trying to make it grow in Maryland soil.

* * * * *

Frankly in view of the size of the yard, it might be best not to give this fine Douglas-fir too much nourishment.

* * * * *

We are very anxious to see what this Oregon tree is going to do in Illinois.

* * * * *

My whole staff is cooperating in giving tender and loving care to the little fir.

* * * * *

REPORT PROMISED

I will let you know how it is doing after the 100 years have passed.

* * * * *

We will have a little bit of Oregon green in the office until it gets too big, then it will be sent to my ranch in Kansas.

* * * * *

I am seeing that it is planted right along side a Louisiana magnolia. It strikes me that they should make very good running mates.

* * * * *

My wife has always wanted a fir, and I know she will be delighted with this one.

* * * * *

Of course, I'll just have to take your word that it'll grow taller and sturdier than the mighty oak.

* * * * *

I appreciate your thoughtfulness, although I feared the mink coat scandal of a few years back might have made a Congressman afraid to give firs to anyone.

* * * * *

THANKS FOR THE TIMBER (J.G.)

Thanks for the timber (j.g.), and will you join me in a chorus of "Mountain Greenery"?

* * * * *

I assume you provide an ironclad guarantee that it will be about 100 feet tall in 100 years. On the lapse of such period, I will measure it and make claim against you for any deficiency.

* * * * *

I look forward to the day when Oregonians will come to New Jersey to see my fine fir tree.

* * * * *

I have just received the Douglas-fir. Frankly, it looks pretty sick. However, I am giving it a water treatment here in my office and as soon as I get home I plan to plant it.

* * * * *

Oregon has a fond place in my heart, not only because it is a beautiful State, but

also because several members of my family tree helped settle it.

* * * * *

A TALLER TREE TALE

The do-it-yourself kit is much appreciated, particularly in view of the fact that I am unable to bring one of Idaho's world famous "white pines" to Washington to plant in my yard—they are so large, even at birth, it is impossible to put them in a pot or planter.

* * * * *

Thanks for the tree, sent me. Fir free.

* * * * *

Does it grow mink?

* * * * *

Now another tree will grow in Brooklyn.

## Poison in Your Water—No. 45

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Livingston (Mont.) Enterprise, on February 14, 1959, entitled "Pollution of Streams Robs State of Water Resources" by C. W. Brink, Director, Division of Environmental Sanitation State Board of Health.

[From the Livingston (Mont.) Enterprise, Feb. 14, 1959]

POLLUTION OF STREAMS ROBS STATE OF WATER RESOURCES

(By C. W. Brink, director, division of environmental sanitation State board of health)

Montana's water frontiers are closing.

Not tomorrow—or next week or even next year, but the time is coming when the "Shining Mountains" of the State will no longer provide sparkling, clear water for fish, wildlife, cities, industries, and agriculture.

The danger lies not in a diminishing supply of water from its mountain headwaters, but in the failure to provide adequate legislation which will protect this essential liquid against pollution, from its source to its ultimate consumption.

At the present time, the sole controlling factor in Montana against pollution is the State board of health. This agency with limited funds and even more limited authority, is unfortunately unable to employ enough personnel or call for necessary measures for the widespread control of pollution.

A working appropriation for domestic pollution control agencies has been estimated to cost only about 5 cents per person per year, based on total population of the State. Adequate sewage treatment facilities in every community can be installed for about 3 cents per family per day.

Since May 1951, the State board of health has followed a policy of not approving any new or additional disposals of raw sewage in any Montana stream, except under unusual circumstances.

But directing long-range programs toward the solution of the domestic sewage problem is not enough.

Statewide and nationwide, populations are mushrooming and industries are expanding at a rate unprecedented in history. Industrial pollution alone in the Missouri River Basin (eastern portion of Montana) has been estimated to be equivalent to a domestic pollution of 900,000 people. Including the small industries which have not as yet been completely studied in the area, the total population equivalent for Montana industries in the Missouri River Basin would exceed 1 million people.

If this is the picture now what will it be in 1964—or 1984 or 50 years from now when the calendar proclaims the 21st century?

Water is essential for life and it is also one of the essentials of industry production. The sugarbeet industry alone consumes 3,400 gallons of water in the processing of 1 ton of beets, another 17 gallons for the production of 1 pound of sugar, and the four plants in the State have current operating capacities of 8,860 tons per day using over 30 million gallons of water. Approximately 770 gallons of water are required in the refining of a 42-gallon drum of crude oil and 20 gallons are needed in refining a gallon of gasoline. Other industries use proportionately large amounts of water in the manufacture of various commodities.

With increased industrial production, Montana can look forward to increased pollution unless the proverbial ounce of prevention is administered.

Montana's economy needs new industries and expansion of existing establishments but not at a cost paid by the industrial eastern States. There, flagrant examples of pollution clearly point up the necessity for pollution control measures to prevent a repetition in the West.

Water pollution in Montana deserves a close examination and attention should be focused on this potential danger. More than attention, action must be taken to assure adequate legislation to protect water—one of Montana's most precious heritages.

## Protection of the Fisheries of the North Pacific

EXTENSION OF REMARKS
OF
### HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. PELLY. Mr. Speaker, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD a resolution of the King County Labor Council of Washington, AFL–CIO, in support of protecting our Pacific coast salmon fishery resources. Passage of my bill, H.R. 4293, to ban the fish products of nations not practicing conservation, would seem to be the only answer to this problem.

The resolution follows:

Whereas the fisheries are considered a great natural resource, representing hundreds of millions of dollars per year if properly operated; and

Whereas treaties have been consummated in regard to these fisheries and, through these treaties or otherwise, fishing is being allowed on the high seas by certain nations, when by law the North American fisherman cannot fish with nets on the high seas for salmon, thereby allowing big operators to take advantage of the situation; and

Whereas scientists and fishermen are all in agreement that this resource of North America, in regard to the salmon in particular, faces possible destruction; and

Whereas this resource is not being destroyed by natural causes, but by individuals who have been too much interested in selfish gain; and

Whereas congressional hearings have been held in the past and committees have been appointed to try to find a remedy to save this resource, still the destruction of our salmon fisheries is going from bad to worse; and

Whereas on account of this condition and the unfair foreign competition, resulting in cheap imports, thousands of our Americans are being deprived of their livelihood: Therefore be it

*Resolved*, That the Bering Sea Fishermen's Union proceed immediately through congressional channels to eliminate destructive methods of fishing for salmon on the high seas by all nations; therefore be it further

*Resolved*, That when rebuilding this resource by North American taxpayers, proper steps will be taken for their protection in the future, and that copies of this resolution by sent to U.S. Senators and Representatives.

## Flood Control

EXTENSION OF REMARKS
OF
### HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. WAMPLER. Mr. Speaker, I was pleased to note today that the 1959 platform of the Mississippi Valley Association, adopted at the association's 40th annual meeting in St. Louis, Mo., February 1959, among other equally laudable resolutions, calls for "a full measure of flood protection" for America's expanding population.

I must agree wholeheartedly with Mr. Daniel O'Toole, president of the MVA, that the association's platform, representing the combined thinking of leaders from all parts of the midcontinent and southern sections of our country, is a carefully analyzed program of continued progress in developing the Mississippi Valley's and the Nation's water and soil resources in order to maintain a prosperous, expanding economy; and, that in this year of 1959 it is particularly urgent that Americans remember that water resource development is a capital investment in the future of this Nation, essential to our internal economy as well as to our national security.

Of signal importance is the association's stand on flood control:

We consider the catastrophic loss of lives and property due to floods to be an unnecessary drain upon the resources of this Nation. We recommend that flood control projects be vigorously prosecuted to completion, with particular efforts to expedite projects which will also contribute to the development of navigation, the security of municipal and industrial water supplies, the reduction of stream polution, the development of irrigation and the incidental generation of hydroelectric power.

The association's recommendation for the development of the Wabash River Basin deserves special recognition and praise:

We urge the early completion of the investigation and survey to determine the feasibility of providing a commercial barge channel on the Wabash River.

We urge that Congress provide funds in the 1959–60 budget for advanced planning for the Mississinewa, Salomonie, and Huntington flood control reservoirs in the upper Wabash River Basin and the Monroe multiple-purpose reservoir on Salt Creek, a tributary to White River in the Wabash River Basin, and the Mason J. Niblack and unit No. 5 levee on the Wabash River.

We recommend that funds be made available to the Corps of Engineers to complete at an early date the investigation and survey for flood control and other purposes in Illinois and Indiana of the Wabash River Basin with particular attention to expediting the reports on the Wildcat, Big Pine, Sugar Creek and Wolf Creek flood control reservoirs and the local protection of Mount Carmel, Ill.

## Strontium 90

EXTENSION OF REMARKS
OF
## HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. WOLF. Mr. Speaker, herein are certain letters to the chairman of the Joint Congressional Committee on Atomic Energy; letters that the Defense Department apparently wanted kept secret because they present certain disturbing facts; namely, that more fallout exists over the United States than any other country and that strontium 90 contaminates the earth at a faster rate than was originally conceived by scientists.

I might add in passing that one of the most insidious results of the continuing crisis with the Soviet Union is the subtle change that has occurred in the United States in the field of public information. The refusal of the executive branch to keep the public informed of scientific data concerning radioactive fallout and other science and defense subjects has resulted in an uninformed and unaware public in issues which are life and death matters to the public. We are all aware that rational decisions on science and defense policy can only be made when facts are available. If these facts are not available to the general public, the public cannot participate in making decisions which concern their destinies. Decisionmaking falls to fewer and fewer men who cannot be questioned or criticized because the people do not have the facts. This false security consciousness must be stopped before the public loses all power over its servant, the Government.

We in the United States have prided ourselves on our right to know, on freedom of the press, and on freedom from censorship. It is a terrifying thing to think that we may be losing the fight against tyranny internally because we are not forever aware and vigilant in protecting these basic rights.

The letters follow:

[From the New York Times, Mar. 22, 1959]

TEXTS OF DOCUMENTS MADE PUBLIC BY ANDERSON ON FALLOUT OF RADIOACTIVE MATERIALS

STATEMENT BY ANDERSON

In commenting the other day on the Defense Department leak of classified information on the Argus shots—high-altitude nuclear explosions in the South Atlantic in September 1958—I pointed out that it was curious that the Defense Department at the same time was gagging the Joint Committee on making public some important data on fallout from weapon tests.

The Defense Department and the AEC (Atomic Energy Commission) have now released their fallout correspondence with classified deletions, and it is made public in the attachments. First is a letter to me dated February 19, 1959, by the Defense Department revealing new data from classified sources on the residence time of fallout in the stratosphere, and the areas of maximum dripout. Next is a letter from the AEC spokesman, Dr. W. F. Libby, commenting on the Defense Department letter and research project on which it is based. Then there is a transmittal letter from AEC stating their official reservations. Finally there is a brief chronology of our attempts to make this information public.

The process of making public any fallout information is an example of how difficult it is to make available to the public the information it is entitled to have.

The February 19 Defense Department letter states that their measurements indicate that the radioactivity in the stratosphere has a residence half life of 2 years, instead of 7 years as had previously been assumed by AEC. It also indicates that there is a latitude band of maximum dripout of the fallout from the stratosphere which occurs from 35°–50° north or south. This area includes the northern part of the United States, and the letter states that the concentration of strontium 90 on the surface of the earth is greater in the United States than in any other area in the world.

In laymen's language, it looks like strontium 90 isn't staying up in there as long as AEC told us it would, and the fallout is greatest on the United States. Perhaps this information may account, in part, for the recent higher readings of radioactivity in soils and plants.

This new data appears to further contradict the official doctrine of AEC spokesmen as to residence time of fallout in the stratosphere and the theory that stratospheric fallout tends to drip out uniformly throughout the earth. The AEC letter of February 27, 1959, ought to be checked for consistency with the speech of the same AEC spokesman on March 13, 1959, at Seattle.

The Joint Committee will look into these matters when it holds its fallout hearings in May of this year under the chairmanship of Congressman CHET HOLIFIELD (Democrat, of California) of the special subcommittee on radiation.

DEFENSE DEPARTMENT LETTER

FEBRUARY 19, 1959.

DEAR MR. CHAIRMAN: The following is a brief status report outlining the present programs for analyzing and evaluating the radiation hazards resulting from atomic detonations:

Fallout reports from Operation Redwing (1956), Plumbbob (1957), and Hardtack (1958) are currently under preparation.

The hazards of local contamination from nuclear-weapon detonations have been fairly well delineated. However, the difficulty in accurately predicting the rapidly varying atmospheric conditions results in uncertainties as to the area of fallout. Predictions of local fallout contours from enemy bombs must be based on a large number of assumptions, such as the type of weapon, height of burst, and yield. These unknowns do not allow accurate prediction of fallout from enemy bursts during wartime. Delineation of contaminated areas by airborne radio instruments after deposition of the fallout is presently practicable and will be of considerable military and civil value during wartime.

The deposition of worldwide fallout or worldwide surface contamination is now beginning to be accurately measured * * * (classified portion deleted) * * *. Recent indications are that the radioactivity in the stratosphere has a residence half life of 2 years (in contrast to the previously assumed value of about 7 years) and the present amount of strontium 90 in the stratosphere would be maintained by the injection of about 6 megatons of fission products per year. The concentration of the strontium 90 on the surface of the earth is greater in the United States than in any other area of the world. The danger of carbon 14 and cesium 137 has been examined and the immediate probability of any one individual being affected is about 1 in 500,000.

The risk of damage resulting from the testing of weapons is, therefore, extremely small and much less than other common day occurrences such as X-rays, contaminants, household cleaners, etc. However, the probable casualties attributable to radioisotopes from weapons testing when summed over the populations of thousands of years create a moral issue that could be of considerable propaganda importance.

The distribution of the radioactive debris in the stratosphere as a result of detonations to date is not clearly defined as to its altitude and latitude variation. The altitude dependence partially determines the dripout rate and the latitude dependence influences the extent to which the worldwide fallout is uniform over the earth. Tentative conclusions to date indicate that three-tenths of the quantity of radioactive debris leaves the stratosphere each year, that the north-south diffusion of radioactive particles in the stratosphere does exist, and that in both hemispheres there is a latitude band of maximum dripout which is from 35° to 50° north or south.

There is a need for more experimental and collecting programs in the following areas of the effects and behavior of fallout from nuclear weapons:

(a) Amount of fallout deposited locally from a low height of burst.

(b) More accurate determination of the drip-out rate of radioactive particles from the stratosphere.

(c) Further define the estimate of the amount of radioactivity formed per kiloton of fission yield.

(d) The refinement of measuring techniques to account for all radioactivity produced from a nuclear yield.

(e) Advancements in the knowledge of fireball chemistry, physics, and particle behavior.

(f) Response of biological systems to radiation.

Sincerely yours,
HERBERT B. LOPER,
*Assistant to the Secretary of Defense (Atomic Energy).*

HON. CLINTON P. ANDERSON,
*Chairman, Joint Committee on Atomic Energy.*

LETTER FROM DR. LIBBY

FEBRUARY 27, 1959.

Hon. HERBERT B. LOPER,
*Chairman, Military Liaison Committee.*

DEAR GENERAL LOPER: In connection with your letter to Senator ANDERSON of February 19, 1959, concerning radiation hazards resulting from atomic detonations, I have just completed a study of data which you kindly made available to us last December. I am sorry that, because of the complexity of the problem and my preoccupation with other duties, I have been so slow in finishing my consideration of the data and in sending on my comments.

I think your letter to Senator ANDERSON is an excellent exposition of the present position we are in. There are, however, one or two points you make, on which I believe fur-

ther words are necessary in order to resolve some questions.

The extensive data that have already been published by Project Sunshine and the United Kingdom study group, together with your beautiful * * * work, still leave us, despite their great volume and complexity, in some uncertainty, as you say, as to the distribution of the radioactive debris in the stratosphere to both altitude and latitude variation, since the altitude variation determines in part the dripout rate and thus the residence half life in the stratosphere, this quantity is left in some doubt. My own present conclusion is in agreement with yours as stated in your letter, in that my previous value of 7 years for this important number is too long and that it should be reduced. In a restudy of this question, being released March 13 in Seattle, a copy of which will be sent you as soon as it is printed, a new value of about 4 years rather than the earlier 7 is arrived at. I find it difficult to push it down to the 2 years you give as an indicative value.

On the amount of strontium 90 in the stratosphere, at the present time there is a somewhat larger difference in our estimates which may be due to your not having included the Russian series of last October which in itself alone, according to my estimates, increased the stratospheric inventory by about 50 percent You give the present inventory as requiring 3 megatons (megatons fission equivalent) per year to be maintained at its present level. For a half-life of 2 years this corresponds to only 17 megatons total and appears to leave too little room for the injections from tests before last October, which I estimate still have left some 25 to 30 megatons and a corresponding required rate of injection for steady maintenance of about 7 megatons per year. The closeness of this figure to your 6 megatons per year number shows how badly we need further information on the actual stratospheric content.

*Evidence increasing*

You indicate that the stratospheric fallout occurs at maximum rates in the 30°–50° bands of latitude in both hemispheres. This old argument still is not quite settled, I believe, although the evidence in favor of your conclusion is increasing. My principal difficulties with it at the moment are that we know that a considerable part of the peak in observed fallout in these latitudes in the Northern Hemisphere is due to tropospheric or local fallout which was never in the stratosphere and the evidence for a corresponding peak in the Southern Hemisphere seems to be rather weak.

With respect to the carbon 14 and cesium 137 hazards, the laboratories measuring radiocarbon dates in various parts of this country, in Europe and New Zealand have sent me data on the present increase in the carbon 14 content of living matter which amounts to about 10 percent of the natural level of carbon 14 from the cosmic rays which in itself corresponds to about 1.5 milliroentgen per year—about 1.5 percent of the average total natural dose rate. Turning to cesium 137, Dr. E. C. Anderson in the Health Division at our Los Alamos Laboratory has just reported data on the human level in the United States and Europe for the late summer and early fall of last year which amount to an average of about 75 micromicrocuries per gram of body potassium for an internal dose rate of about 3 milliroentgens per year. The total cesium 137 fallout in the United States now amounts to about 50 millicuries per square mile. This adds about 1 milliroentgen per year of external dose for a total of about 4 milliroentgens per year due to cesium 137 which is about 3 percent of the natural average radiation dose rate from natural radioactivity and the cosmic these numbers are in strict keeping with your estimate that the immediate probability of any one individual being affected by bomb test carbon 14 and cesium 137 is about 1 in 500,000 but I think your estimate looks reasonable.

On the many other points in your letter I find myself in complete agreement, particularly about the importance of more experimental and collecting programs on the amount of fallout deposited locally from a low height of burst. Since it may be that we will not again have the opportunity to test devices, at least above ground, it is particularly important to consider whether we may not collect more information at this point from past tests. I believe there are some possibilities of doing this and I suggest that we undertake such a program jointly right away.

W. F. LIBBY,
*Commissioner, Atomic Energy Commission.*

AEC LETTER

(From the General Manager to the Joint Committee, received March 21, 1959.)

This is in reply to your letter of March 9, 1959, by which you forward a copy of General Loper's letter to Senator ANDERSON dated February 19, 1959, and requested our comments thereon.

Commissioner W. F. Libby has written his comments to General Loper in a letter dated February 27, a copy of which was sent to Senator ANDERSON at that time. For your convenience another copy of Dr. Libby's letter is attached.

The revised estimates of stratospheric burden and the residence time presented by General Loper are consistent both with the data referred to by General Loper and with the "Ash Can" data obtained by the Atomic Energy Commission in its ballon sampling up to 90,000 feet. However, it should be kept in mind that knowledge of the stratospheric content alone is not sufficient to determine retention time. In addition, one needs the knowledge of either the stratospheric injection or of total stratospheric fallout as a function of time. Within the range of accuracy with which fallout has been measured, observed fallout to date is not incompatible with General Loper's estimate of the injection rate which would be required to maintain the present stratospheric burden.

The two main reasons for the uncertainty in the stratospheric burden and residence time are (1) that the entire stratosphere has not been adequately surveyed from pole to pole and up to altitudes beyond which the overlying radioactive debris can be confidently neglected and (2) that the data obtained at the higher altitudes by balloon only are subject to sizable sampling errors, uncertainties of collection efficiency of the sampling filters, and radiochemical analysis errors due to the small amounts collected.

As a consequence of these uncertainties we do not consider that the data now available are sufficiently decisive to resolve the differences between the estimates of stratospheric content and retention time made by General Loper and the higher estimates given by Dr. Libby in his letter to General Loper. It may be observed that on the basis of the estimates made by General Loper the total worldwide fallout of long-lived radioactive fission products anticipated from all tests up to date would be roughly two times the total deposition so far and that on the basis of Dr. Libby's estimate the total would be roughly three times.

We concur with General Loper in recognizing the need for further investigation along the lines suggested in his letter. We plan to continue our efforts in all these fields. In particular, we hope to be able to differentiate Operation Hardtack surface-burst debris and high-altitude debris, by analysis of tungsten and rhodium isotopes respectively, and, in turn, to distinguish these from the recent U.S.S.R. debris. In this way it should be possible to obtain a much better picture of the actual patterns and rates of spread of stratospheric debris originating in different latitudes and altitudes.

The information bracketed in red on the first page of the attached copy of Dr. Libby's letter of February 27, 1959, is considered by the originating agencies to be confidential defense information. With these deletions Dr. Libby's letter is declassified.

Sincerely yours,

(S) A. R. LUDECKE,
*General Manager.*

CHRONOLOGY

Brief chronology of action by Joint Committee on Atomic Energy to make public Defense Department report on fallout:

December 1958: Dr. Libby furnished new data by Defense Department indicating that the radioactivity in the stratosphere has a residence half-life of 2 years instead of previously assumed value of 7 years.

February 20, 1959: Joint Committee received fallout report by the Department of Defense dated February 19, 1959 classified "Confidential—Restricted Data."

February 27, 1959: Confidential letter sent to Defense Department by Dr. Libby with copy to Joint Committee chairman in which Dr. Libby arrived at new value of 4 years instead of previous 7 years.

March 9, 1959: Joint Committee by letter this date to the Defense Department questioned the reasons for the confidential classification of the report and inquired as to what extent the information could be discussed in public without compromising classified information. A separate letter this date was also sent to the AEC requesting the Commission's views on the report and to what extent the conclusions affected previous assumptions and statements.

March 13, 1959: Restudy by AEC of worldwide stratospheric fallout released at Seattle, Wash., in which no mention of Defense Department study is made and which maintains position of a residence time of 5 to 10 years, selecting 6 years as the mean residence time of stratospheric fallout. Results of another AEC analysis Project Ash Can which indicated a residence time of 3 years was discounted as being doubtful. No mention was made that the Department of Defense conclusions of residence of half-life of 2 years tended to support results of Project Ash Can.

March 18, 1959: By letter, the Defense Department advised the Joint Committee that only one sentence in the report contained classified information and after identifying it went on to state:

"Although the remainder of the letter is unclassified, the Department recommends that it not be discussed in public because there is not full agreement as to the interpretation of the data that has been obtained so far. We believe it would be far better before the date and conclusions are made public that there be a close agreement amongst the investigators concerned. Therefore, we believe that until the results are more than preliminary, the confidential classification should remain on the letter."

March 20, 1959: Letter received by Joint Committee from the Defense Department advising the report could be made public with deletion of the one classified sentence.

March 21, 1959: Letter received from AEC stating what portion of Dr. Libby's confidential letter of February 27, 1959, to the Department of Defense does not contain classified information.

Letter and report released by Joint Committee after deletion of classified information.

## Lt. Gen. Joseph M. Swing, Commissioner of Immigration and Naturalization

EXTENSION OF REMARKS
OF
### HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. LINDSAY. Mr. Speaker, Lt. Gen. Joseph M. Swing is a man to whom the country owes a vote of thanks. For the past 6 years Joseph Swing has held one of the most difficult posts in Government—Commissioner of Immigration and Naturalization. This is a job in which there are only heartaches, headaches and brickbats. It takes a man with a tough skin and a steady hand. Such a man is Gen. Joseph M. Swing.

What is little known about this man, however, is that he has a heart as big as an elephant and has administered a difficult law liberally, fairly, and with as much compassion as the law will allow. He showed his toughness and his ability to get a job done when he took by the horns an appalling situation along the Mexican border where the so-called wetback invasion had assumed unbelievable proportions. The Commissioner, acting swiftly but carefully, and without additional cost to the taxpayers, reversed this avalanche and not only stopped a tide that was daily in the thousands, but made it possible for Mexicans here illegally to return to Mexico of their own accord and without penalty. In the summer of 1954 about 65,000 illegal aliens returned to Mexico of their own accord. This was a situation which nobody liked and which demanded correction and control. The Mexican and the U.S. Governments both have been grateful to General Swing for bringing this unhealthy situation under control.

This man is responsible, probably more than anyone in Government, for taking action at all levels to facilitate travel—all to the advantage not only of the United States but also commerce and industry, including, of course, the transportation industry.

There is much left to be done in this regard and I assure my colleagues, Mr. Speaker, that Commissioner Swing is not resting on the improvements thus far achieved. Within the executive branch of the Government he has fought to eliminate redtape and senseless procedures which have proven so embarrassing and annoying to international travelers. His efforts contributed to a change in the law permitting a waiver of the fingerprinting requirement of people coming temporarily to or through the United States. He is presently seeking to obtain a waiver of the visa requirements for tourists and visitors coming to the United States, as permitted by law in certain cases with respect to neighboring countries and contiguous islands. He lent support to legislation enacted by the 85th Congress which corrected a number of hardships that had been encountered in the administration of the immigration laws.

When the October revolt broke out in Hungary, General Swing was among those in the forefront pressing for the immediate participation of the United States in a crash program designed to relieve the misery of anti-Communist refugees and escapees from Hungary and pressures on Austria. He was quickly on the spot in Austria and Germany and took extraordinary measures to expedite the processing of emergency admission of 30,000 deserving Hungarians to this country.

General Swing is a West Point classmate of President. Eisenhower. Although he was the youngest member of this distinguished class he achieved in his career preeminence and excellence in his chosen profession. It would take far too long, Mr. Speaker, for me to recount to this Chamber the whole history of General Swing's professional achievements. It is enough to point out that he achieved distinction as one of the foremost experts in this country on airborne tactics. In December 1943, he planned and conducted the first airlift by planes and gliders of an entire division. Thereafter, in the Pacific theater, General Swing proved himself one of the most skillful, effective, and courageous combat officers of World War II.

General Swing has been awarded the Distinguished Service Cross; Distinguished Service Medal; Silver Star with two Oak Leaf clusters; Legion of Merit; Bronze Star Medal with one cluster; Air Medal with one cluster; French Legion of Honor; and Chief Commander, Philippine Legion of Honor.

I had the pleasure of working with Commissioner Swing in my capacity as executive assistant to the Attorney General of the United States in 1955 and 1956. He is a devoted and effective public servant. All who strive toward the improvement and betterment of the public service can look to men like Joseph M. Swing for inspiration and leadership.

## Family Service Association of America

EXTENSION OF REMARKS
OF
### HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. WALLHAUSER. Mr. Speaker, our Nation's Capital will be the scene from April 1 to 3 of a biennial meeting of an organization that is outstanding in its contribution to the human welfare. I refer to the Family Service Association of America.

This is a growing federation of almost 300 family counseling agencies in the United States, Canada, and Hawaii, which annually serves nearly 1 million people. This service is rendered mainly through case work help for marital, parent-child, and other family-living problems.

The agencies are supported largely by local united community campaigns, and this is but another reason for all of us to take an active and intense interest in our local fund-raising campaigns conducted yearly by United Funds and others of similar goals.

The Family Service Association of America national headquarters, staffed as it is with highly trained professional people, provides a variety of central services to help local agencies and communities develop effective family service programs for strong family life.

If you have been privileged to observe the conscientious and never-ending efforts of the agencies to cope with the manifold problems of our complex existence, you could not help but be impressed by the devotion and skill of those who render this service.

Additionally, there are hundreds and hundreds of citizens who serve on the boards that direct the agencies' work, without compensation other than a reward for contribution to better living.

It is my hope that these few words will in some small measure emphasize the very greatness of the Family Service Association of America and will point out to the devoted people who work so untiringly in its behalf that those of us who are in the Congress appreciate this great effort on the part of private citizens.

We salute the Family Service Association of America and wish it a very long and successful future career.

## An Appreciation of Charles M. Russell, Montana's Famed Cowboy Artist

EXTENSION OF REMARKS
OF
### HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. ANDERSON of Montana. Mr. Speaker, I believe I speak for all Montana when I say that our famed cowboy artist, the late Charles M. Russell, is truly emblematic of our great Treasure State. The statute of Charley was placed in Statuary Hall here on March 19, 1959. The speaker we of Montana obtained for that solemn occasion was Dr. K. Ross Toole, former head of the Montana State Museum, at Helena, Mont., now director of a museum in New York City. His tribute was so well-stated, so true, that I ask that it be printed in the CONGRESSIONAL RECORD. It follows:

AN APPRECIATION OF CHARLES M. RUSSELL
(By K. Ross Toole)

When a man becomes a myth it is difficult to get at him. It is as if his figure stood behind an opaque screen. No matter how intently you peer, the outline is blurred. The truth about any man is difficult to ascertain. The truth about a complex man( who died 33 years ago) and upon whose image myth and legend have encrusted themselves, is even more unascertainable.

Sometimes what is not true about a man is more revealing than what is true. And sometimes an appraisal of what a man was not strips off more misconceptions.

Charles Marion Russell was not, in the proper sense of the word, ambitious. In a

peculiar way he had what he wanted at a very early stage in his life—and he never entirely lost it. It is true that he lost the land as he first knew it and loved it, but he never lost it in his heart, or in his mind's eye, and it was from these wellsprings that his talent rose. Ambition is a thing that drives men to attain what they want and do not have. Russell was not a driven man.

Charles Russell was not a hail fellow well met. He was extremely gregarious. He enjoyed people and they enjoyed him. But the story of his life is interspersed with long periods away from people and close to the land. He had to revive himself in quiet. The too common picture of Russell always in a crowd, always grinning, always joking is but one small facet of a man who was essentially a quiet man—and almost always a contemplative man.

The difference between Russell and his friends and contemporaries was not merely that he happened to be able to paint—while in every other respect being a regular kind of fellow; the difference lay in the fact that beneath the surface he carried on a lifelong love affair with mountains and plains, with the wind that was born in the canyons and the grass that bent on the hills. Perhaps no man of his time ever understood so thoroughly the uncommon land in which he lived. And no American has ever peered quite so deeply into the Indian heart.

Russell was not a joyful man with unfailing cheer to spread among his fellows. Nor was his humor simple; it had heavy undertones of the ironical and the satirical. He was an inveterate teller of jokes and stories. But they almost always had bite, and often even anger in them.

In short, Charles Marion Russell was a most uncommon man who found himself at home only in the most uncommon land of his adoption. He not only spoke of that land but for it. No one has ever spoken so articulately since, and—because all but its shadow is gone—no one ever will again.

It is a fine thing that Montana has placed the statue of Charles Russell in National Statuary Hall. The statue belongs here. Russell doesn't. Maybe he belongs where most of us think he is: in the places he painted; in the fierce ecstacy of Montana's sunsets; in the mountain meadows, and knee-deep and alone in prairie grass.

But if you look westward from where Charles Russell is buried you can see Square Butte, his butte—purple in the morning, red at noon, and blue in the evening. And it is always far away; it seems to retreat even as you move toward it. That is what Charles Russell does.

Maybe it is that way with all great men. Maybe they don't really belong to any place at all. Maybe they belong to time.

## Dividend Day at Kodak

EXTENSION OF REMARKS
OF
**HON. JESSICA McC. WEIS**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mrs. WEIS. Mr. Speaker, at a time when we hear so much about the many problems which exist between labor and management, it is refreshing to find a situation such as that which prevails at the Eastman Kodak Co., in my home city of Rochester, N.Y.

Eastman Kodak, one of the great companies of this country, has established a truly wonderful relationship with its employees, a relationship which is reflected in the continuing high quality of the products which Kodak produces, in its consistently fine earnings record, and in the almost complete absence of the kind of labor-management problems which seem to plague some industries.

Typical of the type of thing that has made Eastman Kodak a shining example of what labor and management can do when they pull together was this week's announcement of a recordbreaking $28 million wage dividend which will be distributed to the 31,000 Kodak employees in Rochester. This wage dividend plan was begun almost half a century ago, and is based on the amount of cash dividends declared on the common stock during the year and on the recipient's earnings over the last 5 years. It is to my way of thinking a wonderful way of sharing corporate profits.

We in Rochester are proud of Eastman Kodak, and we are proud of the generally fine labor-management relationships which exist throughout the city. I would like to include in the RECORD a newspaper article concerning the Kodak wage dividend.

IT'S DIVIDEND DAY AT KODAK TUESDAY

A record wage dividend of approximately $28 million (before taxes) will be paid Tuesday to the 31,000 Eastman Kodak Co. employees in Rochester.

The total wage dividend to about 47,000 Kodak employees in the United States amounts to approximately $40 million.

Fifteen branches of Rochester banks will extend banking hours until 6 p.m. for the convenience of Kodak employees Tuesday afternoon. In addition, offices of the Eastman Savings & Loan Association at both the Kodak office and the Kodak Park Works will be open to 6 p.m. Tuesday and Wednesday to help with the cashing of wage-dividend checks.

The wage dividend is based on the amount of cash dividends declared on the common stock during the year and on the recipient's earnings over the last 5 years. Next week's payment will be the largest since the wage dividend plan was begun in 1912. Eligible employees will receive $32.625 for each $1,000 they earned during 1954–58, inclusive.

Kodak's highest previous wage-dividend payment in the United States was made a year ago and amounted to $38 million. The rate for that payment was $32 per $1,000 earned over 5 years.

Because the wage dividend is related to the cash dividends on the company's stock, the formula for determining the rate was adjusted after the recently announced Kodak stock distribution to assure that any wage dividend declared by the company in the future will not be reduced because of the stock distribution.

## Aid Comes From Taxes

EXTENSION OF REMARKS
OF
**HON. DENVER D. HARGIS**
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. HARGIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas City Daily Traveler, which I feel effectively calls attention to certain objectionable aspects of this country's present foreign aid program, and also outlines the goals of a worthy organization, the Citizens Foreign Aid Committee:

AID COMES FROM TAXES

Politicians at all levels try to leave the impression that they alone can bring special benefits to certain groups; that under their wing there will be protection. What they haven't succeeded in doing is convincing all people that they will not share the costs of government. Taxes are paid by the masses.

If elected officials engage in programs that are folly the poor man and the rich man pay the costs. That is the reason people want to know and should be told how public money is spent. When this information is not made available it is reasonable to assume that everyone pays for the benefits that go to a few. Aid comes from the people or the politicians.

When a citizen is in distress he is not without sympathy. Americans are noted for their service to mankind. In this country the people don't have to know the resident who has suffered from disaster. If he is hungry and without food and a home there is a tendency to gather around him and ease the condition.

That citizen immediately responds and is thankful he has good neighbors and that other citizens are thoughtful.

Away from home our acts of humanity are not so rewarding. That is, the money spent on foreign aid doesn't bring a friendly reaction. Americans think they are helping the destitute in other lands, but when the results are tabulated there is an element of hate that has been generated in the heart of the foreigner.

Part of every man's taxes goes to foreign aid. More money is sent abroad each year and more is asked. But the reaction to charity abroad is not what the American gets at home when he helps a fellow citizen. Outside official political circles a campaign is underway to stop the flow of foreign aid within a period of 3 years rather than increase it.

A citizens foreign aid committee has been organized. It has studied the foreign-aid program and is making an effort to stem the flow of money from the taxpayer's pocket to the foreigner.

These reasons were given by the committee for halting the giveaway foreign-aid program:

"The threat of Communist aggression rules out our continuing to dispense lavish foreign aid when our own economy is threatened and our defenses are inadequate.

"In a number of recipient countries our foreign aid helps to strengthen political systems hostile to our own.

"Our foreign aid speeds rather than retards the growth of communism; it inflates our economy; it is partially responsible for the alarming flight of gold from our control; it is destroying our foreign markets and increasing unemployment among American workers.

"The administration of foreign aid is inefficient and wasteful.

"Our governmental foreign-aid program is unsound in principle."

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

# *Appendix*

## Human Rights Are Everybody's Problem

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. HUMPHREY. Mr. President, on February 22, it was my privilege to address the Chicago Conference for Brotherhood at the Shoreland Hotel, Chicago, Ill. The theme of my address was that Human Rights Are Everybody's Problem.

I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR HUBERT H. HUMPHREY, BEFORE THE CHICAGO CONFERENCE FOR BROTHERHOOD, FEBRUARY 22, 1959, CHICAGO, ILL.

Throughout our country people have been meeting this past week in commemoration of National Brotherhood Week.

Such gatherings reflect a growing awareness of the importance of human brotherhood and understanding in a free and democratic society. As never before in our history, there is a recognition that suspicion and prejudice stand as a mortal threat to the political and social health of the Nation. Discrimination, bigotry, and prejudice are the dangerous subversive forces at work in our society.

The denial of equal rights to so many of our citizens, as a result of such prejudice, is the reason that we are gathered here tonight. The denial of the God-given right to freedom is the No. 1 moral and political issue which we face today in America and in the world.

The present struggle between the free world nations and the Communist bloc is, after all, based upon the fundamental issue of man's right to freedom. This is what the present conflict, when all is said and done, is all about. The issue is whether government should be the servant of the people or master of the people.

In such a basic and crucial struggle we cannot afford to ignore denials of freedom right here in America. We must put our own house in order if we are not to be considered hypocrites when we point an accusing finger at the Soviets for their denial of human rights.

And may I add that the problem we face right here at home is not a regional problem only confined to the South. We know this only too well from firsthand experience. Minority groups still face employment barriers and by gentlemen's agreements a system of restrictive covenants is effectively maintained in many towns and cities of the North.

At the conclusion of the recent New York hearings of the Civil Rights Commission, Father Hesbergh, president of Notre Dame, speaking on behalf of the Commission members, said that it had been demonstrated beyond a doubt that the problem of discrimination in housing is nationwide in scope.

"We are talking about the face of America," said Father Hesbergh, "and that face must have the beauty and dignity and harmony of the Constitution." Equal protection of the laws, he said, must begin in the homes of all Americans.

In spelling out the problem which we face, I do not wish to leave the impression that we are not making progress. Advancements in the field of civil rights and human understanding are being made every day.

I was heartened to read only the other day that your new State superintendent of public schools here has announced that he intends to take affirmative action against segregation in certain schools in southern Illinois.

Yes, more and more jobs are opening to qualified Negroes. Fewer and fewer trade unions maintain color bars. Progress is being made, slowly to be sure, toward nonsegregated housing.

And in the South there is encouraging progress also. The recent opening of integrated schools in Virginia is a milestone. Its significance cannot be overestimated. The doctrine of massive resistance in that historic State has collapsed completely.

In Kentucky, 85 percent of the schools have been integrated.

In the border State of Maryland, integration of schools is almost complete and has taken place without any difficulties.

Tennessee is in the second year of a start with its capital city integration plan as accepted by the court.

In North Carolina, its largest city, Charlotte, is proceeding with an accepted plan; its fine university has for years had Negro students.

In Texas, Negroes were admitted to the university several years ago, and many of its towns and cities have integrated their schools.

Louisiana admitted Negroes to the State University 2 years ago, and this year admitted Negroes to its undergraduate school in New Orleans.

In Florida, a Negro has been admitted to its law school, and Governor Collins, a courageous and good man, has proposed the abolition of all Negro graduate schools and the admission to the regular university of their students this coming September.

There are only four States in the South which have made no start toward integration and in which a policy of massive resistance continues unabated.

So progress is being made. And this is the encouraging thing to remember. The job remaining to be done is still tremendous, but we have every reason to feel confident that we have reached the time in our country's history when the goal we seek of first-class citizenship for all our people is in sight.

Both as mayor of Minneapolis and as a U.S. Senator I have worked for legislation to protect the rights of all the people. I have advocated civil rights legislation on the basis of the moral law and the constitutional guarantees of freedom to all citizens.

I would like to set forth to you these basic and fundamental principles upon which I have based my stand. Emotional outbursts and arguments of those who oppose civil rights must not cloud the basic issue; namely, the moral and constitutional duty of the State to protect and to guarantee the rights of its citizens, regardless of their race, religion, creed, color or national origin.

In the year 1896, a great American wrote the following words on this duty of the Government:

"The sure guarantee of peace and security of each race is the clear, distinct, unconditional recognition by our Governments, National and State, of every right that inheres in civil freedom, and of equality before the law of all citizens of the United States without regard to race. We boast of freedom enjoyed by our people above all other people. But it is difficult to reconcile that boast with a state of the law, which, practically, puts the brand of servitude and degradation upon a large class of our fellow citizens, our equals before the law."

These are the words from the dissenting opinion of Justice Harlan in the historic case of *Plessy* v. *Ferguson*. As we all know, Justice Harlan's colleagues on the Supreme Court rejected his defense of man's rights under the Constitution by adopting the "separate but equal" doctrine.

However, Justice Harlan's dissenting opinion was finally accepted in 1954 in the case of *Brown* v. *Board of Education* in which the Court stated: "We conclude that in the field of public education the doctrine of separate but equal has no place. Separate educational facilities are inherently unequal."

Justice Harlan had been a slaveholder himself, and an opponent of the 13th amendment. He was, however, a just and righteous man with a deep reverence for the Constitution, and he clearly understood what was intended by the 14th amendment. As his biographer stated:

"The simplicity and directness with which he viewed it approaches that of a layman. He believed that it should be construed in accordance with the views of the framers and the dictates of commonsense."

Justice Harlan's opinion should be read and heard today by every citizen in the land. It demolishes the emotional arguments which have been raised in an effort to bury the simple and fundamental constitutional guarantee of equal protection of the law.

Yes, it is this guarantee which we must constantly keep in mind. We must not let it be pushed aside and obscured. The 14th amendment is clear:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

When the Supreme Court in 1954 overthrew the "separate but equal" doctrine, it breathed new life into the Constitution. Such a decision was inevitable in an age when second-class citizenship can no longer be tolerated. There can be only one class of citizens permitted under our legal structure; and those who argue otherwise are in opposition to the supreme law of the land and the basic and fundamental principles upon which our Nation was founded.

The framers of the Declaration of Independence laid down the basic philosophy of our Government when they wrote:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed.

In these short sentences is summarized two great and abiding ideas which have served to guide our country for almost 200 years.

First of all, that man has certain rights under the natural law; rights given to him not by the government, but rights given to him by God, Himself. As such these rights are unchangeable and everlasting and above the power of Government to destroy or deny.

Second, governments are established by the people for the primary purpose of securing these natural rights—which include that of liberty—and to protect the individual in their enjoyment.

This indeed was a radical philosophy of government in the 18th century, and there were many who deemed it both dangerous and visionary. But this doctrine has served us well and under it our Nation has grown and prospered and government has remained the servant rather than the master of the people. Unfortunately, however, this great concept of a government established to protect the rights of all the people is still not accepted by all. There is still a denial of freedom and equality to many of our fellow citizens—particularly those of the Negro race.

To the extent that our Federal, State, and local governments fail to protect the natural rights of the citizens, such governments are failing to fulfill their function according to our basic philosophy of the role of government.

Human rights are inalienable rights. They are God's gift to man—and their protection and advancement is the first obligation of organized society.

Government at all levels must give constructive and imaginative leadership in the effort to overcome discrimination throughout the Nation.

Protection of human rights is the moral responsibility of government officials in a free and democratic society. They have the obligation to establish standards and practices of equal rights and equal protection of the law for all citizens to follow.

However, action of representative government generally reflects moral and political standards of its citizenry. For that reason fulfillment of civil rights and civil liberties is the continuing responsibility of every community, of every civic organization, and of every individual. Action in Congress is vital and important, of course—but it is not enough alone.

Leadership from the President, the executive branch of our Federal Government, from our Governors and from our mayors is equally important, of course—but it too is not enough alone.

We need courageous leaders in behalf of human rights in every community. We need local action, as well as national action. We need private action as well as public action.

The cause of civil rights should enlist the active support of government, of voluntary organizations, of religious groups and institutions, and of civic bodies. Only by such unified action can we truly fulfill mankind's inalienable rights.

Great progress, as I have already noted, has been made in recent years in the field of civil rights, but we still have a long way to go.

So long as segregation is practiced in schools, parks, libraries, hospitals, buses and trains, we will not have achieved true freedom. So long as color bars exist in housing, hotels, restaurants and theaters, we will be short of the goal. So long as citizens are denied the right to vote or denied the right to a job because of their color, we will have failed to live up to our announced principles.

Those of us who maintain that it is the obligation of government to protect the civil rights of all citizens are proposing no new or radical idea. Our position is as old as the Declaration of Independence itself; founded on the basis of faith in the natural rights of man and in the Constitution of the United States.

I realize only too well that segregation cannot and will not be wiped out overnight. Prejudices which have developed over scores of years cannot simply be ignored in working toward the goal of equality under the law. But these very real problems and roadblocks to understanding should not and cannot be permitted to serve as excuses for refusing to act.

It is my firm conviction that government must give constructive and imaginative leadership in this endeavor. This will require patience, understanding, and a determination on the part of men of good will to cooperate in a dispassionate manner.

This is no time for name calling or for emotional tirades or for holier-than-thou attitudes. It is the time to calmly and rationally discuss and work out methods whereby equality under the law shall be assured to all citizens in as orderly and civil a manner as possible. I am convinced that it can be done if we but put our minds and our hearts to it.

We in the Congress have a grave responsibility to aid in protecting the rights of all the people. And we are making headway.

The Civil Rights Act of 1957 was the first civil rights legislation passed by Congress since 1875. It added greatly to the excellent record of the 85th Congress. While it failed to contain many of the proposals that I, and many of my colleagues, had hoped and worked for, it was a positive step forward. Under this act there was created a Commission on Civil Rights, a Civil Rights Division in the Department of Justice, and most important of all, the Attorney General was empowered to seek an injunction when a person was deprived or about to be deprived of his right to vote. These were provisions which many of us had striven for many years to achieve.

This civil rights record of the 85th Congress, however, should not serve as an excuse for failing to take further action in the 86th. And I am confident that we will have reason to be proud of the civil rights record of this Congress.

As you know, a number of civil rights bills have already been introduced in the Congress this year.

Senator JOHNSON has offered a bill which would (a) make it a Federal crime to bomb schools, churches and other buildings; (b) grant the Attorney General subpena power in investigations of violations of voting rights; (c) extend the life of the Civil Rights Commission another two years; and (d) establish a Community Relations Service to provide conciliation service to communities involved in civil rights disputes.

The administration's proposed bills would (a) make the use of force or threat of force to obstruct court orders in school integration cases a Federal offense; (b) provide funds for education of the children of members of the armed services in areas where the public schools have been closed; (c) make it a Federal offense to travel in interstate commerce to avoid prosecution for the bombing of religious or school property; (d) prohibit the destruction of voting registration lists and make such lists and records available for examination by the Department of Justice; (e) authorize appropriations by the Federal Government to assist local school agencies in desegregation programs; (f) extend the life of the Civil Rights Commission 2 additional years; and (g) create a Commission on Equal Job Opportunity under Government Contracts.

Your own Senator PAUL DOUGLAS and I, joined by several other Members of the Senate, have introduced a bill which (a) endorses the principle of the antidiscrimination decisions of the Supreme Court; (b) provides that the Attorney General may institute a civil action for the purpose of preventing any interference with a person's right to equal protection of the laws; and (c) authorizes the Secretary of Health, Education, and Welfare to (1) render technical assistance to aid in school desegregation; (2) provide grants to areas where desegregation in public schools is being carried out; (3) prepare plans for the elimination of segregation in public schools where no effort has been made to comply with the Court's decision; and (4) institute legal proceedings to enforce compliance when such plans are rejected by State or local officials.

I personally feel that the most meaningful legislation is that which Senator DOUGLAS and I are sponsoring. This is not to say that the bills as offered by Senator JOHNSON and by the administration are not desirable. I think that they are. They would be steps forward. Not as long strides forward as I and many of my colleagues in the Congress favor, but forward strides nevertheless.

Senator JOHNSON is to be commended for offering his civil rights bill and for indicating that he intends to push for its adoption by the Senate.

I think it is significant that under the leadership and direction of Senator JOHNSON, a Senator from a State which was part of the Confederacy, no less than 5 of the 22 southern Senators voted for the Civil Rights Act of 1957. For the first time the solid South split on the civil rights issue.

There is general agreement that the 86th Congress will pass further civil rights legislation. And it will be significant action.

Yes, we are moving forward. We are making progress on wiping out the great evils of discrimination and segregation. The gap between the flowing words embodied in the Declaration of Independence and the Constitution and the denial of first-class citizenship to so many of our people, is being faced up to. This gap is slowly but surely being closed.

The words of a distinguished American, a former Senate colleague from North Carolina, Frank P. Graham, summarize the opportunity which we now have to advance the cause of freedom:

"With human liberty in peril around the earth, may the people of the United States, in cooperation with free nations, light up the wide heavens of the hopes of all peoples with another great declaration of the equal freedom and dignity of all people. Now is the time to make clear to the friends of freedom in the East and West that freedom, due process of equal justice under law, and the equal opportunity for all people are the historic and living sources of the faith of the American people in themselves, of the world's faith in America, and of America's moral influence and power in the world."

## Carbon-Schuylkill Jobless Total 25.3 Percent of Labor Force

EXTENSION OF REMARKS
OF
## HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from

the Lansford, Pa., Record of March 17, 1959:

CARBON-SCHUYLKILL JOBLESS TOTAL 25.3 PERCENT OF LABOR FORCE

Idling of 1,200 workers in the temporary shutdown of the Coaldale Mining Co. operations has zoomed unemployment in the Panther Valley-Tamaqua labor area to the catastrophic figure of 25.3 percent of the total labor force, according to a survey of the labor market compiled today by the Tamaqua office of the State bureau of employment security.

The survey does not so state, but the 25.3 percent of unemployment, which means one out of every four workers is idle, is believed to be the highest for any section in the United States.

ELEVEN THOUSAND, TWO HUNDRED HAVE JOBS

The survey states that out of a population of 40,500, there is a total labor force of 16,600 persons, both male and female. There are 11,200 persons employed in this area, another 1,200 commute to jobs outside the region, and 4,200 are idle.

Compiled by Harold Katz, manager of the Tamaqua office, with the aid of John F. Cooney, district labor market analyst of the district office, BES, at Stroudsburg, the survey takes in the area from New Ringgold eastward to Jim Thorpe, and Lansford, Summit Hill and Jim Thorpe boroughs, and Mauch Chunk Township, in the Carbon County portion of the report.

The survey points up favorable assets attractive to new industries. These include, in addition to a work force the major part of which is in the 20-45 young-age bracket, an abundant water supply, excellent highways, ample housing, and close proximity to consumer markets.

COMMITTEE REPORT

The complete report follows:

The constant decline of anthracite mining and the reduced employment in that industry in this area, once wholly dependent upon mining for its entire economy, projects the necessity for the area to redevelop its industry.

Probably, the decline in population is one of the many items that could be used to describe the situation, which is present in this once prosperous area.

In 1940, the official U.S. Census gave Tamaqua borough a population of 12,486. By 1950, that had declined to 11,508, a net loss of 978 or 7.8 percent. Assuming a continued population loss of 1 percent per year since 1950, current population of the town probably is in the neighborhood of 10,500.

Most of the population loss was incurred by entire families moving from the area to work in other areas along the Eastern Seaboard. In addition, workers are commuting long distances from this area to work daily but principally to points in the Lehigh Valley. Currently there is estimated to be approximately 1,200 persons commuting to work daily to jobs outside this area.

For the purpose of this appraisal, this entire Tamaqua labor market area is being considered. The following political subdivisions comprise this area:

Schuylkill County: Tamaqua, Coaldale, and New Ringgold Boroughs; and Schuylkill, Rahn, Ryan, Rush, Walker, East Brunswick, West Brunswick, and West Penn townships.

Carbon County: Lansford, Summit Hill, and Jim Thorpe boroughs; and Mauch Chunk township.

Population in this area in 1950 is estimated at 44,800. Current population probably does not exceed 40,500. It should be noted, however, that population does not leave the area until economic necessity forces it. It has been established that most of those who left the area would gladly return if suitable work was available to them.

Current labor force is estimated at 16,600. This compared with an estimate of 17,200 10 years ago. Labor force has not declined comparable with population since the economic situation has compelled many females to reenter the labor market and take the place of the male breadwinner of the family who lost his means of livelihood.

EMPLOYMENT

Current employment is estimated at 11,200 with approximately 4,400 of these being females. Of the total females employed, slightly less than 50 percent are employed either in apparel or textile industries.

UNEMPLOYMENT

Current estimate of total unemployment for the area is 4,200. Ten years ago, this estimate was only 1,400. One out of every four unemployed is a female.

CHARACTERISTICS OF LABOR

Classified by broad occupational skills, the unemployment may be identified as follows:

| | *Percent* |
|---|---|
| Professional and managerial | 3 |
| Clerical and sales | 8 |
| Service | 6 |
| Skilled | 25 |
| Semiskilled | 30 |
| Unskilled | 23 |
| Other | 5 |

It is estimated that approximately 60 percent of all unemployed are between the ages of 20 and 45. A very desirable labor pool is available for prospective new industries locating in this area.

Other desirable characteristics of the labor supply of this area include versatility, adaptability, easily trained, a willingness to work and ingenuity. Employees recently locating in this area have found this large supply of easily trained male labor one of the area's foremost assets.

SUMMARY

The current shutdown of Coaldale Mining Co. affecting approximately 1,200 men aggravates an already serious unemployment condition. This number adds to the approximate 3,000 hard core unemployed which has existed for some time.

*10-year comparison*

| | September 1949 | January 1959 |
|---|---|---|
| Population | 44,800 | 40,500 |
| Total labor force | 17,200 | 16,600 |
| Commuters | | 1,200 |
| Unemployment | 1,400 | 4,000 |
| Employment | 15,800 | 11,200 |

OUTLOOK

Despite the difficulties that have beset the area, there is a hope for the future. Chambers of commerce, service clubs, industrial development organizations, and many other groups are working diligently to attract new industries employing males to the area to replace the loss occasioned by the decline in anthracite mining and are meeting with some means of success.

The area has many favorable assets with which to attract new industry including the following:

1. An abundance of water supply.
2. Excellent highways.
3. Ample housing.
4. Already established community facilities and services as such medical, shopping, religious, social recreation, educational, etc.
5. Highways, railroads, air freight, and passenger facilities.
6. Close proximity to consumers markets.
7. Abundant, flexible, and immediate labor supply.

## Statehood for Puerto Rico

EXTENSION OF REMARKS

OF

## HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 24, 1959*

Mr. CHAVEZ. Mr. President, a week ago last Sunday I delivered an address in New York City before a group who are interested in statehood for Puerto Rico.

At the same time an address was delivered by Mr. Luis Ferre, vice chairman of the Republican Party of Puerto Rico.

I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY LUIS A. FERRE DELIVERED BEFORE THE NATIONAL ASSOCIATION FOR THE STATEHOOD OF PUERTO RICO DURING THE COMMEMORATION OF THE 42D ANNIVERSARY OF THE GRANTING OF CITIZENSHIP TO PUERTO RICANS, LAW SCHOOL OF NEW YORK UNIVERSITY, MARCH 7, 1959

Mr. Chairman, ladies and gentlemen, it is a significant coincidence that today, when we gather here to celebrate the 42d anniversary of the granting of American citizenship to the people of Puerto Rico under the auspices of the National Association for the Statehood of Puerto Rico, should also be the closing day of the Puerto Rican Week as proclaimed by Gov. Nelson A. Rockefeller, to underline the fact, as he himself expressed it, "that the American citizens of Puerto Rico have gained the right to equal rights and equal opportunities" in the great State of New York.

Nothing less could have been expected from a man of great moral stature, devoted here in America and also all over the world, to free humanity from suffering, poverty, ignorance and prejudice. Nothing less could have been expected from a great American, who has devoted his life to secure the principle of freedom and equality upon which our Nation was founded, for all its citizens, without distinction of race or social standing. Nothing less could have been expected from the Governor of this great State of New York, to whose development and progress so many good and hard-working Puerto Ricans have contributed with their honest toil and intellectual and cultural achievements.

But it is not enough to guarantee the political rights and equal opportunities of the Puerto Ricans who live in New York State, if it is desired to truly assert their rights to equal opportunities and equal political participation in the life of our Nation. In my opinion, it is the duty of every American who wants to be true to the great tradition of respect for the basic principles of our Government as expressed in the Declaration of Independence and our Constitution, to assure that the American citizens of Puerto Rico are given besides the opportunity to achieve statehood for the island, so that they may also assume their full responsibilities and enjoy all the rights that accompany such citizenship.

It is true that this is a matter for the people of Puerto Rico to decide. But most certainly, the admission of Puerto Rico as a State of the Union, will give greater sense of belonging to those of you who have made your homes up here, either permanently or

temporarily, and will help to assure the respect of your fellow citizens and to guarantee your opportunities for progress and improvement, for as natives of a State you will be looked upon as full-fledged members of the great American family, with right of participation and responsibility in national affairs.

Arguments have been advanced to prove that statehood is not economically advantageous to Puerto Rico and the present status of a Commonwealth has been described as one of great advantages for the island. I have time and again argued that such is not the case. That even though it might appear from a superficial analysis of the question that Puerto Rico is at present enjoying a privileged economic status, because the residents of the island do not pay Federal taxes, such advantages are offset by the loss of Federal appropriations, which accrue to the States and not to Puerto Rico, and also because the sense of political insecurity is a barrier to the investment of capital in the island. Such investment of capital, in amounts large enough to absorb the great labor supply which is available, would create sufficient jobs in Puerto Rico to substantially reduce the migration of Puerto Ricans to the mainland in search of jobs which they cannot find there.

Statehood for Puerto Rico would also be of great advantage to the United States in its great global effort to meet the challenge of the Communist nations. In the first place, it would be a direct denial to the charge which is often made by Russia, that the United States is a nation where racial prejudice is rampant. The admission of a community of 2½ million in habitants of a different ethnic origin as a State on equal footing with the other States of the Union, would be a conclusive proof to the contrary.

In the second place, the United States would enlarge its boundaries and population substantially. During the last 50 years and up to the admission of Alaska as a State of the Union, the democratic areas of the world had been shrinking, while Russia had been expending its boundaries and absorbing population of different languages and ethnic origins in order to increase its manpower and resources. Should this trend continue of the next 50 years, Russia might become the largest single power in the world, while the United States might become a second-rate nation. Those, fortunately few, Americans who make public utterances poisoned by prejudice and parochialism, and who forget the principle of equality which has made America great and also forget that our Nation was strengthened and enriched by its continuous expansion during the 19th century, should look back to our history and see how their shortsightedness is endangering the position of leadership of our Nation, both in the realm of ideals which inspire confidence and respect, and in the wealth of material resources which give the Nation its sinews for progress.

In the third place, in its international relations with the South American Republics the United States would gain greatly in respect and confidence, if it were to grant statehood to Puerto Rico, which comes from a common ethnic and cultural origin with these Republics. How can the United States expect the Latin American nations of South America to believe in the good faith of its verbal expressions of friendship and mutual consideration, when its apparent refusal to accept Puerto Rico as a State of the Union denies the sincerity of such assurances? How can the people of the South American Republics help but resent such statements, as have been recently made by men in high office in our Government, that after Hawaii becomes a State of the Union the door is closed to Puerto Rico, as if our people were unfit to be the peers of the rest of the citizens of America?

We, of course, realize that this is not the opinion of the vast majority of Americans who are inspired by a clear sense of justice and an honest respect for the rights of equality and freedom which is the patrimony of our citizenship. Nor do we, the American citizens of Puerto Rico, believe that this is the case. We are proud of our citizenship and we are proud of the part we have taken in securing its freedom. Our men have served in the Armed Forces to do so. And our people have laboriously worked in fields and factories to create the goods and services that have added to the wealth and prosperity of our Nation. In those essential respects, we have done as much as any other fellow citizens.

But precisely because we have done our part proudly, and with laboriousness and responsibility, we feel that we are entitled to full equality within the Nation. We have accepted the present Commonwealth status of Puerto Rico as a temporary status to better equip ourselves to assume the full responsibilities of statehood. But we do not submit to it as a permanent status, because it does not have the attributes of equal rights and equal dignity to which we as American citizens have the right to aspire and the duty to demand. We reject any status which might be accused of being as Rexford Guy Tugwell accused recently the Commonwealth of Puerto Rico "one of exploitation of one group of citizens by another." And we reject any status which will not give the American citizens of Puerto Rico the full measure of dignity and equality which is the natural right of a freedom loving people.

That is why it is so important that this association be expanded and strengthened with members all over the country. You, who have had the chance to see from personal experience what America is really like, what political strength really means, are the ones to carry the message to your relatives in Puerto Rico of the importance of making statehood the clear and only objective of Puerto Rico. You, who realize what it is to yourselves to be able to say that you were born in the State of Puerto Rico, should assume the responsibility of creating public opinion in the mainland favorable to granting statehood to Puerto Rico.

This is an urgent matter. It cannot be postponed because Puerto Rico must move forward politically in one of two directions: Either statehood, or by default, it will inevitably move toward independence. There is no position in between that can be permanent. At this very moment, the Governor of Puerto Rico is sponsoring amendments to the Federal Relations Act which pose a great menace to the bonds of union between Puerto Rico and the United States. In this respect, Judge Calvert Magruder, of the U.S. Circuit Court of Boston, said recently at the University of Puerto Rico:

"Public Law 600 having been adopted by the Congress, as proposed by the Puerto Rican leaders, I do not expect to see Congress modify the terms of the compact substantially in the direction of cutting down the Federal activities here as they now exist. If the proposal is that Federal activities be reduced to a pale residue, while the citizens of Puerto Rico retain all their present advantages as citizens of the United States, and Puerto Rico retains all its present advantages under the compact, then I would expect the Congress to say, 'All right, if that is what they want, let us cut Puerto Rico loose and give it complete independence.' "

The Governor of Puerto Rico, Mr. Luis Muñoz-Marín, has expressed himself publicly as being firmly and irrevocably opposed to statehood. He has also refused to let the people of Puerto Rico express themselves in a clearcut referendum as to their preference with respect to the political status of the island. In the meantime, he is requesting amendments to the Federal Relations Act which, in the opinion of men who are in a position to judge, will inevitably lead Puerto Rico toward independence. We must act therefore and act fast. You should ask your Congressmen and Senators to vote against these amendments. And you should continue to strengthen this association and help to create public opinion here and in Puerto Rico to demand that Puerto Rico be granted statehood with all its rights, its duties, and also its dignity.

---

## Comments by Representative Joe L. Evins of Tennessee

EXTENSION OF REMARKS
OF
## HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. KEFAUVER. Mr. President, Representative JOE L. EVINS, the very able Representative from the Fourth Tennessee Congressional District, wrote a splendid newsletter on the commemoration of the 170th anniversary of our Constitution, and on the occasion of the congratulation of the Speaker of the House, the Honorable SAM RAYBURN, on his long tenure of service in the Congress.

This thoughtful and well prepared newsletter appeared in a number of Tennessee papers.

Mr. President, I ask unanimous consent that the newsletter be printed in the Appendix of the RECORD.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

[From the Johnson City (Tenn.) Chronicle, Mar. 14, 1959]

CAPITOL COMMENTS

(By JOE L. EVINS, Member of Congress, Fourth District Tennessee)

The House last week, on March 4, paused in its deliberations to observe two historic events. First, the 170th anniversary of our Constitution—that historic document which has provided the framework for our Government; and, secondly, to congratulate the Speaker of the House, SAM RAYBURN, on his long tenure of service in the Congress.

The 170 years that have passed since our Constitution went into effect have seen the Nation expand and grow from Thirteen Colonies on the Atlantic seaboard to 49 States stretching from coast to coast. Today America is the most highly developed nation in the world, covering half the continent and reaching into the Arctic Circle. From a thin population of 3 million it has grown to its present teeming 175 million.

The problems of today are far different, and many feel far more numerous, than they were 170 years ago; but the Constitution still stands with only a few amendments, still successfully guiding the course of our Nation and still preserving the freedoms that are our tradition. Our Constitution is the oldest living and active document of its kind in existence today. Never in the history of the world has a constitution served a nation so long and so well.

CONGRATULATE RAYBURN

While celebrating the anniversary of the Constitution, several Members took occasion at the same time to congratulate Speaker SAM RAYBURN, who on March 4 completed his 46th year of service as a Member of the House of Representatives. Speaker RAYBURN has already held this office longer than any man in our history. In entering his 47th year of service, he now has also exceeded all previous records of service in the Congress. So far as is known, this record is also unprecedented in the history of the entire world.

William Gladstone served in the Parliament of Great Britain for 60 years and Winston Churchill is serving his 54th year. But both these great English statesmen were elected to Parliament for only a limited period and later appointed to the House of Lords in perpetuity. So that it appears that Mr. RAYBURN has served as an elected member of a national legislature longer than any man in the history of modern democracies.

Our great State of Tennessee may rightfully take pride in this unprecedented achievement because SAM RAYBURN was born in east Tennessee, in Roane County, adjoining our own Fourth District. The Speaker is one of the many distinguished men whom our great State has contributed to the history of Texas—a list that includes Sam Houston, Davy Crockett and many others. Our State has contributed three Speakers by election—John Bell, James K. Polk, and Joe Byrns; we can add with pride the name of SAM RAYBURN by nativity.

Although the principal duty of the Speaker is to serve as the presiding officer of the House, the office carries with it many other exacting duties, great power and responsibility. In his ability to influence the course of our Nation, the Speaker is probably second only to the President.

Speaker RAYBURN has served our Nation well and uses his great office with a high sense of public duty. Though the leader of the Democratic Party in the House, he has discharged his official duties as an American, without narrow partisan consideration, and always with a truly national rather than provincial point of view. Tennessee, Texas, and all America may take equal pride in his record of service in the public interest.

## The Area Redevelopment Act

EXTENSION OF REMARKS

OF

## HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. TOLL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Banking and Currency Committee in favor of the area redevelopment bill.

STATEMENT OF HERMAN TOLL, SIXTH DISTRICT, PENNSYLVANIA, BEFORE SUBCOMMITTEE NO. 3, HOUSE BANKING AND CURRENCY COMMITTEE, ON THE AREA REDEVELOPMENT ACT, MARCH 19, 1959

Mr. Chairman and members of the subcommittee, thank you for the opportunity of presenting this statement in behalf of the Area Redevelopment Act. I have introduced a companion bill (H.R. 5330) to the Douglas-Flood bill.

We hear again and again from the executive branch that cities and States should try to help themselves to the greatest extent possible. Unfortunately, the tax structure leaves to the cities only a small portion of the total tax dollars. The only method which would enable cities to take care of more of their problems is to give them a chance to increase their tax base—as the possibility of raising the tax rate or adding new taxes is virtually exhausted. The imaginative aid which would be given to my home city, Philadelphia, for instance, through the various provisions of the bill before us would do just that.

While it is true that Philadelphia, or for that matter any diversified metropolitan area, is not as badly off as the chronically depressed coal or textile areas, it is also true that Philadelphia is in a worse economic condition than the Nation as a whole. Among the reasons are that some industries, such as textiles, have left the city over time, that there are, among a large number of different industries in an old manufacturing center, always some which are in a weak competitive position, or are losing employment due to automation; and that manufacturing employment in an older area like Philadelphia declines due to its congestion, its built-up character, and the fact that it does not have space for industry to expand in, or for new industry to find attractive places in which to build new plants. This situation, as well as transportation difficulties and obsolescence, is particularly bad in and near the core of the city where small but intensive manufacturing establishments would like to locate from the point of view of their consumers, their suppliers, or their labor force. The decline of this type of manufacturing industry and of associated business services in the core of the city, which is serving the entire metropolitan area, endangers the function of the center as a cohesive force, and thus Philadelphia's entire tax base.

Section 5E of the bill is specifically designed to help this type problem by permitting not only entire metropolitan areas, not only entire counties, but clearly defined portions of an area, county, or municipality, to become eligible for help under the Area Redevelopment Act if the problem clearly lies within such a portion of the city. This should not be understood as giving an opening to arbitrary gerrymandering. The center city of Philadelphia, for example, where many of the problems lie for which the Area Redevelopment Act can provide some help, is clearly defined by the proposed expressway loop, as well as by certain economic characteristics. The importance of this provision lies in the fact that due to it an entire metropolitan area will not be judged ineligible just because the suburbs are sufficiently well off to balance the unemployment rate of the problem areas and thus put the total area beyond eligibility, while the problems are concentrated in one particular portion of the area, which need the help this bill can provide.

Philadelphia is typical of older cities which suffer from obsolescence and congestion. Neither the municipality nor private enterprise have the funds to tear down obsolete buildings at these expensive locations and make more room for existing industry, for expansion of off-street loading, for parking, and so forth. Yet the industrial slums created over time by increasing age and progressing technology near the center of cities must be elliminated and new industrial areas must be developed in order to give the city a tax base which can sustain the necessary municipal services without having to go hat in hand to the State and Federal Governments for emergency help just to keep up with current needs.

Section 14 of the bill, by explicitly removing some of the restrictions which have so far inhibited industrial redevelopment under the existing urban renewal legislation, makes it possible to do some redevelopment of industrial slums along with residential slum clearance. It will still be up to the local authorities to decide what the best balance should be between industrial redevelopment and other kinds of slum clearance; but the provision of this section gives the city a chance to redress this balance on the basis of its own best judgment and thus to make room for new industry and for an increased tax base.

Philadelphia has been consistently concerned over the last several years with the problem of a declining industrial base. It has done everything within its power to remedy that situation. The city administration has joined with the chamber of commerce in founding a non-profit corporation for the retention of industry in the city, and the attraction of new industry into the city which, although it has only been in actual operation for a few months, has already shown some remarkable successes. The State has spent millions over the last few years for bringing industry into Pennsylvania, and Philadelphia has received a portion of this help. There again, however, the limits of available private and public funds are very evident.

The Area Redevelopment Act provides funds for all kinds of remedial action on this problem, and makes it possible to dovetail these remedies with particular problems involved. It provides for example, for loans for developing land for industry, for building plants, and even for machinery and equipment for industry. This last possibility is particularly important, as our experience shows that the financing of construction of new buildings and equipping it with the necessary new machinery presents a major stumbling block for attracting new industry or for giving a chance of new ventures to industry already here. As for the development of older industry, particularly in loft structures, which cannot afford or do not need entirely new buildings, the Area Redevelopment Act provides for loans for rehabilitation of old buildings, for their conversion or enlargement (section 6). The flexibility of this section is of signal importance for the complicated and varied needs of different industries within as diversified an area as Philadelphia.

The demands from many sides upon the capital expenditures of a city such as Philadelphia makes it very hard to support industry with the public facilities which are in many cases a prerequisite for enlarging the city's economic base: Section 7 provides for loans to any eligible jurisdiction for those public facilities needed to develop the land for industry, as well as for the alteration and improvement of existing public facilities for the successful establishment or expansion of industrial plants or facilities. Section 8 even provides for grants for this purpose. In many cases the improvement or extenssion of existing utilities must precede the successful location of industry. The building of parking lots or parking garages will make it possible for a large labor force to be available to new industry locating within the city. A new grid of streets adapted to truck use around an industrial area may be necessary before loans to industry are of practical use, etc.

Philadelphia, as mentioned before, has lost industry in the past. This leaves a number of workers with obsolescent skills. Under the present system these men retrain only if it can be proven that a job is waiting for them after their training period. Sections 16 and 17 of this bill provide for training and retraining of workers and for payment of subsistence to them while they train. This is also of great use for workers who lack industrial competence and the basic knowledge of working in an industrial society (because they come from rural areas, largely in the South). As the number of workers without skills or with obsolete skills in Philadelphia is great, this provision of the bill,

which helps overcome the rigidity of the existing training apparatus, would make it possible for more workers to be equipped with the kind of skills useful in today's and tomorrow's labor market—which in turn makes the location a great deal more attractive to industry.

The Area Redevelopment Act would give Philadelphia a chance to fully use the great locational advantages and the splendid community spirit it has to offer to old and new industry, by making it possible to offer industry the public facilities, the necessary loans, the training of workers, etc., all of which adds up to a persuasive argument for old firms not to leave the city and for new firms to build plants here. It so happens that the city's efforts in this direction show clearly (and chapter and verse can be cited) that the best will in the world and great community efforts time and again flounder on the difficulty of obtaining financing for clearing out industrial obsolescence, of being unable to provide needed public facilities in time, etc.—all problems which in each case could be solved by the help promised in the Area Redevelopment Act. It is therefore not only of great importance for the chronically and deeply depressed areas of Pennsylvania, but also of vital importance to the well-being of the 2 million residents of the city of Philadelphia that this bill be passed.

## Proposed Change in Election of Presidents and Vice Presidents

EXTENSION OF REMARKS
OF
### HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. KEFAUVER. Mr. President, on March 9, 1959, I introduced Senate Joint Resolution 72, proposing an amendment to the Constitution providing for the election of President and Vice President. This resolution, if adopted, would abolish the electoral college and replace it with a much more democratic method of selection of our President and Vice President. It would divide the electoral vote in direct proportion to the popular vote in each State. It would also minimize the possibility of the election of a President or Vice President with fewer popular votes than another candidate.

Recently, Mr. Harry J. Carman, cochairman of the American Liberal Association, had a letter on this subject published in the Christian Science Monitor. He explains the need for such legislation in a most succinct and cogent fashion. I ask unanimous consent to have Mr. Carman's letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Mar. 16, 1959]

ELECTORAL COLLEGE REFORM

To the CHRISTIAN SCIENCE MONITOR:

The present method of electing Presidents by the electoral college is defective because the unit vote system does not necessarily represent the will of the majority of the voters accurately. Under the present system the total votes of minority parties might actually add up to a majority of the popular vote and nevertheless fail to effectuate the will of the majority, therefore being essentially undemocratic.

A Georgia Republican or a Vermont Democrat cannot make his vote for President count—in fact, minority party members actually aid the opposition since the number of electoral votes which a State casts is relative to the size of its population. For example, although in 1944 Roosevelt received only about 10 percent more votes than Dewey in New York State, he had the benefit of its total electoral vote. This system could break down if the people felt that they had been deprived of victory because of faulty machinery. Like the human appendix, the electoral college is useless and a possible source of inflammation.

There have been various proposals for changing the present system. The most radical proposal is that Presidents be elected directly by popular vote. There is theoretical justification for this method from the standpoint of the democratic principle. The election of a President by a vote which ignores State lines and without the interposition of the electoral college between the people and the successful candidate would have much to commend it logically and would offer no serious mechanical difficulties.

But for the present such a change is politically impossible as it would eliminate the States as political factors. The less populous Western States would oppose such a change lest the voters in the more populous Northeastern States dominate a popular election. The Southern States would oppose it because it would compel them to permit Negroes to vote so that these States might continue the influence to which they would be entitled on the basis of their populations.

Another proposal provides that the 531 members of the electoral college be chosen as are the Members of Congress; that is, 435 representing one from each congressional district and 96 consisting of 2 from each State. However, this plan would not eliminate the possibility that the popular vote and the electoral vote might produce different results, permitting the election of a President representing a minority of the popular vote.

The most reasonable proposal calls for a constitutional amendment eliminating the electoral college and providing for the division of the electoral vote in direct proportion to the popular vote in each State. This method would minimize the possibility that the electoral vote would result in a different selection than the popular vote. In time of crisis, both accuracy of representation and stability of government are vital, and reform of the electoral college would strengthen both these pillars of our democracy.

HARRY J. CARMAN,
*Cochairman, American Liberal Association.*
NEW YORK, N.Y.

## Could Be a True Story

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, you are a retailer and the manufacturer sets your prices on the merchandise you handle and sell. You must sell at that price. The manufacturer thus protected then makes the same product for a big chain or department store who puts on the product his own trademark or brand. This he sells at a price of his own choosing—let us say a six-tube radio—considerably below your identical radio.

You cannot lower your price—your prices are controlled by the manufacturers. You lose your customers to the department store or chainstore. You go broke. Why?

Because Congress changed the entire free enterprise system, and did it to help you, the little retailer.

Fantastic? Yes, but it could be true. This is exactly what the fair trade bill, H.R. 1253, will do.

## The Basis of East-West Agreement on the Use of Space

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I wish to include a timely and cogent address made by Spencer M. Beresford at the First Conference on Space Law and Sociology held by the American Rocket Society, on March 20, 1959, in New York City. Mr. Beresford, who served as special counsel of the Select Committee on Astronautics and Space Exploration, of which I was chairman during the last session, and now holds the same position on the staff of the Committee on Science and Astronautics, has given a great deal of thought to the subject. His address should be of special interest to everyone who has felt the need for international regulation of space activities—a need that was recently dramatized by the announcement of nuclear explosions in outer space:

THE BASIS OF EAST-WEST AGREEMENT ON THE USE OF SPACE

(Remarks of Spencer M. Beresford, special counsel, House Committee on Science and Astronautics, at the first conference on space law and sociology of the American Rocket Society, New York City, March 20, 1959)

Although the United States and the Soviet Union have not achieved any greater cooperation in the use of outer space than in most other matters, there are signs that some mutually advantageous agreements may be possible. The purpose of this talk is to explore the kinds of agreement that may afford a basis for accommodation and compliance. My views on this subject are personal and not official.

To prevent misunderstanding, I hasten to say that free-world cooperation in outer space should be pursued with all possible speed. Free-world agreements with the Soviet bloc, on the other hand, should not be negotiated without careful preparation and would scarcely be worth making unless they are likely to be kept as a matter of self-interest or can be enforced.

In the "Survey of Space Law" (H. Doc. 89 of the 86th Cong.) the conclusion is reached that space law can be developed most rapidly by concentrating upon the most urgent matters which show some promise of settlement and deferring the question of national sovereignty.

The most likely alternative to sovereignty as the basis for the legal control of outer space is a classification by international agreement of proscribed activities in space according to their purpose and effect. Several commentators on space law have pointed out this possibility. Professors McDougal and Lipson, in an article published in the July 1958 issue of the American Journal of International Law, observed that it may be questioned whether physical boundaries are as relevant to the purposes of human control and planning as would be an arrangement based upon types of space craft, probable functions, and potential dangers.

In speaking at the 1958 annual meeting of the American Bar Association last summer, I suggested that the proper test is not distance but time and causation. Only a few days ago Mr. John A. Johnson, the General Counsel of the National Aeronautics and Space Administration, in testimony before the Committee on Science and Astronautics, called for a more fruitful emphasis on the nature and purpose of the specific activity in space, how it affects the security interests of individual nations and the international community as a whole, and the relative importance of other interests, such as scientific and commercial, to be served by the activity.

It is true that space activities are hard to classify as harmful and innocuous since many lend themselves to hostile as well as peaceful purposes. The military and civilian uses of given devices or activities in outer space are characteristically inseparable. For example, a radio satellite could be used not only for private and commercial messages but for military communications, for monitoring or jamming foreign radio stations, and for broadcasting propaganda. An observation satellite equipped with photographic, infrared, or television cells would lend itself to military reconnaissance as well as forest-fire patrol.

But the classification of proscribed activities in space, though difficult, is by no means impossible.

Radio transmissions can be protected against jamming and interception. The use of radio for military communications and propaganda (not to mention advertising) is already widespread. There is little reason to doubt that agreements on frequencies, call signs, and signal strengths can be reached for vehicles in space as they have been for radio stations on the surface of the earth.

Observation satellites present a greater problem, yet our Deputy Secretary of Defense testified last year that the Defense Department would not object to Soviet satellites' taking pictures of the United States. (See hearings of the House Select Committee on Astronautics and Space Exploration (1958), p. 1102). Furthermore, the Soviet legal scholar, E. Korovin, writing in the January 1959 issue of International Life, indicates that the sending of an American reconnaissance satellite through outer space above Soviet territory would at least not be regarded as an act of war. His comments are worth quoting:

"Two groups of acts should be differentiated from the standpoint of world relations and international law: acts in the Cosmos that are acts of war and those that are not acts of war but serve in international relations as expressions of mistrust, ill will, and similar cold-war consequences.

"Clearly one cannot lump together the destruction of another country's sputniks by means of antimissile missiles with the presence of photo and TV equipment in a satellite, even if employed for reconnaissance."

Limited practical agreements on the use of outer space have often been proposed in the free world. Though numerous, these proposals agree in certain particulars not only with one another but with similar proposals emanating from the Soviet bloc. In this fact there may be some basis for early and useful East-West agreements.

For example, last year an article by A. Galina in Soviet State and Law (No. 7, pp. 52–58) concurred in the following proposals for international agreement on the use of outer space:

1. Supplying satellites with identifying signs.

2. Agreement on radio frequencies and the elimination of interference.

3. Space vehicles to remain the property of the launching state.

4. Prohibition of the use of outer space for warlike purposes.

5. By implication, liability for injury or damage caused by space vehicles (since the stated reason for putting signs on satellites is to identify the responsible states in case sputniks should fall to earth and cause damage).

Korovin, also, in the article to which I have previously referred, states that the government concerned bears full responsibility for personal or property loss caused by satellites or other space vehicles. He looks forward to the solution of such problems as identification markings for scientific apparatus launched into space, and their registration; the elimination of radio and TV interference in outer space and, in a word, the institution of what might be provisionally called cosmic space safety rules.

The same areas of agreement have been proposed in the free world, and could serve as starting points for the rule of law in outer space. We could reasonably expect, in working from these proposals, that the resulting agreements would be mutually advantageous and likely to be observed for reasons of self-interest. For example, there is now no obligation under international law for the return of a fallen space object to the launching state. This is an agreement the Soviet Union appears to desire.

Certainly any free-world negotiator would like to make certain additions. Liability for injury or damage caused by space vehicles should include collisions with aircraft. It should be possible to reach agreement on exchanges of navigation and signal codes and fuller exchanges of data obtained by space vehicles.

Prior notice and coordination of launchings would reduce the dangers of mistaken identification. From the free-world point of view, however, such notice must ultimately include reliable information of capabilities and payloads. As the President has proposed to the Soviet Union, nuclear warheads must be prohibited. The enforcement of this prohibition implies inspection prior to launching. It may or may not be possible to separate the inspection of payloads from the general question of nuclear disarmament.

In any event, the present Soviet position appears to be represented by the remarks of G. Morozov, who said on November 27, 1958, in a talk on the Soviet home service radio:

"Rockets are not dangerous in themselves, but their danger is to be found in the charge which they contain. The prohibition of nuclear weapons, therefore, would automatically settle the issue of the peaceful use of cosmic space."

East-West agreement on the use of space is a matter of some urgency. If no agreement is reached, unwritten rules may become established which would be hard to change. The ground is already shifting under our feet. It may be later than we think and growing later faster. The tempo of events is not only rapid but accelerating.

The crescendo of space development is witnessed by the fact that as recently as 1953 the British Interplanetary Society, which can hardly be suspected of slighting the prospects of space flight, predicted that the first satellite would be launched in 1965 and the first lunar probe in 1985. As everyone knows, both events have now occurred. Note that while the first event was only 5 years earlier than predicted, the second was more than 25 years earlier.

Many specific dangers also impel both sides to come to terms—for example, the risk of touching off a general war through mistaken identification of a space vehicle as a ballistic missile unless there is an appropriate agreement for prior notice of launchings.

The United Nations study committee on the problems of outer space will report to the General Assembly in the fall. Meanwhile, we have the opportunity of threshing out the issues on which early agreement may be possible.

---

## Fighting Progress and Committing Suicide

EXTENSION OF REMARKS

OF

### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, when chainstores and mail-order houses came into the retail sales field there was great resistance to them. They offered better service and lower prices. Is this bad? No; the consumers liked them fine. Some merchants resented this intrusion, however, progress notwithstanding, and forgetting that most businesses start as price cutters and offerers of unusual service, decided to eliminate this new threat. First, there were horizontal conspiracies where dealers got together to blacklist the offenders. Ninety such suits are contained in Antitrust Assistant Bicks' brief—1958 Senate Select Committee on Small Business, appendix I—wherein the Government had to prosecute the dealers and others who endeavored to enforce an economic blockade in one way or another.

Then came another effort or reaction—the vertical price-fixing attempt to eliminate the new upstart business wherein manufacturers, distributors, and dealers variously conspired with each other. Here again antitrust action by the Government was necessary. Fifty-three such vertical combinations were prosecuted and are listed in Mr. Bicks' brief—appendix II. Finally, these new businesses were accepted by merchants because of consumer acceptance. A new, more efficient distribution and sales effort had won out.

But today the lessons are forgotten. Now once again retailers resist new and tough competition, only now they want a so-called fair trade law with the antitrust law set aside so that prices can be set by manufacturers, thus assuring the same price by force of law for every retailer. Aside from depriving consumers of lower prices, these retailers seeking this fair trade law are asking, first, Federal intervention which is bad enough; and second, the curses of planned economy rather than the blessings of a free market; and third, worst of all are unbeknownst to themselves trying to commit suicide by holding an umbrella over the big retailers who can market their own brands at their own

prices. The smaller retailers will not be able to compete because the fair trade law will not permit it. Fair?

## Legalizing Price Fixing

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the Appendix of the RECORD an article from the Boston Sunday Herald of March 15, 1959, entitled "Legalizing Price Fixing":

LEGALIZING PRICE FIXING

Again Congress is being called upon to decide between all the people and some special interests. This time the issue is fair trade, the device by which manufacturers are given legal sanction to fix retail prices on trademarked goods.

This week the House Interstate and Foreign Commerce Committee will hold hearings on two bills which would, for the first time, establish fair trade as a Federal law, thus overriding even those States that have consistently rejected the system for themselves.

Fair trade is anticonsumer. It is promoted largely by certain retail groups which are interested in establishing the same, fixed profit margins in as many lines as possible for all stores.

The fair-trade backers insist that they have the interest of the consumer at heart; that they merely seek to prevent cutthroat competition and loss-leader practices which are said to be harmful to the consumer. But their insistence has a hollow ring.

Low prices do not hurt consumers very often, and it is pretty hard to prove otherwise.

Price fixing, however, in the particular interest of the retailer, can hurt.

Let's say a particular trade-marked product can be sold by retailer A for a dollar less than the price retailer B must get. This doesn't mean cutthroat competition. It may mean that retailer A has a cash-and-carry store on a back street with the simplest of furnishings and a minimum of service, while retailer B supplies all sorts of services, with every sale in gracious and attractive surroundings.

Fair trade would deny the consumer the cash savings obtainable by trading with retailer A. It would end price competition at the retail level.

But this is not the only drawback. The manufacturer is likely to believe that the larger the profit he gives to the retailers (within reason), the greater will be the effort made by these retailers to push his product. So the fair-trade fixed price may prove to be even more than enough to assure retailer B his extra dollar.

So the consumer suffers even more.

As a matter of fact, fair-trade price fixing is likely to encourage bootlegging to favored customers at below the marked price. It will encourage more firms to enter retailing until the falling volumes of sales for all retailers will nullify the profits guaranteed by fair trade. Even the retailers themselves will find fair trade no help.

But the straight moral issue is whether Congress is to serve 175 million people or the misguided interests of a few groups of retailers. Unfortunately, the loudest noise in Washington next week will be made by the latter.

## Teaching Conservation in Our Schools

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. WILEY. Mr. President, we recognize that one of the most important problems confronting America is the task of preserving and conserving its natural resources.

The challenge is particularly significant in the face of an ever-expanding population—estimated to be about 220 million by 1970.

The unprecedented growth of cities, overflowing into our countryside, also is literally wiping out the last vestiges of natural outdoor areas in many sections of the country.

Fortunately, constructive conservation programs by States, conservation groups, and conservation-minded individuals—along with assisting Federal programs—have helped tremendously in preserving our outdoor heritage.

In the face of ever-greater utilization and, in some cases, unfortunately, depletion of our natural resources, stepped-up efforts for preservation of these resources is essential for the future of America.

In Wisconsin, we have great out-of-door areas which, through the constructive work of conservation-minded citizens, have been preserved for the benefit and enjoyment not only of Wisconsin citizens, but also of visitors from throughout the country and from abroad. For example, we have more than 16 million acres of forest land, 8,700 interior lakes, 33,000 miles of water courses, and 978 miles of water frontage on lakes and streams. In addition, we have constructive programs of fish and wildlife preservation which help to provide refuges for fish, birds, and more than 650 kinds of animals.

I should like to point out, too, that Wisconsin is the only State with a natural resources committee, with a subcommittee on conservation education, established by legislation. However, a number of other States have similar coordinating groups, either appointed by Governors or inaugurated through voluntary programs.

In the March 15 edition of Conservation News, published by the National Wildlife Federation, I was most interested to read an article entitled "The Need for Teaching Conservation in our Schools." The article contains thoughtful suggestions for teaching conservation in our schools and, as a result, broadening the concept of conservation among our people. I request unanimous consent that excerpts from the article be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

THE NEED FOR TEACHING CONSERVATION IN OUR SCHOOLS

National Wildlife Week, now being observed under sponsorship of the National Wildlife Federation, features the theme: "Conservation in the Schools." While Wildlife Week focuses attention to conservation education, it is hoped that particular emphasis can be directed to the subject during all of 1959 and on into succeeding years.

This subject is of particular importance because, generally speaking, the resource conservation concept is not receiving adequate attention in U.S. schools.

Conservation is a philosophy—an approach to life. The conservation concept calls for the adoption of an attitude of wise use of natural resources. While some early leaders had this approach, only in the last few years has the general public begun to become aware of the need for abandoning a policy of lavish wastefulness of soil, water, woods, and wildlife. A full acceptance of the conservation philosophy, as prevalent in some European countries, is the ultimate goal.

How can the philosophy of an entire populace be changed? While the scattergun approach of utilizing all informational media produces favorable results, the most effective means is by teaching conservation in the schools. Children properly indoctrinated carry the conservation principles into their adult life. However, while many educational institutions perform admirable jobs, all too few teachers are adequately equipped for teaching conservation. Thus, a "teach the teacher" process is necessary in many areas. In turn, many educators in teacher-training colleges first must be converted and sold on the importance of resource conservation. This procedure is long and laborious.

It is generally agreed that conservation is best taught when integrated into other school subjects. Conservation of natural resources can, and should be, taught as part of science, history, economics, and most other subjects. This approach also is the most feasible because school administrators at all levels are beset by pressures to insert this or that special subject into already crowded curricula.

Conservation agencies and organizations, on the whole, are progressing well in conservation education but, due to budgetary limitations, their contributions are a mere drop in the bucket to what might be accomplished if school systems took the ball and ran with it.

Dr. Richard L. Weaver, associate professor of conservation and conservation education at the University of Michigan, recently published results of a study on leadership in State agencies covering the period 1956–58. He found only five State departments of education had full-time conservation staff supervisors. Eleven had part-time conservation supervisors and nine more employed people who were designated as such even though little effort beyond leadership could be spared. Departments of education in the remaining States saw no need for special conservation leaders. Many States, in fact, rely upon conservation agency personnel as consultants or advisers. The situation was such in six States that conservation agencies employed suitable people and assigned them to their departments of education. Thirty-two State conservation agencies are actively engaged in school visitation programs.

Wisconsin is the only State with a natural resources committee (and a subcommittee on conservation education) established by legislation, but four other States have similar coordinating groups appointed by Governors. Eleven States have voluntary or self-created resource coordinating groups which deal with conservation instruction. Twelve States have permanent curriculum committees and 13 assign temporary groups to prepare materials.

The Conservation Education Association is a voluntary national organization of educators, conservationists, other scientists, and laymen. The CEA's major objective is to stimulate the teaching of conservation in the schools. It serves as a coordinating and information disseminating group.

## Wisconsin's New Lobbying Law

EXTENSION OF REMARKS
OF
## HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. PROXMIRE. Mr. President, we are very proud in Wisconsin of the record of our State government as a trailblazer among all the States for clean and responsible government in the public interest.

Two years ago Wisconsin went farther than any other State in the Union in the regulation of that issue which is the crux of the public interest versus the special interest, that is, lobbyists and their relationship to legislators. The State of Wisconsin went the whole way. Our State government enacted a law which flatly prohibited permitting lobbyists to provide directly or indirectly, anything of value for the Governor, any legislator, any officer or employee of the State, or any candidate for State office or for the legislature. This drastic Draconian measure has to the surprise of many cynics worked with amazing efficiency.

Both political parties claimed credit for this measure. Both in fact had a good deal to do with it. We Democrats in Wisconsin used the lobbying issue in campaigns against entrenched Republican officeholders for a number of years. The effect of this issue was apparent to both Democrats and Republicans in the great gains our Wisconsin Democratic Party has made in recent years in Wisconsin elections. It is undeniably true however, that it was a Republican legislature and a Republican Governor who were in office when this issue which we Democrats had pushed so strongly, was in fact enacted into law.

Many individuals and institutions deserve credit for this enactment, but two newspapers should be particularly singled out. The Capital Times, of Madison, has carried on a relentless, militant, hard-hitting campaign for this lobbying legislation for many, many years. The Milwaukee Journal has also never let up in its drive to secure the most stringent lobbying regulations which would be workable.

Mr. President, yesterday's Milwaukee Journal carried an excellent report on the full consequences of this newest experiment in this country on absolute, better than Ivory-soap purity in government.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Mar. 22, 1959]

LIFE IN CAPITAL IS CHANGED BY NEW LAW ON LOBBYING—DAYS OF ENTERTAINING LEGISLATORS AT BARS ARE OVER; CAUTION IS WATCHWORD

(By Willard R. Smith)

MADISON, WIS.—A widely known Wisconsin attorney, never before identified as a lobbyist, appeared at the capitol in that role recently.

"I didn't want to register as a lobbyist, but a client insisted on my representing him over here," the attorney said.

Addressing a State official who is his fishing companion and close family friend, he said, "Do you know what this means to us?

"This means I can't even given you a ride from home down to work, or have you and your family over to our home for dinner as long as I am registered as a lobbyist."

THINGS HAVE CHANGED

There well may be some question whether Wisconsin's law against lobbyists giving legislators or State officials anything of value is being observed that closely all the time. However, there is no question about the law having completely changed the whole social aspect of the current legislative session as compared to those of the past.

Veteran lobbyists with a long time reputation as free spenders, who formerly bought drinks and steaks for parties of legislators night after night, are not operating that way now.

Lobbyists are seen eating with lobbyists, and legislators with legislators. Neither group patronizes the steakhouses as heavily as when the lobbyist was host and the lawmakers were guests.

IT'S MURDER

"It's murder," the proprietor of one of Madison's finest dining places said in describing what the new law is doing to his business.

The lobbyists, or at least the veterans in this field, appear to be taking the law most seriously.

"My organization has advised me that I would no longer be of any use to them if I lost my license," said the secretary of an industrial group who has represented it as a lobbyist for many years.

Other companies which have their own employees serving as lobbyists have issued similar warnings about strict observance of the law so that the company does not incur unfavorable publicity through a violation of it.

Some amusing incidents have been observed as a result of their adherence to the letter of the law.

A lobbyist and a senator chanced to be standing side by side at a bar, each paying for his own drinks, but talking to the other. The lobbyist insisted upon the senator being given a receipt to prove that he had paid his own bill in case anyone saw them and suspected that the lobbyist was violating the law.

CIGARETTE REQUEST IS TURNED DOWN

Perhaps the best illustration was one previously reported in the Journal, when a legislator, begging a cigarette from a lobbyist in the corridor of the senate, received only a polite "Sorry, senator, nothing of value, you know" as the lobbyist lit his own cigarette and replaced the pack in his pocket.

A few hungry legislators are complaining. They are, for the most part, of the type that in the past had no hesitancy about "sticking" a lobbyist for a meal if they spotted "a live one" wherever they were dining.

They simply would point out the man and tell their waitress to give him the check. It usually worked then, but it does not now.

The lobbyist makes himself liable to a year in jail if he fails to report such expense, and if he does report it he gives evidence that he has violated the law and can have his license revoked for 3 years.

District Attorney Joseph W. Bloodgood of Dane County told the Journal he had received "no complaints—not even tips"—regarding possible violations of the law.

"And I have some good sources that can give me tips on such things," he added.

EASIER TO ENFORCE

Legislators know this. One of them disclosed that he had observed a person at one of the capital's most popular places for legislators and lobbyists in past sessions sitting at the bar throughout the evening, watching closely who paid for the drinks.

Bloodgood, a Democratic assemblyman before becoming district attorney, said he still maintains contacts with his former colleagues and gets around to various night spots patronized by them.

"As far as I can see, the law is being observed," Bloodgood said.

The district attorney said the lobby law was much easier to enforce now than it was previously. Even then Wisconsin's control of lobbying was considered outstanding among the other States.

EARLY TO BED

There are lobbyists who like it this way. They get to bed earlier and get up with a clearer head in the morning. Most of them make their contacts with legislators in the capitol before the houses convene, during the interval between morning sessions and afternoon committee hearings, and at the close of business.

The older lobbyists in point of service, who have a reputation for obtaining the ear of a legislator while providing sumptuously for his stomach, continue to operate on the strength of that reputation.

Members who have been here before remember me for my largess, one veteran lobbyist said, adding that establishing an equally favorable acquaintance with newly elected legislators was his major problem now.

NEWCOMERS IMPATIENT

Some of the legislators concede that they prefer the present system. They point out that now they can choose congenial company from among their own number or acquaintances in Madison—outside the legislature—for their luncheon and dinner companions and not be roped in with a party of some lobbyist's choice.

Evidence of impatience is being shown by newer lobbyists, possibly acting in that capacity for the first time. They probably have employers willing to provide liberal expense accounts which they are anxious to exercise, but they find themselves in a legal straitjacket.

Rumors about a couple of affairs for legislators have been checked as far as possible. It was learned that a number of directors of a trade association were urged by their secretary and lobbyist to take legislators from their respective districts out to dinner when attending the monthly meeting of their board of directors in Madison They have been doing just that.

PRINCIPALS DOING THE ENTERTAINING

If a new pattern is evolved out of the present law, it probably will be one of entertainment by principals, or employers, instead of by lobbyists.

The cheese buffet enjoyed by legislators once every session with the Wisconsin Cheesemakers' Association is traditional.

The Fleischmann Malting Co., a supplier to the entire brewing industry, offered a buffet dinner and beer to legislators last week and showed a film on brewing from ancient to modern times. Numerous legislators ignored it.

Other affairs of this type may be expected before the session adjourns, and it begins to look like a long one.

WAIT UNTIL I SEE

A veteran lobbyist who was complaining at the start of the session that he did not see how it would be possible to operate under the restraints of the new law was asked last week whether he had changed his mind yet.

"Wait until I see how my bills come out," he replied. "I can tell you better then."

Awkward situations have been created, especially for established Madison attorneys who serve regular or special clients as their registered lobbyists. This position immediately restricts their everyday relations with acquaintances and even family friends who happen to work for the State, however remote their field of activity may be from the interests of their lobbyist friend.

It actually affects buying the next round of drinks at a weekly poker club, or a gift to a new baby in a friend's family if a lobbyist-State employee situation exists.

Wisconsin law prohibits any person other than a licensed lobbyist to attempt personally or directly to influence any member of the legislature for or against any proposed or pending measures, excepting by appearance before legislative committees or through other restricted means of communication.

The lobbyists, registered and licensed by the secretary of state, still are required to make monthly reports to him on their expenditures under the headings of meals, drinks, and entertainment for legislators.

Jail sentences are provided for failure to report or for false reports. In the past, these reports were under close scrutiny by the press and were subject to wide publicity. Although the requirement remains in the law, to report such expense now would be an admission of guilt under its new provisions.

NEW PROVISION ADDED

The 1957 legislature, not without reluctance, added a new provision to the definition of unprofessional conduct for which a lobbyist's license could be revoked. This definition was broadened to include:

"Directly or indirectly furnishing or being concerned in another's furnishing to the governor, any legislator, or to any officer or employee of the State, to any candidate for State office or for the legislature, any food, meal, lodging, beverage, transportation, money, campaign contributions, or any other thing of pecuniary value. This does not apply to entertainment by a nonprofit organization at a bona fide social function or meeting of such organization."

With the force of public opinion behind him, Republican Governor Thomson in 1957 virtually shoved down the legislators' throats his bill to prohibit lobbyists from providing anything of value to lawmakers.

Democratic Governor Nelson, then a member of the senate, amended Thomson's bill to apply also to the Governor, other State officials, candidates for State office and State employees. He thereby claimed credit for the end result.

---

## America's Defense Posture

EXTENSION OF REMARKS
OF
## HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. KEATING. Mr. President, Mr. Paul Martin, the Gannett News Service's Washington bureau chief, and an alert, informed journalist, recently interviewed Dr. Herbert F. York on the subject of our Nation's defense picture. Dr. York, who is director of military research in the Defense Department, is a native of my home city of Rochester, N.Y., and a highly regarded leader in America's scientific and technological effort.

In his interview with Mr. Martin, Dr. York outlines many of the complexities which marked the development of our present Defense Establishment, and deals with some of the future problems we will face. It is an important contribution to public understanding of the enigmas in this terribly important and complicated field.

I ask unanimous consent that excerpts from this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat and Chronicle, Mar. 15, 1959]

ARE WE AHEAD IN ARMS RACE?—ROCHESTER EXPERT GIVES VIEWS

(By Paul Martin)

WASHINGTON, March 14.—The Nation's top research expert on military systems says "we have had and we do have an aggressive program" in development of advanced weapons such as rockets and missiles.

He is Dr. Herbert Frank York, a graduate of the University of Rochester and Ph. D. from the University of California, who at 37 is regarded as a "boy wonder" in the field of science and engineering.

Dr. York is the overall director of military research for the Defense Department.

"There is nothing esoteric about rockets," says Dr. York. "What costs money and time is their complication. They are a large collection of gadgets, valves, electric parts, etc.

"Getting them to work is merely having experience with them. There is no great engineering magic, no problem in science. There is no substitute for experience."

If one is going to compare the United States and Soviet position in military missiles, there are quite a number of questions that must be asked. Dr. York answers them in this fashion:

Propulsion: "The Russians are probably ahead in large reliable engines" for long-range rockets.

Guidance and control: "We are probably ahead, although it is hard to tell."

Reentry: "We know we can do it; there is no reason to believe the Russians can't; there is no point in arguing who is ahead."

(This refers to the problem of bringing a missile warhead back from outer space, and having it reenter the earth's atmosphere without being destroyed by friction.)

Warheads: "We are probably ahead." This refers to thermonuclear payloads which military rockets would carry.

Reliability: "The Russians are probably ahead, because they have fired more big rockets."

Dr. York believes that the Soviets have had a number of rocket failures, the same as the United States. Russian mistakes have not been advertised because of internal police state controls of the Communist system. American failures have been out in the open for all to see.

He says it is foolish to claim the Russians have made progress in rocketry because of "captured German scientists," or because of "defense secrets they stole from us."

"The Russian scientists are good," he says. "The best in Russia are as good as the best in America. It is impossible to say whether they are better."

The controversy over the so-called missile gap that has developed since the Russians fired their first sputniks in the fall of 1957 it quite simple, according to York.

The argument, which has been advanced in Congress by political opponents of the Eisenhower administration, runs like this:

Taking the maximum production which our intelligence shows the Soviets might be able to attain in big intercontinental ballistic missiles, and comparing that with the presently planned procurement rate of missiles by the Defense Department, you arrive at a point in 1963 where the United States would have 200 ICBM weapons on launchers and ready to go, compared with a possible 600 behind the Iron Curtain.

"There is nothing we can do about this in research and development," said Dr. York. "That is a matter of production, procurement, and deployment. If there is a missile gap, the way to fix it up is to go to the factories and order more missiles. The argument is over how many we should produce not how many we can produce."

The question of force strengths and deployment in the armed services is up to the Secretary of Defense and the Joint Chiefs of Staff. President Eisenhower, Defense Secretary McElroy, and the Joint Chiefs have taken a position to this effect:

1. It would be foolish to order more first generation, liquid-fuel Atlas and Titan missiles at the present stage of development in the missile art, when the solid-propellant Minuteman is coming along faster than previously expected, and there are still more advanced long-range weapons on the drawing boards.

2. The total defense capability of balanced U.S. forces, including strategic bombers, jet fighter-bombers on forward bases carrying nuclear weapons, missile-carrying ships and submarines, intermediate range rockets on NATO installations, and ICBM's in position in this country, will be adequate to deter Soviet aggression in 1963, or to wreak such havoc in retaliation as to make war unprofitable for the Communists.

"We are turning our attention to improving rockets in the areas of simplicity and reliability," said Dr. York. "We are developing more powerful fuels and engines. We are laying a firm groundwork of technology to have a further generation of long-range missiles."

Deployment plans call for hardening and dispersing missiles to make them less vulnerable to enemy attack. This means placing them underground in protected capsules on missile farms covering miles of territory, with perhaps 50 missiles on each farm.

Solid-fuel missiles will be easier to handle and quicker to fire than the cumbersome first-generation missiles employing highly explosive liquid oxygen, with their time-consuming and countdown process.

That's one reason why the Defense Department wants to move ahead with Minuteman and its successors, keeping only a standby capability in the presently operational liquid-fueled missiles.

If a mistake was made in the past in failing to push missile development—and most sources agree that there was—then it was a common mistake shared by the best scientific and military brains available to the Pentagon.

The mistake also occurred during the administration of former President Truman, and not during the tenure of President Eisenhower.

Here is what happened:

Immediately after World War II, the Russians with the aid of German scientists who had worked on Nazi V-1 and V-2 rockets, plunged into a full-scale program to develop bigger missiles in the 600 to 1,000-mile range, thereby hoping to be able to blanket targets in Western Europe.

The United States, 5,000 miles away and with a different strategic problem, concentrated on manned aircraft. The Army decided it preferred atomic artillery to rockets. A proposal in 1946 for an earth satellite which could be put in orbit by 1952 was not funded because no one could show a "military requirement" for it.

Before the Korean war broke out in 1950, a top civilian scientist advised the Pentagon that it would be foolish to work on an ICBM. He claimed it would be destroyed by the sand-blasting effect of meteorites in space.

The scientific breakthrough that gave practical military effect to long-range missiles—and made the Russian gamble pay off—was the U.S. discovery in 1951 of the hydrogen bomb, followed by the baby H-bomb in 1953. The Russians got their H-bomb in 1952.

This big increase in explosive capability made it possible to eliminate tons of weight in the warhead of a missile. With the same amount of thrust, an intermediate range missile (1,000 to 1,500 miles) was transformed overnight into an intercontinental weapon (5,000 miles or more) which could carry greater destruction to a broader enemy target area with less need for missile accuracy.

"Our systems analysis people outsmarted themselves in this period," said Dr. York. "That rectification took place in 1953–54. The Ballistics Missiles Division was formed, and told to go ahead. All stops were pulled out at this time. We started on ICBM's before IRBM's. The Russians did it in a more orderly progression.

"We went all out in 1954. It would be difficult to have a more aggressive program than we have had since then in missile development. It is not a matter of money. It is a matter of time and experience."

The clamor for more defense spending today seems to be a combination of politics, interservice rivalry, competition among manufacturers for more Government contracts, and some genuine concern over the status of national defense.

* * * * *

Some voices calling for more missile procurement today were advocates of a bigger Strategic Air Force in 1950–53 to offset the Soviet "Bison," a new long-range bomber. The Russians never produced the Bison in quantity. They dropped it, and skipped a whole generation of manned aircraft, while the United States was spending $3 billion on the now obsolete B–36.

In research, Dr. York says, "people working on these things tend to become enthusiastic about them. We find it very hard to do an exploratory development, just a reconnaissance, without having the people turn into zealots. They think each new thing is the final answer for saving the country."

For instance, the Army is pressuring Congress for a go-ahead to build the Nike-Zeus as an antimissile missile to shoot down any incoming enemy rockets.

"I am in complete agreement with the Army on the priority and necessity for an antimissile missile system," Dr. York said. "I disagree on production. We believe this is not the right time. Everyone knows it is easy to make the missile. That's the cheapest and simplest part of the system.

"The real trouble is the discrimination problem. How do you build the detection and computer, or fire control system, to get anywhere near the right target to make an intercept? It would be easy to foul up Nike-Zeus with decoys."

He said an enemy could break up the incoming stages of a missile into 100 parts, only 1 of which would be carrying the warhead. More sophisticated decoys could be built to fool the antimissile missile system, which must be able to accurately detect and intercept the warhead.

These are some of the complexities in an extremely complex art. President Eisenhower contends that the best policy is to keep an adequate and balanced national defense, which the Nation could support over a long period of time without going broke.

## The Real Truth About Michigan

EXTENSION OF REMARKS
OF
## HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

*Tuesday, March 24, 1959*

Mr. McNAMARA. Mr. President, in recent weeks the State of Michigan has been much in the news.

Ordinarily, this would please me very much, because there are so many good things to say about Michigan. Michigan has that ideal combination of natural resources, natural beauty, and industrial might that makes the State a tremendous asset to our Nation.

Unfortunately, however, the news that has been appearing about Michigan elsewhere in the country recently has not been about Michigan's assets.

These stories have sought to portray Michigan as bankrupt, as a welfare state, as a State that is unfriendly to industry.

There is no truth to any of this. Yet, the stories persist, and many of them border on outright slander. They usually are written by those who have made absolutely no effort to find out the truth.

What is the truth? The truth is that these stories were first begun inside Michigan for political reasons.

As such attacks often do, this one soon got out of hand. The unsupported charges were picked up by others outside of Michigan, embellished and circulated with no regard for the facts—again for political reasons.

Soon, those who had given birth to this lie found that what they were doing was causing irreparable damage to their own State. By then, they could not halt what they had started.

Now, however, a Detroit newspaper has undertaken to clear the slanders and the lies from the record—and to set forth the facts about Michigan.

These articles are being carried in the Detroit Times, and I ask unanimous consent that the first of the series, which appeared Sunday, March 22, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STORY OF THE SLANDERS AND LIES—THE REAL TRUTH ABOUT MICHIGAN

(By John Creecy)

"You gotta be brave to move to Michigan."

So goes the word among today's industrial pioneers, the men who decide where new plants shall be built.

So went the word a century and a half ago—when a $5 bounty was offered for the scalp of any American settler, of any age or sex, who had the temerity to move into Michigan.

There were many brave ones then. There doesn't seem to be too many brave ones now.

Whenever one ventures this way, through the dark forest of economic uncertainty, pranksters in scaremasks pop up from the bushes and whisper the chilling phrases:

"Welfare State."

"Unhealthy business climate."

And with a flourish of their ghostly sheets they intone the three witching names:

"Williams, Hoffa, Reuther."

Like any good Halloween stunt, this is fakery.

But—like any good Halloween stunt—it can be pretty terrifying. It can be scary enough to make the victim trip over his own feet in headlong flight.

It started apparently as good clean fun. But it's gone pretty far. Somebody could get hurt.

In fact, it seems clear Michigan already has been hurt. Over the last year or two our State has failed to show the industrial gains that reasonably and logically should have come our way.

Some disturbing charges have been made against Michigan, its economic climate, its labor situation, its tax structure.

Williams, belatedly, has refuted some of them.

Others have been cleared up by census data and other objective reports. Some of the sources that were spreading calumnies about Michigan have come up with polite retractions.

But the facts seem to bear relatively little weight.

Most of the damaging charges against Michigan never were true. The harm was done because people were led to fear that they were true, or that they might become true.

Let's review the charges.

Then, in this series to which several Times writers will contribute, let's take a detailed look at the truth.

The result, we believe, is no gloomy picture—but a bright one for Michigan's future.

First, let's look squarely at that magic incantation "unhealthy business climate," which has done so much lately to ward off prosperity for Michigan.

Turn it over carefully. Don't be frightened.

Remember when it first came to widespread attention? It was about a year and a half ago.

An air rifle firm in Plymouth notified its 700 employes it was moving to Arkansas.

Williams hadn't done anything to the owner, except fail to reappoint him to the state aeronautics commission.

THE WORKERS MIGHT JOIN UNION

Hoffa and Reuther hadn't done anything to the company. The employees were nonunion.

But they were making $2.24 an hour, counting fringe benefits. And if the wages were reduced there was danger that they might join a union.

Down in the Arkansas hills, the owners felt, they could find people willing to work for $1 an hour less, who would be able to meet the company's standards.

So they moved—and all over the United States the case is being cited by editorial writers and other spokesmen as exhibit No. 1 in the case against Michigan's "business climate."

There had, it is true, been complaints from other industrialists to the effect Michigan taxes on industry were out of line with those in other States, and were discouraging the location of new plants here.

What state, what city, hasn't had such complaints?

And what state wasn't jealous of Michigan—the acknowledged champ of the Industrial League?

Every such complaint was a great break for Michigan's rivals.

Drumbeaters for competitive states picked up such things, magnified them, put them to use as propaganda to lure plants to their states.

OUR TAX CRISIS ADDED DRAMA

Then came Michigan's current "tax crisis."

It added drama and an air of plausibility to the propaganda barrage of our rivals.

It mattered not at all that other States were facing tax troubles, too, that about four States out of five faced situations similar to Michigan's.

In most cases these other States tackled the problem, as every State in the Union has countless times tackled the same chore. And they worked out solutions, as Michigan could easily have done if the Governor and legislature had worked together.

But our politicians—on both sides—played right into the hands of the rival States.

They staged a boyish brawl that, while leaving the home folks unimpressed, tended to scandalize the neighbors.

Sanctimonious fingers were pointed from some of the most unlikely quarters.

From smogbound California—where the taxes are really something to scream about—came the unctious prate that things have grown blacker and blacker in Michigan as the State moved farther and farther into the red.

SMUG SERMONIZING IN HARTFORD

With a doleful shake of its ancient head the Hartford (Conn.) Courant sermonized on the downfall of Michigan's Governor and expressed grave doubt that even now, with the State treasury empty, he sees any error in his ways.

And the Chicago Tribune:

"Gov. 'Soapy' Williams' Michigan welfare state is bankrupt, from overspending its revenue."

The Kansas City Star likewise finds text for a sermon in Michigan's plight:

"So the bubble of the welfare state bursts, and as it does, we see a pointed lesson for the nation. * * *"

Kansas City, the home of the late Boss Pendergast, has always considered itself a good judge of efficient government.

As the Los Angeles Times sees it:

"A substantial rise in population accounts for part of the 100-percent increase in State spending during Williams' regime * * * but the remainder is due to the highly advanced concept of paternalism in which the State has greatly increased its support of various welfare programs and taken over the responsibilities of local governments."

(Statistics: In Michigan, State and local taxes total $181 per citizen. In California they total $237 per citizen, according to the latest report of the U.S. Department of Commerce.)

The so-called 100-percent rise in Michigan's budget is a recurring theme in the many outstate newspaper and national magazine articles that have dealt with Michigan conditions.

The U.S. News & World Report says:

"Over the past decade—the years in which the Williams administration has been in office—total State spending has gone from about $500 million annually to more than $1 billion."

Then look a few pages further back in the same (February 13) issue of the same publication.

Without reference to Michigan it discloses that State spending—for all States—now totals more than five times as much as it did in 1946.

And it says:

"Put your finger anywhere on a map of the United States and odds are that you'll find a State in serious financial difficulty.

"The chances are about 4 to 1 you will point to a State in which people are about to be asked to pay higher taxes, perhaps sharply higher ones.

"State spending is soaring. * * * Deficits in State budgets are common."

OUTLOOK FROM DIFFERENT VIEWPOINTS

In succeeding articles in this series, Michigan's outlook will be probed from the standpoint of business, labor and other interests.

But as a starter, lets take a look at the most prominent anti-Michigan allegations, and see how they hold up under preliminary examination:

Indictment No. 1: Michigan is a welfare State.

This is a potent brickbat to throw at a rival. What does it mean?

Does it mean public welfare in the standard, conventional sense: "Institutional and noninstitutional aid to the needy?"

If so, there's no need to be vague. A new U.S. census report shows what this cost—in terms of both State and local taxes—for each Michigan citizen, * * * and for the citizens of every other State. (The figures, latest available, are for 1957.)

Welfare cost each Michigan citizen $16.30.

It cost each Ohio citizen $17.71.

In Arkansas—where some businessmen dream of finding respite from the welfare State—it was $19.17.

In California—where they are so shocked over Michigan's plight—the welfare cost for each citizen is $29.19.

And in Oklahoma it is $47.73. Anyone for Tulsa?

MICHIGAN RANKS 34TH IN COST

Among all the States, Michigan ranked 34th in this respect.

Indictment No. 2: Taxes are out of line.

Again let's take a look at California. That State is enjoying a huge industrial boom, while businessmen are asked to tremble in fear at the thought of Michigan taxes.

California is the most heavily taxed State in the Nation. The average citizen pays $237.87 in State and local levies, according to the latest census study.

In New York the average citizen pays $229.31.

In Wisconsin, famous for the Kohler Co.'s war against the unions, it's $184.47.

Michigan? It's $181.13 per citizen. We rank 12th among the States in this regard. When taxes are considered as a percentage of personal income we rank 31st.

Indictment No. 3: Unhealthy business climate.

If this diagnosis has any validity at all, it would seem to concern mental health rather than physical health.

Until recently, Michigan was acknowledged to have just about the healthiest business climate in the world.

Its tremendous resources of technology, skilled manpower, finance and management produced sensational results.

They still can. They will, once the goblins are exorcised.

A big element in the fear, one astute business analyst observes, is that labor leaders Reuther and Hoffa are linked with Detroit in the mind of the average out-of-State businessman.

When he thinks of Michigan and/or Detroit it isn't the charms of our water wonderland that dance before his dreamy eyes. It's Jimmie and Walter.

He gets an unpleasant psychological reaction—though his conscious mind well knows that Jimmie and Walter are omnipresent on the American industrial scene, and that they aren't likely to bother him any more in Detroit than they would in Wetumpka, Ala.

## Curbstone Observations From a Yankee Editor

EXTENSION OF REMARKS

OF

## HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 24, 1959*

Mr. COTTON. Mr. President, one of the best known newspaper editors in New Hampshire, Earl S. Hewitt, of Hanover, has humorously, but accurately, portrayed the spirit of town meeting and late winter which governs much of the March news in New Hampshire and New England. His interesting article was published in the American Press for March 1959, an independent magazine for hometown newspapers. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CURBSTONE OBSERVATIONS

(By Earl S. Hewitt)

It is the tough month here in Yankeeland and if one can weather town meeting and all that comes along one is probably a good insurance risk, relatively speaking.

A lot of oldsters still show up and fulminate over rising taxes. They can't seem to do much about it, since they lost control over expenditures long ago when the State and Federal Government sold them on the idea of "papa knows best". Right now legislatures are considering bills to restore home rules and fundamental rights. It is a time of confusion which makes it normal, everything considered.

The local editor is sounding off and continues to make his irritating comment. He can't understand why people won't register and vote. Even when they do he thinks they are cockeyed, but standing to be counted gives them stature in his eyes. He says they are doing the only thing they can do to save their country from the decline and fall, and they can't be sure about that. The point is they can try and be respectable.

Editing and publishing, according to the editor, becomes more competitive and complicated all the time. He thinks it is due more to gadgets than to the art of gathering and spreading the news. He says a good story and good writing makes a weekly newspaper. His favorite crack is that when you read it in the Gazette you can believe it. As for the satisfactions to be enumerated after 25 years he says they are too numerous to mention. He knows of no editor here in New Hampshire who would do differently given a second chance.

The future is something else again, but relatively unimportant to the editor who has a philosophy and pursues a routine. The editor of the Hanover Gazette, Hanover being the home of Dartmouth College, likes to think of himself as being a curbstone listener and observer. He knows he is in an argumentative frame of mind most of the time and that it constitutes his editorial capacity, such as it is. He thinks son David should assume the same attitudes.

The space age coming up will present new challenges for editorial comment. The present editor hasn't yet become fully conscious of the implications of gross national product. As for space travel, he says it is too astro-

nomical for his blood pressure and besides he has a coronary to consider. Right now, he insists it is the month of March and if you have anything to say, address the moderator.

## Address by John C. Weaver, Dean of Graduate School, University of Nebraska, Before Graduate Convocation of Purdue University

EXTENSION OF REMARKS
OF
### HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. HRUSKA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the March 19 issue of the Lincoln Evening Journal and Nebraska State Journal. This editorial comments upon a recent address of John C. Weaver, dean of the Graduate School of the University of Nebraska, before the graduate convocation of Purdue University.

Mr. Weaver's observations on what is happening to higher education through the impact of Federal grants, research scholarships, and so forth, are well worth sober reflection. It is particularly refreshing to note that he apparently does not subscribe to the view that there is nothing wrong with education that only a great deal of money can cure.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE OR LESS PERSONAL

"More than one person has, with some reason, observed that under the influence of Federal grants, made in response to national necessity, the Russians are doing more to shape our universities than we are. In any event, we have been caught up in what has overtones of a huge academic WPA."

Those are the words of John C. Weaver, dean of the Graduate School of the University of Nebraska in an address to the graduate convocation of Purdue University last week. This thought-provoking speech deserves a wide audience.

Dean Weaver is well qualified to take an informed look at what is happening to higher education through the widespread granting of scholarships and grants. Under a Carnegie Corp. traveling fellowship, he has visited nearly 2 dozen leading Canadian and American universities and their graduate schools, from British Columbia to North Carolina and from Harvard and MIT to California Tech. and UCLA.

He is convinced that "one of the greatest strengths of American higher education is the diverse character and behavior of the institutions that comprise our system."

But in preserving this he is not unmindful that education must keep up with the times. He says, "I do sense a variety of barnacle-encrusted traditions or presumptions that call for thoughtful reevaluation.

But he is looking with some concern on the impact of Federal grants, research scholarships, industrial and technical demands. He points out that according to recent data from the National Science Foundation, two-thirds of all research expenditures in our American institutions of higher learning this past year came from Federal grants. Despite all of the obvious advantages, he feels that this vast involvement in Government-sponsored research is not a completely unalloyed blessing.

Nonuniversity agencies whose goals are of necessity not coincident with those of the universities, come into a position to influence such basic university functions as research and graduate education. He says, "At best we have as a Nation only a limited number of men of high-level creative talent in sciences and technologic arts. If able research people of our universities become so encumbered with specific project work that they are largely unavailable to students, no matter how important and urgent the investigation, a real question of the long run national interest is clearly involved."

The National Defense Education Act provides support for new graduate programs and the expansion of the old ones. Dean Weaver believes that a careful inventory would reveal that the top 50 graduate schools could, with a reasonable distribution of enrollment, double the total number of graduate students, at present levels of instructional quality, without major expansions of either staff or physical equipment.

He says the extremely uneven use now being made of available facilities has been aggravated by major national fellowship plans. He asks, "If Federal aid is to be extended to graduate education, why should it be given only to students?"

Present legislation being what it is, a university can neither provide a place for students receiving Federal fellowships, nor can it become eligible for any aid itself. Dean Weaver would thus provide assistance for existing respected graduate schools rather than promoting a few famous graduate centers as the individual grants have a tendency to do.

## Indians and White Southerners Find Scant Regard in the U.S. Capital

EXTENSION OF REMARKS
OF
### HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. THURMOND. Mr. President, editor Thomas R. Waring of the Charleston (S.C.) News and Courier compares the U.S. Indians and white southerners in a March 22 editorial. As he puts it, "the Great White Father" is not very much interested in the welfare of either group.

I ask unanimous consent that Mr. Waring's editorial, entitled "Indians and White Southerners Find Scant Regard in the U.S. Capital," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDIANS AND WHITE SOUTHERNERS FIND SCANT REGARD IN THE U.S. CAPITAL

When a small band of Indians went to Washington last week to complain of broken treaties they met rebuffs at the White House and in the office of the Indian Affairs Commissioner. The Great White Father was not interested in their grievance.

White southerners can sympathize with the redmen. South Carolinians are in much the same dilemma as the Iroquois. Proud people who have known independence and glory, today both are at the mercy of massed majorities and politicians with their ears glued to election returns.

Emphasizing the quaintness of the Indians' simple approach to government, the News and Courier chose an antique headline style yesterday to caption an Associated Press account of the visit.

Perhaps our editorials, reflecting traditions of a republic founded before the West was pioneered, seems as archaic as the type format that we long ago abandoned in favor of streamlined journalism. But we are sufficiently egotistical, or stubborn, or dedicated to believe that some ideas remain fresh regardless of fashions in rhetoric or typography.

Among the ideas we espoused is the notion that too much government is not good for people or countries. The U.S. Constitution was designed to protect people against too much government. In effect, the Constitution is a treaty between the Federal Government on one hand, and the States and the people on the other.

Through various means, including Supreme Court decision on race, subversion, and other issues, Federal Government has usurped more than its share of power over the States and the people. Though troops of bluecoats no longer are required to carry out the adage that a "good Indian is a dead Indian," Federal arms and ammunition still are being stored in the stockades for possible use against white southerners.

The same day the Indians were trying unsuccessfully to make themselves heard in Washington, Attorney General William P. Rogers was defending before a subcommittee of the U.S. Senate his Department's request for money to recruit and arm U.S. marshals to quell souther resistance to mixing races in the southern public schools.

U.S. Senator SAM J. ERVIN, Jr., of North Carolina, complained, the Associated Press reported, "that the administration was proposing to single out violence in school cases for prosecution, without paying any attention to violence in labor troubles, etc."

Labor union goons are not in the same segregated category as Indians and white southerners. The Government has no intention of dispatching marshals to protect workers who want to cross picket lines.

The Indians might as well retreat to their reservations and bid their time. As to white southerners, we are still hopeful that they will find ways to become more effective than the noble but conquered Indians.

## Oregon's Scenic Beauty Adds to 1959 Centennial Attractions

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. NEUBERGER. Mr. President, this year Oregon is celebrating 100 years of statehood. Hundreds of thousands of persons will visit my native State in 1959 to attend the Oregon Centennial Exposition and International Trade Fair and to view the many local pageants, programs, and promotions planned by local communities and State officials. Many will linger in our State to appreciate the beauty of the Oregon landscape.

The Christian Science Monitor of March 3, 1959, contains a brief article entitled "Oregon Rides Majestic Trail"

which describes the enjoyment which awaits visitors to the Beaver State. I ask unanimous consent that this vivid word picture of Oregon's vacation offerings be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON RIDES MAJESTIC TRAIL

SALEM, OREG.—Oregon's vacation offerings are so many—and to most Americans so undiscovered still—that the best thing to be said is a hearty, "Come and see."

This State can be a magnificent interlude in a west coast journey from San Diego to Seattle, a driving distance of 1,290 miles or so. It can be viewed from the dome car of Southern Pacific's Shasta Daylight by the traveler in a hurry. Or for anyone wanting an idyllic change, a pause in the fast tempo of modern life not undetached from modernity, Oregon is a wonderful holiday goal all by itself.

Oceans and lakes, valleys and mountains, wilderness trails and scenic highways, bubbling streams rushing through forest glades—they are all here, with a hospitable State playing host and friendly people in all the towns and cities.

Actually, Oregon folks seem a little reserved about boosting their State travelwise. In Eugene, handsome and comfortable University of Oregon community, they tell you stories about how much nicer the country seems without crowds. Even so, their welcome is warm and lovely, and here in Salem, the State capital, the Oregon State Highway Department is prepared to give willing help through its travel-information division.

There's a touch of New England about the Oregon scene, and a New England solidness about the people. A seaside hotel at Gearhart looks as down Maine as can be, and the appearance is heightened by the salty tang in the morning mist and the circling seagulls above the wide, white beach.

Portland, of course, flatly contradicts Oregon protestations of liking things the old way, for it plans to become this summer's center for the State's centennial celebration. It expects to draw 8 million visitors.

And Portland is no mean city. It has stunning views, including Mount Hood in the distance. Its restaurants are international and good—French, German, Japanese, Mexican, Hungarian, Italian, with one that allegedly serves every kind of pancakes known to man or woman. The annual rose festival, lavish with flowers, gives eloquent support to Portland people's contention that there is no lovelier place, anywhere, to live.

For the auto traveler, the Old Oregon Trail, followed more or less by U.S. 30 from the eastern part of the State to Astoria in the west, unfolds a scenic panorama that is breath taking. It shows off the Wallowa Mountains, some of them 10,000 feet high and more, the Snake River and Hells Canyon, Pendleton where the famed roundup takes place, and one State park, forest camp, and roadside rest area after another.

HISTORY RECALLED

U.S. 30 comes to Portland, follows the Columbia River west again, and ends at Astoria. And the Astor Column, rising 125 feet high from one of the city's highest points, recalls events of consequence to the whole United States—the discovery of the Columbia in 1792, the Lewis and Clark expeditions, and restoration of Fort Astoria to the United States.

What interests many travelers, though, is Oregon's sufficiency of good hotels and motels. It makes pristine wilderness, for many of them, easier to look at.

For anybody who wants to camp, Oregon country can only be called superb. The State maintains some 400 forest camps and more than 160 State parks. Most of the parks are for day use only, but some provide clean overnight camp sites, and a number have completely modern connections for trailers.

Indeed, Oregon's coast unfolds a continuous vacation paradise, from the Chetco River in the south to Gearhart in the north, with sandy beaches, mostly State owned and open to the public, backed by farms, rugged promontories, and forests.

There are all sorts of things to do in the coastal region—swim, fish for salmon, ride horseback and bicycle.

MODERN BACKWOODS

From Wedderburn, an inexpensive trip aboard a U.S. mail boat takes the traveler upstream 32 miles to the modern backwoods town of Agness.

Near Florence, a 12-mile drive to Sealion Point makes possible a visit to the only mainland sealion rockery in the Nation. At Tillamook, center of a rich dairy section, one can tour the Tillamook cheese factory. At Seaside, one can enjoy the west coast's finest boardwalk, as it is called there.

---

## Mrs. Eugene Talmadge

EXTENSION OF REMARKS
OF
## HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

*Tuesday, March 24, 1959*

Mr. THURMOND. Mr. President, the Atlanta Journal and Constitution magazine of March 22, 1959, contained an article on one of the most amazing women of our time. She is the widow of a former Governor of the State of Georgia, and the mother of a former Governor and the present most able junior U.S. Senator from Georgia. I speak of Mrs. Eugene Talmadge, who, at the age of 77 years, is still actively engaged in the management of her 800-acre farm in Georgia.

Her life is a story of contributions to her fellow Georgians and to Americans. Her example should be an inspiration to all women. She has excelled as a wife and mother, as demonstrated by the record of her able husband, Eugene Talmadge, and the distinguished career of her son, the junior Senator from Georgia, and the accomplishment of her other children.

It is with great pride that I ask unanimous consent that this article about Mrs. Eugene Talmadge, of whom I am privileged to be a kinsman, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON PIGS OR POLITICS, MISS MIT SPEAKS HER MIND

(By Katherine Barnwell)

The only woman in Georgia today whose husband and son both served as Governor of the State prefers working on a south Georgia farm to loafing in the Nation's Capital.

Mrs. Eugene Talmadge, 77-year-old widow of former Gov. Eugene Talmadge and mother of former Gov. HERMAN TALMADGE, lives simply in a 12-room, red-brick, white-columned home on Sugar Creek plantation near McRae, Ga. And she personally directs the operation of her sprawling, 800-acre farm in Telfair County with remarkable business know-how.

Mrs. Talmadge, known familiarly throughout Georgia as "Miss Mit," says her son HERMAN wants her to give up farming, take it easy and spend more time at his home in Virginia near Washington, D.C., where he's now in the U.S. Senate.

"But I enjoy working on my farm," Miss Mit doggedly insists. "I like to see things grow, and I like to feed farm animals. I'm going to keep right on working as long as I enjoy it. * * * In Washington I couldn't do anything but loaf and go to parties."

Silver-haired Miss Mit is not a woman to spend her time in idleness or party-going.

"Mama has always taken life seriously," Senator TALMADGE says. "She regards it as a matter of survival and views every problem and challenge in life in terms of fundamental values. There is nothing frivolous or artificial about her. I've never known her to play bridge, go to a dance, drink anything stronger than coffee, or take so much as an aspirin tablet."

Although she loves farming, her interests are not confined to corn growing and chicken raising. When we visited Miss Mit at her home recently she discussed everything from pigs to politics. She has definite ideas on many subjects—and she expressed them candidly, sometimes bluntly.

Here are some of her comments:

On the Supreme Court: "Something's got to be done about the Supreme Court. It has too much power."

On her son: "I think HERMAN is doing a wonderful job in the Senate. He keeps dropping new bills in the hopper. They won't ever get out, I reckon, but he keeps trying. I don't see how anyone could object to his constitutional amendment, giving every State the right to run its own schools."

On Senator RUSSELL: "DICK is going much better now that HERMAN is up there in Washington to help him. A lot of times Senator GEORGE didn't vote like the southerners did."

On integration: "You know it wouldn't do to mix the schools. * * * The Negroes down here don't want mixed schools."

On the next President of the United States: "He will be a Democrat I'm sure. I think LYNDON JOHNSON of Texas is about the best we can get. He doesn't always vote the right way, but then he knows he's got to get votes from the North, too, to be President. * * * I like Senator KENNEDY all right, but I think a southerner who sees things like we do would be better.

On Georgia politics: "I don't think Marvin Griffin will run for Governor again after all the bad things that have come out about his administration. I don't believe he could win without the help of the Talmadge people. The Talmadge supporters are stronger than ever in Georgia."

Miss Mit thinks Ernest Vandiver is going to be a fine Governor. And she's proud that she was for him at least 4 years before he ran for office. She recalls that she gave Mrs. Vandiver some good advice just after her husband was elected lieutenant governor. "I told Betty to travel around with Ernie," she pointed out, "and to shake hands with all the country people. I told her to tell 'em what a fine Governor he would be."

Miss Mit recalled that she herself took part in the Vandiver-Bodenhamer campaign. "In the last days of the race," she related, "the Bodenhamer people were saying that HERMAN TALMADGE was not taking sides. So the Vandiver people asked me to go up to the rally for Ernie in Gainesville and sit on the platform.

"When I walked out on the platform I got a big ovation and the band started playing 'Happy Days Are Here Again.' Everybody knew for sure that TALMADGE was on Vandiver's side. That was the only rally I attended."

"Miss Mit's" keen mind is brimming over with memories of past political races in Georgia. Her husband served three 2-year terms as Governor in 1933–37 and 1941–43. He was elected to a fourth term but died in 1946 before taking office. HERMAN TALMADGE was Governor from 1948 to 1955 when he was elected to the Senate.

GENE TALMADGE gave his wife her nickname. "My first name was Mattie," she explained, "but he started calling me 'Miss Mit.' Then everybody took it up. I've always spelled my nickname with one 't,' but lots of people write it with two 't's'. It really doesn't matter to me how it's spelled."

"Miss Mit" confessed that she didn't want her husband to get into politics in the first place.

"When GENE first talked about running for commissioner of agriculture I was against it," she recalled. "But after I knew he was determined to do it I helped him all I could. He was commissioner of agriculture from 1927 to 1933 when he became Governor."

Mrs. Talmadge said she also was against HERMAN running for the Senate after he served as chief executive. "I wanted him to wait 4 years and run for Governor again. Then he could have stayed in Georgia. Now I guess he'll be in Washington from now on—unless he makes some bad mistake."

Although "Miss Mit" has six scrapbooks crammed with clippings about the Talmadges, she never looks at them.

"I don't live in the past," she said emphatically. "All that is water over the dam."

Asked about the possibility of political careers for Senator TALMADGE's two sons, Eugene and Bobby, "Miss Mit" commented:

"Well, little Gene is getting more interested in politics. He's 16 now and he's been on several debating teams. Gene is a genteel boy. He looks a little like his granddaddy, and he might get into politics someday. I don't know what Bobby's going to do. My daughter Margaret wants one of them to be a doctor. It would be nice to have a doctor in the family."

"Miss Mit" is just as concerned about the price of hogs and the location of her sweet potato patch as she is about politics, past or future.

"We're clearing some ground now for our sweet potato patch," she said. "You should move your patch every year to keep the potatoes from getting diseases."

Walking over her farm Miss Mit came to a board fence about 4 feet tall. When magazine photographer Floyd Jillson asked how we were going to get on the other side of the fence to make a picture, Miss Mit snapped: "I can climb over that fence, can't you?" But out of deference to her visitors, Miss Mit decided to use a gate. Later, when we were walking down a steep bank she spurned offers of assistance.

"Shucks, I don't need any help," she retorted. "I'm just as able-bodied and energetic now as I was at 50."

Miss Mit proudly showed off her Duroc-Jersey hogs and pigs. She has between 200 and 300 of them. "Unfortunately," she sighed, as she shelled some corn for her pigs, "the price of hogs is way down. They are so cheap right now that we hate to sell them."

Miss Mit also has nearly 300 head of cattle, mostly Hereford. She has so many chickens that she has lost count of them, but she gets 8 to 10 dozen eggs a day. She gives many of them to her friends and the workers on her farm, but she also has some to sell.

Her senator son points out: "Mama regards energy and talents as gifts to be utilized to the fullest and gives herself wholeheartedly to whatever task she undertakes. To her a full life is a productive life. Having lived on a farm all her life, she always has some fruits of her labor to sell if nothing more than a basket of turnip greens or a dozen eggs."

Besides cattle, hogs and chickens, Miss Mit raises feed crops, tobacco, vegetables and pine trees. She says turpentine from her trees makes it possible for her to farm. "I put 300 acres in pines last year," she remarked. "We make money on the turpentine. You have to have some income from something to be able to farm these days."

Miss Mit has lived by herself since her daughter, Mrs. Vera Smiley, was killed in an automobile accident in 1952. Another daughter Margaret (Mrs. Scott) Shepherd, lives in Ponte Vedra, Fla., but frequently visits her mother in McRae. Mrs. Talmadge also has a son, John Peterson of Atlanta, by her first marriage. She has two Peterson grandsons and six great-grandchildren.

"I love for my grandchildren to visit me," she said. "They all like the farm. I built a 15-acre fishing lake for them here last year. Some folks say it's the prettiest fishing lake in the county."

After Vera's death, Huley Purvis, longtime overseer of the farm, and his wife, Rossie, moved into a garage apartment just behind the Talmadge home. They planned to stay a few weeks to keep an eye on Miss Mit—and they have been there ever since. Mrs. Purvis drives Mrs. Talmadge to McRae whenever she wants to go.

"I drive around the farm myself," Miss Mit said, "but I don't like to drive to town. I used to ride horseback all over the farm until my horse died about 3 years ago."

Although Mr. Purvis is an invaluable overseer, Miss Mit insists on supervising the overall farm operation. "I get up at 6:30 or 7 every morning to go out and get things started," she said. "I've got to set a good example for my farm hands." About a dozen men work for her.

The Talmadge home is about 5 miles south of McRae on U.S. Highway 341, a heavily traveled route to Florida. Miss Mit recalls that she built the house "with cotton money the first year that Ed Rivers was Governor."

Miss Mit sometimes forgets dates, but she quickly associates happenings in her life with Georgia political events. Thus in 1937—or "the first year Rivers was Governor"—she and Gene Talmadge moved into their large Sugar Creek home which cost between $15,000 and $20,000. "Of course, we couldn't build it for $50,000 now," Miss Mit pointed out.

A plaque on the highway identifies the two-story house as the Talmadge home, and sightseers often stop to inspect it. "They just want to see where Gene Talmadge lived," Miss Mit explained. "Sometimes they want to come inside, but I don't fool with them. This is just an old farmhouse." The old farmhouse has beige wall-to-wall carpeting on the first floor and traditional furnishings. Portraits of Gene and HERMAN TALMADGE hang in the library, and Miss Mit's portrait is over the mantel in the living room.

One of Miss Mit's prized pieces of furniture is a long, marble-topped table with a large ornate gold mirror placed over it in the living room. In the dining room is a large breakfront in which she keeps much of her silver. "I have a lot of silver given to Gene by the Governor's staff, and I don't know what to do with it," she mused. "HERMAN already has so much."

She has a wood stove as well as an electric stove in her kitchen. "I like a wood stove," she explained. "It makes the kitchen nice and warm. Most of the people who visit me come in through the kitchen."

There are two large television sets in the house, but Miss Mit says she enjoys her radio more. "If I had to choose between the two, I'd take radio," she remarked. "I like the news programs best."

Mrs. Talmadge says she never gets lonely in the big house. She has two large hunting dogs, Lady and Wici, which she says are not only pets but good guards. She also has seven cats. And she has a lot of visitors. She doesn't go to many social events in McRae—"I'm too busy," she says—but she does go to the McRae Baptist Church almost every Sunday.

Miss Mit is a native of Edgefield County, S.C. The former Mattie Thurmond, she is a first cousin of U.S. Senator STROM THURMOND, of South Carolina, a former Governor of that State. She came to Georgia as a girl and was a railroad telegraph operator at Ailey, Ga., when she was only 16. At 18, she married John Peterson. When their son was about 3 months old, Mr. Peterson died of typhoid fever.

The young widow and her baby lived with her mother-in-law, the late Mrs. John A. Peterson, Sr., in Ailey. While Miss Mit was there an ambitious young lawyer named Eugene Talmadge boarded in Mrs. Peterson's home. "Eugene and I used to go horseback riding together," Miss Mit recalled. "Then he started asking me to go to parties in Ailey with him. I wouldn't go, so he stayed home to be with me."

Mattie Thurmond Peterson and Eugene Talmadge were married in 1909—when she was 27 and he was 25. They lived in Mt. Vernon for about a year and then moved to a farm in Telfair County near McRae, Ga., which has been Miss Mit's hometown ever since. "At one time Gene wanted to move back to Ailey, but I wouldn't do it," she reminisced. "I loved the farm. Even after Gene was elected commissioner of agriculture I stayed on the farm and he came from Atlanta every weekend."

When Gene Talmadge was elected Governor Miss Mit agreed to go to Atlanta. Of course, the Talmadges took along a cow and some chickens when they moved into the executive mansion in Ansley Park, startling some of their citified neighbors. "I cleaned up that old mansion," Miss Mit said. "It was a terrible place when we moved there."

Miss Mit thinks Georgia badly needs a new Governor's mansion. She says there's no use spending any more money "on that old house that is hardly big enough for a good sized family." She added that she had planned to get a new mansion built the last time her husband was elected, but he died before she had a chance to push the project.

Mrs. Talmadge recalls that she enjoyed entertaining legislators and other politicians in the mansion.

Equally at home in a ballroom or on a tobacco field, Miss Mit now spends most of her time on things agricultural. "I've learned about farming from the men who work for me. I always asked them, 'How would you do this?' You can't beat these old-timey people when it comes to farming."

Miss Mit seldom travels, except to visit her children. She has never been to Europe and has no real desire to go. "I get more pleasure out of making money and putting it away than I do out of spending it," she says.

She has a few expensive clothes, including two fur coats, but she wears old clothes around the farm. She like pert, flower-decked hats and laments that people "don't wear hats much any more." She has not cut her long hair since she was very young. She wears it in soft waves, with a braided coil at the back of her neck.

Miss Mit is one of two Georgia Governors' wives immortalized in bronze on the State capitol grounds. A plaque affixed to the statue of Eugene Talmadge shows "Old Gene" tenderly embracing Miss Mit at the edge of a cattle field. The other husband and wife commemorated in bronze on the capitol square are Governor and Mrs. Joe E. Brown.

Senator TALMADGE says no man ever had a more loyal or devoted wife than his father. "Mama was never too busy to help him in his work," the Senator recalls. "She encouraged him in all his undertakings and was unquestionably obedient to his decisions.

She was completely loyal to him in victory and adversity.

"Four simple words describe Mama," Senator TALMADGE went on. "They are character, courage, work, and thrift in that order. She believes in Christian, moral living and has little faith in quick remedies, medical or otherwise. She taught her children to avoid evil, to have faith in God and themselves, to work hard, to be self-sufficient, to rely on no one, to look to none for favors, and to treat everyone as we would want ourselves treated.

"Her philosophy is that the future is what one makes of it."

## Traffic Accidents on Public Highways

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from A. A. Ramstad, manager of the Ramstad Agency, in Minot, N. Dak., discussing the subject of accidents on the public highways.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RAMSTAD AGENCY,
*Minot, N. Dak., January 28, 1959.*

Hon. Senator WILLIAM LANGER,
*U.S. Senate,*
*Committee on the Judiciary,*
*Washington, D.C.*

DEAR SENATOR LANGER: From time to time, I do receive from you letters relative to your committee. I do note in your letter of December 26, 1958, you invite our suggestions for legislation for measures to be prepared by January 7, 1959. However, be that as it may, I believe you can do something about this awful appalling slaughter on our highways.

The timetable says it should be done now.

Here is the main text of a letter I have written to one of our outstanding leaders in the auto industry. For confidential reasons at this time, I shall not disclose his name. Here is the text of the letter, which is as follows:

"Knowing that you enjoy a position of national reputation and international reputation relative to the auto industry, writing this personal letter to you, I know will receive your personal attention.

"With the above in mind, I will launch right into the ever-growing serious problem of traffic accidents on public highways. The idea is not to build automobiles with less speed, but here is where you can play an important part.

"Through your engineering department, you can be first in taking a forward step in cutting down this hazard. Psychology plays an important part in this.

"Everyone wants to be a careful driver, the driver that keeps within the law; that is, as long as no one can see the speedometer he is driving by.

"Now, through your engineering department, would it be possible to install a sign with numerals the same size as our license plates that could be synchronized with the speedometer and could be read at the same distance as the license number and installed in the rear window or in the rear part of the automobile.

"This, I feel would be a challenge to anyone who then would deliberately exceed the speed limit as set forth by the highway signs. He would be telling the world how fast he was going and he could not argue about it because too many people have already seen the exact speedometer speed he was driving.

"So, knowing this, the psychological tendency would be to stay within the prescribed speed. You see, he wants to be the good driver within the law.

"If you would back me up on this, I shall be glad to write to each head of the traffic departments in every one of our States.

"I trust you will be the one who will take the first step in that direction. It is not cutting down the engineering speed of your automobile. It is just a device to help people think. It will show that they, the public, are thinking out loud, so to speak, or not thinking at all.

"Over 2,448,000 were injured due to motor vehicle accidents in 1957. Over 40 percent was due to exceeding the speed limit.

"Now, I sincerely believe that the human reaction to a device that tells others the speed they are traveling will help cut down accidents due to the high percentage of speeding which causes these accidents.

"Before I write to other leaders in the auto industry, I shall be awaiting a reply from you at your very earliest convenience.

"Something must be done immediately and I trust you shall be the first to make the installation."

Now, Mr. LANGER, after you have read the above, what do you believe could be done relative to legislation as to make it a law relative to each motor vehicle should have this speedometer visible to the public at all times, the same as the license number?

Engineering skills these days should not stand in the way, but certainly should enhance the creating of a speedometer of such a type. Just how, I am not to say, but I am sure it can be done, and behind it all is the psychological reaction of the driving public, which I really believe would cut down these horrible accidents.

I will await your reply with interest. I thank you personally.

Sincerely,

A. A. RAMSTAD, *Manager.*

## Poison in Your Water—No. 46

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the Appendix of the CONGRESSIONAL RECORD an article from the Green Bay, Wis., Press-Gazette of February 3, 1959, entitled "No Relief Seen Soon for East River Odors."

NO RELIEF SEEN SOON FOR EAST RIVER ODORS—RESIDENTS IN AREA TO GET SMELLS FOR AT LEAST ANOTHER SUMMER, COMMITTEE TOLD

Residents living in the area of the East River are faced with at least one more summer of pungent odors from industrial wastes and sanitary sewer discharges.

That was the conclusion of members of the East River Water Pollution Committee Monday night after hearing suggested methods to improve the condition of the river.

T. F. Wisniewski, director of the State water pollution committee, said detailed reports on methods to reduce the amount of industrial wastes being dumped into the East and Fox Rivers had been received in his office by the December 31 deadline. The reports were from papermills throughout the Fox River Valley.

Wisniewski said they "will receive thorough study by our engineers, and a report should be ready for the State committee at its March 17 meeting."

TO ISSUE ORDERS

He said he expected new State orders to the mills and some municipal bodies would be issued around March 25.

Wisniewski said even if the contemplated orders were complied with by next summer, it would be another year before the river was cleaned sufficiently to remove the cause of odors.

Alderman Don Tilleman, chairman of the City Council Water Pollution Committee, said the group will meet in the near future to determine whether any action should be taken this year to alleviate East River odors on a temporary basis.

That was unsuccessfully attempted last summer when a chemical was sprayed on the river's surface to overcome odors.

MUST ACT ON PLANS

Wisniewski said the State has the responsibility of accepting or rejecting the reports submitted by the paper mills. It was pointed out that a plan submitted by Northern Paper Mills, a division of Marathon Corp., would eliminate the discharge of industrial wastes into the East River and pump the aftertreatment into the Fox.

Construction of four lagoons on property owned by Northern in the area of the Green Bay Yacht Club has been suggested by the company. All the bleach water and fibrous material would be pumped into the lagoons and separated.

The solids would be used to fill low property owned by Northern and the pure water would be discharged into the Fox.

Last summer's study of the East River conducted by the city health department, metropolitan sewerage district, and State Water Pollution Committee, revealed that Northern discharged 13,092 pounds of suspended solids and 12,456 pounds of oxygen demanding wastes into the East River each day.

CHARMIN TOTALS GIVEN

Charmin Paper Products, the report revealed, discharged 1,718 pounds of suspended solids and 779 pounds of oxygen-demanding wastes into the river each day. Other pollution was caused by intermittent discharges from the city's sanitary sewers.

Wisniewski expressed the opinion that when the industrial discharges are eliminated from the river the undesirable odors should end a short time later. However, he doubted that would be accomplished this year.

George Martin, manager of the Metropolitan Sewerage District, reported use of overflow stations along the two rivers is being eliminated with the separation of sanitary and storm sewers.

As an example, he said, last year stations were taken out of service at Porlier Street at East River, either Grignon or Eliza Street at Fox River, and several on the West Side.

HELPS REDUCE LOAD

"Each time this is done it reduces the load at the disposal plant and at the same time the discharge of sanitary wastes into the rivers is being lessened."

Martin said 6 of the 24 water drainage basins in the city now have the storm sewers separated from the sanitary sewers. Two drainage basins were completed this past summer.

Mayor Otto Rachals noted that the entire city separation program would not be completed for another 10 years at the current rate of construction.

"The costliest and most extensive work remains to be done, and that is in the downtown area," Rachals said.

## Catholic Sentinel Points to Moral Responsibility of the United States

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. NEUBERGER. Mr. President, the question of assistance to underdeveloped nations will soon be under discussion again by Congress. As a supporter of the concept of economic aid to less fortunate countries, I am hopeful that Congress will act affirmatively and vigorously in implementing this policy.

Walter Lippmann—whose insightful columns have contributed so much to public discussion of our foreign policy—said recently upon his return from a visit to Russia:

I submit that we shall not meet the Soviet challenge unless we stop looking at the underdeveloped nations as military bulwarks and bastions and adopt a new and different objective in the uncommitted world. The Communists are expanding in Asia because they are demonstrating a way of raising quickly the power and standards of living of a backward people. The only convincing answer to that must be a demonstration by the non-Communist nations that there is another and more humane way of overcoming the immemorial poverty and weakness of the Asian peoples.

Within the past few weeks Mr. Lippmann has again thrust through the veneer of rationale surrounding this subject to state bluntly the crux of the matter. He said:

The question is whether we are ready to recognize the principle that rich nations in the world community, like rich individuals in their own communities, have a duty to help the poor to raise themselves out of poverty.

Mr. President, in the February 19, 1959, issue of the Catholic Sentinel, a weekly newspaper published in my home city of Portland, Oreg., there appeared a thoughtful editorial commenting on Mr. Lippmann's recent statement. I ask unanimous consent that this editorial, entitled "Rich and Poor Nations," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RICH AND POOR NATIONS

An article by Mr. Walter Lippmann which appeared in the Oregonian of February 1, 1959, deserves wide attention. Mr. Lippmann has raised a point that we hear too little about when the question of foreign aid is discussed.

He says: "The question is whether we are ready to recognize the principle that rich nations in the world community, like rich individuals in their own communities, have a duty to help the poor to raise themselves out of poverty."

Last year, when the U.S. foreign aid program was in danger of being rejected by Congress, the administration called various civic and religious leaders to Washington to urge the continuation of American oversea aid. At that time the address of Bishop Fulton J. Sheen, national director of the Society for the Propagation of the Faith, received widespread and favorable comment in the daily press. His point was precisely that brought forward by Mr. Lippmann. The wealthy, nations as well as individuals, do have an obligation to their less fortunate brethren.

But, as Mr. Lippmann also points out, this has not been adopted as a part of our official policy of foreign aid. Although the United States has made substantial contributions to foreign countries, the money has not always been spent wisely. Cuba is a glaring example of this fact. But as Mr. Lippmann says: "What matters most is that Congress has voted these contributions on what is humanly speaking a self-defeating principle. They have not been voted on the principle that the rich have a duty to the poor but on the theory that we are subsidizing our allies in the cold war." This explains why South America has received a comparatively small portion of our foreign aid. Perhaps it also explains Mr. NIXON's less than triumphant reception by our neighbors to the south.

## Mexico: New Spokesman for Latin America?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very pertinent article entitled "Mexico: New Spokesman for Latin America?" The article was written by Daniel James, and was published in the New Leader of March 16.

Mr. President, it appears that this particular article augurs a new high in the relationships between the Republic of Mexico and the Republic of the United States of America. It is my hope that the move started under the leadership of the distinguished majority leader, the senior Senator from Texas [Mr. JOHNSON], who traveled to Mexico at the express request of the President of the United States and the Secretary of State, will continue, and that the relationships between our two Republics will be closer and more intimate with the passage of time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEXICO: NEW SPOKESMAN FOR LATIN AMERICA

(By Daniel James)

MEXICO CITY.—President Eisenhower's recent meeting in Acapulco with President Adolfo Lopez Mateos may well have marked the emergence of Mexico as the spokesman for Latin America.

Many Latin American leaders have expressed this opinion. Ex-President José Figueres of Costa Rica, for example, has called the Acapulco meeting an "interview between the United States and Latin America." In the view of Figueres and other Latin leaders, decisions taken at and after Acapulco will presumably be regarded by the rest of Latin America as an indication of U.S. intentions toward the whole continent. Also, Washington itself appears to be of the same belief.

Mexico is the only Latin country that President Eisenhower has ever paid a state visit to, and he has done so twice since taking office in 1953. (He went to Panama in 1956, but that was to attend the meeting of American Presidents.) This, plus the fact that Eisenhower's health does not make hectic trips abroad desirable, points up the significance of his Acapulco sojourn.

Nor is Eisenhower the only ranking American who has visited Mexico recently. He is merely the latest of a parade of American VIP's who have come here in the past few months, including the three most powerful men in the United States.

The parade began in late November, when Senate majority leader LYNDON JOHNSON met Lopez Mateos, also in Acapulco. It was a strange meeting, for the position each man occupied precluded fruitful discussion. Lopez Mateos was then only President-elect and hence unable to speak for Mexico or reveal his program; JOHNSON's party had just won a smashing electoral victory but he had not yet begun to function as majority-leader of the new Congress.

Still, the JOHNSON-Lopex Mateos meeting was important on two counts: It opened up a pipeline between the Democratic party and the Lopez Mateos administration—a pipeline which presumably will function throughout the rest of Eisenhower's term, and of course will take on considerably more importance if the Democrats win in 1960. It also gave the Democrats an initiative insofar as the current Latin American debate in the United States is concerned and promptly stirred up rivalry with the Republicans for Mexico and, in general, Latin American affections. This rivalry will continue through the Presidential campaign, what with prominent Democrats and Republicans headed this way in the future.

One of them is Senator WAYNE MORSE, Democrat of Oregon, who is scheduled to deliver the commencement address at Mexico City College in June. The fact that he heads a Senate subcommittee which is studying our Latin American policy will not be overlooked—least of all by the Senator himself. In addition, his subcommittee report will be issued in mid 1960—just in time for the election campaign.

Only the growing interparty rivalry for Mexican (read always: Latin American) affections can explain why, hard on Johnson's heels, Secretary of State John Foster Dulles himself came to Lopez Mateos' inauguration on December 1, although he was then ill. He headed up a VIP-studded delegation which included Milton Eisenhower, the President's brother, and several important Senators, including MORSE, BARRY GOLDWATER, Republican, Arizona, and RALPH YARBOROUGH, Democrat of Texas. (In contrast, Thomas Dewey was dispatched to the inauguration of Venezuela's President Romulo Betancourt.)

I have it on excellent authority that a prime mover in the decision to send Dulles here was the U.S. Ambassador to Mexico, Robert C. Hill, who argued that after Johnson's visit it was imperative to have top Republican brass attend the inauguration. Hill, a Republican who leans toward Nelson Rockefeller and has had his share of troubles with State Department antediluvians, also influenced President Eisenhower's decision to see Lopez Mateos. Ike, however, had earlier expressed a desire to meet the new Mexican Chief Executive.

Hill was not simply trying to get his party in on the act; he was trying to sell the administration on Mexico's importance to the United States. That he has succeeded almost beyond expectation is borne out not only by the Dulles and Eisenhower visits, but by the covetous eyes which several administration Latin American hands are casting on Hill's Mexico City job.

Why all this attention to Mexico?

In a quiet way, Mexico is becoming the top power in Latin America. Argentina, Cuba, Venezuela, and others may periodically capture the headlines with revolutions and assassinations, but it is Mexico which is by far the most important country south of the border—for the latinos as well as for us. The Latins have, in fact, taken to calling Mexico, in the friendliest spirit, the Colossus of the South.

One thing that makes Mexico a colossus is that, within the past 15 years or so, it has accomplished the feat of graduating from an underdeveloped country into a semi-industrialized one. None of the other 19 Latin Republics have managed to do this. I described this evolution in a previous New Leader article ("Is Mexico Going Capitalist?" July 21–28, 1958).

Simultaneously, too, the Mexicans have succeeded in diversifying their economy—an object of particular admiration in a continent where monocultural economies are the rule. That this has paid off handsomely was demonstrated only recently, when Eisenhower's lead-zinc quota dealt a serious blow to mineral-dependent Peru but caused barely a ripple in the Mexican economy.

It is not Mexico's economic performance alone, however, that Latin America admires and wants to emulate. Perhaps even more attractive is its continuing political stability, and growing democracy. Too often, industrialization in Latin America has been accompanied by strong-arm rule which assumes that you can build a country only by oppressing its people. This is how Perez Jimenez industrialized Venezuela, the industrialization consisting largely of a speedway to the capital's airport and fancy buildings for the rich. Inevitably, as we have seen in Venezuela, Colombia, Argentina, and other countries, revolution or chaos follows.

In Mexico it is different. Underpinning industrialization—a true and not a spurious industrialization—are years of political continuity, stability, and maturity. Not since 1920, when Alvaro Obregon seized power from Venustiano Carranza, has a Mexican Government been ousted by force or violence. Even after Obregon was assassinated in 1928, at the hands of a religious fanatic with no political motives, the succession of governmental crises that followed never resulted in revolution. Since 1934, when Lazaro Cardenas became the first to serve under the newly stipulated 6-year presidential term, every Mexican President has completed his term and has peacefully handed over power to his legally elected successor.

Thus a whole generation of Mexicans has known only peaceful and orderly Government, even though the word "revolution" figures constantly in Mexican politics. This cannot be said for any other Latin republic. Even Uruguay and Costa Rica, often cited as examples of democracy, have had their upheavals in the recent past. And, of course, only within the last 4 or 5 years some of the biggest Latin countries—e.g., Argentina, Brazil, Venezuela—have experienced coups or revolts.

No wonder, then, that Latin America looks up to Mexico and says: "Why dont' we follow the Mexicans and maybe we'll get where they are?" Few thinking persons doubt that the rest of Latin America would be extremely happy if the southern collossus sought to give it active guidance. Will Mexico take on this leadership role?

There was a time when Mexico did claim to speak for Latin America. The revolution of 1910 put it in the vanguard of progress, and Latin Americans everywhere looked to the Mexican example. They do to this day—although sometimes, unfortunately, half-baked leaders, l'ke Fidel Castro understand by revolution a technique for seizing power rather than a means for reorganizing society. But in recent years Mexico has been content to leave the leadership of Latin America to others. It has concentrated its energies on strengthening its own economic and political institutions. This ingrown nationalism has proved eminently sensible, for it has enabled the Mexicans to set their house in order.

The country's basic problems are by no means solved, but they are well in hand. Mexican leaders can now pay attention to hemispheric issues without fearing that, once their backs are turned, trouble will flare up at home. As a result, more and more Mexicans feel that the time has come to assert their leadership in inter-American affairs. After all, they argue, with a population of 33 million Mexico is the largest Spanish-speaking republic and therefore the natural leader of the other 17, if not of Portuguese-speaking Brazil and French-speaking Haiti as well. The only conceivable rival for this leadership, Argentina, has been rendered temporarily hors de combat by Juan Perón.

"Why not accept the leadership which Latin America has always offered us?" asks a leading young Mexican thinker, Dr. Leopoldo Zea. He asked this question in an article that appeared, significantly, only 2 or 3 days after the Eisenhower-Lopez Mateos Acapulco meeting. Interestingly, too, the article was published on the editorial page of Novedades, a Mexico City newspaper owned by powerful interests close to Lopez Mateos. In fact the paper's director, Ramon Beteta, a former finance minister, was one of the handful of Mexicans Lopez Mateos selected to join him in his talks with Eisenhower.

The Zea article is only one recent expression of a mounting consciousness among Mexicans of their destiny to lead the Latin countries. And this could well be Mexico's moment, for not only does the internal situation allow it the time and energy to play a hemispheric role, but in the present government it might find the perfect instrument for essaying that role.

Having already met both President Eisenhower and Secretary Dulles less than 3 months after taking power, Lopez Mateos has made it very clear that he will take a greater interest in hemispheric affairs than his predecessors. That interest has now received new emphasis with his acceptance of Eisenhower's invitation to pay a visit to the United States, which he will do in April.

The Mexican President actually served notice in his inauguration speech on December 1 that henceforth Mexico would direct her gaze outward. The first section of the speech was devoted to international affairs, expressing Mexico's affinity with her sister Latin republics and stretching out a friendly hand to the United States. The latter was unprecedented; no other Mexican chief executive has ever referred to the United States in friendly terms at his inauguration.

With a rich family heritage which has produced many famous Mexican leaders, including a close collaborator of Benito Juarez, and with some previous experience in foreign affairs as a Senator, the young and dynamic Mexican President appears cut out for the role of Latin American spokesman. Or course, it is too early to tell whether or not Lopez Mateos will attempt the role, but he has the equipment and the time is ripe.

From the U.S. viewpoint, Mexican leadership of the Latin American community could prove highly beneficial—or highly disastrous. Mexico is the Latin country most strategically place vis-a-vis the United States. She is our only contiguous Latin neighbor and shares with us a long frontier. No other Latin state has had as long and as close contact with us as Mexico, and the fact that in the past it was often abrasive does not negate its profound value.

Nowadays, life along the U.S.-Mexican border is practically a family affair. Whether you poke about Loredo, Tex., or Nuevo Laredo, Tamaulipas, you are likely to find in each of these twin border towns just as many Mexicans as Americans, just as much Spanish spoken as English, just as much Mexican food eaten as American food. You find it much the same when you travel somewhat further inland on both sides, and of course the Mexican communities deep inside the U.S. border States are growing apace. So much so that Mexicans quip about the peaceful reconquest they are making of the territory we took from them in 1836–47.

Nor can one overlook the border's importance defensewise. One little-known but grave problem we face, for example, is to get Mexican permission for Air Force jets to fly over Mexican land just south of the Rio Grande. We have a DEW line beyond the Canadian border, to the north, but none on the Mexican, to the south—and this is a weak spot in our national defense which has security planners intensely worried.

Mexico's strategic position in relation to the United States and in relation to Latin America as well, could make it an ideal bridge between Latin America and the United States. But there are those who see Mexico capable of playing another role, that of the colossus of the south as a buffer against the colossus of the north. They see Mexico in this role because it is the only Latin power capable of standing up to the United States. If it did so in 1914–16 against President Wilson's attempts to foist a government of his choosing upon it, and again in 1938 when the oil companies and Washington ganged up on it, how much more capable of resistance is Mexico today. So, at any rate, goes the reasoning.

It is quite possible that Mexico may find itself playing a dual role. As the leader of Latin America, it may at times have to act as interpreter between Latin America and the United States; at other times it may have to act as the aggressive leader of the Latin bloc against some particular U.S. policy.

Whether or not she will fulfill such a dual role, and where she will place the main emphasis, are questions that will test both Mexican maturity and our own mettle. In any showdown with European or Asian powers, as the prophetic Mexican thinker Andres Molina Enriquez wrote in 1909, Mexico will side with the United States and other American republics; she proved this in World War II, and the dominant thinking today is anti-Communist (though it differs from our official anticommunism). So that is not the issue.

The issue is simply whether we, at long last, are going to come to grips with the realities of Latin America instead of continuing to pursue mirages. Eisenhower made a good beginning at Acapulco. I can testify that the President has lost none of his greath warmth and simplicity, and was an instant hit with Mexicans high and low. They reveled in the thought that the President of the mighty United States had come so far inside Mexico, farther than any predecessor, to be with their President and with them. But that, while creating a healthy psychological climate, is only a beginning.

Now words must go down the line to follow through on the President's achievement. Congressional leaders should be thoroughly briefed and their aid enlisted in a continuing effort to encourage Mexico to become a bridge. And, of course, appropriate economic and similar measures should be drafted, for the bridge can never be strong or secure as long as its construction is weak or faulty.

But we should not imagine that economic measures alone are sufficient. Of paramount importance just now is something noneconomic: United States understanding of Mexico's coming leadership of the Latin American republics. Without that, any measures taken must become reduced in their value and any overhauling of our Latin American policy must fall short of its objective.

## Outrage in Oil

EXTENSION OF REMARKS
OF
**HON. JOHN D. DINGELL**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the Appendix of the CONGRESSIONAL RECORD an article from Barron's, National Business and Financial Weekly, of March 16, 1959, entitled: "Outrage in Oil." This article describes the recent import quotas on oil imposed by President Eisenhower. As the Members of the House will recall I was one of the first to protest this outrage perpetrated upon the consuming public of this country. I need not remind the House that this will result in substantial increases not only in oil but in other competing fuel costs.

OUTRAGE IN OIL: IMPORT QUOTAS WILL HARM PRODUCER AND CONSUMER ALIKE

In the voluminous annals of American industry, the 27th of August, 1859, enjoys a special place. On that red letter day Edwin L. Drake, exrailroad conductor and entrepreneur extraordinary, made the first commercial discovery of oil, not on some vast Texas plain, as might be expected, but near the quiet little farming town of Titusville, in western Pennsylvania. The epochmaking event already has been celebrated, in story if not yet in song, by publication of an entertaining book aptly titled "The Great Oildorado." In coming months, if all goes according to plan, the centennial also will be marked by the proclamation of Titusville Week, the issuance of a commemorative stamp and, tentatively at any rate, the sealing of a time capsule in a replica of the original well.
